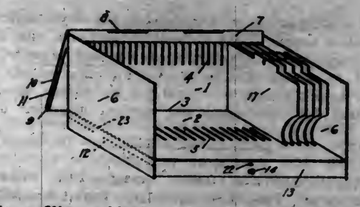
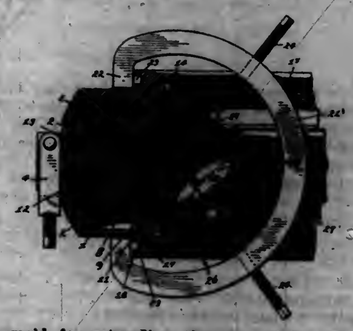
1. In a projecting device, a pulley having a circumferential groove therein and frictional means comprising corrugations disposed at the bottom of the groove.

1,750,865. CANDY-COATING MACHINE. OSCAR E. SEGAIN, Springfield, Mass., assignor, by mesne assignments, to Merrow Brothers, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 10, 1928. Serial No. 268,987. 1 Claim. (Cl. 91—3.)



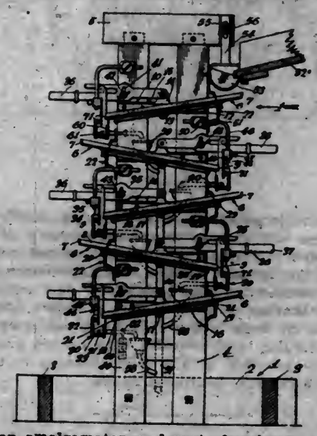
A coating machine comprising side frame members, a storage tank supported between said members, a flow pan, a pair of drums rotatable in vertical planes between said

members and each having a portion of its peripheral path dipping within said storage tank and a portion elevated above said flow pan, each of said drums having a rim offset toward said flow pan and overlapping the adjacent end of said pan, brackets secured to each side frame member and projecting inward over and beyond said offset



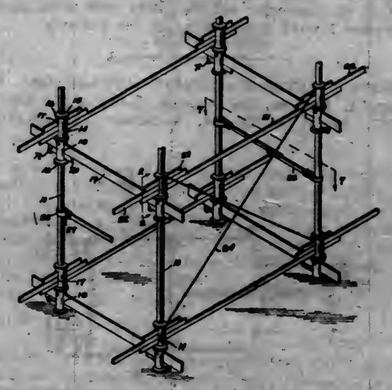
rims, an arm depending from each of said brackets and having a horizontal aperture, a separate scraper bar slidable in each of said apertures with its operative end positioned within one of said offset rims, and means to secure said bars in adjusted position in said arms, whereby the feed of coating material may be regulated.

1,750,866. FILING CABINET. JOHN SKOWRON, Los Angeles, Calif. Filed Apr. 4, 1927. Serial No. 180,967. 5 Claims. (Cl. 129—16.)



1. In a filing cabinet, a slotted device having a vertical and horizontal wall, said slotted device being provided in the upper portion of its vertical wall with a series of slots and in the intermediate portion of its horizontal wall with a row of corresponding slots, a set of partitions adapted to be positioned vertically on said slotted device, and the rear and lower edges of said partitions being provided with projecting portions that are adapted to enter the slots in the vertical and horizontal wall of said slotted device.

1,750,867. ADJUSTABLE MOLD FOR RETREADING TIRES. FRANK L. SMITH, JACOB S. CAUFIELD, and CHARLES J. PETERSON, Sacramento, Calif., assignors, by mesne assignments, to Super Mold Corporation, Reno, Nev., a Corporation of Nevada. Filed Dec. 8, 1926. Serial No. 153,272. 6 Claims. (Cl. 18—18.)

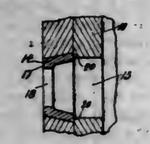


1. A mold for retreading tires comprising a pair of matching mold sections having steam chambers formed therein; a sectional matrix fitted into the mold sections and arranged to receive a tire for retreading; annular ribs formed upon the outer sides of the mold sections; a plurality of yokes engaging the ribs; and means carried by the yokes and engaging the side walls of the tire for expanding the tread of the tire against the inner surface of the matrix.

1,750,868. AMALGAMATOR. JAMES J. TINKER, San Diego, Calif. Filed Jan. 19, 1926, Serial No. 82,195. Renewed Jan. 15, 1930. 4 Claims. (Cl. 209—58.)

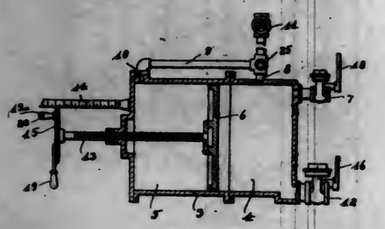
1. In an amalgamator, end posts forming a supporting structure, a pair of plate brackets each substantially channel shaped and having a depression in the lower flange forming a bearing, a plate supported in a frame, said frame having a central longitudinal bar pivotally mounted in the said bearings, the said frame having side angle bars with connecting rods between the side bars and the central bar, one of the side bars being extended beyond the plate over the outside of one of the posts, and means on the post to engage the extension of the side bar and adjust the inclination of the plate.

1,750,869. SCAFFOLD CONSTRUCTION. CHRISTOPHER R. URIS, Los Angeles, Calif. Filed Sept. 26, 1928, Serial No. 308,463. 9 Claims. (Cl. 304—2.)



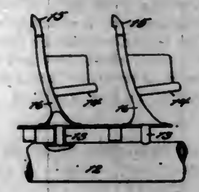
2. A scaffold construction comprising upright members, coupling members in which the ends of the upright members are receivable, horizontal members having their ends receivable in the coupling members and in the upright members, and means for causing the said members to be held together.

1,750,870. PORTABLE GARAGE LIGHT. HARRY C. VOOTH, East Haven, Conn., assignor to The Rattan Mfg. Co., New Haven, Conn., a Corporation. Filed Apr. 29, 1929. Serial No. 358,790. 3 Claims. (Cl. 240—54.)



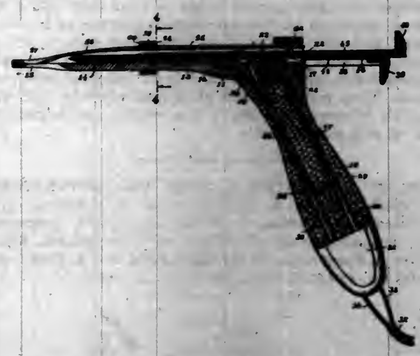
1. A portable garage light comprising a handle formed at its outer end with an annular rib having notches, a ring adapted to rest on said rib and formed with arms extending through said notches, said arms terminating in outwardly-extending fingers, a strap surrounding said arms and bearing upon said rib and fingers, means for connecting the ends of the said strap, said ring formed with an annular band provided with inward projections, and a cage provided with a collor adapted to be interlocked with the first-mentioned flange.

1,750,871. WELL SCREEN. ELIHU C. WILSON, Los Angeles, Calif. Filed May 12, 1925. Serial No. 29,663. 6 Claims. (Cl. 166—6.)



1. In a well screen embodying a double wall casing, the two walls having registering perforations, screening elements in the perforations of the outer wall, means on the outer wall adapted to prevent outward displacement of the elements, and the inner wall being adapted to prevent inward displacement of the elements.

1,750,872. WATER-MEASURING APPARATUS. WILLIAM A. BREMER, Los Angeles, Calif. Filed Nov. 21, 1927. Serial No. 234,756. 4 Claims. (Cl. 221—113.)

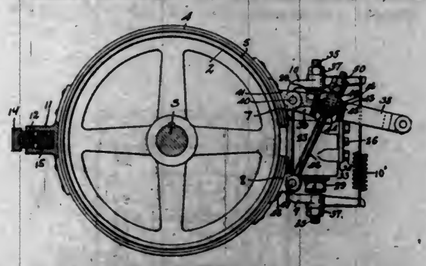


1. In a water supply and measuring apparatus, a cylinder having inlet and outlet connections at one end, a piston movable longitudinally within and dividing the cylinder into measuring and storing compartments, communicating means between said compartments, a spindle mounted in the cylinder and having operative engagement therewith whereby the spindle can be adjusted longitudinally within the cylinder, the spindle having also turnable engagement with the piston for moving the piston, the measuring compartment being on the side of the piston facing the end of the cylinder that has the inlet and outlet connections, whereby the volume of water admitted through the inlet connection into the measuring compartment comprises the measured volume to be discharged through the outlet connection, and a scale in operative relation to the spindle whereby the position of the piston is indicated on the outside of the cylinder.

1,750,873. VENTILATING SYSTEM. EVERETT S. BUCK and LEE B. METTLER, Los Angeles, Calif. Filed May 10, 1926. Serial No. 108,004. 2 Claims. (Cl. 98—39.)

2. In combination, a chair having a hollow supporting standard, a source of air communicating with said standard, a nozzle swivelably mounted upon said standard and adapted to control the horizontal direction of air flow, a valve in said nozzle to control the air supply, means in said valve for controlling the vertical direction of air flow.

1,750,874. TONSILLOTOME. ARTHUR C. CAMPBELL, Tulsa, Okla. Filed Dec. 12, 1928. Serial No. 325,523. 6 Claims. (Cl. 128—300.)

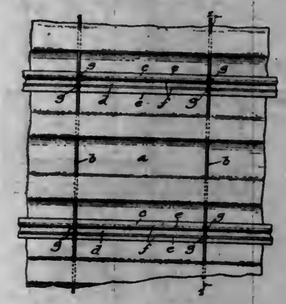


1. In a tonsillotome of the guillotine type including an apertured shank and a tonsil severing blade slidable over the apertured end of the shank; an auxiliary coagulator blade initially movable to grip the base of the tonsil and operable to direct a high frequency electrical current through the base of the tonsil for effecting coagulation of the appendages prior to the actual severance of the tonsil by the severing blade.

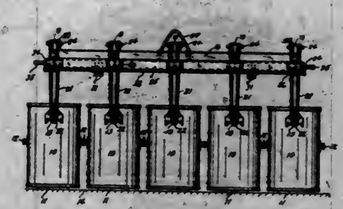
1,750,875. BRAKE MECHANISM. NIELS A. CHRISTENSEN, Milwaukee, Wis. Filed Mar. 22, 1924. Serial No. 701,061. 7 Claims. (Cl. 188—106.)

7. In brake mechanism of the class described, the combination of a brake drum, of a contracting type brake

engageable with said drum, a fluid-pressure-operated motor acting directly upon the ends of said brake to move it into braking engagement with said drum, manually-operated means independently connected with the ends of said brake to move it into braking engagement with said drum, and means to release said brake.

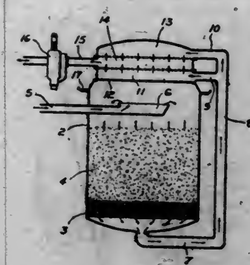


1,750,876. LOADING MACHINERY. JOHN L. CLARKSON, Nashville, Ill. Filed Jan. 19, 1927. Serial No. 161,984. 4 Claims. (Cl. 198—10.)



1. In a loading machine, a carriage, a rangeable shoveling element at the forward end thereof, a rangeable loading conveyor extending rearward from said carriage, reciprocable means for thrusting said shoveling element longitudinally forward under power and likewise returning it, an endless conveyor, and means automatically controlled by the direction of movement of said shoveling element for operating said conveyor intermittently and during the forward stroke of said shoveling element for conveying the collected material from said shoveling element to said loading conveyor.

1,750,877. REENFORCED BUILDING FABRIC. EDWIN D. CODDINGTON, North Milwaukee, Wis. Filed Aug. 6, 1923. Serial No. 655,917. 9 Claims. (Cl. 72—116.)

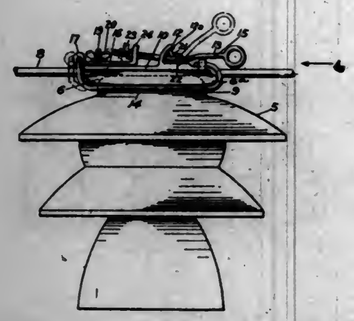


1. A reenforced building fabric comprising a flexible sheet of fibrous material, metal reenforcing wires woven at intervals through the sheet and forming undulations therein transversely to the wires, and auxiliary reenforcing and stiffening members disposed transversely to the wires and deepening the undulations in the sheet adjacent thereto, said members being secured at intervals to the wires by non-slip fastenings.

1,750,878. BARREL-HANDLING APPARATUS. JAMES R. COE, Waterbury, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 18, 1927. Serial No. 169,209. 8 Claims. (Cl. 294—67.)

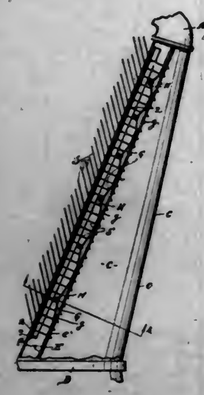
1. In lifting tongs for carrying a plurality of barrels, two sets of spaced lifting elements extending longitudinally of the tongs and each set including a plurality of loops to engage hooks on opposite sides of a plurality of barrels in a row, and a single operating means operable from either end of the device for simultaneously swinging the two sets of elements to and from the barrels.

1,750,879. FILTER. LOUIS DE MARKUS, Chicago, Ill., and FREDERICK B. LEOPOLD, Pittsburgh, Pa.; said Leopold assignor to McKenna Brass and Manufacturing Company, Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1926. Serial No. 147,436. 11 Claims. (Cl. 210—144.)



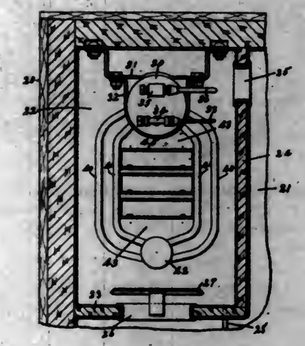
1. A self-contained filtration unit comprising separately contained non-porous filtering means and porous filtering means constituting an index to the condition of the non-porous filter means, means for passing water successively through the non-porous filter and then through the porous filter, means for reversing the water flow through the non-porous filter in order to wash the same, and means for diverting the wash water from the porous filter.

1,750,880. TIE CLAMP FOR ELECTRIC INSULATORS. ROY G. DICKINSON, Denver, Colo., assignor of one-third to Charles A. Semrad, Denver, Colo., and one-third to Henry C. Reagan, Boulder, Colo. Filed Sept. 8, 1925, Serial No. 55,084. Renewed Aug. 6, 1929. 10 Claims. (Cl. 173—313.)



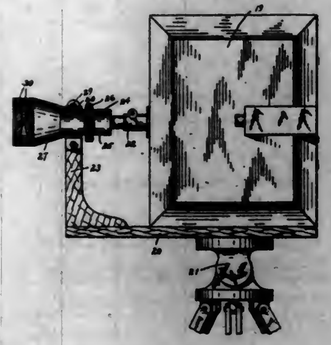
4. A tie clamp for insulators comprising a base, a sliding head thereon, laterally extending resilient clamp

members pivoted on the base and on the sliding head, and means on the base for moving the sliding head and thereby tensioning the clamp members.



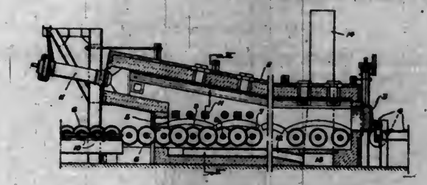
6. A tie clamp for insulators comprising a fixed member provided with means adapted to engage and position a line wire on an insulator, a relatively movable member secured to and carried by said fixed member, a clamping element attached to and connecting said members and engageable with an insulator, and means mounted on said fixed member and engageable with said movable member for locking said members in an adjusted position.

1,750,881. STRINGED MUSICAL INSTRUMENT. JOHN DOPYERA, Los Angeles, Calif. Filed Mar. 28, 1928. Serial No. 265,254. 5 Claims. (Cl. 84—264.)



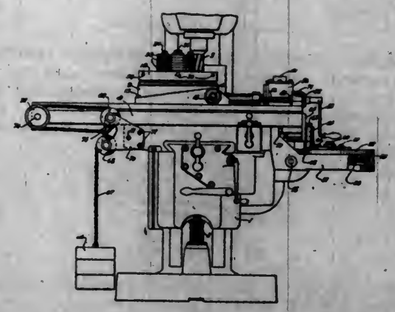
1. A harp comprising a frame including a sound box provided with an inner partition and a cover-plate spaced therefrom, said cover-plate having a slot therein and said partition having a plurality of apertures, a plurality of strings held in tension on said frame extending through the slot in said cover-plate and attached at their lower ends to said partition, means below said cover-plate for engaging and holding the strings in tension, a plurality of metallic conical diaphragms mounted on and over the openings in said partition and connected at their apices with said tensioning means while communicating the vibrations from the strings to the diaphragms.

1,750,882. REFRIGERATING APPARATUS. JOHN RALPH FEHR, Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed Dec. 2, 1926. Serial No. 152,263. 11 Claims. (Cl. 62—95.)



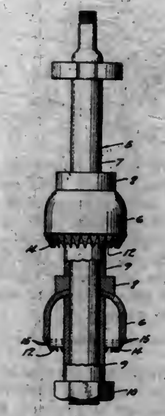
5. A cooling unit for mechanical refrigeration comprising, a plurality of headers and a plurality of ducts connecting the headers, certain ducts connected between two of said headers being spaced apart to enclose therebetween a freezing space and certain other ducts being located spaced from said freezing space.

1,750,883. APPARATUS FOR PRODUCING DISTORTED PICTURES. GEORGE WILLIAM FORD, Brighton, England, assignor to Herbert George Ponting, London, England. Filed Nov. 15, 1926, Serial No. 148,379, and in Great Britain May 31, 1926. 5 Claims. (Cl. 88—16.)



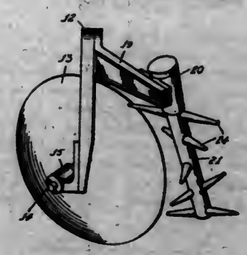
1. Means for producing distorted pictures of an object comprising the combination of a camera, a refractive distorting element situated in front of the lens thereof, and means for producing a real image of the object adjacent the said element.

1,750,884. APPARATUS FOR HEATING. EDWARD M. FREELAND, Steubenville, Ohio, and FRANK MCGOUGH, Follansbee, W. Va., assignors to Follansbee Brothers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 31, 1927. Serial No. 195,242. 8 Claims. (Cl. 263—6.)



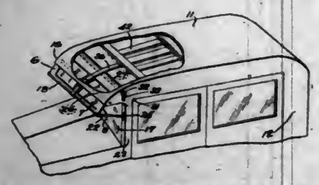
1. In a heating furnace having a heating chamber, conveying means therein, burners for supplying products of combustion to said chamber, and indirect heating means intermediate the supporting plane of said conveying means and the main furnace bottom receiving and conveying such products of combustion and serving to heat said conveying means and prevent radiation of heat downwardly from material thereon.

1,750,885. MILLING MACHINE. JOHN GOETZ, Wauwatosa, and LAWRENCE J. RADENMACHER, Milwaukee, Wis., assignors to The Kempsmith Manufacturing Co., West Allis, Wis., a Corporation of Wisconsin. Filed Feb. 6, 1926. Serial No. 86,395. 11 Claims. (Cl. 90—18.9.)



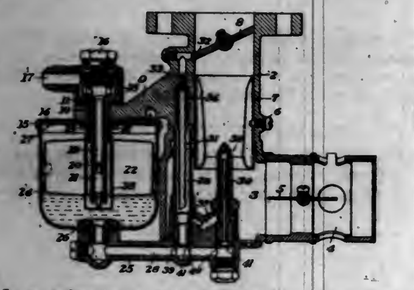
1. In a milling machine, a base, a tool supported above said base for rotation about a fixed axis, a work-holding member supported by said base for forward and backward movement with respect thereto and for rotation about an axis parallel to the tool axis, means including a master cam for controlling said movement of said member, a first shaft for effecting rotation of said member, a second shaft for operating said means, and a third shaft common to and directly connected to said first and second shafts for driving the latter, and means for driving said third shaft.

1,750,886. PACKING. PAUL H. GRANGER, Los Angeles, Calif. Filed Sept. 23, 1929. Serial No. 394,451. 3 Claims. (Cl. 74—109.)



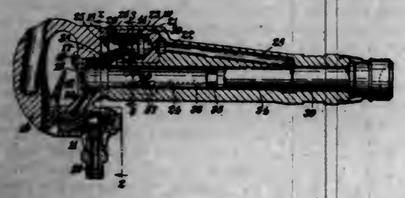
1. Packing means comprising a cup shaped member of flexible material having a wear resisting guiding means at its free edge, said means comprising a plurality of tapering elements secured to said free edge.

1,750,887. ROTARY TILLER ATTACHMENT FOR DISK PLOWS. GUY HERRING HALL, Evanston, Ill. Filed Apr. 3, 1928. Serial No. 266,929. 4 Claims. (Cl. 97—43.)



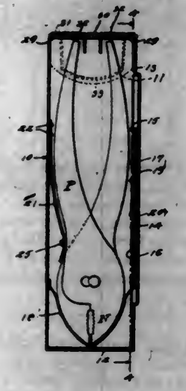
1. The combination of a plow frame, a rotatable disk carried by the plow frame having a concave working face and being presented at such angle that when being advanced it will cut a furrow slice, move it rearwardly and outwardly and perform the initial part only of the turning-over movement of the furrow slice, a rotary tiller device comprising a shaft having its upper end rotatably supported on the plow frame, a series of tiller blades fixed to the shaft and extended substantially at right angles thereto, said shaft being positioned in the rear of the disk and being extended substantially parallel with the under surface of the furrow slice as it passes from the adjacent edge of the disk with the shaft out of the path of travel of the furrow slice and the tiller blades in position to engage and penetrate the furrow slice during its rotation, completing its turning-over movement and pulverizing it and throwing it rearwardly and outwardly.

1,750,888. ADJUSTABLE CURTAIN FOR AUTOMOBILES. GEORGE HARROLD, Los Angeles, Calif. Filed Apr. 5, 1928. Serial No. 267,507. 7 Claims. (Cl. 296—95.)



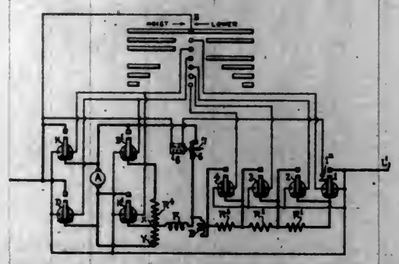
1. In combination with a vehicle having a window and a top, an adjustable curtain construction comprising a movable curtain, a resilient strip secured to and extending longitudinally of the curtain, said strip being extended beyond the inner edge of the curtain within the top, and an operating handle carried by said strip and extending through a slot in the top into the vehicle whereby the curtain may be slid to extend its outer edge through an edge of the top over said window.

1,750,889. CARBURETOR. VICTOR R. HEFTLER, Detroit, Mich., assignor to Societe du Carburateur Zenith, Lyon, France, a Corporation of France. Filed Oct. 26, 1922. Serial No. 597,032. 5 Claims. (Cl. 261—41.)



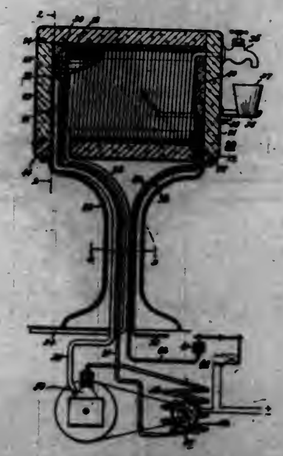
1. In a carburetor, a main body having an air passage therein forming a mixing chamber extending completely through the body in one direction, a base secured to said body and having a fuel passage therein, said base closing the through extension of said passage, a float chamber exteriorly of the mixing chamber and communicating with said fuel passage, an atmospheric well physically inside of the walls of the mixing chamber and communicating with said fuel passage, and means for delivering fuel from said well to said mixing chamber, said well being bodily removable from said base.

1,750,890. FLUID-OPERATED RECIPROCATING MACHINE TOOL. JOHN LEONARD HOLMAN and ARTHUR TREVE HOLMAN, Camborne, England, assignors to Holman Brothers Limited, Camborne, England, a British Company. Filed May 9, 1925, Serial No. 29,108, and in Great Britain Oct. 16, 1924. 9 Claims. (Cl. 121—24.)



1. The combination of a valve chest formed as a tubular sleeve adapted to fit in an outer casing and having in its outer periphery at one end an annular groove whereof one wall is constituted by a flange at said end of the chest, which groove has an admission port connecting it with the interior of the chest, which chest has a recess in its periphery near the other end thereof, a passage for conveying driving fluid connecting said recess with the adjacent end face of the chest, and a port for connecting said recess with the interior of the chest, and a fluid-actuated reciprocatory valve in said chest for controlling said ports, which valve comprises a tubular shell and a core of yielding material in said shell.

1,750,891. PLIER CASE. ERICH F. JUNGEMANN, Wolsey, S. Dak. Filed Apr. 4, 1929. Serial No. 352,514. 6 Claims. (Cl. 24—3.)



1. In a plier case and in combination, a tube having an open upper end permitting insertion of a pair of the pliers therein, a spring pressed support for the pliers normally maintaining the pliers partially projected from the case, and releasable means for retaining the pliers in a lowered position within the case against the action of the springs of said support.

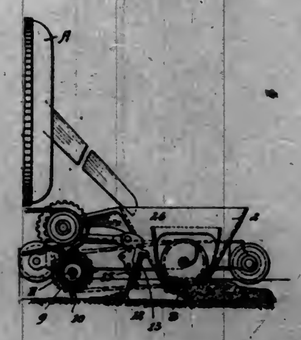
1,750,892. CONTROLLER FOR ELECTRIC MOTORS. WALTER C. KENNEDY, Llanerch, Upper Darby, Pa., assignor, by mesne assignments, to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Nov. 15, 1926. Serial No. 148,489. 8 Claims. (Cl. 172—179.)

1. In combination, a series motor, a resistance and means to connect said motor to a supply source with said resistance in parallel with its armature and with the motor field connected directly to the supply source through a portion of said resistance and means to establish for said motor when disconnected from its supply source a dynamic braking circuit inclusive of said portion of said resistance.

1,750,893. LIQUID COOLER. JESSE G. KING, Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 169,745. 9 Claims. (Cl. 62—141.)

1. A liquid cooler comprising, in combination, a cylindrical refrigerant chamber having walls of metal of good thermal conductivity, and a coil of flattened pipe of metal of good thermal conductivity wound on edge and having its turns metallically joined to the chamber and the flat sides of the turns of the coils abutting one another.

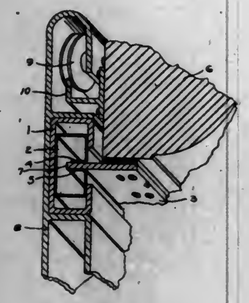
1,750,894. SHEET-METAL SIGN. ANDREW A. KRAMER, Kansas City, Mo. Filed Feb. 28, 1927. Serial No. 171,614. 12 Claims. (Cl. 40—148.)



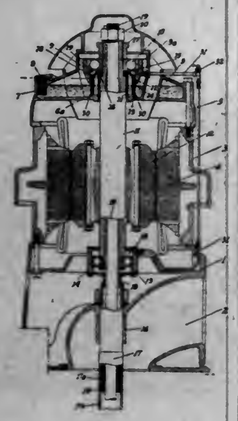
1. A sign of the character described, comprising a panel member and a frame comprising a panel carrying portion and a supporting portion, said supporting portion comprising vertical portions, portions extending outwardly therefrom in opposite directions and portions extending substantially transversely of the plane of the said panel member on opposite sides thereof and spaced from said vertical portions to provide foot portions having ends spaced from all other portions of said frame.

1,750,895. AUTOMATIC CIRCUIT BREAKER. WILHELM LEYHAUSEN, Nuremberg, Germany. Filed Mar. 30, 1928, Serial No. 266,089, and in Germany Aug. 14, 1926. 6 Claims. (Cl. 200—111.)

1. An automatic circuit breaker of the screw-plug type comprising a casing having a spark space, a magnet coil having one of its sides adjacent to said space, circuit closing contacts at the side of the coil adjacent to the spark space, releasing mechanism at the side of the coil opposite that first-named, and connecting means between said releasing mechanism and the switch contacts arranged to embrace said magnet-coil and to effect movement of said contacts on the side of the magnet-coil which faces the spark-space.

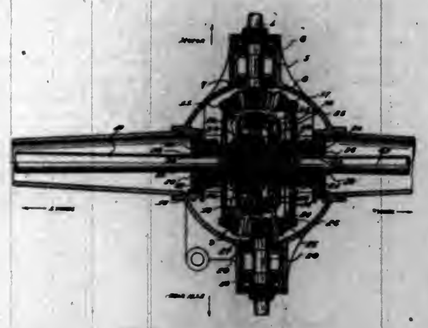


1,750,896. SUBGRADE PLANER AND CONCRETE-DISTRIBUTING MACHINE. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Jan. 27, 1928. Serial No. 249,929. 6 Claims. (Cl. 94—46.)



1. In combination, a concrete mixing machine, and a concrete distributing and earth-working unit associated therewith, comprising a distributing device arranged to deposit the concrete upon the sub-grade, earth leveling means arranged in advance of said distributing device, with common supporting means for the distributing device and the earth leveling means, and means common to the distributing device and earth working unit for driving the said instrumentalities and moving the machine over the subgrade.

1,750,897. ADJUSTABLE WEATHER SHIELD AND ANTIRATTLING DEVICE. GEORGE C. LOVY, Springfield, Ill., assignor of one-fourth to William F. Canavan, Decatur, Ill., and one-fourth to Charles J. Maier, Decatur, Ill. Filed Dec. 10, 1928. Serial No. 324,953. 4 Claims. (Cl. 20—16.)



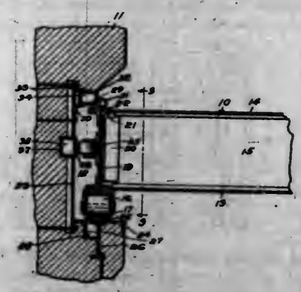
1. An adjustable weather shield and anti-rattling device comprising in combination an inner and an outer channel and a weather strip slidably engaged by the inner channel; said inner channel slidably and springily engaged by and within said outer channel.

1,750,898. AUTOMATIC OILING SYSTEM FOR DEEP-WELL TURBINE PUMPS. ROY M. MAGNUSON, Stockton, Calif., assignor to Sterling Pump Works, Stockton, Calif., a Corporation. Filed Feb. 14, 1927. Serial No. 168,060. 4 Claims. (Cl. 308—170.)

1. In a vertical pump head, a rotatable shaft, a bearing therefor, a support for the bearing, a sleeve depending from the support, said sleeve being spaced from the shaft, an oil reservoir into which the sleeve depends and arranged to permit the oil to enter the space between the shaft and sleeve, a cylinder fixed on the shaft and spaced from the sleeve, a flange all about the cylinder at its upper end having a free running fit with the sleeve and a boss projecting from the outside of the cylinder and extending from the bottom of the flange downwardly and having a running fit with the sleeve, one side edge of the boss being disposed at an angle to a vertical plane.

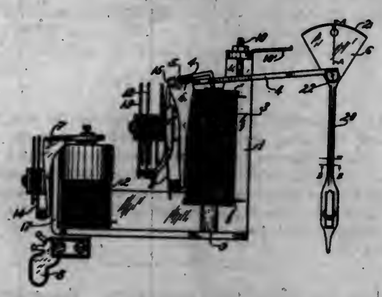
1,750,899. DRIVE AXLE. ARTHUR I. MARCUM, Oakland, Calif., assignor to Emory Winship, Macon, Ga. Filed June 7, 1926. Serial No. 114,251. 10 Claims. (Cl. 180—22.)

1. A tandem axle drive including a drive shaft, an intermediate shaft, axle sections, a differential operatively associated with said axle sections, a second differential driven by said drive shaft, and operatively associated with said intermediate shaft, and said first named differential, said differentials being arranged in nested relation.



1,750,900. ELECTROACOUSTIC DEVICE. JOHN PRESTON MINTON, White Plains, and ABRAHAM S. RINGEL, Brooklyn, N. Y., assignors to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 15, 1924. Serial No. 732,153. 11 Claims. (Cl. 179—109.)

1. In combination, a plurality of intersecting sound amplifying horns each substantially resonant to a different portion of the audible range of frequencies, and an electro-acoustic device attached to each of said horns.



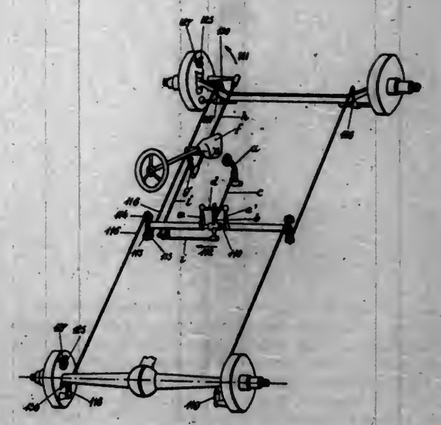
1,750,901. WATER-REGULATING SLUICE GATE. FRED NEWELL, Montreal, Quebec, Canada. Filed Apr. 7, 1928, Serial No. 268,290, and in Canada May 30, 1927. 1 Claim. (Cl. 61—28.)

Guide means for the end of a sluice gate, comprising a channel iron, rollers carried by the gate and co-acting with the channel iron, an I beam rigidly secured to the outer side of the channel iron, an iron rigidly secured to one side of the I beam and rigidly connected with the channel iron, these parts being assembled to produce a tube for receiving a heating medium, and an angle iron arranged

upon the opposite side of the I beam and rigidly connected with the I beam and channel iron to provide a tube for receiving a heating medium.

1,750,902. AUTOMATIC SWITCH. HERBERT F. OBERGFELL, River Forest, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 5, 1925. Serial No. 13,046. 7 Claims. (Cl. 200—103.)

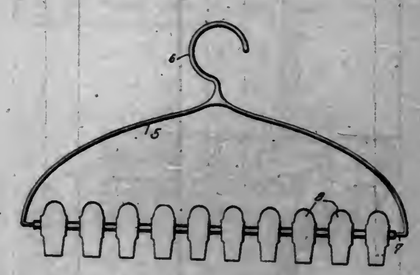
1. In a telephone system, a relay having a pair of armatures, a core for said relay, both of said armatures rotatable about an axis which lies in the same plane as the faces of the armatures which engage the core of the magnet, and a bracket acting as a bearing for both armatures upon which the two are mounted as a unit and which unit is then attached to the relay.



1,750,903. RESINOUS CONDENSATION PRODUCT FROM LIGNIN AND FURFURAL. MAX PHILLIPS, Evansville, Wis. Filed Apr. 6, 1929. Serial No. 353,244. 4 Claims. (Cl. 260—2.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

2. A process of preparing new and useful resinous condensation products, consisting in heating furfural and lignin in the presence of hydrochloric acid.

4. As new articles of manufacture, condensation products from furfural and lignin.

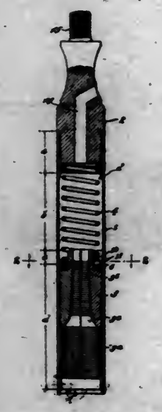


1,750,904. BRAKE-OPERATING DEVICE FOR MOTOR VEHICLES. LOUIS ROUANET, Ivry-Port, France, assignor to Compagnie d'Applications Mecaniques, Ivry-Port, France, a French Company. Filed Mar. 9, 1925, Serial No. 14,255, and in France Mar. 21, 1924. 3 Claims. (Cl. 188—194.)

1. A brake device arrangement comprising a main brake operating member, a primary member connected therewith and operated thereby, a shaft and said primary member pivoted on said shaft, an intermediate member, two secondary brake operating members disposed on either side of the primary member and also pivoted on the shaft,

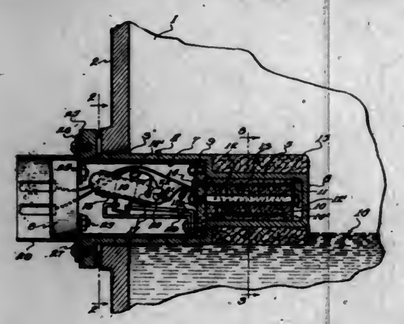
and means controlled by the steering mechanism and adapted to modify the relative positions of the primary and secondary members along the shaft on either side of the position of the said members corresponding to the straight running of the vehicle.

1,750,905. STOCKING HANGER. HELEN SCHILPP, Eustis, Nebr. Filed Apr. 1, 1927. Serial No. 180,351. 1 Claim. (Cl. 223—62.)



An article of the class described comprising a supporting member having a horizontally disposed rod, a plurality of garment clamping members mounted on said rod, and a plurality of spacing sleeves arranged on the rod with one of the sleeves disposed between each of said clamping members whereby to maintain the same in spaced relation upon said rod.

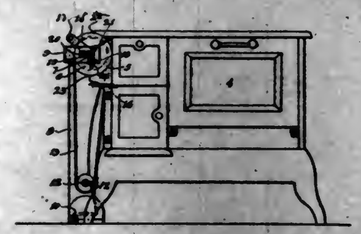
1,750,906. SLIP SOCKET. ERNEST J. SHAFFER, Tulsa, Okla. Filed Nov. 29, 1920. Serial No. 426,974. 3 Claims. (Cl. 294—102.)



1. A slip socket designed to operate within well tubing of a given diameter, the same comprising a barrel of substantially the maximum diameter that will operate within said tubing, said barrel having a downwardly convergent frusto-conical inner surface providing a "choke", means at the upper end of the barrel to permit the same to be lowered into a well, and a set of slips yieldingly sustained in contracted condition within the "choke" of the barrel,

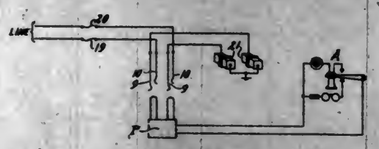
and having a taper corresponding substantially to that of the inner surface of the barrel, the upper portion of the barrel having a cylindrical inner surface to permit the

slips to recede into the same, and the outer surface of each slip being so shaped as to bear only adjacent its edges upon the frusto-conical surface of the barrel when the slips are in contracted condition.



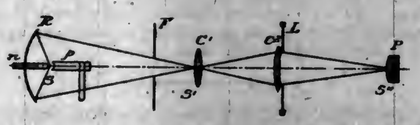
1,750,907. ELECTRICALLY-HEATED RADIATOR. JOHN F. SKOLD, Chicago, Ill. Filed Jan. 16, 1929. Serial No. 332,944. 4 Claims. (Cl. 219—38.)

2. In an electric radiator, a tubular housing extending into the interior thereof, comprising an end portion of reducing diameter, a wick on said end portion for absorbing liquid and retaining the same in close proximity to the outer surface of said housing, and a heating unit insertable in said housing comprising a heating element and a thermostatic switch adapted to be assembled in and removed from said housing without admitting air into said radiator.



1,750,908. DOMESTIC CONTINUOUS IRONING DEVICE. JOSEPH SNIDER, Vancouver, British Columbia, Canada. Filed Apr. 29, 1929, Serial No. 358,927, and in Canada Apr. 2, 1929. 2 Claims. (Cl. 68—9.)

1. In combination with a domestic cooking range, an external smooth-surfaced arcuate concavity integral with the fire-box side of said range and adapted to correspond with the surface of a cylindrical member extending horizontally across the end of said range, a cylindrical roller member adapted to be revolvable in said arcuate concavity, a framework positioned adjacent the end of said

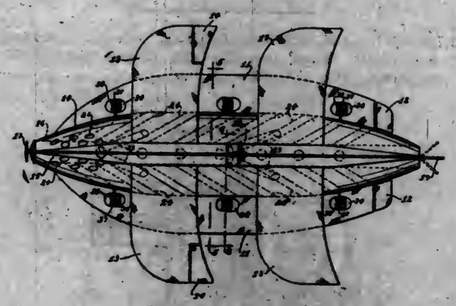


range and adapted to pivotally support said roller whereby the latter may be swung away from contact with said concavity or drawn into contact therewith, means for suitably revolving said roller.

1,750,909. PROTECTIVE DEVICE. WILLARD J. STANTON, Chicago, Ill., assignor, by mesne assignments, to American Electric Company, Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 9, 1928. Serial No. 268,470. 3 Claims. (Cl. 179—78.)

1. In a telephone system, a jack having tip and ring contacts, lightning arresters connected to said tip contacts, line conductors connected to said ring contacts, and a plug to which is connected talking instrumentalities, said plug upon insertion in said jack first making contact with said tip contacts to connect said instrumentalities to said arresters before connecting the same to said line conductors.

1,750,910. PROJECTING APPARATUS. SANDER STARK, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 14, 1925. Serial No. 15,448. 4 Claims. (Cl. 88—24.)



1. In a projection apparatus, the combination with a light source embodying a reflecting arc forming a convergent light pencil having a homogeneous portion, and a condenser arranged in the focal point thereof to magnify the homogeneous portion of the light pencil, of a second condenser so located with respect to the first as to receive the image of said homogeneous portion as projected by said first condenser, a lantern slide holder arranged closely adjacent to the plane of the second condenser, and a projector lens in which the image formed by the second condenser is imaged.

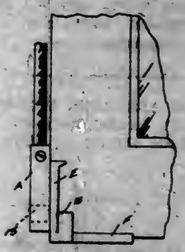
1,750,911. AIRCRAFT. JAMES TANTILLO, Glendale, Calif., assignor of one-half to Florence E. Gaines, Los Angeles, Calif. Filed Nov. 3, 1928. Serial No. 316,889. 5 Claims. (Cl. 244—18.)

1. In an aircraft, a substantially cylindrical body tapered at both ends, a tunnel extending axially through said

body, means for forcing air under pressure through said tunnel, longitudinally disposed stabilizing planes projecting laterally from the sides of said body, branch tubes leading from the tunnel outwardly and rearwardly and discharging at the sides of the body beneath the stabilizing

planes, wings projecting laterally from the sides of the body above the lateral stabilizers, and branch tubes leading from the tunnel upwardly and outwardly and discharging at the sides of the body beneath the forward portions of said wings.

1,750,912. CRAYON AND ERASER HOLDER. BENJAMIN TOWNE, New York, N. Y. Filed Mar. 5, 1927. Serial No. 173,140. 1 Claim. (Cl. 120—13.)



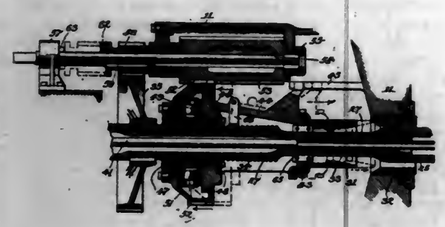
A chalk holder comprising a tubular member of uniform diameter and open at both ends, the said member being formed with a longitudinally extending slot having a branch at one end extending in the direction of the circumference of the member, which member is adapted to have a chalk frictionally fitted into one end thereof and movable therein to project at one end beyond that end of the member remote from the branch of the slot, a stem of cylindrical form fitted slidably and rotatably in the said tubular member and adapted to engage at its inner end against the inner end of the chalk and projecting at its other end beyond the other end of the tubular member, and a stud upon the stem movable in said slot and permitting of adjustment of the stem in the tubular member, when the stud is in the straight portion of the slot, to effect corresponding adjustment of the chalk to project at its first mentioned end beyond the said tubular member, the said stud being engageable in the branch of the slot whereby to hold the said stem against sliding movement in the slot and permit retractive movement of the chalk into the said tubular member.

1,750,913. GLASS CUTTER. ADOLF VOLLM, Somerville, Mass. Filed Feb. 18, 1929. Serial No. 341,007. 3 Claims. (Cl. 49—52.)

1. An improvement in a glass cutter of the type comprising a shank of rigid construction throughout its length adapted to be held in substantially vertical position between the user's thumb and second finger having glass scoring means at its lower end, a flattened fore-finger engaging portion near said lower end disposed in a plane transverse to the line on which the cutter is moved when scoring the glass, and a notch to receive an edge of the glass for breaking the latter along a line scored by said scoring means, the notch and scoring means being in fixed invariable relation; said improvement consisting in forming said notch in an edge of said fore-finger-engaging portion, whereby it assists in obtaining an anti-slipping grip thereon and opens laterally for engagement with the glass after the scoring operation by simply shifting the shank laterally and downwardly without the necessity of turning said shank with the fingers.

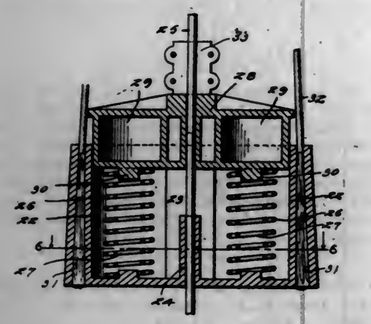
1,750,914. PIVOTED WINDOW. HENRY F. A. WACHTER, Peru, Ill. Filed Sept. 8, 1928. Serial No. 304,791. 1 Claim. (Cl. 20—43.)

A cord connecting fixture for sliding and swinging sash, comprising an angular metal body to fit the corner of the sash and having a horizontal arm to extend under the bottom edge of the sash and a vertical arm to extend beside the side edge of the sash, and a pivot pin projecting from the vertical arm, the rear edge of the body being curved to permit the sash to swing on the pivot, and the front edge squared to prevent complete rotation of the sash.



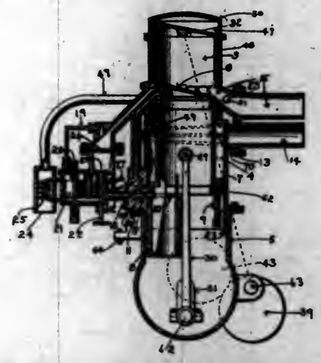
1,750,915. SPRING COVER. CHARLES B. WOODWORTH, Binghamton, N. Y. Filed Oct. 6, 1924. Serial No. 741,808. 2 Claims. (Cl. 267—37.)

1. A spring cover comprising an outer casing of impervious material and a pad made of absorbent material,



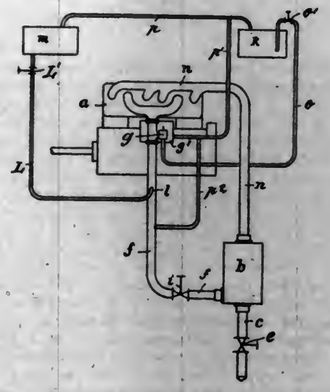
one longitudinal edge of the casing folding over the contiguous longitudinal edge of the pad and one end of the casing folding over and secured to the corresponding end of the pad, the other longitudinal edge of the pad and the other end of the pad terminating short of the corresponding edge and end of the casing and being unsecured thereto with the end of the casing prolonged beyond the end of the casing prolonged beyond the end of the pad and foldable on itself to fit springs of different lengths, securing means extending through the contiguous longitudinal and end folds for securing the outer casing and pad together, said securing means along the longitudinal edge terminating in lacing hooks, a cooperating row of lacing hooks mounted on the other longitudinal side of the outer casing and spaced from the edge thereof and lacing means engaging the rows of hooks for drawing the opposing edges of the cover together in overlapping position.

1,750,916. SCREW PRESS. FREDERICK V. ANDERSON and RAYMOND T. ANDERSON, Cleveland, Ohio, assignors to The V. D. Anderson Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 17, 1928. Serial No. 326,605. 8 Claims. (Cl. 100—48.)



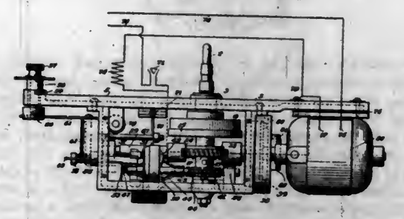
1. In a screw press, the combination of a press housing; a rotary shaft mounted therein; screw pressing means removably mounted on said shaft; a hollow extension threaded to the end of said shaft and serving to lock said screw pressing means thereon; an annular choke encircling said extension; and means for passing cooling fluid through said extension.

1,750,917. SHOCK ABSORBER FOR OIL-WELL PUMP RODS. FRANK C. BAKER, McCamey, Tex. Filed Oct. 5, 1928. Serial No. 310,633. 1 Claim. (Cl. 267—70.)



A shock absorber for an oil well pump rod comprising a lubricant containing shell having its upper end open and having an upwardly extending hollow boss on its bottom wall for maintaining the lubricant at a predetermined level and for receiving a polish rod therethrough, a follower block in the upper open end of the shell and having a downwardly extending hollow boss on its lower end, concentric coil springs disposed within the shell, the inner of the springs receiving the said bosses in its opposite ends, the shell having longitudinal tapering bores in its opposite sides, and a cable in the form of a bail disposed above the shell and having its ends wedgingly secured within said longitudinal tapered bores.

1,750,918. COMBUSTION ENGINE. JOHN BARLETTA, Galt, Calif. Filed Aug. 27, 1923. Serial No. 659,605. 9 Claims. (Cl. 123—67.)



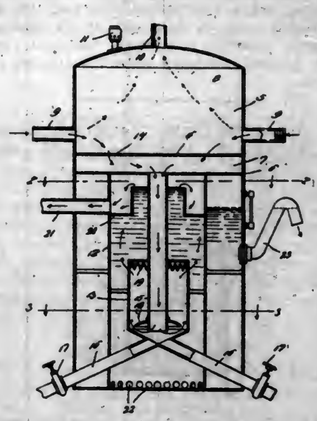
1. A combustion engine having a cylinder with a large bore and a small bore, an air tight crankcase having means to admit air into the crankcase and enclosing the opposite end of the cylinders, a piston having a large diameter and a small diameter fitted in said cylinders, a projecting slide with one port opening extending from a portion of the large piston, a spring to maintain the projecting slide in close contact with the cylinder, arranged by the reciprocating of the piston to open and close the passageways one at a time, opening the upper passageway first, leading from the large to the small cylinder, then the lower one second, leading from large to small cylinder, through the carburetor, and means to regulate the amount of air passing through each passageway.

1,750,919. SUPERCHARGING METHOD FOR INTERNAL-COMBUSTION ENGINES. GABRIEL BECKER, Charlottenburg, Germany. Filed Aug. 28, 1928, Serial No. 302,577, and in Germany June 15, 1928. 4 Claims. (Cl. 123—119.)

1. The method of supercharging internal combustion engines which comprises returning a portion of the exhaust gases from the engine to the combustion chamber under pressure derived directly from the exhaust pressure, and introducing fuel and oxygen under pressure into the returning exhaust gases.

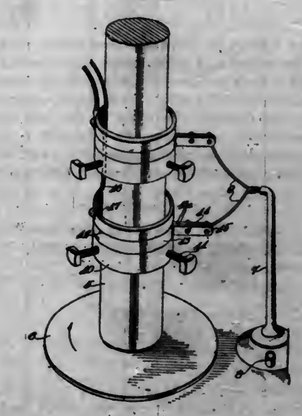
1,750,920. MOTOR. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Original application filed Sept. 29, 1921, Serial No. 504,097. Divided and this application filed Aug. 2, 1926. Serial No. 126,404. 18 Claims. (Cl. 172—36.)

1. The combination with an electric motor having a driving shaft of a driven shaft, means actuable when the torque of said driven shaft rises beyond a predetermined point to decrease the power transmitted to said driven shaft, said means permitting said motor to rotate said driven shaft when the torque on said driven shaft falls below said predetermined point, an additional shaft and a resilient connection between said driven shaft and said additional shaft for compensating for variations of speed of said driven shaft whereby said additional shaft is rotated at a uniform speed by said motor.



1,750,921. ADJUSTABLE DOOR JAMB. WILLIAM P. BRIGHT, Bethlehem, Pa. Filed Nov. 24, 1928. Serial No. 321,667. 1 Claim. (Cl. 20—12.)

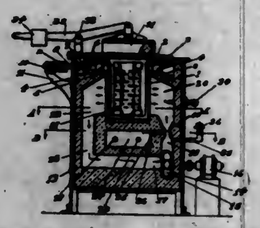
A door frame having at the striking side, a stile provided with a groove, a jamb slidably seated in said groove, screws arranged at intervals along said jamb extending from the front, depth-wise through said jamb and threadedly engaging the bottom wall of said groove, stops on said screws behind said jamb for pushing the latter outward when said screws are backed, and springs on certain of said screws between said jamb and the bottom wall of said groove for taking up looseness between said jamb and the heads and stops of said screws.



1,750,922. SEPARATING DEVICE. GEORGE G. CHEAKAS and JOHN HENRY MARTIN, Wichita Falls, Tex., assignors of one-third to R. R. Fisk, Wichita Falls, Tex. Filed Apr. 17, 1928. Serial No. 270,714. 1 Claim. (Cl. 210—61.)

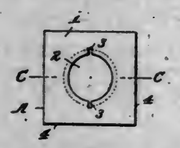
In a separator of the class described, a tank, a horizontal partition therein dividing the same into upper and lower chambers, a secondary tank arranged within the lower chamber, a trap chamber arranged within the intermediate portion of the secondary chamber and being spaced from the wall thereof, a pipe extending downwardly through the secondary tank, the lower end of said pipe extending into the trap chamber, the upper end of said pipe having communication with the upper chamber, oil inlet pipes having communication with the upper chamber, sediment drain pipes extending downwardly in diverging relation from the bottom of the trap chamber through the secondary

and main tanks, the upper portion of the trap chamber being provided with a discharge opening to permit oil and water to flow into the secondary tank, a trough arranged within the upper portion of the secondary tank and surrounding said vertical pipe for receiving the oil only that collects in the upper portion of the secondary tank, an oil take off pipe leading from the trough through the tanks, the lower end of the secondary tank having water discharge passages, and a water take off pipe extending from the main tank.



1,750,923. TREE-LIGHTING FIXTURE. MICHAEL J. COURTNEY, Chicago, Ill. Filed Feb. 24, 1927. Serial No. 170,685. 1 Claim. (Cl. 173—324.)

A device for supplying electric current to the lighting system of a Christmas tree having a rotatable supporting base, comprising a standard, current supply wires extending from the end of said standard, a pair of separate rings



adapted to enclose the tree trunk and having clamping means adapted to locate the same at spaced points on the tree trunk, the latter serving to insulate the rings from one another, each of said rings having an exterior surface groove, a strap rotatably carried in each of said grooves and having laterally extending free ends, means including a binding post for maintaining contiguous the free ends of each strap, said current carrying wires being connected to said respective binding posts, means carried by each ring for the attachment of one line of the Christmas tree lighting system or circuit, said standard serving through said current carrying wires to hold said straps against rotation but being movable to various positions circumferentially of, toward and away from the tree as occasion may require.

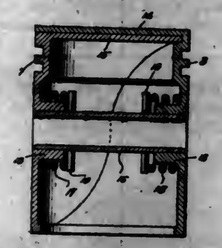
1,750,924. HEAT-TREATING MACHINE. WILLIAM A. DARRAH, Chicago, Ill. Filed June 4, 1927. Serial No. 196,584. 12 Claims. (Cl. 263—2.)

10. In a heating machine a gas moving mechanism having a discharge portion of varying cross section to form a venturi, a combustion chamber and a connection between said combustion chamber and the reduced pressure portion of said venturi, and an exhaust outlet connected to the discharge portion of said gas moving mechanism.

1,750,925. LOCK NUT. PAUL W. DIETER, New York, N. Y. Filed Feb. 1, 1927. Serial No. 165,133. 1 Claim. (Cl. 151—21.)

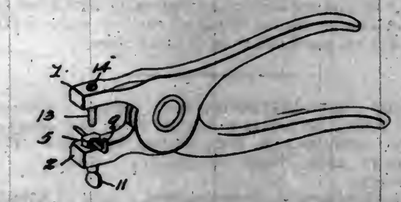
A lock nut having a threaded bore therethrough, said nut further having a pair of diametrically opposite grooves extending the length of the nut, said grooves opening into said bore and being of a width and depth approximating the depth of the threads, the sides of the nut being compressed transversely to the grooves to make a portion at least of the bore slightly elliptical in form and the threads of said portion substantially continuous circumferentially.

1,750,926. LOCK NUT. PAUL W. DIETER, New York, N. Y. Filed Apr. 19, 1927. Serial No. 184,934. 1 Claim. (Cl. 151—21.)



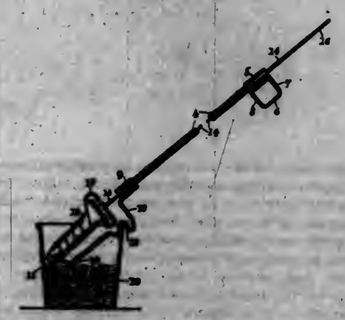
A nut provided with a threaded bore and diametrically opposed grooves opening through the outer end of said nut and into said bore, the outer end of said nut at one side only of said grooves being compressed axially on a line with said grooves to provide a definitely stepped offset relation between the portions of the threads at opposite sides of the nut.

1,750,927. FIRE-HOSE CONNECTER HEAD. CONRAD J. DIEM, Baltimore, Md., assignor to American Brass & Fire Equipment Corporation, Baltimore, Md., a Corporation of Maryland. Filed Feb. 16, 1928. Serial No. 254,780. 1 Claim. (Cl. 137—13.)



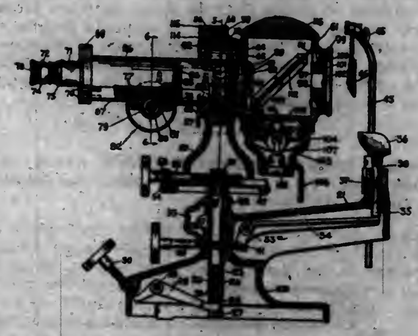
A connecter head of the character described comprising a hollow casing having a cylindrical valve chamber and having three ports, means whereby one port may be connected with a fire plug outlet, means whereby another port may be connected with a pumper suction line, and a Y extension having a passage connected with the third port to communicate with said chamber, a passage adapted for connection with a distributing hose line, and a passage adapted for connection with a pressure line from a pumper, a flap valve in said extension automatically operable by water pressure for closing the passage from the chamber into the extension or the passage from the pressure line, and a rotary valve in said chamber for closing any one of said three ports as desired leaving the other two in communication.

1,750,928. EXPANDING PISTON. GEORGE W. GALLOWAY, Santa Ana, Calif. Filed Apr. 25, 1929. Serial No. 357,994. 3 Claims. (Cl. 74—108.)



1. A piston composed of a pair of complemental sections, each of said sections comprising a head portion and a skirt portion having their adjacent edges disposed in abutting relation, said adjacent edges being irregular in outline, a bearing formed on each of said skirt sections and adapted for alignment with each other, a wrist pin extending through the aligned bearings, a coiled spring on each of said bearings and keyed on the wrist pin against which one end of each spring is adapted to impinge.

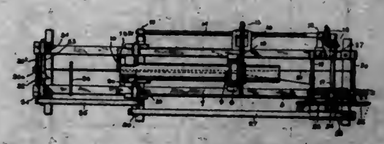
1,750,929. GAUGE FOR PUNCHES. LESTER GRISWOLD, Colorado Springs, Colo. Filed Jan. 14, 1928, Serial No. 246,769. Renewed Nov. 26, 1929. 1 Claim. (Cl. 164—120.)



In a hand operated implement of the pivot type, the combination with a jaw having a rigid punch and a complementary jaw having a threaded socket, of a nut threaded in the socket and fashioned with an anvil-head, an L-shaped, transversely arranged gauge adjustable in an opening in the anvil and adapted to be disposed with its shorter arm in a plane parallel with the punch, and a thumb screw in the nut for retaining the gauge in adjusted position.

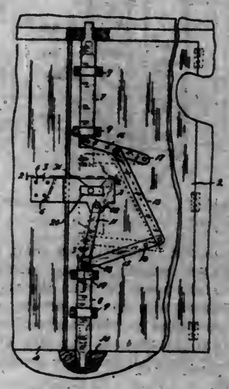
1,750,930. FLOOR-MOP HANDLE. OLE J. HOHN, Bellingham, Wash. Filed June 4, 1929. Serial No. 368,385. 2 Claims. (Cl. 15—120.)

1. A mop handle consisting of a hollow staff, a mop rod mounted for revolution and reciprocation in said staff projected from both ends thereof, a crank fastened on the upper end of said mop rod, an eye fastened on the lower end of said mop rod, a shank fastened on the lower end of said staff offset therefrom, an eye fastened on the lower end of said shank disposed to cooperate with said rod eye to hold a mop cloth, and a hand hold fastened on the upper end of said staff having two spaced frame members normal to said staff one of which is adjacent said upper end of the staff.



1,750,931. OPHTHALMOMETER. GUSTAV A. H. KELLNER, deceased, Rochester, N. Y., by Carl F. Lomb, executor, Rochester, N. Y., and WILBUR B. RAYTON, Rochester, N. Y., assignors to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed July 7, 1927. Serial No. 204,089. 19 Claims. (Cl. 88—20.)

4. In an ophthalmometer the combination of an ocular, a collective lens, target means having a light-transmitting portion in alignment with the axis of said lens and reflecting means on a surface of said lens.

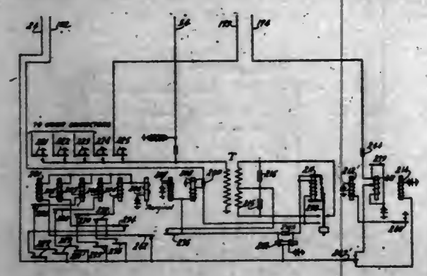


11. In an ophthalmometer, a target unit comprising a plano-convex lens, and a target plate adjacent the plano surface of said lens, said plate carrying target indicia.

1,750,932. TURNING AND HEADING MACHINE. WILLIAM KIECHNER and FRANK J. SHELDON, Sparta, Wis. Filed July 29, 1927. Serial No. 209,304. 2 Claims. (Cl. 142—1.)

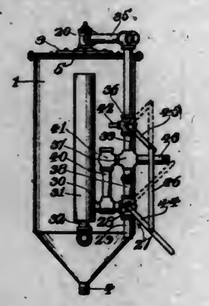
1. A turning machine including a frame, a carriage movable therein, work supporting and rotating means mounted on said carriage, a main cutter mounted on said frame, and a cutter for shaping the end of the work, the cutters being so positioned and the work supporting and rotating means being so arranged that at least a portion of one end of the work shall be exposed and so that the work shall be rotated and carried by the carriage past the main cutter to shape the length of the work while the exposed portion of the end of the work is brought up against the end shaping cutter to be shaped thereby at the end of the travel of the work.

1,750,933. DOOR-LATCH MECHANISM. FRANK KOONS, Sr., Detroit, Mich. Filed May 20, 1929. Serial No. 364,348. 3 Claims. (Cl. 292—36.)



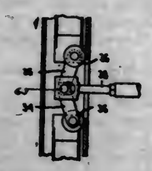
1. In a latch mechanism, the combination with a bolt pivotally mounted upon a door to swing across a vertical edge thereof, of a pair of bolts mounted upon said door to slide respectively across its upper and lower edges, a swinging link connecting one of said sliding bolts to said pivotal bolt, adapting the bolts so connected for actuation in common, and means connecting the two sliding bolts for reverse actuation in common independently of said link.

1,750,934. TELEPHONE SYSTEM. CLARENCE E. LOMAX, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Original application filed Dec. 6, 1922, Serial No. 605,149. Divided and this application filed Oct. 20, 1927. Serial No. 227,436. 5 Claims. (Cl. 179—16.)



1. In a telephone system, groups of connectors, a transformer having a primary winding and a secondary winding, a start conductor, a source of current, means for connecting said current source to said start conductor, means

responsive thereto for connecting said current source intermittently to said primary winding of the transformer for inducing alternating current in the secondary winding,



means operated responsive to the connection of said current source to said start conductor for distributing said induced current to each connector group in sequence.

1,750,935. OIL FILTER. OTTO A. MAUNULA and WILLIAM R. ROWLAND, Astoria, Oreg., assignors to Diesel Filter Co., Astoria, Oreg. Filed Feb. 19, 1929. Serial No. 341,093. 13 Claims. (Cl. 210—183.)

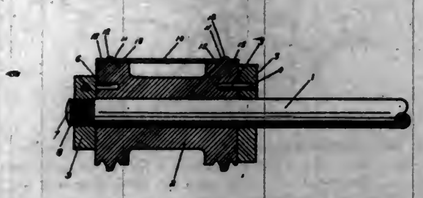
1. A filtering device comprising, a shell, a pair of concentrically arranged, spaced screens within the shell, a filtering medium interposed between the screens and having a portion thereof adjacent one screen of greater density than the remaining portion thereof, and means for conducting oil into the shell at one side of said filtering medium and out of the shell from the opposite side of said filtering medium.

1,750,936. BRAKE MECHANISM FOR MOTOR VEHICLES. LOUIS P. MOORES, Cleveland, Ohio, assignor to The Columbia Axle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 17, 1924. Serial No. 756,429. 11 Claims. (Cl. 188—78.)

1. In mechanism of the character described, the combination of a wheel, a brake drum secured thereto, brake shoes normally spaced from engagement with said drum and movable outwardly into braking engagement with said drum, actuating means movable at right angles to the plane of said wheel for moving said shoes into braking engagement, and anti-friction means maintaining said shoes against lateral displacement during such action.

1,750,937. SHAMPOO SHIELD. MONA MORGAN, New York, N. Y. Filed July 5, 1928. Serial No. 290,596. 4 Claims. (Cl. 4—15.9.)

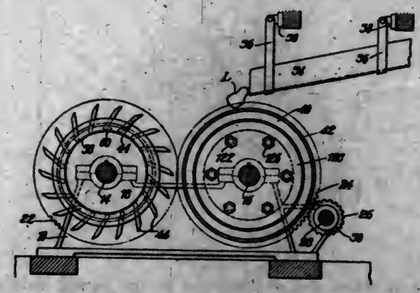
1. A shampoo shield comprising an elongated one-piece resilient form-retaining member having its central portion longitudinally curved to fit the user's forehead from temple to temple, said member being bent to provide face-gripping portions extending downwardly from the ends of said curved portion, said member being provided with relatively long and narrow water-conducting means whose length follows the length of said member from end to end, said water-conducting means being carried solely by said member.



1,750,938. MANUFACTURE OF DEXTROSE. WILLIAM B. NEWKIRK, Western Springs, Ill., assignor to International Patents Development Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 6, 1924, Serial No. 730,374. Renewed June 20, 1929. 14 Claims. (Cl. 127—58.)

1. Method of making crystalline dextrose hydrate which comprises incompletely melting the solid hydrate dextrose having a purity above ninety percent so as to leave some of the substance in the solid phase, and inducing crystallization of hydrate dextrose by supersaturation without the addition of seed crystals and with the magma in motion.

1,750,939. METHOD OF MAKING DEXTROSE. WILLIAM B. NEWKIRK, Riverside, Ill., assignor to International Patents Development Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 17, 1925. Serial No. 3,105. 22 Claims. (Cl. 127—58.)

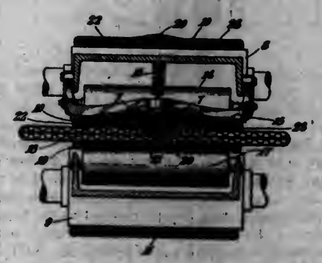


1. Method of making dextrose which comprises incompletely melting the impure solid or semi-solid dextrose of substantially one crystal type and bringing about supersaturation of the solution so formed to induce crystallization of the dextrose in solution in the form of crystals of the type of the unmelted dextrose.

1,750,940. FILM SPROCKET. FREEMAN H. OWENS, New York, N. Y. Filed July 13, 1927. Serial No. 205,443. 5 Claims. (Cl. 74—28.)

1. A film sprocket having teeth, shoulders adjacent said teeth, and recesses cut in said shoulders on each side of said teeth.

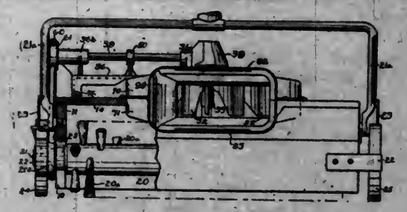
1,750,941. COAL BREAKER. FRANK PARDEE, Hazleton, Pa. Filed July 7, 1925. Serial No. 41,907. 5 Claims. (Cl. 83—52.)



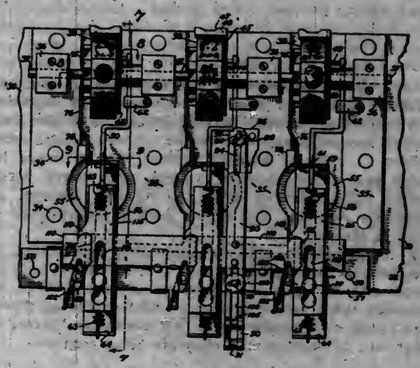
1. A coal breaker comprising a pair of co-acting rolls, one roll consisting of a member having a multiplicity of longitudinally extending seats with bar like cutter-blades detachably secured therein, the other roll consisting of a multiplicity of members arranged alongside one another with individual disc-like cutter rings clamped between them.

1,750,942. PROCESS FOR VAT COLOR DYEING. FRANK L. REMLEIN, New York, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 26, 1928. Serial No. 288,535. 2 Claims. (Cl. 8—5.)

1. In the process of vat color dyeing, the steps which comprise padding the color in a solution of reduced dyestuff and developing the color with steam produced by evaporation of the water remaining in the goods after padding.



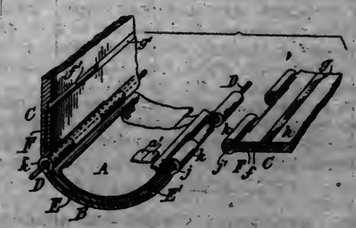
1,750,943. TAPING MACHINE FOR BOX BLANKS. LOUIS H. SCHRODER, Woodhaven, N. Y., assignor to Progressive Corrugated Paper Machinery Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 17, 1929. Serial No. 355,753. 2 Claims. (Cl. 93—56.)



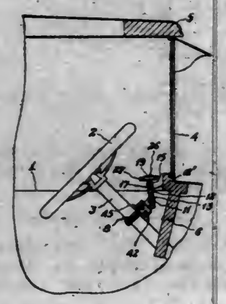
2. A box blank taping machine having means for advancing a blank to be taped, means for feeding a strip of tape to the path of travel of the blank, and a pressure applying member positioned to bear against the taped side of the blank, said member having a bluntly beveled raised portion positioned to engage the tape.

1,750,944. CARPET SWEEPER. WILLIAM E. SHEBONDY, Cleveland, Ohio. Filed Sept. 28, 1925. Serial No. 58,066. 11 Claims. (Cl. 15—8.)

1. In a sweeper of the character described, the combination of a carpet sweeper apparatus including a traction driven horizontal brush shaft, a suction mechanism surmounting the sweeper apparatus and in communication with the interior thereof and including a fan on a vertical shaft driven by a horizontal shaft through interconnecting gearing and an elastic belt drive connecting the brush shaft and horizontal shaft.



1,750,945. TARGET FOR AMUSEMENT DEVICES. WALTER A. TRATSCH, Chicago, Ill. Filed Feb. 23, 1928. Serial No. 256,352. 14 Claims. (Cl. 273—102.)



1. In an amusement device of the character described the combination of means for firing balls; a target provided with a latch toward which said balls may be fired; rotatable means for visibly indicating when the target is hit; and a slide released by said latch for actuating the indicating means.

1,750,946. LOOSE-LEAF BOOK. CLARENCE D. TRUSSELL, Poughkeepsie, N. Y., assignor to Trussell Manufacturing Company, Poughkeepsie, N. Y., a Corporation of New York. Filed Oct. 12, 1927. Serial No. 225,762. 8 Claims. (Cl. 129—24.)

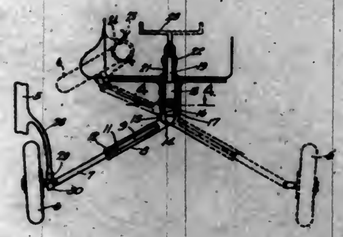
1. In a cover for a loose-leaf book of the type having a back and sides hinged together, the cover back, separate hinge plates embedded in the back, each formed with hinge eyes located respectively at the opposite edges of the back, and means for uniting such separate hinge plates so that they serve as a single plate.

1,750,947. SIGNAL-LIGHT REFLECTOR AND MOUNTING THEREFOR. JOHN VONS, Cleveland, Ohio. Filed Dec. 31, 1927. Serial No. 243,830. 5 Claims. (Cl. 45—97.)

1. A signal-light reflector and mounting therefor comprising a bracket for mounting on a support, a supporting arm adjustably secured to said bracket, a double-leafed support secured to said arm and having an extended curved portion, a reflector element formed with a recess into which said curved portion extends, said curved portion having rolling contact with the reflector element, and means for retaining said curved portion and reflector element in contact.

2. A signal-light reflector comprising a reflecting surface member, a backing member secured thereto and provided with an aperture, a bearing element between said members and a second bearing element extending through said recess and engaging said first-mentioned bearing element, one of said bearing elements being resilient.

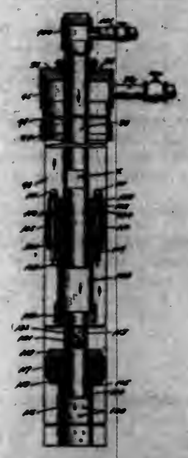
1,750,948. PROCESS OF MAKING NITRATED SUGAR EXPLOSIVES. PHILIP G. WRIGHTSMAN, Chester, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 17, 1927. Serial No. 220,282. 7 Claims. (Cl. 52—13.)



1. A process of manufacturing an explosive containing a nitrated sugar, comprising forming a suspension of over 25% sugar in a polyhydric alcohol mixture, said mixture having a viscosity less than glycerin and nitrating the mixture.

1,750,949. NITRATED CARBOHYDRATE EXPLOSIVE AND PROCESS OF MANUFACTURE. PHILIP G. WRIGHTSMAN, Chester, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 17, 1928. Serial No. 300,400. 16 Claims. (Cl. 52—13.)

1. The process of producing explosives which comprises nitrating mixtures of carbohydrates and polyhydroxy alcohols having from four to six carbon atoms and liquid polyhydroxy alcohols.

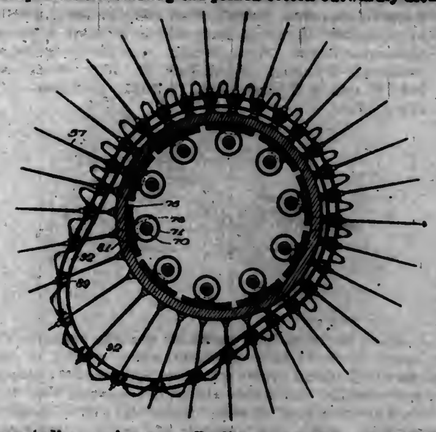


1,750,950. EMERGENCY WHEEL FOR AEROPLANES. LEWIS H. BALDWIN, Oklahoma City, Okla. Filed Apr. 29, 1929. Serial No. 359,077. 5 Claims. (Cl. 244—2.)

1. A device, as described, embodying, a pivoting, telescoping axle operatively attached beneath the cowl of an aeroplane and adapted to be folded against the side of and be suspended from said cowl, means within the cockpit for releasing said axle from said suspension, means within said cockpit for turning said axle to either side of said aeroplane, catch means for attaching the free end of said

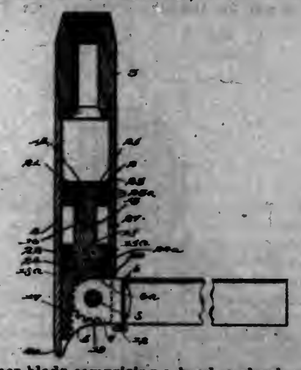
axle at either end of its throw to the regular running gear, and a wheel operatively mounted upon said axle for emergency use.

1,750,951. APPARATUS FOR FLOWING OIL WELLS. TITUS ANDREW BEECHER, Chicago, Ill. Filed Apr. 8, 1927. Serial No. 182,021. 4 Claims. (Cl. 103—234.)



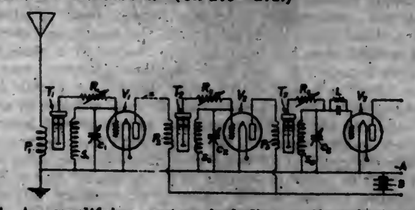
1. In a liquid elevating apparatus, the combination of a flow pipe and a fluid pressure pipe, a packer for supporting one of said pipes within the bore of a well and dividing the same into separate liquid and fluid pressure compartments, said liquid compartment having connected thereto the flow pipe, means included within the packer for positioning the same within the well bore and dividing the other of said compartments into separate chambers, the latter receiving therein oil, and a fluid pressure operated valve for controlling the entrance of fluid pressure from the pressure compartment into one of said chambers for removing the liquid upwardly therefrom through the flow pipe.

1,750,952. COTTON PICKER. HIRAM NEWTON BERRY, Greenville, Miss., assignor, by direct and mesne assignments, to Cotton Harvester Corporation of America, Greenville, Miss., a Corporation of Delaware. Filed Apr. 23, 1927. Serial No. 186,148. 12 Claims. (Cl. 56—44.)



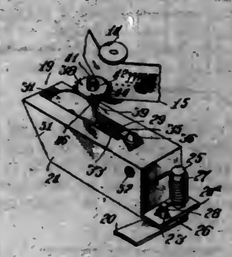
1. In a cotton picker including a picking cylinder having peripherally outstanding picking spindles and stripper bars

rotatable with the cylinder and operating lengthwise of the spindles for shifting the picked cotton outwardly along



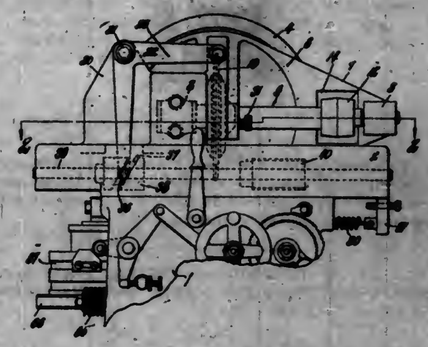
the spindles; and means affording a complete covering for the spaces between the stripper bars for the purpose described.

1,750,953. ROTARY REAMER. ALEXANDER BOYNTON, San Antonio, Tex. Filed Apr. 17, 1925. Serial No. 23,879. 5 Claims. (Cl. 255—75.)



1. A reamer blade comprising a head, a shank extending from the head having a plurality of bearing surfaces of varying diameters defining shoulders, a plurality of roller cutters mounted upon the bearing surfaces of the shank, said cutters having annular recesses confronting each other at the shoulders, packing means situated in said recesses and abutting the shoulders, and means for holding the roller cutters in place upon the shank.

1,750,954. SIGNALING SYSTEM. WILLIAM LESLIE EDISON, Wilmington, Del., assignor to The W. L. Edison Manufacturing Corporation, Wilmington, Del., a Corporation of Delaware. Filed Sept. 11, 1928. Serial No. 305,272. 10 Claims. (Cl. 179—171.)

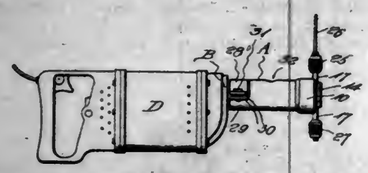


1. An amplifying system including a thermionic tube having cathode, grid and plate elements, a grid circuit joining the grid and cathode of the tube, means for impressing signals on the grid circuit, and a cell including a body of liquid and an electrode contacting therewith, said electrode being connected with the grid.

1,750,955. INKING DEVICE. EMIL O. ECKLAND and WALTER H. YOUNG, Chicago, Ill. Filed Aug. 12, 1925. Serial No. 49,748. 19 Claims. (Cl. 197—171.)

16. A device of the class described comprising a ribbon; a receptacle having a feeding wheel mounted thereon associated with said ribbon and mounted to move toward and away from the same, distributor means mounted on said receptacle to contact with said ribbon and transfer material from said feeding wheel to said ribbon; and a spring yieldingly pressing said receptacle toward said ribbon to effect yielding contact between said ribbon and said transfer means.

1,750,956. MACHINE FOR GRINDING CHASERS. RALPH E. FLANDERS, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a Corporation of Vermont. Filed June 15, 1928. Serial No. 645,515. Renewed June 7, 1929. 3 Claims. (Cl. 51—84.)

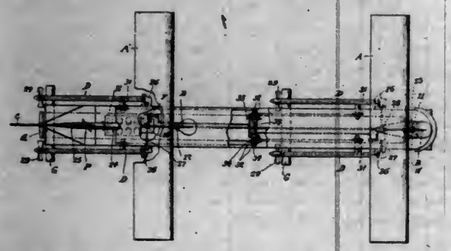


1. In a machine of the class described comprising a grinding wheel, a carriage movable substantially parallel to the axis of rotation of said wheel, a chaser holder movable transversely of said carriage to effect relative traversing movement between the cutting face of said wheel and the chaser lengthwise of the threads thereof, means for reciprocating said holder, and means acting automatically between its traverses to move said carriage to cause successive traverses between the wheel and chaser to be effected on adjacent threads.

1,750,957. DRILL ATTACHMENT. CLARENCE D. FOWLER, Bar Harbor, Me. Filed June 7, 1928. Serial No. 283,716. 1 Claim. (Cl. 77—7.)

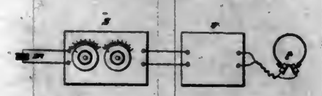
A drill attachment comprising a cylindrical head having an axial bore, a cap secured against one end of said

head and having a bearing opening alined with said bore, a drive shaft rotatably mounted in said bore and said opening and projecting from the other end of said head for engagement with a drill chuck, a second shaft transverse to said drive shaft, gearing connecting the two shafts, said head and cap being jointly recessed to receive



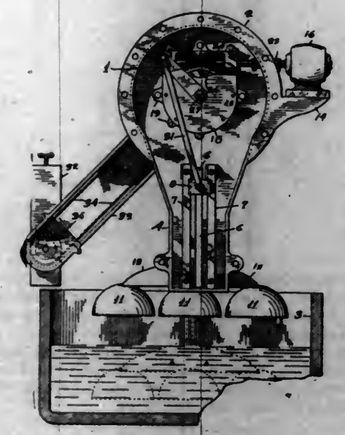
said gearing and to provide bearings for said second shaft, and a tubular member integral with said other end of said head, disposed around said drive shaft and projecting beyond the latter, the free end of said tubular member having means whereby it may be contracted around a portion of a drill body.

1,750,958. MAGNETIC LIQUID HEATER. ROBERT R. GOSHORN, Jasonville, Ind., assignor to The All-Ways-Hot Mfg. Co., Jasonville, Ind. Filed Mar. 24, 1928. Serial No. 264,502. 3 Claims. (Cl. 219—47.)



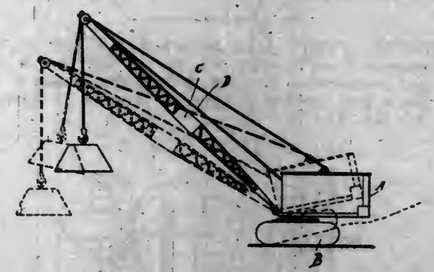
1. In a water heater, a tank, a transformer including a pipe coil as the secondary winding, a fuse in the primary circuit of the transformer, said fuse being in contact with a portion of the secondary winding.

1,750,959. HYDROPLANE VESSEL. SIMON LAKE, Milford, Conn. Filed Sept. 1, 1927. Serial No. 216,869. 14 Claims. (Cl. 114—66.5.)



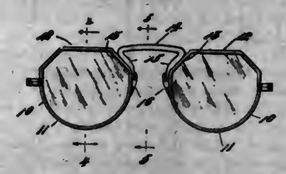
1. A motor boat comprising a hull, a hydroplane arm attached to said hull, a propeller shaft supported by said hydroplane arm, means for rotating said propeller shaft and means for depressing the propeller end of said hydroplane arm.

1,750,960. ELECTRICAL INSTRUMENT FOR DIAGNOSING AND ASSISTING DEFECTIVE HEARING. BERNHARD LANGENBECK, Leipzig, and HELMUT SELL, Berlin-Siemensstadt, Germany, assignors to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, a Corporation of Germany. Filed July 31, 1928, Serial No. 296,557, and in Germany Apr. 12, 1927. 5 Claims. (Cl. 174—177.)



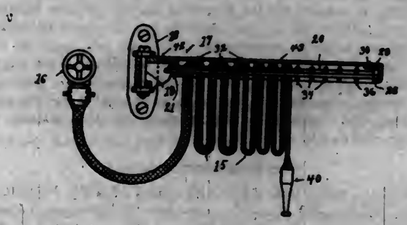
1. In an electrical instrument for acoustic purposes, one or more aperiodic filter members which consist of condensers in the main circuit and of resistances in the coupled branch circuits, and which are so dimensioned that they attenuate the sounds of lower frequency, and a receiving microphone, which, independently of the throttling transmission arrangement, selects the sounds of high frequency for reproduction.

1,750,961. WASHING MACHINE. FRANK J. LASAR, San Francisco, Calif., assignor to Champion Washer Company, Ltd., a Corporation of Nevada. Filed May 21, 1927. Serial No. 193,241. 1 Claim. (Cl. 74—14.)



A drive mechanism for washing machines comprising a mounting bracket formed from light, soft metal; an independently constructed gear box formed from relatively heavy, rigid metal mounted within the mounting bracket and secured upon the inner surface thereof at a plurality of spaced points to distribute the strain thereon over a large area; a power driven shaft journalled within the gear box and extending outwardly through one side of said box and the bracket for connection to a source of power; a worm secured upon said shaft; a second shaft journalled within the gear box; a worm gear mounted upon said second shaft in meshing relation with the worm; and means connected to the second shaft for actuating washing mechanism.

1,750,962. BOOM-ANGLE INDICATOR FOR CRANES. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed June 24, 1929. Serial No. 373,296. 9 Claims. (Cl. 116—114.)

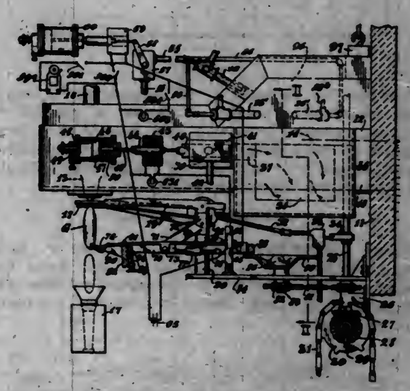


1. In combination, a boom hoist, means for adjusting the boom hoist, and indicator means carried by said boom hoist shiftable incident to adjustment of the hoist.

1,750,963. OPHTHALMIC MOUNTING. JOHN N. NELSON, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 23, 1927. Serial No. 235,273. 8 Claims. (Cl. 88—43.)

1. An ophthalmic mounting having a pair of eyewires with their upper edges extending in a line substantially parallel with the medial line thru the eyewires and having downwardly inclined inner edge portions each forming a sharply defined oblique angle with the upper edge and providing a surface in a single plane, a substantially rigid connecting bridge bar positioned to lie substantially parallel with said upper edge portion of the eyewires and having downwardly and inwardly inclined portions each providing a surface in a single plane and contacting with said plane surface of the inner edge portion for a substantial extent to provide an enlarged soldering surface along the correspondingly inclined portions of the eyewires.

1,750,964. HOSE RACK. CHARLES NUHRING, Cincinnati, Ohio. Filed Sept. 6, 1927. Serial No. 217,789. 2 Claims. (Cl. 248—28.5.)



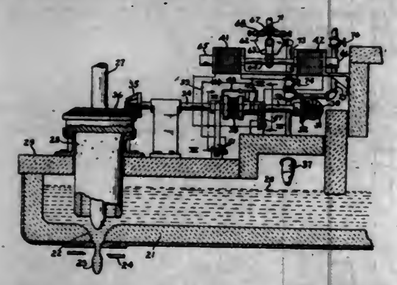
1. A hose rack comprising a supporting frame, a first guide rod stationarily mounted upon and along one side of said frame, a second guide rod pivotally attached to said frame at one end and detachably supported relative to said frame at its opposite end, a link pivotally attached to said frame and provided with a perforation to receive and detachably support the free end of said second guide rod, said second guide rod extending along the opposite side of said frame substantially parallel to said stationary guide rod, and a series of cross-bars attached by means of eyes to said stationary guide rod and adapted to be supported at their free ends upon said second guide rod and to support a series of loops of hose, and to release said cross-bars and hose loops when said second guide rod is disengaged from its supporting link, and a cross-bar having a hook at its free end to engage over said guide rod in position to engage said link and disengage the free end of said second guide rod from said link.

1,750,965. LAMP SOCKET. SAMUEL OSTERMAN, Bronx, N. Y. Filed Apr. 20, 1929. Serial No. 356,828. 6 Claims. (Cl. 173—358.)

1. A lamp socket, comprising a hollow cup-like member of insulating material adapted to be softened by heat, said cup-like member being provided internally with grooves, and a screw shell located within said cup-like member and provided with anchor points extending into said grooves, said screw shell being further provided with a slot for enabling said screw shell to be sprang into said cup-like member.

1,750,966. AUTOMATIC TEMPERATURE CONTROL FOR GLASS. JOHN F. RULE, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 7, 1926. Serial No. 114,042. 65 Claims. (Cl. 49—55.)

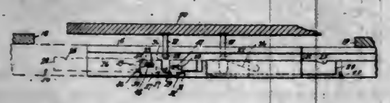
15. A glass feeder comprising in combination, means for flowing and suspending charges of molten glass, means for severing the charges periodically, individual mechanisms for applying cooling and heating mediums to the molten glass prior to its suspension in charge form, a control bar pivoted to the severing means, a portion of said control bar movable into and out of the path of travel of severed charges in synchronism with movements of the charge severing means, said control bar being adapted for rocking upon its pivot under influence of sus-



pended charges of abnormal length, and means whereby movement of the control bar will cause application of the heating or cooling medium to the glass prior to its formation into charges and thereby control the length of succeeding charges.

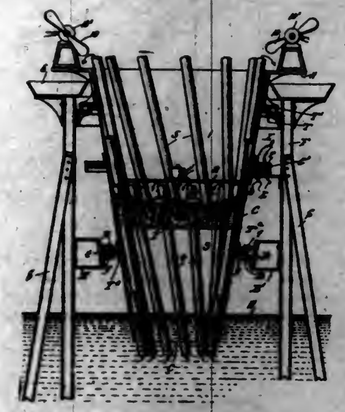
24. The method of maintaining uniformity in the volume of gathers of glass produced by an automatic glass feeder, which consists in causing a gather of glass as it issues from the feeder to regulate the amount of glass in a succeeding gather in response to a departure of the issuing gather from a predetermined normal volume.

42. The combination of a container for molten glass, means for causing a regulated discharge of glass therefrom, a temperature controlling device in the path of and actuated by the issuing glass, and means controlled by said device for automatically regulating the temperature of the glass in the container.



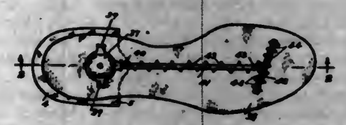
46. Apparatus for delivering charges of molten glass comprising a container from which the glass issues, means for separating the charges from the supply body of glass in the container, means for directing a flow of temperature regulating fluid, and automatic means controlled by the condition of the glass for regulating the flow of said fluid, said means comprising a mechanical element contacting with the glass before said separation and moved thereby to a position determined by the condition of the glass.

1,750,967. MEANS FOR AUTOMATICALLY CONTROLLING THE TEMPERATURE OF MOLTEN GLASS. JOHN F. RULE, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 12, 1927, Serial No. 183,067. Renewed Sept. 8, 1928. 20 Claims. (Cl. 49—55.)



1. Means for controlling the temperature of molten glass, comprising a mechanical element in contact with the glass, means for moving said element, and means governed by the resistance of the glass to the movement of said element for controlling the application to the glass of a temperature regulating medium.

1,750,968. EXTENSION TABLE. WALTER P. SAUER, Forest Hills, N. Y., assignor to Theodor Sauer Company, New York, N. Y., a Corporation of New York. Filed Mar. 23, 1928. Serial No. 264,036. 7 Claims. (Cl. 45—113.)

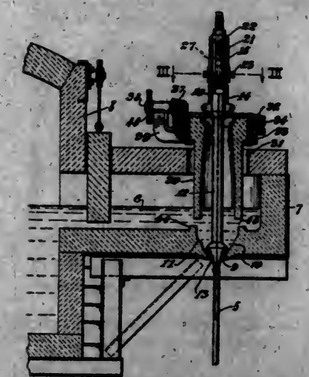


5. In an extensible table, a stationary slide, a movable slide in operative engagement therewith, a leaf secured to the movable slide, a table top normally overlying the leaf, means on the table top to maintain same at a predetermined height while the leaf is being fully extended, a set of plates in sliding relation to each other mounted on the fixed slide and provided with cutouts normally out of alinement with each other, means on the movable slide to bring the said cutouts into alinement at a predetermined point of the outward travel of the said slide, and means on the movable slide to permit the table top to be lowered when the said movable slide is partially retracted.

1,750,969. PUMP. ISAAC SCHAFRAN, New York, N. Y., assignor of one-fourth to Jack Snarck, New York, N. Y., and one-fourth to Joseph F. O'Brien, Englewood, N. J. Filed Sept. 21, 1927. Serial No. 220,875. 8 Claims. (Cl. 103—5.)

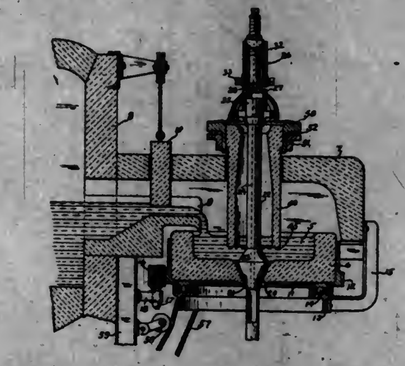
1. A pump embodying a casing supported for rotation and having an open end dipping within a body of liquid, and means for applying primary power to the periphery of the casing for rotating said casing to elevate the water therein applied to the periphery of the casing, said power means comprising an air propeller mounted on the outer wall of said casing, and means for rotating said propeller.

1,750,970. SHOE-VENTILATING DEVICE. RUDOLPH H. SCHWALM, Millvale, Pa., assignor of one-half to Laverne C. Knirnschild, Millvale, Pa. Filed July 31, 1929. Serial No. 382,372. 7 Claims. (Cl. 36—2.)



1. In a ventilating and cooling device for shoes, a shoe having a sole and an interior chamber, a shoe heel having a chamber formed therein, a bellows having a rigid bottom, and upper plate, a spring mounted on the bottom plate adapted to normally hold the bellows in extended position, a hinged piston mounted on the bottom bellows plate, a cylindrical piston chamber in the heel, in which the piston slidably reciprocates, a fresh air duct in the heel, an inlet valve mounted in the bottom bellows plate, an outlet valve mounted in the top plate of the bellows, and means connected to the said outlet valve for conveying and distributing the air pumped by the bellows to the interior cavity of the shoe.

1,750,971. METHOD AND APPARATUS FOR PRODUCING TUBULAR GLASS. LEONARD D. SOUBIER, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 16, 1926. Serial No. 141,915. 12 Claims. (Cl. 49—17.1.)

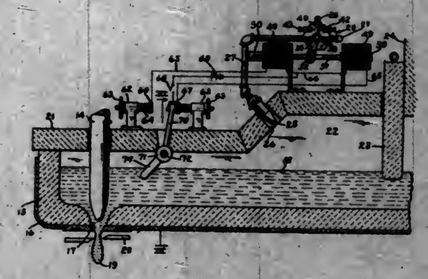


10. The combination of a container for molten glass having a bottom outlet opening in the floor thereof, a

stationary mandrel projecting downwardly into said opening and forming therewith an annular passageway through which the glass issues, a stirring tube surrounding said mandrel and projecting downward into the glass

into proximity to the floor of the container to provide an annular passageway through which the glass flows from the supply body to the outlet, and mechanism for continuously rotating said tube.

1,750,972. METHOD OF AND APPARATUS FOR FORMING GLASS TUBING. LEONARD D. SOUBIER, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 16, 1927. Serial No. 168,724. 6 Claims. (Cl. 49—17.1.)



5. In a tube forming apparatus, the combination of a container for molten glass having an outlet opening extending through the floor thereof, means for supplying molten glass to said container and maintaining a head of glass therein, a mandrel comprising a stem projecting downward into the glass in the container and a head carried by said stem and projecting into said outlet opening, means for supplying air through said head, a tube surrounding said stem and projecting downward into the glass with its lower end terminating at a level above the floor of the container, and means for continuously rotating said tube and container.

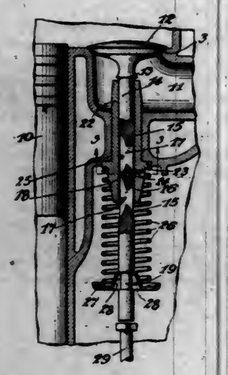
1,750,973. GLASS FEEDER. LEONARD D. SOUBIER, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 16, 1927, Serial No. 168,725. Renewed Sept. 13, 1929. 19 Claims. (Cl. 49—55.)

7. A glass feeder comprising in combination, a container for a moving body of molten glass, a burner supplying

heat to the glass, a valve regulating the supply of fuel to the burner, a pair of solenoids operable independently of each other to actuate said valve and increase or decrease the flow of fuel therethrough, a circuit closer operable to cause energization of either solenoid, and a

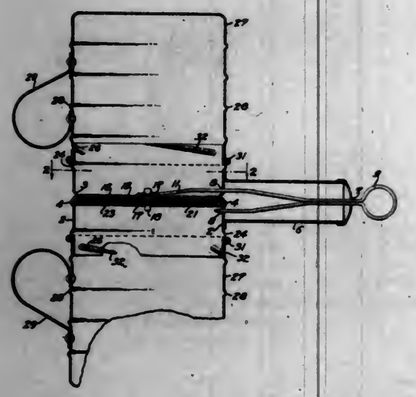
finger carried by the circuit closer and projecting into the moving body of molten glass, said finger being movable by the molten glass in response to changes in the viscosity of the glass to actuate the circuit closer and thereby energize one of the solenoids.

1,750,974. MOVABLE STILE FOR WINDOW FRAMES. HAROLD M. STEINMETZ, New York, N. Y. Filed Mar. 19, 1929. Serial No. 348,329. 1 Claim. (Cl. 20—12.)



In a window frame in combination with top and bottom window sashes having sash guides, a shallow box-like body substantially the width of said frame and adapted to be set within the stiles of said frame, a freely movable cover or plate for said box-like body adapted to normally engage the side of a window flush with said guides and held in position by a center strip, and resilient elements within said body engaging said cover or plate whereby the top or bottom sash may be urged laterally to remove the opposite side thereof from its guide.

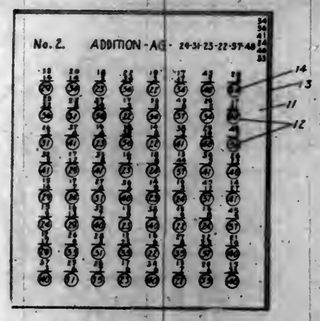
1,750,975. ENGINE VALVE. WILLIAM M. STIER, Jr., Ridgefield Park, N. J. Filed June 16, 1928. Serial No. 285,831. 7 Claims. (Cl. 123—188.)



1. In a valve, in combination, a valve stem having a transverse opening therethrough, a valve head carried

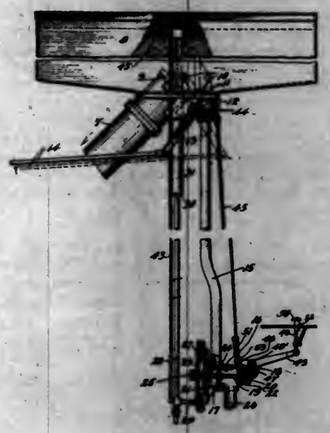
by said stem and a valve sleeve for said stem having plurality of openings therethrough, said stem and said

sleeve being so positioned with respect to each other that the movement of said stem within said sleeve will force air through said openings in said stem and sleeve.



1,750,976. SIFTER. WILLIAM K. STUBBOCK, Livingston, Calif. Filed Mar. 20, 1929. Serial No. 348,572. 6 Claims. (Cl. 209—251.)

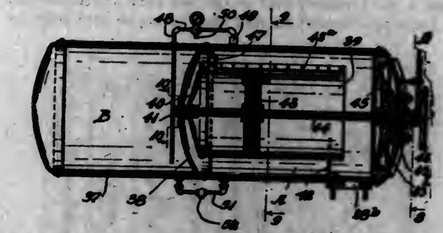
1. In a flour sifter, a ring, a handle on said ring, a sifter mechanism having a pair of star wheels arranged in the ring, a hairpin loop having an end pivotally connected to each star wheel for actuating the sifting mechanism, and a cup demountably engaged with said ring.



1,750,977. EDUCATIONAL DEVICE. THOMAS E. THOMPSON, Los Angeles, Calif. Filed Aug. 5, 1926. Serial No. 127,283. 12 Claims. (Cl. 35—2.)

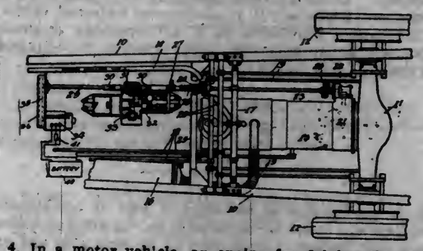
1. A correction overlay comprising: a sheet having defined spaces through which a portion of a field of markings placed in a given order on an exercise sheet may be viewed, each space being so situated on said overlay that it would register with a vacant area between spaces on the opposite side of said overlay sheet were the sheet to be folded along a central axis so that the spaces of

the two folded portions of the overlay would unite to assume the same order as a corresponding number of said markings.



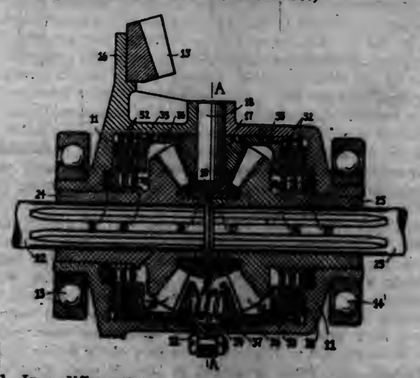
1,750,978. AUTOMATIC MEASURING TANK. GEORGE EVANS WEBB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Sept. 17, 1925. Serial No. 56,930. 11 Claims. (Cl. 221—113.)

1. In water supply means of the class described, a water supply pipe adapted to carry water to a mixing drum, a supply tank with which said supply pipe communicates, a water supply pipe leading to said tank to replenish water flowing therefrom, valve mechanism controlling the passage of water through the last mentioned pipe to the tank and through which the water supplied to the tank flows, and control means for said valve mechanism comprising a pressure diaphragm and a pipe for conveying water to the valve mechanism, and adjustable means in the tank to permit water in the latter to overflow into the last mentioned pipe.



1,750,979. WATER-MEASURING TANK. GEORGE E. WEBB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Oct. 12, 1926. Serial No. 141,169. 20 Claims. (Cl. 221—95.)

1. In liquid measuring apparatus of the class described, the combination of a tank having a partition therein, dividing said tank into a measuring compartment and a pressure equalizing compartment, means in said tank for varying the capacity of said measuring compartment, and means for admitting the liquid to opposite sides of the

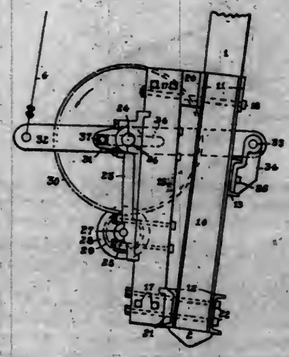


capacity varying means for equalizing the pressure thereon in the measuring operation and during the discharge of the measuring compartment.

1,750,980. BOILER FEED PUMP. RAYMOND E. WHITE, Newton, Mass., assignor to Steam Vehicle Corporation of America, Newton, Mass., a Corporation of New York. Filed Sept. 4, 1924. Serial No. 735,891. 8 Claims. (Cl. 60—107.)

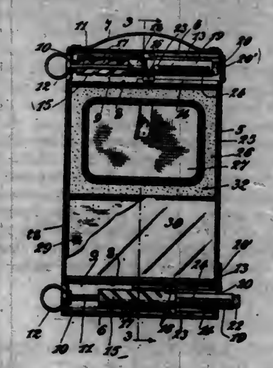
4. In a motor vehicle, an engine for driving the same, a source of fluid energy for the engine, feeding means for the latter source, a gear take-off device from the engine having operative connection with the feeding means, means operative during the ordinary running of the engine and vehicle when the demand on the engine and source of energy is not excessive to store energy for operating the feeding means when the demand is excessive or in traveling upgrade, and means for disconnecting the feeding means from the gear take-off of the engine at such times, whereby the feeding means will be operated solely by the stored energy.

1,750,981. DIFFERENTIAL MECHANISM. ERNEST WILDHABER, Brooklyn, N. Y. Filed Feb. 7, 1928. Serial No. 252,499. 19 Claims. (Cl. 74—99.)



1. In a differential mechanism for automotive vehicles, gears for transmitting torque from a driving member to

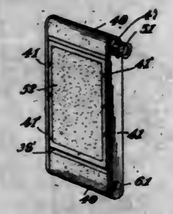
CARNEGIE LIBRARY OF ATLANTA



two coaxial driven members, a clutch frictionally opposing relative motion between said two driven members, spring means for maintaining said clutch in continuous engagement, and means for keeping the frictional torque substantially constant, irrespective of the relative velocity of the surfaces engaged in frictional contact.

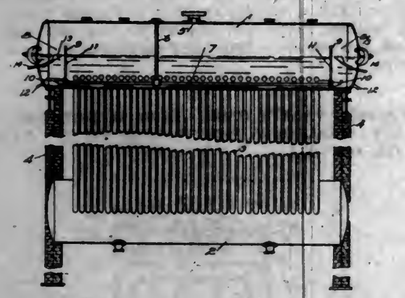
1,750,982. WELL-DRILLING APPARATUS. CLYDE S. WRIGHT, Toledo, Ohio, assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed May 27, 1927. Serial No. 194,592. 1 Claim. (Cl. 189—16.)

In a well drilling apparatus, a mast, a frame comprising a parallel pair of base bars at opposite sides of the lower end of the mast, a pair of brace bars secured to opposite ends of the base bars and inclined upwardly to engage opposite sides of the mast, and a pair of plates engaging the opposite sides of the mast and secured to the opposite sides of the upper ends of the brace bars, in combination with a machine frame, a mechanism mounted on the machine frame and adapted to cooperate with the mast, and means for detachably connecting the frames together.



1,750,983. VANITY CASE. DAVID H. ZELL, New York, N. Y. Filed July 25, 1928. Serial No. 295,294. 5 Claims. (Cl. 132—83.)

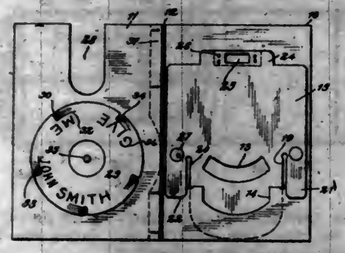
1. A vanity case simulating the form of a kodak and provided at its opposite ends with members rotatably mounted in one of the lateral walls thereof and having exterior operating means in simulation of the film reel



operating means of a camera, the opposite lateral wall of the case at each end being provided with an opening, a holder for a cosmetic composition material in stick form slidably mounted in each end of the case for lateral movement, and means operatively connecting each of said holders with one of said rotatable parts to project the holder and the stick of composition material through one of said openings on rotation of said part.

1,750,984. VANITY CASE. DAVID H. ZELL, Brooklyn, N. Y. Original application filed July 25, 1928, Serial No. 295,294. Divided and this application filed Jan. 22, 1929. Serial No. 334,311. 18 Claims. (Cl. 132—83.)

1. A case having a body consisting of a sheet metal plate forming the rear side of the case and having its end portions inwardly directed towards each other to form the opposite ends and front side of the case body, a sheet of flexible material covering the outer surfaces of said body plate, and means detachably secured to the case body to removably secure said covering material against longitudinal or lateral movement relative thereto.

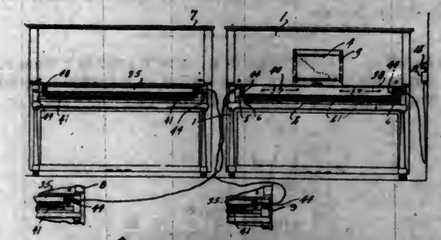


1,750,985. STEAM BOILER. GEORGE W. BACH, Erie, Pa., assignor to Union Iron Works, Erie, Pa., a Corporation of Pennsylvania. Filed July 28, 1925. Serial No. 46,596. 1 Claim. (Cl. 122—428.)

In a steam boiler, the combination of an upper drum; a lower drum; connecting tubes, the ends of the upper drum extending outwardly from the tube space; partitions separating the upper drum into a central steaming space and end feed water spaces; a feed water pipe leading into the steaming space of the upper drum and discharging into the feed water spaces; and furnace walls set inwardly from the ends of the drum leaving the feed water spaces projecting to without the walls.

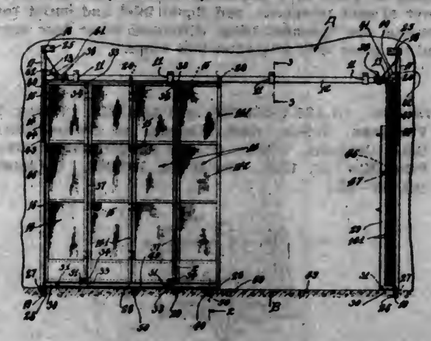
1,750,986. DISPLAY OR ADVERTISING DEVICE. WALTER M. BARRY, New York, N. Y. Filed Mar. 22, 1928. Serial No. 263,633. 6 Claims. (Cl. 40—71.)

1. Display and advertising device comprising, two main parts foldably connected for forming a housing when folded against each other, flaps for holding the parts in their folded and closed positions, the front part provided with display openings, a slide containing proper pictorial illustrations sliding along the inner face of said front part, a disc rotatably held on the rear part, and a plurality of abutments formed on said disc, means on said slide for



engaging said abutments, and a means on said slide for displacing the same to engage and disengage said abutment engaging means from said abutments, for displaying legends on said disc successively in their consecutive order through one of said displaying openings.

1,750,987. OPHTHALMIC MOUNTING. EARLE J. B. BEATTEY, Edgewood, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 13, 1929. Serial No. 346,626. 4 Claims. (Cl. 88—42.)

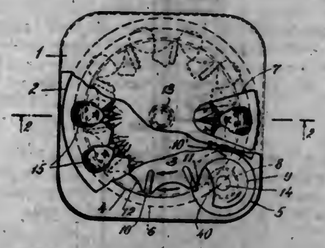


1. In an ophthalmic mounting, a pair of non-metallic lens frames, a metal bridge member having arms extending along said frames, a rivet secured to said arm and extending thru said frame, the end of said rivet being tubular and split with portions extending in opposite directions over the inner surface of said frame.

1,750,988. MUSICAL APPARATUS. JOHN C. BOSTELMANN, Jr., New York, N. Y., assignor, by mesne assignments, to The Aeolian Company, a Corporation of Connecticut. Filed Jan. 27, 1927. Serial No. 163,990. 9 Claims. (Cl. 84—478.)

5. In combination, a music dictation device detachably supportable across the keys of a keyboard instrument and being portable relatively thereto; a receiving device detachably supportable across the keys of another keyboard instrument and being portable relatively thereto; electrical connections operatively connecting said portable dictating and receiving devices, the dictating device comprising a plurality of electrical contacts together with elements for operating them arranged to rest upon and be movable with the respective keys of its keyboard instrument, and said receiving device comprising electrically operative signals at the respective keys of its keyboard instrument operatively connected by the aforesaid electrical connections with the corresponding aforesaid element-operated contacts of the dictation device.

1,750,989. FOLDING GATE. LOUIS G. BRADFIELD, Los Angeles, Calif. Filed Apr. 23, 1929. Serial No. 357,865. 11 Claims. (Cl. 20—20.)

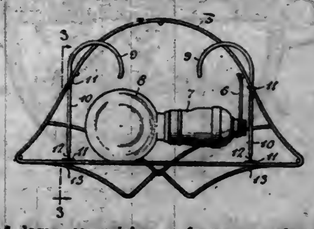


1. A folding gate comprising a rail of sectional construction, the sections being separate and one of the rail sections being movably mounted, and movably connected panels slidably and pivotally suspended from the rail and foldable alongside of one another.

1,750,990. COMMUTATOR CLEANSER. KURT BRIEL, Brooklyn, N. Y. Filed Apr. 21, 1928. Serial No. 271,980. 1 Claim. (Cl. 87—5.)

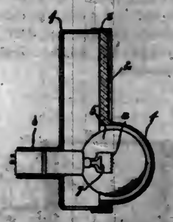
A commutator cleansing composition comprising approximately equal parts of oleic acid and paraffin oil with approximately ten per cent of amyl acetate.

1,750,991. PICTURE TOY. CESAR BUSTAMANTE, New York, N. Y. Filed May 2, 1928. Serial No. 274,436. 3 Claims. (Cl. 46—37.)



3. A moving picture toy, comprising in combination, a casing having a viewing aperture therein, a main stub-shaft inserted through one face of the casing, a picture disk supported loosely on one end of the main stub-shaft, a Geneva-gear attached to the under side of said disk, a spur-gear attached to said shaft intermediate the Geneva-gear and the casing, another spur-gear fixed in the casing eccentric to said first spur-gear, a pin-and-disk driver for the Geneva-gear attached to the second spur-gear, and a cranking disk attached to the other end of said main stub-shaft.

1,750,992. MOUNTING MEANS FOR SNAP FASTENERS. MABEL V. CLARK and CECIL F. CLARK, Jersey City, N. J. Filed Nov. 14, 1928. Serial No. 319,332. 5 Claims. (Cl. 24—150.)



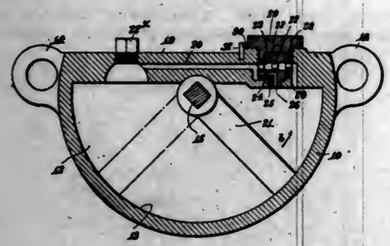
5. An interlocking fastening device comprising a stud element and a socket element, each of said elements including a plate, a pair of prongs integrally formed with said plate, said prongs being adapted to be bent under said plate, and the ends of said prongs being adapted to be bent over onto the top of said plate, said plate having indentations therein into which the ends of the prongs are adapted to extend, said plate having a plurality of depressions therein which serve to prevent slipping of the elements when mounted.

1,750,993. BED LAMP. ANNE COWEN, New York, N. Y. Filed May 2, 1928. Serial No. 274,417. 2 Claims. (Cl. 240—52.)

1. A bed lamp comprising a frame, an electric lamp socket mounted upon said frame and enclosed thereby, bearings located at the rear of said frame and arranged in pairs in spaced vertical registry, and suspending members movably mounted in each pair of bearings for supporting said frame in operative position, said members being pivotally adjustable to operative supporting positions and to inoperative folded positions relatively to said frame.

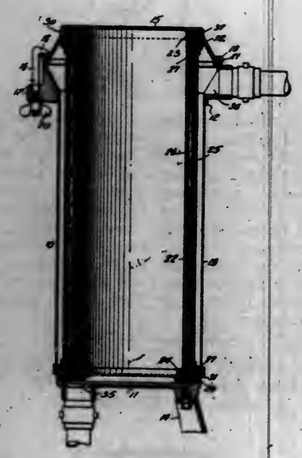
1,750,994. COMBINATION STOP AND TAIL LIGHT. WILLIAM CARL DORMAN, Long Beach, Calif. Filed Mar. 28, 1927. Serial No. 178,921. 2 Claims. (Cl. 177—329.)

1. A combination stop and tail light comprising a single compartment casing, a lens secured over the rear open face of said casing, said lens having a thin section adjacent the bottom thereof, said section serving as the tail light lens, a two filament bulb in said casing adjacent the bottom thereof, one of the said filaments emitting a feeble light and the other filament emitting a bright light, the remainder of said lens being of sufficient thickness so that the feeble light will not illuminate the same but said thick section being brightly illuminated when the second filament is lit, said thick section having a stop insignia thereon.



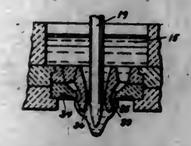
1,750,995. ENGINE VALVE. LEWIS E. EDWARDS, Huntington Park, Calif. Filed May 10, 1927. Serial No. 190,190. 2 Claims. (Cl. 123—188.)

1. A valve of the character described, including a stem, a head having a socket in one side, an enlargement on the



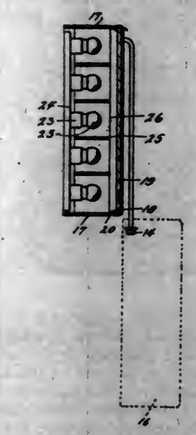
stem fitting said socket for rotation, and a plug in the mouth of the socket retaining the enlargement in the socket, the edge of the socket being turned to hold the plug.

1,750,996. SHOCK ABSORBER. FREDERICK T. ELLIOTT, Somerville, Mass. Filed June 21, 1928. Serial No. 287,121. 6 Claims. (Cl. 188—89.)



1. The combination of a casing having an inner chamber and a channel communicating at opposite ends therewith; an oscillating shaft extending through said casing; a blade movable therewith with its free end contacting with the inner cylindrical wall of said chamber; a fixed cylindrical stud extending transversely of said channel with three passages therethrough, one of which is always open and through all of which liquid may flow freely in one direction; a ball in another passage to close the inlet thereto when liquid is flowing in a reverse direction; and a rotatable sleeve surrounding said stud having a port therein for partially or wholly closing the third passage.

1,750,997. LIQUID FILTER. HARVEY FELDMEIER, Little Falls, N. Y., assignor, by mesne assignments, to Cherry-Burrell Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 27, 1925. Serial No. 26,008. 9 Claims. (Cl. 210—183.)

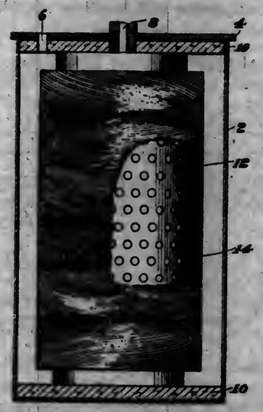


1. The combination of a receptacle open at its upper end, a movable cover for the upper end of the receptacle, means for tightly securing said cover in closed position, a liquid displacement core carried by said cover and projecting into said receptacle and forming an annular chamber therein around the core, an annular strainer dividing said annular chamber into inner and outer flow spaces for the liquid, said strainer being removably retained in place by engagement with the lower end and cover of said receptacle, and liquid inlet and outlet connections one communicating with said inner flow space and the other with said outer flow space.

1,750,998. GLASS-FEEDING APPARATUS. ENOCH T. FRENGREN, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 22, 1924. Serial No. 701,007. 6 Claims. (Cl. 49—55.)

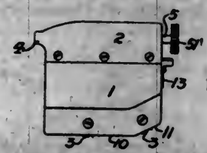
5. Glass feeding apparatus comprising, in combination, a container for molten glass having an inner outlet orifice surrounded by an annular outlet orifice, a regulating rod projecting downward through the inner orifice, and means to reciprocate the rod vertically, the portion of the rod which works in the orifice being tapered and thereby operative to vary the open area of the inner orifice.

1,750,999. STREET INDICATOR. MATTHEW M. FINN, Sioux City, Iowa. Filed May 14, 1928. Serial No. 277,661. 4 Claims. (Cl. 40—132.)



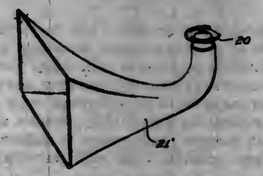
1. In a crossing indicator, a casing having a glass covered sight opening, a panel, lamps mounted on said panel, a pair of inverted L-shaped brackets, sliding, pivotal connections between the casing and said brackets, allowing the casing to be first moved away from the panel to clear the lamps and then to be dropped vertically.

1,751,000. OIL FILTER AND FILTER ELEMENT. MAURICE A. GOLDMAN, Milford, N. H., assignor to Tucapau Mills, Tucapau, S. C., a Corporation of South Carolina. Filed June 9, 1928. Serial No. 284,085. 5 Claims. (Cl. 210—169.)



1. A filter of the class described, comprising in combination, a support arranged to permit the passage of liquid; a filtering body sustained by said support and comprising

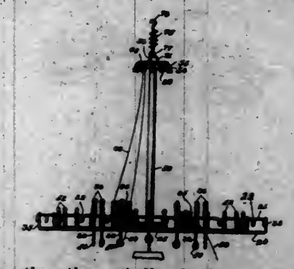
successive layers of fuzzy strands interlaced at intervals and presenting filtering passages between the strands



through the intermeshed fuss thereon; and connections for passing liquid through said filtering body in an inward direction.

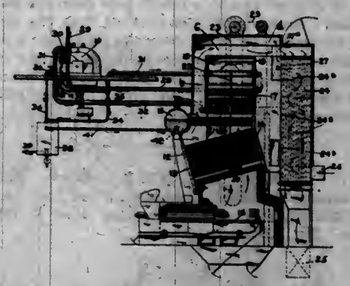
1,751,001. CLOTH-MARKING DEVICE. FREDERICK GUTH, Seattle, Wash. Filed May 12, 1928. Serial No. 277,191. 5 Claims. (Cl. 120—9.)

1. A cloth marking device for tailors comprising a powder-holding case, means for discharging minute quantities of the powder as the device is moved over the cloth, said case having an ironing surface engaging the powder as discharged to iron it into the cloth.



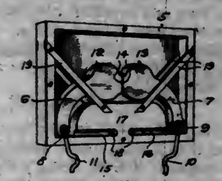
1,751,002. SHEET-METAL HORN ELBOW. FREDERICK C. JONES, Camden, N. J., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Aug. 16, 1924. Serial No. 732,411. 2 Claims. (Cl. 181—27.)

1. A horn elbow or bracket for talking machine amplifiers, comprising a hollow body open at both ends and flared from one end toward the other, and drawn, shaped and made in seamless form from a single continuous piece of sheet metal, and a member provided at one end of the body for attaching the same to a talking machine cabinet to support the elbow.



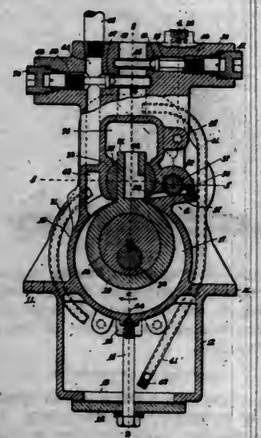
1,751,003. SPOOL HOLDER. SAMUEL KAISER, Coney Island, N. Y. Filed June 15, 1928. Serial No. 285,595. 2 Claims. (Cl. 242—134.)

1. In a spool holder the combination of a main frame, an upper suspending frame having loops formed therewith, means connecting the frames, spindles extending up from the main frame, said main frame having guide loops formed therewith adjacent to some of said spindles, and a guide loop located below each of the other spindles of the main frame, some of said spindles having spools of thread rotatably and removably supported thereon with the threads thereof leading through the guide loops of the



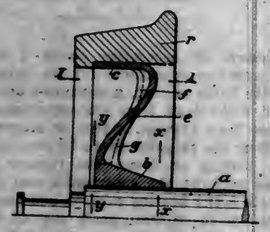
main frame, the other spindles having spools of thread rotatably and removably supported thereon with the thread of each leading to one of the guide loops of the upper frame and then leading through one of the guide loops below the main frame.

1,751,004. POWER-GENERATING SYSTEM AND METHOD OF OPERATING THE SAME. JAMES KEMMAL, London, England, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 7, 1923, Serial No. 637,088. Renewed Aug. 1, 1928. 8 Claims. (Cl. 60—73.)



1. In a system for generating power, a steam boiler having a superheater, a furnace for the boiler, a steam reheater in the boiler setting, a multiple-stage steam turbine supplied with steam from the superheater, pipes to conduct steam from between a pair of stages to the reheater and from the reheater to an intermediate stage of the turbine, baffling to direct the furnace gases over boiler heating surfaces, the superheater and the reheater and back to the boiler heating surface, and means whereby the proportion of the furnace gases passing over the reheater may be varied to regulate the degree of reheating.

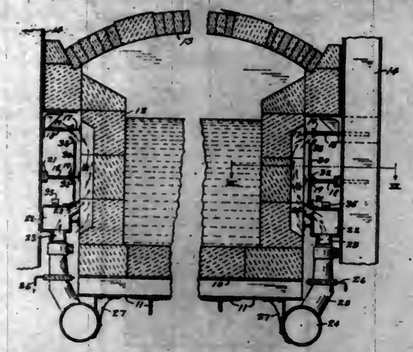
1,751,005. GRAVITY-ACTUATED CIRCUIT BREAKER. LUCIEN C. KIMSEY, Oklahoma City, Okla. Filed Apr. 30, 1929. Serial No. 359,251. 5 Claims. (Cl. 200—52.)



1. A device of the character described, comprising two contact making elements movable toward each other under the influence of gravity, and means for connecting them in the wiring circuit of an automobile.

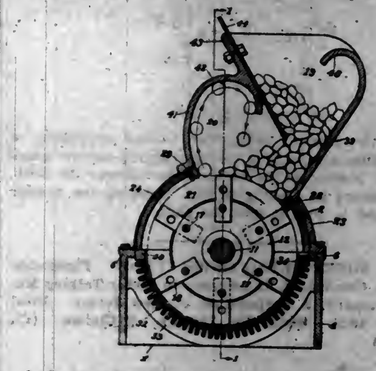
1,751,006. PUMP FOR MIXING OIL AND AIR. JUSTUS R. KINNEY, Jamaica Plain, Mass., assignor to Kinney Manufacturing Company, Boston, Mass. Filed Sept. 28, 1928. Serial No. 308,980. 11 Claims. (Cl. 261—28.)

1. The combination of a tank adapted to contain oil; a combined oil pump and air pump; a pipe leading from the oil tank to said oil pump; a return pipe from the oil pump to the tank; means for discharging oil from the oil pump into the air pump; an outlet from the air pump; a by-pass from said outlet to the air pump inlet consisting in part of a tube extending across said inlet having perforations in the under wall thereof; and means for regulating the admission of air into said tube.



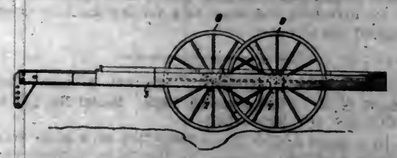
1,751,007. WHEEL AND AXLE. ERNST KREISSIG, Uerdingen-on-the-Rhine, Germany. Filed June 11, 1929, Serial No. 370,089, and in Germany June 8, 1928. 8 Claims. (Cl. 238—15.)

1. A wheel having a pressed out rim and boss in which, in order to secure good seating of a tire on the rim of the wheel and of the boss on the axle of the wheel, the rim and the boss are constructed to act as annular springs and are connected together by a web comprising either spokes or discs which are bent and provided with impressed or recessed portions or otherwise constructed so that they are subjected to a bending strain by radial forces and thus do not adversely affect the spring action of the rim and boss.



1,751,008. MEANS FOR COOLING FURNACE WALLS. RICHARD LA FRANCE, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 9, 1927. Serial No. 218,454. 6 Claims. (Cl. 49—54.)

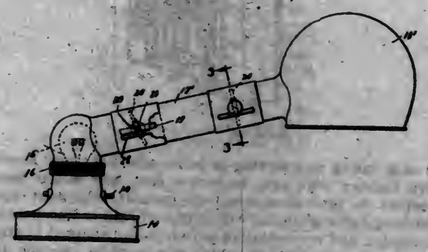
6. The combination of a tank wall having a series of vertically extending channels in its outer surface, means arranged to direct a cooling medium into the lower ends of and upwardly thru said channels, closure plates rising vertically from said means and positioned to confine the cool-



ing medium in said channel, said plates terminating short of the upper end of said channel to provide exhaust ports for said cooling medium, and means to removably secure the plates in said position.

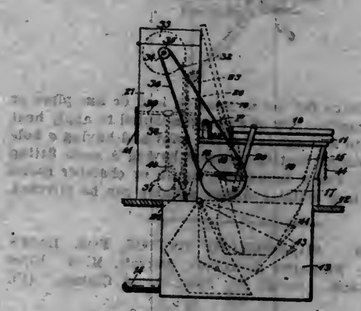
1,751,009. PULVERIZING MACHINE. WILLIAM KELSEY LIGGETT, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed May 20, 1918, Serial No. 235,635. Renewed July 30, 1929. 37 Claims. (Cl. 83—11.)

1. In a pulverizing machine, the combination with a rotor adapted to revolve about a horizontal axis and having a substantially continuous cylindrical pulverizing surface, of a pulverizing chamber entirely above the rotor, means to feed material to be pulverized upon the pulverizing surface within the pulverizing chamber and permit it to freely float thereon, and means to prevent the escape of unpulverized material from said pulverizing chamber.



1,751,010. WHEEL MOUNTING FOR LAND VEHICLES. JESSE G. LINDEMAN, Yakima, Wash. Filed Jan. 31, 1929. Serial No. 336,373. 3 Claims. (Cl. 280—80.)

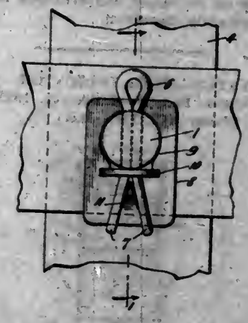
1. A device of the type described, comprising a frame, a pair of ground engaging wheels for each side of the



frame located substantially centrally of the length of the frame to balance the entire load on said wheels, the wheels of each pair being closely positioned with respect to each other so that their axes are spaced a distance less than the diameter of either wheel, and a pair of axles extending entirely across the frame and each supporting one wheel of each of said pairs, said axles being connected to the frame and the wheels to prevent bodily movement of the wheels with respect to the frame.

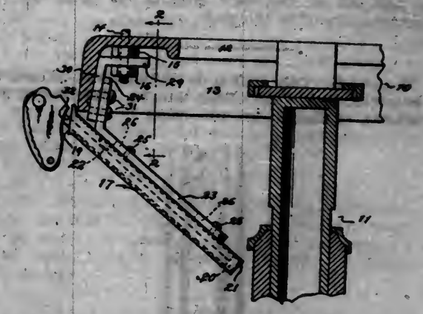
1,751,011. ELECTRIC LAMP. HORACE G. MARTIN, Jr., New York, N. Y. Filed Aug. 9, 1928. Serial No. 298,460. 6 Claims. (Cl. 240—61.)

1. In an electric lamp, a support, a socket in said support for an electric lamp, a light transmitting tube having at one end means for engaging said support and at its opposite end a light dispensing means and adjustable light controlling means in said tube, said tube forming the sole means for transmitting the light generated by said lamp to the exterior of said support.



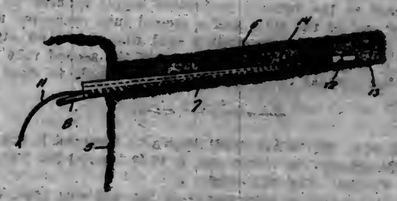
1,751,012. SANITARY TOILET. FRED M. MCHENRY and THOMAS S. WILKES, Corvallis, Oreg.; said Wilkes assignor to said McHenry. Filed May 2, 1929. Serial No. 359,960. 7 Claims. (Cl. 4—228.)

1. In a sanitary toilet having a normally closed cover, a chemical tank, means for discharging measured charges of chemical from said tank to a point below said cover, operating means for said discharging means connected with and operated by said cover, a float in said chemical tank, and means controlled by said float for preventing operation of said charge discharging means when the chemical in the tank has lowered to a predetermined extent.



1,751,013. COTTER-PIN SPREADER. JOHN MCMULLEN, Buffalo, N. Y. Filed Aug. 2, 1928. Serial No. 296,927. 1 Claim. (Cl. 85—7.)

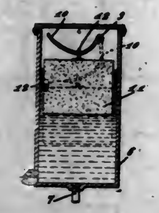
A device of the character described comprising a plate having a bolt or pin receiving opening therein, a wedge shaped cotter pin spreading projection carried by said plate, and a tongue carried by said plate and provided with an aperture through which the cotter pin is adapted to be passed prior to its engagement with said projection, said tongue being disposed between said projection and



the bolt or pin receiving opening in said plate and being formed by bending the metal of the plate originally closing said bolt or pin receiving opening at, or substantially at, right angles to the plate.

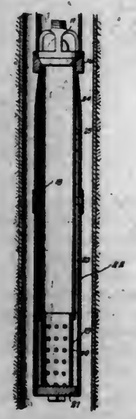
1,751,014. ATTACHMENT FOR BARBERS' CHAIRS. CHARLES W. MORLEY, Barnesville, Ga. Filed Oct. 18, 1928. Serial No. 313,269. 3 Claims. (Cl. 155—188.)

1. In an attachment for the seat of a barber's chair, the combination with an elongated tubular holder adapted to receive the supporting standard of a head-rest, of an angle-bar having a long arm attached to and extending longitudinally a considerable length of the holder, said angle-bar also having a short arm oblique to the long arm and projecting from the holder adjacent to the receiving end thereof, and means for attaching the short arm of the angle-bar to the outer part of the chair seat to decline the holder beneath the seat.



1,751,015. BLASTING DEVICE. JOHN MORA, Plains, Pa. Filed Dec. 3, 1928. Serial No. 323,867. 2 Claims. (Cl. 86—21.)

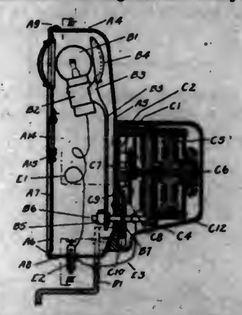
1. A blasting device of the character described, comprising a tube, for receiving the conductor wires of a



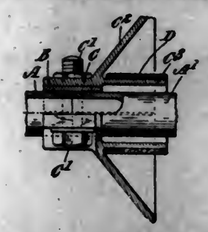
detonator therethrough, said tube being rigid and of a length to enclose and protect the portion of said wires adapted to lie in the blast-hole, said tube further being externally tapered from one end to the other and having a rigid handle on its larger end arranged to extend outwardly and upwardly therefrom.

1,751,016. WATER-LEVEL INDICATOR. CLARENCE B. O'NEILL, Clymer, Pa. Filed Dec. 11, 1928. Serial No. 325,261. 1 Claim. (Cl. 116—118.)

A water level indicator for radiators, comprising a tank, a pipe establishing communication between the tank and radiator to permit water to pass from the radiator to the tank, a shaft extending into the tank adjacent to the upper end of the tank, a curved arm having one of its ends secured to the shaft, a float of a size to fit within the tank, an eye secured to the float to receive the curved arm, said float adapted to move the arm and shaft with the rise and fall of the liquid level in the tank, and an indicator operated by the shaft.



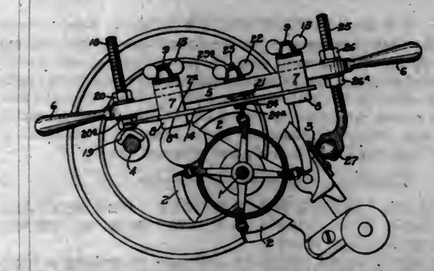
1,751,017. OIL AND GAS SEPARATOR. JAMES R. SULLIVAN, Taft, Calif. Filed Nov. 30, 1928. Serial No. 322,810. 1 Claim. (Cl. 103—208.)



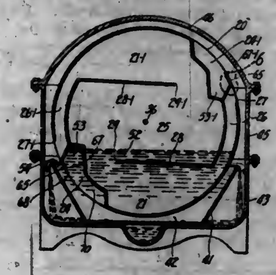
The combination with a pump cylinder, of a tube connected with the lower end thereof, a perforated thimble secured to the tube, a perforated nipple secured to the lower end of the tube, and a second tube connected with the thimble and surrounding said first tube and nipple and a plug closing the lower end of the second tube and bearing against the lower end of the nipple to close the same.

1,751,018. WIGWAG STOP SIGNAL. WILLIAM E. SIGNOR, Gettysburg, Pa. Filed Apr. 6, 1928. Serial No. 268,015. 3 Claims. (Cl. 177—329.)

1. In a vehicle stop signal of the wig-wag type, comprising a casing provided with an opaque wall having plural apertures adapted to mount therein a series of spaced transparencies which as a unit provide for a color scheme of which the endmost transparencies are given a like color while the intermediate transparencies are given a color sharply contrasting therewith, a single movable light means disposed to oscillate within said casing and reciprocatively sweep along the course of said transparencies, electromotive actuating means wholly housed within said casing and serving to bring said light into successive registry with said transparencies, said means being adapted to produce a dwell on part of said light upon reaching and registering with either of said endmost transparencies, and manipulative switch means adapted to start said motor at will and which motor while running imparts a sustained regular beat-like oscillation to the aforesaid single light.

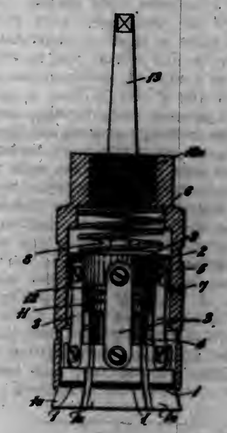


1,751,019. APPARATUS FOR JOINTING LEAD OR LIKE PIPES OR SHEATHS. ALFRED EDGAR WILSON, Bromley, England. Filed Sept. 10, 1927, Serial No. 218,728, and in Great Britain Oct. 23, 1926. 8 Claims. (Cl. 78—82.)



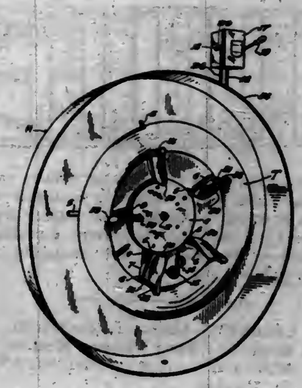
1. In apparatus for use in jointing lead or like pipes or sheaths, the combination of a clamp adapted to apply heat and pressure to a sleeve round the joint and having a hole or recess, a metal heating member having a stem fitting into said hole, and a funnel-like mouth or chamber round said member into which chamber a flame can be directed.

1,751,020. SHARPENING DEVICE FOR LAWN MOWERS. BRISBANE J. ALISON, Detroit, Mich. Filed July 20, 1928. Serial No. 294,136. 8 Claims. (Cl. 76—82.1.)



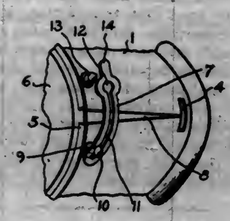
1. In a device of the character described, the combination of a frame having sharpening means attached to its underside adapted to be moved transversely of and to bear against a lawn mower blade, a block depending from said frame adapted to be moved with the latter along the transverse rod of the lawn mower, and means depending from said frame and rotatable about a substantially vertical axis adapted to hold that portion of the blade against which the sharpening means is then bearing in the desired position under the latter.

1,751,021. METER. CHARLES M. ANDERSON, Salt Lake City, Utah. Filed Aug. 15, 1927. Serial No. 213,119. 20 Claims. (Cl. 73—37.)



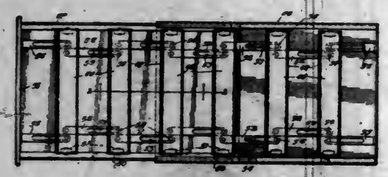
1. A meter comprising a rotor having a circumferential shell, a basin containing liquid partially submerging said rotor, walls defining balancing pockets spaced apart from each other and positioned so as to indent the circumferential shell of said rotor, walls defining measuring buckets intermediate said balancing pockets, and means for supplying liquid to said buckets.

1,751,022. BOTTLE-CAPPING MACHINE. JAMES ASKEY, London, England. Filed Sept. 18, 1926, Serial No. 135,273, and in Great Britain Apr. 30, 1926. 2 Claims. (Cl. 226—87.)



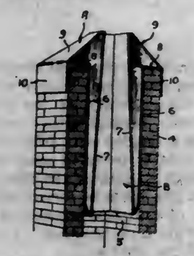
1. The combination with a thrust member having an upper head and a lower head, of a rotatable ring mounted on the upper head, flat springs suspended from said ring, radially movable segments suspended at the lower ends of the springs and forming a compressible ring about the lower head, an enclosing, rotary holder, a spring between the holder and said rotatable ring, said segments having exterior tapered faces, and said holder having a complementary interior, annular, flaring face.

1,751,023. DRYING APPARATUS. RICHARD J. AUNE, Fergus Falls, Minn. Filed Mar. 19, 1929. Serial No. 348,242. 7 Claims. (Cl. 34—26.)



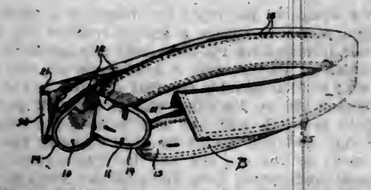
1. A drying apparatus of the class described comprising a suitably supported shaft, two wheels mounted thereon for rotation one independently of the other and independently of the shaft, driving means coacting with one of the wheels, arms extending outwardly from the second wheel, fan blades slidably mounted upon said arms, connecting means secured to each of the fan blades and the first wheel whereby the blade is forced outwardly of the arm upon rotation of said first wheel and to cause both of the wheels to rotate in unison, and an engaging means carried by each of the blades.

1,751,024. GOGGLES. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 11, 1927. Serial No. 182,770. 3 Claims. (Cl. 2—14.)



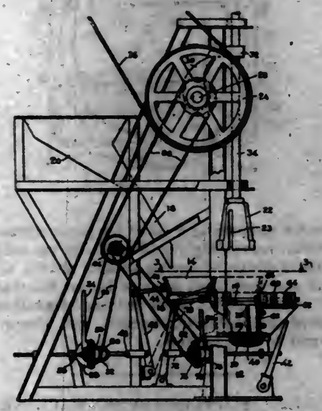
1. In a device of the character described, a split eye cup having means to engage a lens, a resilient clip having a slot intermediate its ends, said clip spanning the split portion of the eye cup, a headed pin on one side of the split portion movably securing said clip to the eye cup, a second pin on the other side of the split portion adapted to interlock with the clip to lock the lens in the eye cup, said clip having its ends engaging the adjacent walls of the eye cup and its intermediate portion arched and spaced from the adjacent walls of the eye cup whereby the split edges of the eye cup will be urged together through the resiliency of the clip.

1,751,025. FILING DEVICE. EDWARD A. BANSCHBACH, Chicago, Ill. Continuation of application Serial No. 274,323, filed Jan. 31, 1919. This application filed Nov. 7, 1921. Serial No. 513,360½. 9 Claims. (Cl. 129—16.)



1. In a filing device, a plurality of holders each comprising a back and hinged covers, a container therefor, and carriers in which the backs of the holders are seated, movable apart for opening the covers depending upon the movement of the carriers for disclosing the contents of the holders.

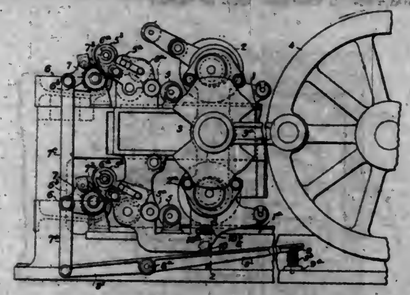
1,751,026. CHIMNEY. LESTER L. BLANCHARD, Presque Isle, Me., assignor to Henri Crepeau, Montreal, Quebec, Canada. Filed July 2, 1929. Serial No. 375,402. 2 Claims. (Cl. 72—94.)



1. A thermocap for chimneys, comprising a hollow cap, a hollow conduit integrally depending from said cap, an outer shell comprising outer wall of said conduit, an inner shell of tapering proportions comprising inner wall of said conduit, and constituted a central, converging flue section, said outer shell having its upper edge outwardly turned to yield a lateral flange which constitutes the base wall of the cap, and its lower edge incurved, to merge and conjoin with the lower and larger edge of the said inner shell, which inner shell extends upwardly and convergingly from this conjunction, a cap shell of frustro-conical proportions, said shell being conjoined near its lower edge with the outer edge of said base wall and with its lower margin depending beyond such conjunction to constitute a vertically, depending rim, and extending upwardly from said conjunction at an inclined degree, forming the conical cap which is frustrated by the merging and conjunction of its upper edge with the smaller, upper edge of the said converging inner shell all as and for the purpose specified.

1,751,027. COLLAR. MARIANO A. BOIX, Mayaguez, Porto Rico. Filed Mar. 30, 1926. Serial No. 98,557. 1 Claim. (Cl. 2—131.)

A reversible collar comprising a neck band embodying a pair of symmetrically formed sections connected to provide a pocket extending along the top edge of the neck band, and a fold flap embodying connected superposed layers having wings turned inwardly between the layers along each end edge of each layer, said wings having their like ends cut away and forming folds having ends spaced inwardly from one longitudinal edge of the fold flap, the fold flap having said longitudinal edge for the depth of the cut away ends of the wings secured in the pocket of the neck band.

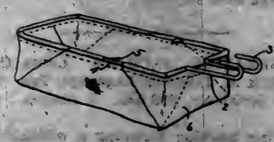


1,751,028. METHOD OF AND APPARATUS FOR MANUFACTURING CONCRETE HEADER BLOCKS. THOMAS W. CASWELL and GEORGE A. KELLY, Flint, Mich.; said Caswell assignor to said Kelly. Filed Jan. 23, 1928, Serial No. 248,680. Renewed Oct. 10, 1929. 18 Claims. (Cl. 25—41.)

12. A header block machine having a mold box comprising a stationary mold portion including side walls and a core and a movable mold portion constituting in combination with the stationary mold portion a mold box adapted to mold a block of substantially uniform dimensions in depth and width, said movable mold portion comprising as a unit side wall portions, an intermediate wall portion and a core portion, a pallet mounted to support the aggregate block forming material within the box during the molding operation and movable through the mold to strip the block therefrom, feed mechanism to deliver aggregate into the combined mold box, tamping mechanism to tamp the aggregate within the mold to form a block of said substantially uniform dimensions, mechanism operable to shift the movable portion of the mold away from the stationary portion of the mlod removing the aggregate confined therein to form a block of header shape, mechanism for moving the pallet through the stationary portion of the mold to strip the header block therefrom, said movable mold portion shifting mechanism operable to return said mold portion into cooperative combination with the stationary mold portion to deliver the aggregate contained therein into said stationary mold portion to form a part of the next block.

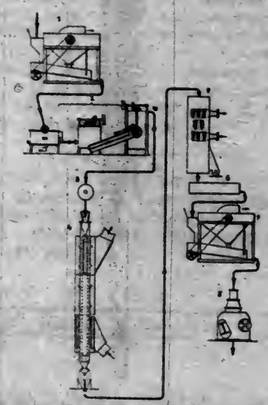
1,751,029. INKING MECHANISM FOR TRAVELING CYLINDER PRESSES. PAUL F. COX and JOSEPH L. COX, Chicago, Ill., assignors to The Goss Printing Press Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 19, 1926. Serial No. 320,821. 7 Claims. (Cl. 101—355.)

1. In a printing press having a traveling cylinder, inking rollers moving with the cylinder, and a fountain adjacent one limit of movement of the cylinder having a roll adapted to supply ink to the said rollers; a long pivoted lever extending along and adjacent the path of movement of the cylinder and adapted to be actuated



by the linear movement of the cylinder, and means actuated by said lever for imparting a gentle intermittent rotary movement to the fountain roll.

1,751,030. GARMENT SUPPORT. JULIA E. DALLIMORE, Los Angeles, Calif., assignor of one-half to Pearl M. Dallimore, Los Angeles, Calif. Filed Sept. 1, 1928. Serial No. 303,529. 2 Claims. (Cl. 241—12.)



1. In combination with a garment, supports for suspending the garment from a person's shoulders each comprising a strand of a length to extend across a shoulder with its end portions depending therefrom at the front and back, each end portion being provided with a garment-engaging element at its lower end and having an elongated base secured along the upper edge portion of the garment, the intermediate portion of said strand being formed with an eye, and a fastener carried by the eye for engagement with an over-garment to retain the strand in place upon a person's shoulder.

1,751,031. ICE CARRIER. JACOB H. DARNELL, Houston, Tex. Filed May 11, 1928. Serial No. 276,893. 4 Claims. (Cl. 294—99.)

1. An ice carrier comprising a frame of resilient metal, the ends at one side being spaced apart, handles on said ends, and a flexible container secured upon said frame and depending therefrom.

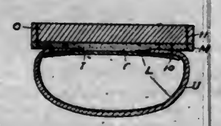
1,751,032. GRINDING OF BREAD GRAIN. KARL DIENST, Frankfort-on-the-Main, Germany. Filed Sept. 1, 1928, Serial No. 303,527, and in Germany Dec. 24, 1927. 6 Claims. (Cl. 83—42.)

1. The method of grinding bread-grain into flour, which comprises preliminarily cleaning the grain, washing it, then substantially completely peeling the grain in the wet way, submitting it to motion and to airing, thereupon heating it to a temperature of substantially 158 degrees F. and subsequently cooling the heated grain to substantially 20 degrees F. and submitting it to additional cleaning and to a grinding operation.

1,751,033. HEATING RADIATOR. JOHN G. ENGELHART, Atlanta, Ga. Filed May 2, 1929. Serial No. 359,955. 4 Claims. (Cl. 257—136.)

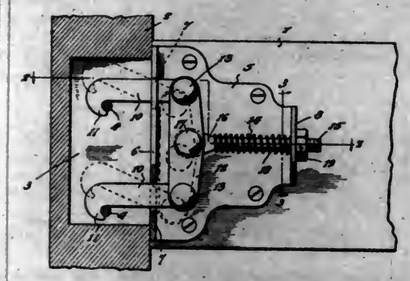
2. In a heating radiator, end walls having longitudinal and transverse inwardly extending flanges thereon, side walls slidably received between said end walls and bearing upon said flanges, heating units received between said end walls and connected thereto, the connection of said heating units to said end walls maintaining the same and said side walls in assembled relation, the upper portion of one of said side walls having air discharge means formed therein, and means adjustably received between said end and side walls and between said heating units and air discharge means for controlling the discharge of heated air from the latter.

1,751,034. METAL FILE. LANIOUS P. ENS, Anaconda, Mont., assignor of one-half to Paul Krskov, Anaconda, Mont. Filed Jan. 3, 1927. Serial No. 158,682. 2 Claims. (Cl. 29—78.)



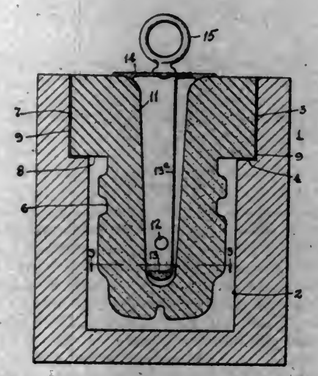
1. A file having its faces provided with fine teeth extending across the same and coarser cutting teeth on the corners intersecting the finer teeth.

1,751,035. ACOUSTICAL WAVE FILTER. HARVEY C. HAYES, Washington, D. C. Filed Mar. 3, 1927. Serial No. 172,391. 2 Claims. (Cl. 178—44.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)



1. An acoustic filter comprising means for converting non-acoustic energy into acoustic energy said acoustic energy being in the form of a standing wave having a plurality of components, means resonant to a predetermined component of said standing wave, a plurality of energy dissipating means in fixed positional relation to said resonant means and so positioned as only to dissipate energy from other than the predetermined component of said standing wave and means for reconverting the undissipated acoustic energy into non-acoustic energy.

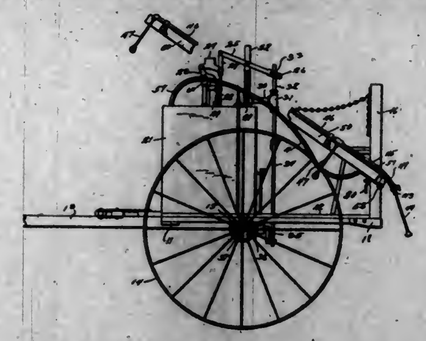
1,751,036. SHOE. FRED G. HOOKE and JAMES J. FLYNN, Lowell, Mass., assignors of one-fourth to Gardner W. Pearson, Lowell, Mass. Filed June 16, 1924. Serial No. 720,259. 3 Claims. (Cl. 36—19.)



1. A boot or shoe comprising an upper, an in-sole and a cut-out middle sole reinforced at the toe, fastened together by through and through stitching at the sides and by nails at the reinforced toe, an outer sole fastened by through and through stitching to the edge of the middle sole, and pliable filling in the cut-out part of the middle sole.

1,751,037. BED-RAIL FASTENER. PHILIP M. HOWSE, Nashville, Tenn. Filed Sept. 1, 1928. Serial No. 303,446. 5 Claims. (Cl. 5—298.)

5. A bed rail fastener comprising a plate adapted to be secured against a bed rail, inner and outer flanges projecting from said plate, the inner flange having an opening therein and the outer flange formed with slots above and below the opening, anchors slidable through said slots, and actuating means for said anchors including a yoke pivotally connected with the anchors and a draw rod connected with the yoke and slidably passed through the opening in the inner flange.



1,751,038. CASTING MAGNESIUM AND ALLOYS THEREOF. JOHN E. HOY, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed July 3, 1926. Serial No. 120,426. 7 Claims. (Cl. 22—214.)

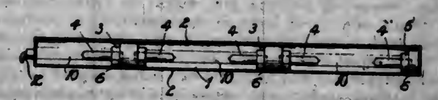
1. A method of casting a readily oxidizable metal or an alloy containing the same, which comprises eliminating oxygen from the path of the molten metal on its way to and within the mold cavity by igniting an oxygen-consuming material in the path of the metal and out of contact with the mold surface.

1,751,039. SPRAYING MACHINE. LOUIS C. JANSSEN and WILHELM A. JANSSEN, Lagrange, Tex. Filed July 19, 1928. Serial No. 293,935. 4 Claims. (Cl. 299—42.)

1. A spraying machine including a wheeled supporting frame, a tank thereon, a pump carried by the tank, means actuated by the wheels for operating the pump, a vertically movable supporting member operatively mounted upon the supporting frame and adjustable to different heights, said member being also mounted for rotation about its longitudinal axis, supporting arms flexibly engaged with said supporting member whereby the arms may

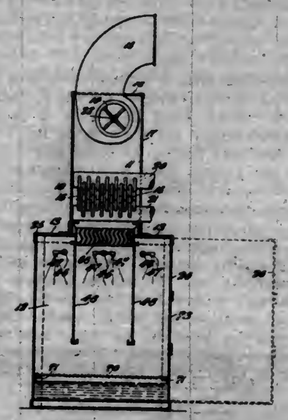
be swung in a plurality of planes into parallel relation with the tank or swung outward or upward, spray pipes upon said arms and upon said member, and a flexible hose connecting said spray pipes to the pump.

1,751,040. UNCOUPLING DEVICE FOR RAILWAY CARS. EDWIN JONES, East Cleveland, Ohio. Filed May 28, 1927. Serial No. 195,055. 4 Claims. (Cl. 213—170.)



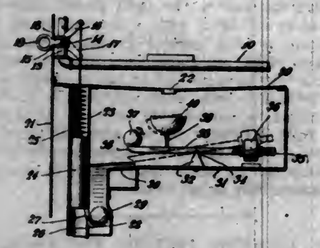
4. The combination of a crank having an arm provided with two upstanding loops located one in front of the other, and an upright link having a pair of upstanding prongs at opposite sides of said loops, a cross piece connecting said prongs and extending across above the arm, and a lower cross arm connected at one end to one of said prongs and adapted to slidably engage a locking pin, the link being shiftable from one loop to the other to permit disconnection of the link from the arm when the latter is in a lifted position.

1,751,041. AUTOMATIC NEEDLE-VALVE CLOSER. PIERRE KEROUANTON, Marieval, Saskatchewan, Canada. Filed Apr. 30, 1929. Serial No. 359,370. 1 Claim. (Cl. 161—7.)



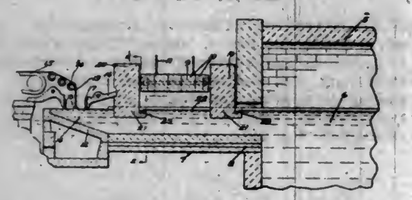
In an automatic needle valve shutter for use on a gasoline engine; a main frame member having a secondary frame secured thereto; a shaft mounted in a bearing in the main frame and pivoted at its upper end in the secondary frame; a shaft adjusting lever extending at right angles from said shaft; a spring enclosed in a spring case, said case being secured to the secondary frame; the spring being fastened to the shaft on its inner end and to the case at its outer end; a toothed wheel mounted on said shaft; a catch pivoted on main frame to engage said toothed wheel; an alarm clock mounted on the secondary frame; a lever pivoted in the secondary frame extending upwards to engage the winding key on the alarm clock, a spring to control said lever; a connecting arm and link from the lever to the aforementioned toothed wheel catch; and a means of connecting the lower end of the shaft to the needle valve stem of the gasoline engine, substantially as set forth.

1,751,042. LIGHTING FIXTURE FOR SHOW CASES. OSWALD W. KLINGSICK, St. Louis, Mo., assignor to Day-Brite Reflector Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 21, 1927. Serial No. 185,449. 5 Claims. (Cl. 240—6.)



1. In a device of the kind set forth, a socket member for an electric light bulb, a reflector fitting over the end portion of said socket member, electric wiring for said socket member extending along the back of said reflector member and a clip on said socket member overlapping the end of said reflector member, said clip having rebent flange members engaging said wiring to hold it in place.

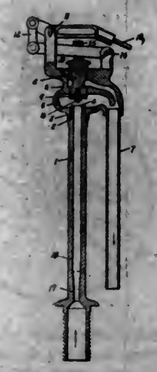
1,751,043. AIR-CONDITIONING APPARATUS. ALEXANDER THORNTON LEWIS, Merion, HARRIS PAUL GANT, Philadelphia, and ROBERT RYLAND TALIAFERRO, Beechwood Park, Pa., assignors to York Heating and Ventilating Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 10, 1927. Serial No. 190,812. 18 Claims. (Cl. 257—3.)



9. An air conditioning apparatus comprising a vertically arranged self-contained water spray chamber and a superposed air heater communicating with said chamber, a device for spraying water into said chamber towards the bottom thereof, means to cause air to pass successively through said chamber and through said air heater, and means to direct said air towards the bottom of said chamber and then towards the top of said chamber whereby the air moves at one time with the water spray and at the other time counter to said water spray.

1,751,044. SAFETY ATTACHMENT FOR GAS VALVES. ERICH KRAUSE, South Jamaica, N. Y. Filed Apr. 3, 1928. Serial No. 267,083. 3 Claims. (Cl. 126—42.)

1. A device for closing a valve comprising a lever secured to a valve, a weight suspended from said lever, said weight adapted to drop and rotate said lever to close said valve, means for latching said weight in raised position to retain said valve lever in open position, a platform above said weight, an opening in said platform adapted to drain boiled over liquid, a ball, and normally balanced means supporting said ball, said ball being adapted to trip said latching means and release said weight when said balanced means is over-balanced.



1,751,045. GLASS TANK. LEOPOLD MAMBOURG, Lancaster, Ohio, assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 3, 1927. Serial No. 172,224. 11 Claims. (Cl. 49—56.)

11. In glass apparatus, a furnace containing a mass of molten glass, a cooling chamber associated therewith for receiving the molten glass therefrom, a jack-arch arranged at substantially the juncture of the furnace and cooling chamber and having its lower end dipped downwardly into the molten glass to allow sub-surface glass only to flow from said furnace into said cooling chamber, a working receptacle associated with said cooling chamber for receiving the molten glass therefrom, a jack-arch arranged at substantially the juncture of the working receptacle and cooling chamber and having its lower end dipped downwardly into the molten glass to allow subsurface glass only to flow from said cooling chamber into said working receptacle, and trough means associated with the jack-arches for catching the upper stratum of glass retarded thereby and directing the same toward the opposite sides of the furnace and cooling chamber respectively.

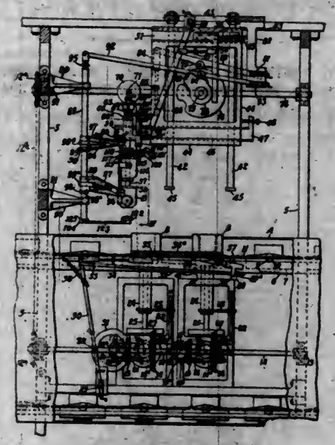
1,751,046. BALL COCK. ROSS MARTIN, Elkhart, Ind., assignor to Northern Indiana Brass Company, Elkhart, Ind. Filed Aug. 18, 1928. Serial No. 300,510. 3 Claims. (Cl. 137—104.)

1. In a ball cock, the combination of a supply pipe having an upwardly expanding restriction spaced from its upper end, the upper end of said supply pipe constituting a valve seat, a valve casing mounted on said supply pipe and having a chamber enclosing said valve seat, and a plunger valve mounted in said casing to coact with said valve seat and provided with a flat surface and with a central conical tip disposed centrally relative to said supply pipe and adapted to enter the same when the

valve is moved toward seating position, gradually restricting the discharge capacity of the supply pipe prior to the seating of the valve.

1,751,047. COMBINED DOLL'S CARRIAGE AND SOUND-PRODUCING MEANS. LOUIS MARX, New York, N. Y. Filed Jan. 28, 1928. Serial No. 250,153. 8 Claims. (Cl. 46—47.)

1. In combination, a doll's carriage comprising a doll receiving body and a frame therefor including running wheels; and a doll crier comprising a self-contained sound producing unit mounted for rotation on said carriage and rotated by a wheeled movement of said carriage, said sound producing unit comprising a casing, a bellows therein, a reed associated therewith, a weight movable in said casing and operating the bellows to sound the reed, the mounting of said sound producing unit on the carriage being such that rotation thereof effects an oscillating movement of said weight in said casing to produce a series of intermittent cries upon wheeled movement of said carriage.

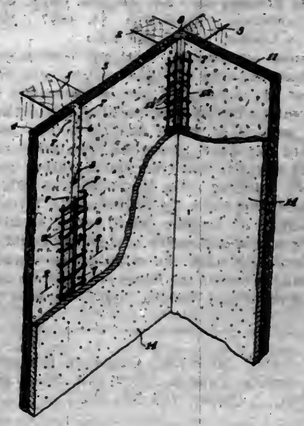


1,751,048. VIOLIN PRACTICE FINGER BOARD. WILLIAM OTTO MUESSNER, Milwaukee, Wis. Filed Oct. 25 1928. Serial No. 314,905. 6 Claims. (Cl. 84—485.)

5. As a new article of manufacture, a board having delineated on one surface thereof four sets of stringed instrument finger forms, each finger form being arranged in a longitudinal row and a pair of said forms extending from one end of the board toward a medial portion thereof and the other pair of said forms extending from the other end of the board toward a medial portion thereof,

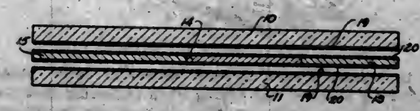
each form being marked and provided with recesses to designate finger positions and the finger positions of each form differing from that of the other forms.

1,751,049. AUTOMATIC MEANS FOR TURNING AND FINISHING WARE IN THE MANUFACTURE OF POTTERY. WILLIAM J. MILLER, Swissvale, Pa. Filed Aug. 26, 1927. Serial No. 215,615. 36 Claims. (Cl. 25—26.)



1. In mechanism of the class specified, in combination, a fluid-operated ware pick-up device, means for moving the latter in a predetermined path, of a ware-turning and finishing assembly including rotating cutting and burnishing tools, and a pattern device mounted adjacent said pick-up device for automatically guiding said tools.

1,751,050. WALL CONSTRUCTION. OSCAR NILSSON, Verona, N. J. Filed July 10, 1928. Serial No. 291,673. 3 Claims. (Cl. 72—16.)



1. A building wall construction and the like including a frame member, a pair of artificial fibrous boards, means for securing the boards to the frame member in spaced relation to each other, a filling-in material incorporated into the gap between the boards, and an elongated wire

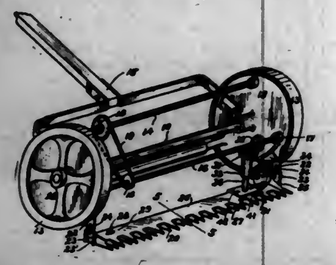
mesh unit bridging the gap and firmly secured to the adjacent fibrous boards or sheets in coplanar relation therewith, said unit being secured to the adjacent artificial

fibrous sheets by the free ends of the cross wires of the mesh which are bent at right angles to the plane thereof and formed into yielding securing nails.

1,751,051. LAMINATED GLASS AND METHOD FOR PRODUCING THE SAME. WILLIAM E. NOBBE, Toledo, Ohio, assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 28, 1928. Serial No. 250,128. 3 Claims. (Cl. 49—81.)

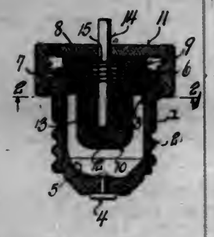
3. The method of producing laminated glass, which consists in interposing a plurality of individual sheets of non-brittle material between two relatively larger sheets of glass, arranging the sheets of non-brittle material side by side so that their outer edges will be flush with the edges of the glass sheets and their adjacent edges in abutting or substantially abutting relation, uniting the glass sheets with the individual sheets of non-brittle material simultaneously, and in then cutting the glass sheets between the adjacent sheets of non-brittle material.

1,751,052. METHOD FOR MAKING LAMINATED GLASS. WILLIAM E. NOBBE, Toledo, Ohio, assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 2, 1928. Serial No. 251,283. 8 Claims. (Cl. 49—81.)



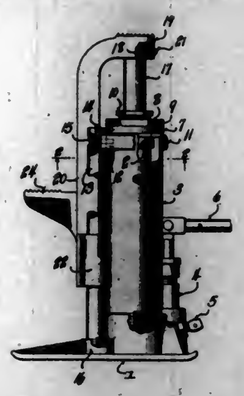
1. The method of making laminated glass, which consists in interposing a plurality of individual sheets of non-brittle material between two relatively larger sheets of glass, arranging the said sheets of non-brittle material side by side with their edges in spaced relation, uniting the glass sheets with the individual sheets of non-brittle material simultaneously, and in then cutting the glass sheets intermediate the adjacent edges of the sheets of non-brittle material whereby each individual cut sheet will have a peripheral groove or recess.

1,751,053. METHOD OF CLEANING LUBRICANT CASES OF ENGINES. WILLIAM L. OSBORNE, Los Angeles, Calif., assignor, by direct and mesne assignments, to Osborne Process, Inc., Los Angeles, Calif., a Corporation of California. Filed Feb. 14, 1927. Serial No. 168,246. 4 Claims. (Cl. 184—1.5.)



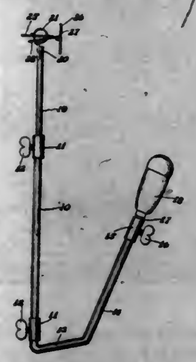
1. A method of cleaning lubricant containers, which comprises first removing the used lubricant and preventing the return of any substantial portion thereof to said container, thereafter introducing flushing liquid thereto, no substantial portion of which had previously been introduced to said container, thereafter circulating repeatedly said flushing liquid to and from the container under pressure, initially building up a liquid level of said flushing liquid in said container by continuously introducing a greater quantity of flushing liquid while simultaneously withdrawing a lesser quantity of flushing liquid, continuing said circulation until the container is cleaned, thereafter gradually lowering the liquid level therein and finally withdrawing all of said flushing liquid from said container.

1,751,054. LAWN MOWER. CLARENCE HOWARTH PEEL, Dundas, Ontario, Canada. Filed Oct. 25, 1928. Serial No. 314,971. 1 Claim. (Cl. 56—262.)



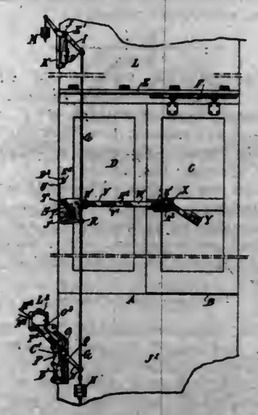
1. In a lawn mower, a fixed horizontal cutter blade transversely disposed and having teeth projecting from its forward edge, a knife mounted thereon for reciprocal movement, means for adjustably securing the fixed blade in the frame, a boss borne by the knife providing a well, an eccentric operably retained therein, a shaft rigidly rising from said eccentric, a bearing projecting from the frame, a gear journalled therein, said gear having an elongated bore telescopically receiving said shaft, a key precluding independent rotation therebetween, and a driven gear meshing with said gear.

1,751,055. FUSE PLUG. EMMET F. PELLETIER, St. Joseph, and WALTER E. BANDLOW, Benton Harbor, Mich. Filed Oct. 22, 1928. Serial No. 314,266. 3 Claims. (Cl. 200—121.)



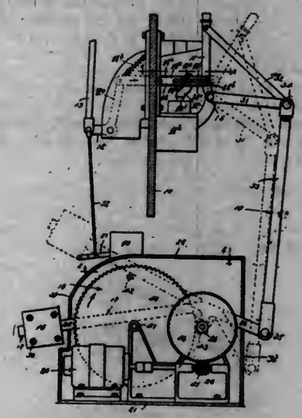
2. A renewable indicating fuse plug comprising a shell provided with terminals, a ring and a sleeve adapted to hold between them a renewable fuse strip, a plunger carried by said sleeve and spring-pressed inwardly and restrained by said fuse strip, a cap holding said sleeve and ring in place and screwed upon said shell.

1,751,056. JACK. EDWARD M. PFAUSER, Milwaukee, Wis., assignor to Blackhawk Manufacturing Co., Milwaukee, Wis. Filed June 21, 1928. Serial No. 287,095. 2 Claims. (Cl. 138—9.)



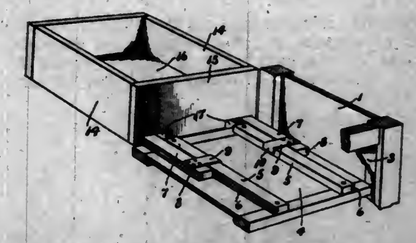
1. An hydraulic jack comprising a base, a pump carried by said base, a reservoir supported from said base, a cylinder carried by said base, a cylinder head threaded upon the upper end of said cylinder and contacting with and locking the upper end of said reservoir in place, a plunger projecting through said cylinder head, a guide carried by said base and projecting upwardly parallel to said cylinder, a member surrounding said cylinder and locked to the upper end of said guide, and a cross head secured to the upper end of said plunger and having a portion paralleling the cylinder and guided by said guide.

1,751,057. WINDOW CLEANER. REES REES, Jersey City, N. J. Filed Sept. 5, 1928. Serial No. 304,094. 2 Claims. (Cl. 15—232.)



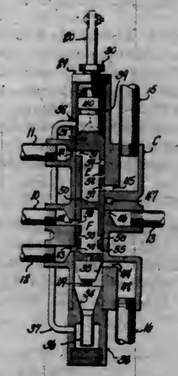
1. In a window cleaner having an arm adapted to support a cleaning head, a substantially cylindrical clamping member attached to said arm, a cleaning head having a tongue projecting therefrom, said member being resilient and having an opening extending longitudinally throughout its length, openings in said member at points distant from said first-named opening, said tongue being releasably insertable first through said first-named opening and then through one of said second-named openings, and means extending through said first-named opening and the other of said second-named openings cooperating with said member to releasably retain said tongue in said member.

1,751,058. ELEVATOR-DOOR MECHANISM. ALBERT J. ROSENTRETER, Boonton, N. J., assignor of one-half to Frank E. Hutchins, New York, N. Y., and one-half to Edgar Zabriskie, Maplewood, N. J. Filed Oct. 15, 1927. Serial No. 226,396. 3 Claims. (Cl. 187—51.)



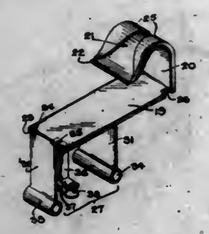
2. The combination of an elevator shaft having a plurality of floors, a flexible member extending past said several floors, a pivoted member for each floor connected with said flexible member, door-opening mechanism adapted to move the group of pivoted members of the several floors when the door is opened, means for connecting the door-opening mechanism with the pivoted member whereby the door-opening mechanism cannot be moved in either direction without moving said pivoted member, and means for checking the movement of said pivoted member on the closing movement of said door.

1,751,059. RECLOSING MECHANISM FOR CIRCUIT BREAKERS. HENRY L. SAMPSON, Los Angeles, Calif. Filed Jan. 10, 1927. Serial No. 160,138. 5 Claims. (Cl. 200—89.)



1. An attachment for a circuit breaker for reclosing the circuit breaker including a shaft, a motor, a drive connection between the shaft and motor, a lever pivotally mounted on said shaft and adapted to be operatively connected with the breaker, a weight on one end of the lever, a pinion fixed on the shaft, a gear mounted on an axis spaced from the shaft to mesh with the pinion, and a projection on the gear to engage and lift the lever and then release it.

1,751,060. DRAWER SLIDE. DIRK B. K. VAN RAALTE, Holland, Mich., assignor to Charles P. Limbert Company, Holland, Mich., a Corporation of Michigan. Filed May 15, 1928. Serial No. 277,831. 1 Claim. (Cl. 45—77.)



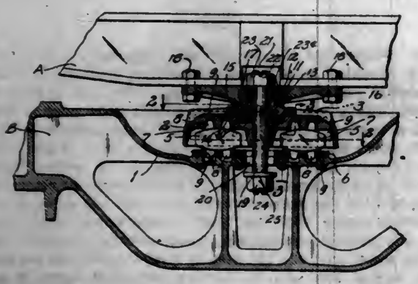
In a drawer guide construction, a horizontal support, a pair of bars each grooved longitudinally at its outer edge permanently secured to the support in spaced apart relation, a second pair of bars each grooved longitudinally at its outer edge located one alongside the outer edge of each of the first bars, guide pins extending from the second bars into the grooves of the first bars, a stop adjacent the front end of the groove in each of the first bars, a drawer having vertical sides and a bottom located a distance above the lower edges of said sides located over said bars, guide pins extending inwardly from the sides of the drawer at points below the bottom thereof into the grooves of the second mentioned bars and a stop adjacent the front end of the groove in each of the second mentioned bars, each of said bars a short distance back of its outer end having a notch cut therein at its grooved edge from its upper side downwardly to the groove therein for the purposes described.

1,751,061. VALVE FOR WATER SOFTENERS. BENJAMIN H. TER BEEST, Madison, Wis. Filed Aug. 9, 1928. Serial No. 298,531. 5 Claims. (Cl. 251—76.)

1. A valve for a water softener comprising a body portion provided with a valve receiving aperture, a valve slidably mounted within said aperture and having an upper and a lower compartment, said body portion having a port, a second port, a hard water supply port, a soft water service port, a brine supply port, a brine delivery port, and a waste port, said valve having transverse ports arranged in groups with one group communicating with the upper compartment and the other group communicating with the lower compartment, said valve in one position establishing communication between the hard water port and the first mentioned port, and between the second port and the service port, said valve in another position establishing communication between said hard water port and the brine supply port, between the brine delivery port and the second port, and between the first mentioned port and the waste port.

1,751,062. COMBINED VALANCE-BOARD SUPPORT AND CURTAIN-ROD BRACKET. JACOB M. WINTROB, Philadelphia, Pa. Filed Sept. 29, 1928. Serial No. 309,138. 16 Claims. (Cl. 156—13.)

2. In a combined valance board support and hanging rod bracket, a member having a substantially flat horizontally disposed portion for supporting a valance board, means slidably associated with said bracket member for supporting one or more rods from which hangings may be suspended, and means for supporting a draw-cord pulley upon and in fixed relation with respect to said slidable means.



1,751,063. NITRATED CARBOHYDRATE EXPLOSIVE AND PROCESS OF PRODUCING SAME. PHILIP G. WRIGHTSMAN, Chester, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 7, 1927. Serial No. 238,466. 9 Claims. (Cl. 52—13.)

1. A process of manufacturing an explosive containing nitrated sugar, which comprises nitrating a solution of a monosaccharide and disaccharide in polyhydric alcohol, said solution containing more than 5% monosaccharide and about 25% disaccharide.

1,751,064. EXPLOSIVE AND PROCESS OF MANUFACTURE. CHARLES CHESTER AHLUM, Chester, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 20, 1928. Serial No. 271,057. 21 Claims. (Cl. 52—13.)

1. The process of producing explosives which comprises nitrating mixtures of polyhydroxy alcohols having from four to six carbon atoms and liquid polyhydroxy alcohols.

1,751,065. CENTER-BEARING CONSTRUCTION FOR RAILWAY CARS. HERBERT W. ALDEN, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed Oct. 17, 1928. Serial No. 313,094. 7 Claims. (Cl. 105—200.)

1. A center bearing construction for railway cars comprising a truck bolster having a longitudinal slideway in the top thereof, a supporting member mounted in said slideway for limited vertical and longitudinal sliding movement therein, a body bolster pivotally supported on said supporting member, and rocker members interposed between the bottom of said slideway and said supporting member, said supporting member being provided on its undersurface with downwardly opening pockets adapted to loosely house said rocker members.

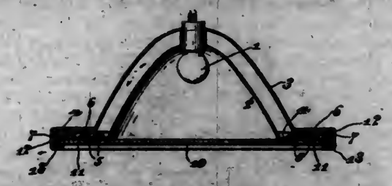
1,751,066. PROCESS OF PRODUCING ELEMENTAL SULPHUR. RAYMOND C. BENNER, Bayside, and ALFRED PAUL THOMPSON, Jackson Heights, N. Y., assignors to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1926. Serial No. 134,160. 17 Claims. (Cl. 23—227.)

1. The process for producing elemental sulphur which comprises contacting a mixture of sulfide ore and carbonaceous material with an oxidising gas, and passing the gaseous products, while heated, over a catalyst adapted to complete the interaction of the gases to produce elemental sulphur.

1,751,067. PROCESS OF PRODUCING ELEMENTAL SULPHUR. RAYMOND C. BENNER, Bayside, and ALFRED PAUL THOMPSON, Jackson Heights, N. Y., assignors to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1926. Serial No. 134,162. 16 Claims. (Cl. 23—224.)

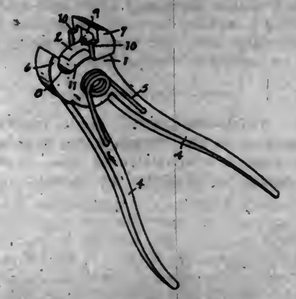
13. The process of producing elemental sulphur which comprises the step of introducing sulfide ore and carbonaceous material in finely divided dispersed form into a reducing atmosphere.

1,751,068. PROCESS OF PRODUCING ELEMENTAL SULPHUR. RAYMOND C. BENNER, Bayside, and ALFRED PAUL THOMPSON, Jackson Heights, N. Y., assignors to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1926. Serial No. 134,163. 12 Claims. (Cl. 23—224.)



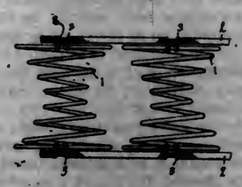
1. The process of producing elemental sulphur which comprises contacting a mixture of sulfide ore and a carbonaceous material with an oxidizing gas, maintaining a temperature sufficiently high to cause a reaction between the contacting materials and to fuse the non-volatile reaction products, regulationg the proportion of carbonaceous material to reduce substantially all the sulphur to the elemental form, and discharging the non-volatile reaction products as a slag.

1,751,069. FOOTWEAR. ALBERT BLAIN, Philadelphia, Pa. Filed Feb. 19, 1927. Serial No. 169,433. 2 Claims. (Cl. 36—34.)



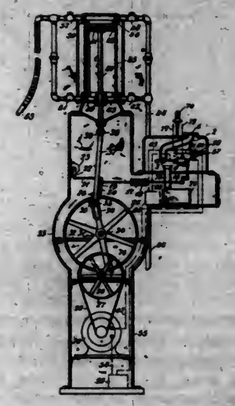
2. The combination of an article of foot-wear, comprising a heel and an upper, and having a chamber within said heel, with a sub-caliber member slidable within said chamber, an element of renewing material slidable within said member, and means to normally maintain said member and said element within said chamber.

1,751,070. REFLECTOR FOR AUTOMOBILES. EDMUND R. BOOTH, Short Hills, RICHARD W. LUCE, Maplewood, and VICTOR L. OESTMANS, Westfield, N. J., assignors to American Gas-Accumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 26, 1928. Serial No. 264,782. 14 Claims. (Cl. 240—7.1.)



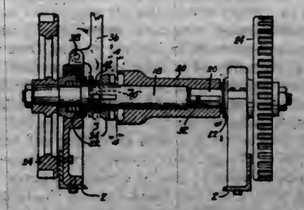
1. In combination, a source of light, a reflector surrounding the said source of light and adapted to reflect and project the rays of light therefrom outwardly, a multiplicity of self-focusing light reflectors associated with and located outside of the outer edge portion of the first named reflector, and a lens for the said light.

1,751,071. CLIP-APPLYING TOOL. GUSTAV O. BRANDT, Detroit, Mich., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Filed May 17, 1928. Serial No. 278,575. 6 Claims. (Cl. 140—65.)



1. A tool of the class described comprising a pair of pivotally connected jaw members provided with handles and with jaws having opposed outwardly curved faces, one of the jaws having forwardly projecting stepped shoulders disposed in planes at the outside of the planes of the sides of the other jaw, said jaw members having complementary forwardly curved work supporting faces between the jaws merging into the curvature of the jaws with the reverse curves.

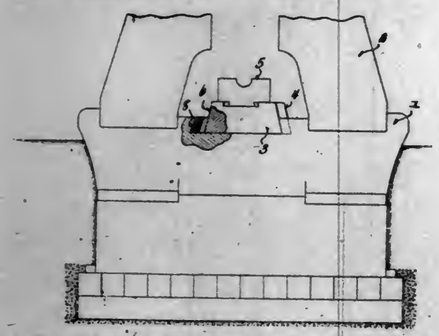
1,751,072. METHOD OF ASSEMBLING SPRING STRUCTURES. GUSTAV O. BRANDT, Detroit, Mich., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Filed May 17, 1928. Serial No. 278,578. 4 Claims. (Cl. 140—101.)



1. The method of assembling coiled body springs and coiled spring tie members having coils of uniform diameter into a spring cushion structure consisting of positioning a coiled spring tie member in tangential juxtaposition to a coil of a body spring, applying a clip adapted to embrace both the coiled spring tie member and the coil of the body spring, and closing the clip upon the parts and simultaneously offsetting the portion of the coiled spring tie member embraced by the clip providing shoulders therein at each side of the clip.

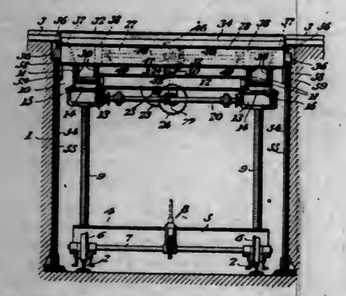
1,751,073. AUTOMATIC LIQUID-FUEL DISPENSER. CHARLES BRAHY, Brooklyn, N. Y., assignor to Charles E. Marion, New York, N. Y. Filed Mar. 28, 1928. Serial No. 265,257. 8 Claims. (Cl. 194—13.)

1. In an automatic liquid fuel dispenser of the class described a coin-operated control box comprising, in combination, a coin-deposit slot communicating with a chute terminating above a temporary coin receptacle having an electric contact point attached thereto; an intermediate releasable support for said receptacle, the said support having another electric contact point attached thereto; said receptacle being provided with means to enable the weight of a coin deposited therein to cause a downward movement of said receptacle until it comes into abutment with and rests upon said releasable support thereby bringing said points into contact with each other; means to trip said releasable support and remove it from its position where it upholds said receptacle, thereby separating said contact points and at the same time allowing said receptacle to continue on its downward course until the coin therein is caused to drop into a suitably positioned coin box; and means to bring said receptacle and said support back to their starting positions.



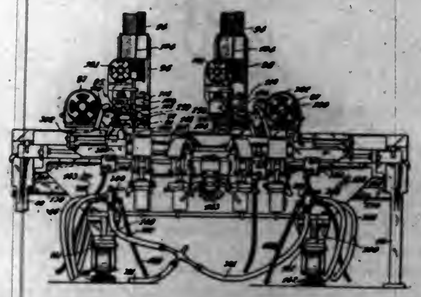
1,751,074. ROAD VEHICLE. DAVID B. COOK, Frankfort, N. Y., assignor to Acme Road Machinery Company, Frankfort, N. Y., a Corporation of New York. Filed July 14, 1928. Serial No. 292,786. 1 Claim. (Cl. 74—100.)

A power driven vehicle having, in combination, traction devices, differentially driven shafts, connections between said shafts and wheels, respectively, for driving said devices differentially, comprising gears secured on the ends of said shafts, idler gears operatively engaged by said first-mentioned gears, gears for driving said devices



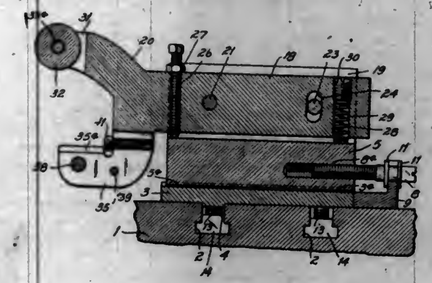
and operatively engaged by said idler gears, and means comprising a clutch interposed between said idler gears and operable from the driver's seat for locking said idler gears together to prevent differential movement of said traction devices but permitting them to be driven simultaneously by said connections.

1,751,075. SOW-BLOCK HOLDER FOR HAMMERS. MARK H. DAMERELL, Worcester, Mass. Filed May 11, 1928. Serial No. 276,967. 2 Claims. (Cl. 78—44.)



1. In a hammer having a base provided with a slot having overhanging slanting side walls, a sow block having slanting sides, a corrugated shim and a hardened straight shim interposed between a side of the sow block and a side of the slot, and a wedge driven between the hardened straight shim and the adjacent side of the slot.

1,751,076. DROP-PIT APPARATUS. FRANK L. DAVIS, Jr., Kenilworth, N. J., assignor to The Watson Stillman Co., New York, N. Y., a Corporation of New Jersey. Filed May 11, 1928. Serial No. 276,972. 6 Claims. (Cl. 104—32.)

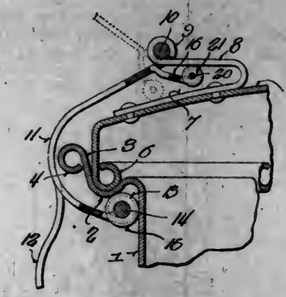


1. In a drop pit apparatus, a bridging and transporting table comprising a frame structure and a pair of track rail sections to extend across the pit supported in spaced relation by said frame structure, said table being adapted to be raised and lowered in the pit to and from bridging position; a plurality of bolting means carried by the table for holding it in bridging position, located adjacent the ends of the rail sections and each comprising a reciprocable bolt and a guide member for the bolt fixed to the frame structure and formed with a nose extending out toward the adjacent side of the pit and tapered upwardly; means mounted at opposite sides of the pit defining a plurality of keeper means to receive the bolts and support the table in bridging position; downwardly opening vertical guides mounted in the pit, extending downwardly from each keeper and flaring outward in opposite directions at their lower ends, said guides being adapted to engage opposite sides of said noses of the bolt guides to accurately register the bolts with the keepers; and means for reciprocating the bolts to operative and inoperative position.

1,751,077. AUTOMATIC WELDING. WALTER H. D'ARDENNE, J. OLIN LANDIS, and LEWIS H. CHRISTENSEN, Philadelphia, Pa., assignors to Heintz Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Sept. 12, 1925, Serial No. 55,934. Divided and this application filed Dec. 30, 1927. Serial No. 243,541. 15 Claims. (Cl. 219—8.)

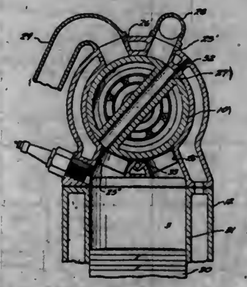
1. In an apparatus of the character described, in combination, a movable jig and automatic welding apparatus for automatically welding seams on work engaged on said jig, guide arms projecting laterally from said welding apparatus, and shoe members secured to said movable jig and adapted to slide along said arms, said welding apparatus including a welding unit and means for moving said unit bodily along said work during the welding, said unit including an automatic welding head.

1,751,078. TOOL HOLDER. IRVIN DROWNS, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Apr. 23, 1928. Serial No. 272,089. 14 Claims. (Cl. 82—35.)



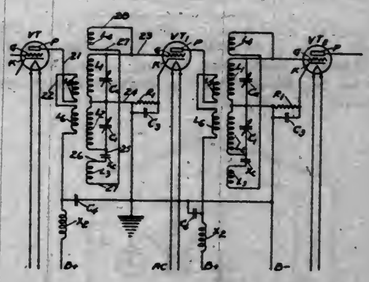
1. A tool holder for screw machines or the like, comprising a base member adapted to be slidably mounted on said machine, a body member mounted on said base member for sliding movement at an angle to the direction of sliding movement of said base member, a tool arm mounted on said body member, means for locking said base member and said body member together and to said machine in any position of their sliding movements, means independent of the combined base member and body member locking means for locking the body member to the base member in any position of its sliding movement thereon, and means independent of said first and second mentioned locking means for locking said base plate to said machine in any desired position of its sliding movement thereon.

14. The combination with a screw machine or the like, provided with parallel T-slots, of a tool holder comprising a base member provided with holes adapted to register with said slots, a body member slidable on said base member in directions transverse to said T-slots and provided with elongated slots extending in the direction of the sliding movement of said body member and registering with the holes in said base member, a tool arm pivotally mounted



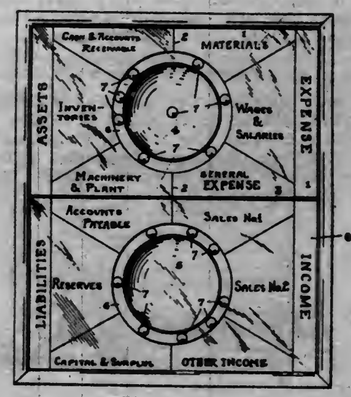
on said body member, clamping screws extending through the elongated slots in said body member and the bolt holes in said base plate and into said T-slots, T-nuts mounted in said T-slots and threaded on said screws, a clamping screw extending through an elongated slot provided therefor in said body member and threaded into said base member, means cooperating with one of said first mentioned clamping screws for preventing the same from clamping said body member to said base member, means for clamping said tool arm to said body member in any position of its pivotal movement, a working supporting roller journaled on said tool arm, means for adjusting said roller in directions transverse to its axis, a tool block slidably mounted on said arm, means for clamping said tool block to said arm, and an adjustable stop on said tool arm for limiting the sliding movement of said tool block in one direction.

1,751,079. VESSEL CLAMP. ELMER E. DRUMM, Manitowoc, Wis., assignor to Aluminum Goods Manufacturing Company, Manitowoc, Wis. Filed Aug. 3, 1928. Serial No. 297,174. 3 Claims. (Cl. 220—55.)



1. A vessel cover clamp comprising a resilient attaching member for securement to a cover, a clamping member hinged thereto, a roller carried by the lower end of said clamping member for engaging a portion of the vessel, and means carried by the clamping member for yieldably retaining the same in raised position, said means comprising an offset tongue, and an engaging roll carried thereby.

1,751,080. INTERNAL-COMBUSTION ENGINE. CLARK L. FRY, Wisconsin Rapids, Wis., assignor of one-half to Hugh W. Goggins, Wisconsin Rapids, Wis. Filed Aug. 2, 1928. Serial No. 296,910. 5 Claims. (Cl. 123—190.)

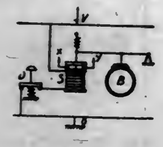


1. An internal combustion engine including a cylinder and a cylinder head provided with a cylindrical bore and a pair of ports for the passage of fuel gases, a rotor in the cylindrical bore provided with a diametrical conduit whereby, when the conduit registers with the ports, fuel gases may pass therethrough to the cylinders, said ports being so positioned in the cylinder head that in the rotation of the rotor the conduit passes out of registry with one of said ports before passing out of registry with the other.

1,751,081. RADIO APPARATUS. ANATOL GOLLOR, Chicago, Ill. Filed May 13, 1929. Serial No. 362,822. 15 Claims. (Cl. 179—171.)

1. In a system of the character described, oppposed primary inductances adapted to be energized from a common source of radio frequency, tuned secondary inductances each coupled with one of said primary inductances, a vacuum tube having a grid connected to one of said secondary inductances and phase correcting means associated with another secondary inductance for impressing upon the grid a second voltage substantially in phase with the voltage in the secondary inductance connected to the grid.

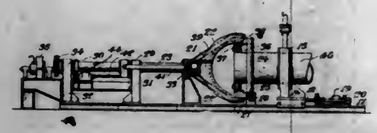
1,751,082. ACCOUNTING DEVICE. JAMES GRANT, Ben Avon Heights, Pa. Filed June 4, 1928. Serial No. 282,704. 8 Claims. (Cl. 35—12.)



1. An accounting instruction device provided with a surface marked in divisions to denote various classes of accounting items and pellets arranged to be moved thereon to indicate various items, the pellets being caused to move through the force of gravity by tipping the device.

1,751,083. PROCESS FOR PRODUCING METALS IN ELECTRIC FURNACES. EMIL GUSTAF TORVALD GUSTAFSSON, Stockholm, Sweden. Filed May 11, 1927, Serial No. 190,652, and in Sweden Sept. 27, 1926. 4 Claims. (Cl. 75—22.5.)

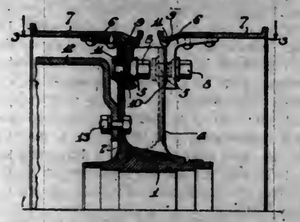
1. A process for producing metal on a commercial scale, which consists in subjecting a metalliferous charge on top of a slag bath in an electric furnace to an arc from a downwardly extending electrode positioned above the charge, the charge and electrode being connected to a suit-



able source of electrical energy, developing sufficient energy in the afore described circuit to melt the charge, and spacing the electrode sufficiently far from the charge to make the ohmic resistance of the circuit a minimum of 0.02 ohm.

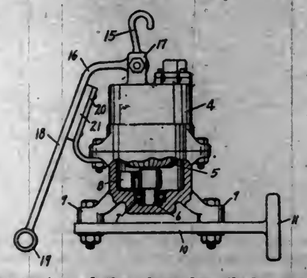
1,751,084. AUTOMATIC EMERGENCY CONTROL. WALDEMAR HOFF, Oslo, Norway. Filed Mar. 14, 1928, Serial No. 261,606, and in Norway Jan. 8, 1928. 18 Claims. (Cl. 303—19.)

1. Safety apparatus for locomotives controlled by a single operator, comprising, in combination, an automatic control device whereby said locomotive can be maintained in operation or stopped; a "dead man's button" normally held by said operator; means for operating said control device so that normally the holding or release of said button maintains in operation or stops respectively the said locomotive; interrupting means driven by said locomotive; means whereby said interrupting means is adapted to operate said control device at intervals in a manner adapted to maintain in operation or stop said locomotive; and means whereby said control device, after operation so as to stop said locomotive, can be again operated by said button so as to be reset and maintain said locomotive in normal operation.



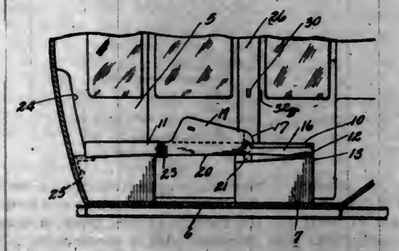
1,751,085. METHOD OF AND APPARATUS FOR FORMING HEADS ON TUBULAR ARTICLES. ROBERT KINGSLEY HOPKINS, New York, N. Y., assignor to The M. W. Kellogg Company, a Corporation of Delaware. Filed Sept. 29, 1927. Serial No. 222,787. 6 Claims. (Cl. 113—52.)

1. Method of forming heads on tubes which comprises bringing a roll into contact with the external surface of a tube at a point adjacent to, but spaced from, an end thereof, causing relative movement between said roll and said tube simultaneously in a rotary and a longitudinal direction, and causing said roll to move longitudinally of said tube toward the adjacent end thereof and at the same time causing the circle described by the relative rotary movement of the roll and tube to gradually decrease in diameter.



4. A forming head for a head-forming apparatus comprising a support, a plurality of spaced arms radiating from said support and carrying arcuate guideways, roll-carrying members movable in said guideways, and means movable longitudinally of said support for moving said roll-carrying members along said guideways.

1,751,086. VEHICLE WHEEL. J. HAROLD HUNT, Detroit, Mich., and GORDON M. EVANS, New York, N. Y., assignors to Bud Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1927. Serial No. 236,898. 2 Claims. (Cl. 301—13.)



1. In a vehicle wheel, a single disc wheel body having its outer peripheral portion formed with radial corrugations to provide transversely offset portions, and a pair of tire supporting rims secured to said offset portions.

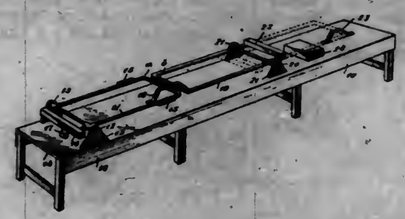
1,751,087. AGITATOR FOR CONCRETE MOLDS. CORWILL JACKSON, Chicago, Ill. Filed July 5, 1928. Serial No. 290,355. 13 Claims. (Cl. 259—72.)

1. An apparatus of the class described comprising an electric motor casing, a rotor within said casing provided with a shaft having an unbalancing weight thereon, a bar-like form engaging member disposed transversely of and rigidly secured to said casing, a lever pivotally mounted on the upper end of said casing with one end projecting downwardly at the side of said casing and in opposed relation to said form engaging member and provided with a handpiece, its other end being provided with a suspending hook, and a thrust arm on the side of said casing provided with a resilient supporting pad for said lever.

1,751,088. CONVERTIBLE SEAT FOR AUTOMOTIVE VEHICLES. EDWARD L. JACOBY, Gaylord, Mich. Filed Dec. 5, 1927. Serial No. 237,659. 3 Claims. (Cl. 155—7.)

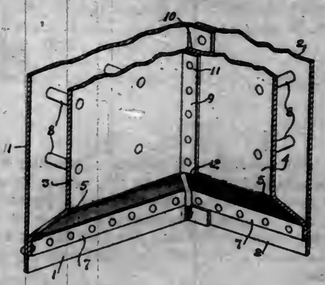
1. The combination with a vehicle body, of a seat support, a seat frame pivotally connected to the front of said support, a seat cushion detachably mounted therein, a back frame pivotally connected to the rear end of the pivoted seat frame, cams mounted on said back frame and adapted to engage the seat when the back is swung down, and means on the body for rigidly and detachably engaging the back frame when it is swung to upright position.

1,751,089. METHOD OF PRODUCING A WOOL FINISH ON COTTON GOODS. RICHARD G. KNOWLAND, Wollaston, and GILBERT T. LOVERIDGE, Boston, Mass., assignors to Nashua Manufacturing Company, Nashua, N. H., a Corporation of New Hampshire. Filed May 11, 1926, Serial No. 108,380. Renewed Aug. 13, 1929. 5 Claims. (Cl. 8—20.)



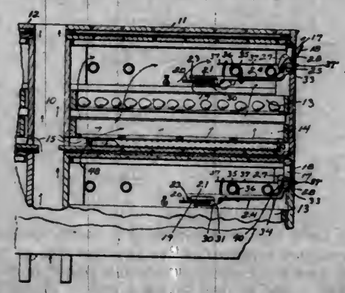
1. That improvement in the process of producing a wool finish on cotton goods which consists in subjecting the goods to the action of a caustic alkali of mercerizing strength until the cotton fibre of the goods has become well plumped or swelled, allowing the goods to shrink freely during the action of the caustic thereon, washing a considerable proportion of the caustic out of the goods, drying the goods with heat while a part of the caustic still remains in them, and subsequently removing the remaining caustic from the goods.

1,751,090. SPEAR. NELSON LAMOUREUX, Whittier, Calif., assignor of one-half to Michael W. Lukes, Compton, Calif. Filed Apr. 4, 1929. Serial No. 352,341. 9 Claims. (Cl. 294—96.)



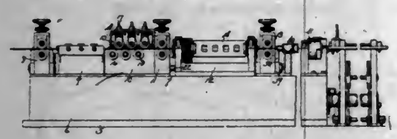
1. A well tool of the character described including, a body, a wedge part on the body, a slip mounted for cooperative movement along the wedge part and for lateral movement to position out of engagement with the wedge part, and means preventing lateral movement of the slip in one direction from the wedge part.

1,751,091. BAG MACHINE. HENRY B. LANDAU, Sandusky, Ohio, assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed June 7, 1924. Serial No. 718,458. 9 Claims. (Cl. 223—20.)



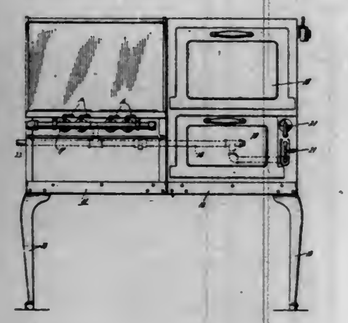
1. An apparatus for lining bags comprising cooperating complemental carriers arranged and constructed to carry a bag and a liner respectively, each carrier being pivoted to move independently in a vertical plane into cooperative relation with the other.

1,751,092. STEAM BOILER. CLARENCE B. LITTLE, Dayton, Ohio, assignor to The Brownell Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 26, 1928. Serial No. 249,617. 1 Claim. (Cl. 122—368.)



In a boiler water leg, a pair of rectangular sheets of metal, said sheets being united at right angles to each other along parts of one edge of each sheet by an overlapping joint, the other part of said edge of each sheet having an offset portion, each offset portion having a part of its edge at an angle to the overlapping joint and a portion parallel to said joint, and the edges of the offset portions beveled and united by welding.

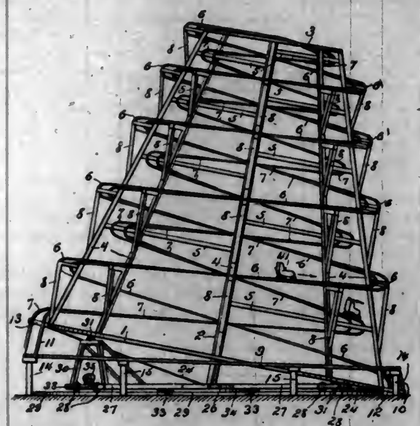
1,751,093. VENTILATING AND HUMIDIFYING SYSTEM. GEORGE T. MARKEY, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis. Filed Feb. 6, 1926. Serial No. 86,482. 9 Claims. (Cl. 119—42.)



1. In a ventilating system for incubators, an egg compartment having a horizontal slot in the lower portion of one wall, said slot and the chamber space being adapted to allow air to enter in a horizontally flowing sheet and another horizontal slot in the upper portion of an opposing wall, said slots being of a length substantially equal to the length of the chamber, means for manually controlling the passage of air through one of the slots by varying its width and means for thermostatically controlling the passage of air through the other, whereby the capacity of the inlet slot may be proportioned to the normal requirements for delivery of air through the outlet, said compartment having an egg tray at an intermediate point adapted to promote distribution of the air current throughout the portion of the compartment occupied by said tray by partially obstructing the flow of air at all points in the space occupied by the tray.

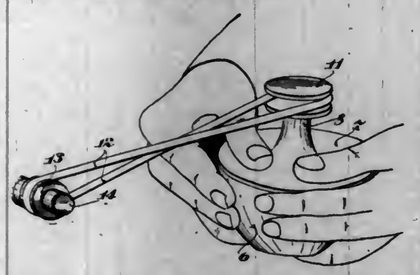
1,751,094. WIRE-STRAIGHTENING MACHINE. GEORGE FRANKLYN MATTESON, Rockyhill, Conn., assignor to The F. B. Shuster Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 6, 1928. Serial No. 268,016. 7 Claims. (Cl. 140—140.)

1. A wire straightening machine including a rotatably mounted straightening arbor having means for straightening the wire passed therethrough, and a breaker unit comprising sets of oppositely arranged rolls with means for positively driving one of said sets to force the wire toward and to substantially straighten said wire for delivery to said arbor.



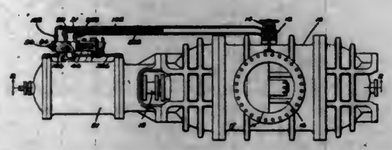
1,751,095. REVERSIBLE STOVE AND FUEL CONNECTION. LEWIS MOORE and CLAUDE M. DIBBLE, Joliet, Ill., assignors to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Nov. 27, 1925. Serial No. 71,561. 1 Claim. (Cl. 126—39.)

In a stove the combination of a burner section and a broiler section arrangeable one at either side of the other, said sections being provided with fuel supply inlets at their rear, and a said section having a burner supply manifold at its front and connected to the fuel supply inlet of said section at the rear by a pipe passing through the section, and a pipe assembly at the rear of the stove for delivering fuel to said supply inlets, said pipe assembly consisting of parts adapted to be connected together in one relationship when said sections have one arrangement and in a different relationship when said sections have the reverse arrangement.



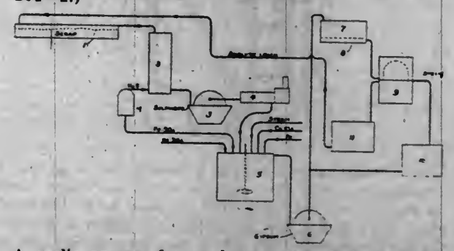
1,751,096. COASTING APPARATUS. CHARLES E. MORRIS, Leavenworth, Kans. Filed Mar. 10, 1927. Serial No. 174,235. 5 Claims. (Cl. 272—50.)

1. In a coasting apparatus, a gyratory support, a track carried thereby having two upwardly leading spiral portions of opposite leads, connected at their upper ends and encircling the axis of said support and having each an angle of lead less than the angle of said axis to the vertical, and a landing track comprising two swinging portions having one set of ends respectively connected to the



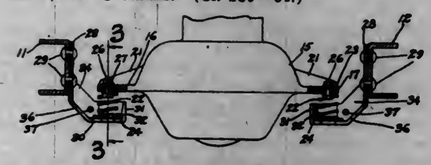
lower ends of said spiral portions and a stationary portion having its ends respectively connected to the other set of ends of said swinging portions.

1,751,097. DENTAL INVESTMENT MIXER. EARL ALLEN NELSON, Minneapolis, and CHARLES E. LARSON, St. Louis Park, Minn. Filed Sept. 19, 1928. Serial No. 307,026. 4 Claims. (Cl. 259—107.)



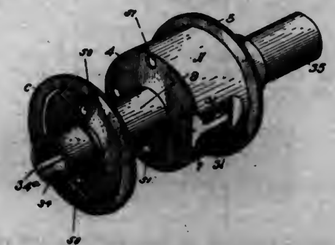
1. A mixing device of the kind described comprising a bowl of yielding material and a spatulating blade of unyielding material arranged to rotate within and formed at its outer portions on lines that approximately fit the interior of the bowl, and the oppositely projecting arms of said blade having operative surfaces that are backwardly curved in respect to the direction of rotation of the blade so that the curved portions thereof blend approximately into tangential contact with the bowl.

1,751,098. VALVE-CONTROL SYSTEM. ERNEST W. ORTON, Mountain View, and CHARLES V. FOULDS, Berkeley, Calif., assignors to The Pelton Water Wheel Company, San Francisco, Calif., a Corporation of California. Filed July 11, 1927. Serial No. 204,997. 8 Claims. (Cl. 137—139.)



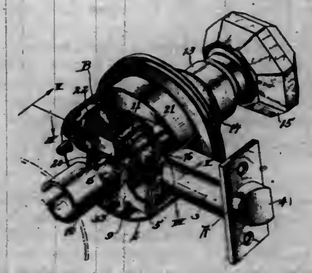
1. In a hydraulic control system, a valve adapted to open and close a hydraulic pipe, the inflow side of the valve being connected to a source of water under pressure, a controllable bypass extending about said valve, hydraulic means utilizing the pressure of water on the outflow side of the valve for opening the same, and valve means for controlling flow of water from said outflow side to said hydraulic means.

1,751,099. PROCESS OF MAKING ELECTROLYTIC IRON FROM SCRAP. ROBERT D. PIKE, Piedmont, Calif. Filed July 20, 1926. Serial No. 123,625. 1 Claim. (Cl. 204—1.)



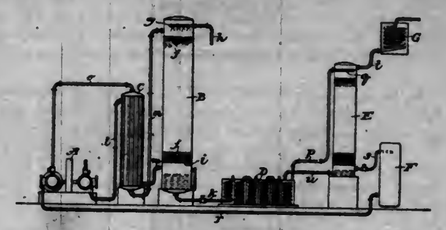
A cyclic process for producing electrolytic iron from scrap, which consists in dissolving the scrap in a leach containing ferric chloride, purifying the reduced liquor by precipitation of metallic impurities as sulphides, adding $CaCl_2$ to restore chlorine losses to the cycle, and adding sufficient sulphate ion to precipitate the calcium of the said calcium chloride as gypsum, filtering off the gypsum, electrolyzing the solution for production of pure electrolytic iron and regeneration of the leach.

1,751,100. ENGINE MOUNTING FOR AUTOMOTIVE VEHICLES. ROBERT SARDESON and FRANK J. LA MERE, Minneapolis, Minn., assignors to Sardeson & La Mere Patents Holding Company, Ltd., Minneapolis, Minn., a Partnership composed of J. D. Strutzel, Frank J. La Mere, Robert Sardeson, John Corser, and Martinson Brothers & Osborn, Inc. Filed Jan. 12, 1925. Serial No. 1,905. 8 Claims. (Cl. 180—64.)



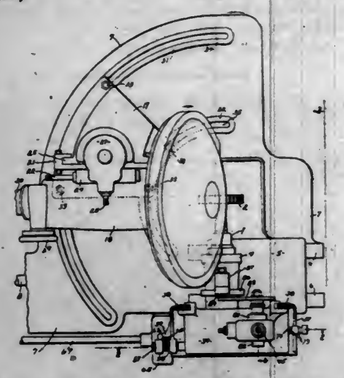
1. A device of the class described comprising a bracket having a cup-shaped socket and a circumferential groove at the inner side of its wall, said bracket being slotted to permit springing of the socket members thus formed, to clamp the terminal of a spring within the groove.

1,751,101. DOOR LOCK. WALTER R. SCHLAGE, San Francisco, Calif., assignor to Schlage Lock Company, San Francisco, Calif., a Corporation of California. Filed Aug. 8, 1923. Serial No. 656,335. 45 Claims. (Cl. 292—169.)



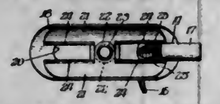
6. In a lock of the character described, a retractor guide, said guide comprising an end plate, a pair of side plates disposed at right angles thereto and parallel with relation to each other, said end plate having a bearing opening formed therein for the reception of a lock spindle, a pair of hook shaped lugs formed one on each side plate, said side and end plates being substantially rectangular in shape, and a pair of securing lugs having threaded openings formed therein, said lugs being flush with the face of the end plate and forming a part thereof.

1,751,102. CLOSET-DOOR LATCH. WALTER R. SCHLAGE, San Francisco, Calif., assignor to Schlage Lock Company, San Francisco, Calif., a Corporation of California. Filed Mar. 8, 1926. Serial No. 93,081. 7 Claims. (Cl. 292—358.)



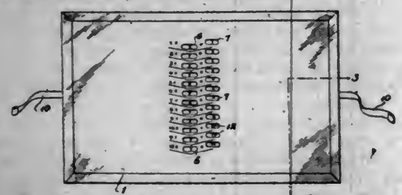
1. In a latch of the character described the combination with the latch actuating unit and the clamping plate cooperating therewith, of an inner and an outer spindle in the latch actuating unit, a third spindle carried by the clamping plate and telescoping with relation to the inner spindle, and interlocking means connecting the inner spindle and the third spindle whereby turning movement of the third spindle will be transmitted to turn the inner spindle.

1,751,103. PROCESS FOR RECOVERING GAS CONSTITUENTS FROM GAS MIXTURES. MAX SCHROEDER, Berlin, Germany. Filed Oct. 29, 1924, Serial No. 746,569, and in Germany Aug. 12, 1924. 3 Claims. (Cl. 23—178.)



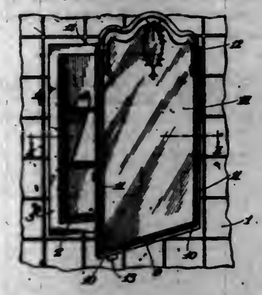
1. The cyclic process for recovering sulfur dioxide from a gas mixture containing the same and a gaseous component which is relatively insoluble in water which comprises compressing the gas mixture by means of force supplied in part by steam and in part by said gaseous component after the same has been compressed, separated from the gas mixture and heated, subjecting the gas mixture while maintaining it compressed to an absorbing operation by contacting it with water, separating the unabsorbed gaseous component from the resulting aqueous solution of sulfur dioxide, heating and delivering it while maintaining it compressed to the gas mixture compressing operation, elevating said aqueous solution of sulfur dioxide by means of the gas pressure maintained on it during the absorbing operation and liberating its sulfur dioxide content by countercurrent treatment with exhaust steam from said gas mixture compressing operation, and preheating said aqueous solution of sulfur dioxide on its way to the sulfur dioxide liberating operation by heat transfer thereto from the water leaving said sulfur dioxide liberating operation.

1,751,104. GEAR-GRINDING MACHINE. CHARLES H. SCHURR, Cleveland, Ohio, assignor to The Lees-Bradner Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 15, 1928. Serial No. 254,382. 17 Claims. (Cl. 51—52.)



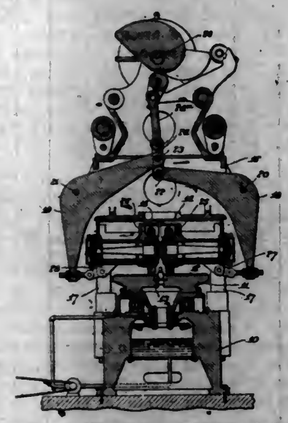
1. In a gear grinding machine, a main frame, a grinding wheel supporting column on the frame, a planular faced grinding wheel rotatably mounted on the column, ways on the frame, a reciprocable slide on the ways, a work spindle rotatably mounted on the slide, means for reciprocating the slide and oscillating the work spindle to cause a work gear mounted on the work spindle to roll on an imaginary conjugate rack, means for adjustably moving the column on the frame and for adjustably moving the planular face of the grinding wheel on the column to bring the wheel plane into coincidence with a tooth face of an imaginary right hand or left hand helical rack of helical angle from zero degrees upward.

1,751,105. CURTAIN FIXTURE. HARRY D. SEVISON, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a Corporation of Illinois. Filed July 22, 1929. Serial No. 379,910. 5 Claims. (Cl. 156—26.)



4. In a curtain fixture, tube, upwardly spring-pressed holding members at the ends of the tube, finger pieces projecting laterally from one side of the tube at the center of the same for retracting the holding members, and spring clips compressibly embracing the portions of the finger pieces within the tube to prevent the finger pieces from rattling.

1,751,106. EDUCATIONAL APPLIANCE. FREDERICK H. SHELLEDY, Bladensburg, Md. Filed June 17, 1927. Serial No. 199,520. 5 Claims. (Cl. 35—2.)

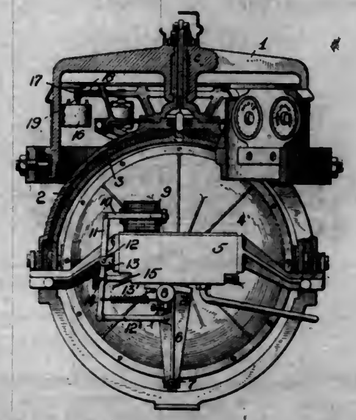


1. An educational appliance comprising a housing having spaced front and back surfaces, said surfaces being provided with offset rows of vertically alined indicia viewing openings, a table card bearing indicia and slidable between said surfaces, and means for operating said card.

1,751,107. WALL CABINET. AUGUST J. SMITH, Chicago, Ill. Filed Mar. 11, 1929. Serial No. 345,974. 1 Claim. (Cl. 312—112.)

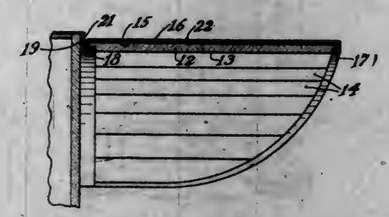
In a wall cabinet having a casing for mounting in a recess in a wall of a room, a metal door plate hinged on the casing, and means on the door plate whereby a plate glass mirror may be slid into retained position on the door plate after the casing has been mounted in the wall, the said means including a three-sided frame of open-grooved channel members secured along the lower and the vertical marginal portions of the door plate.

1,751,108. TRAVERSING-ROLL MOUNTING. JOHN W. SMITH, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1926. Serial No. 84,594. 5 Claims. (Cl. 80—16.)



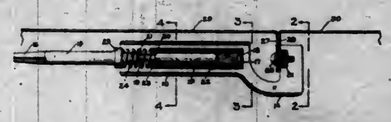
1. In a roll mounting, a cantilever spindle having an enlarged projecting end portion provided with peripheral and radial seating surfaces, a demountable roll having complemental surfaces coacting with said seating surfaces on the spindle, and a unitary element having a peripheral flange for engagement with the inner portion of the roll to clamp it on the spindle.

1,751,109. PAVEMENT. RUSSELL H. SMITH, Brookfield, Mass. Filed July 17, 1925. Serial No. 44,240. 1 Claim. (Cl. 94—12.)



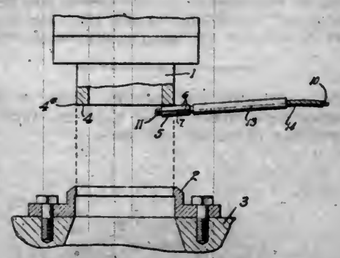
A paving block, of resilient moldable and vulcanizable material, provided on its under side with recesses for the reception of wet unset concrete foundation material to enter said recesses to lock said block to the foundation, said block having, embedded and vulcanized in its body, two crossing sets of anchoring and reinforcing wires having inclined downwardly-turned and then inwardly-turned projecting parts to enter the wet, unset foundation material, to assist in binding said block to said foundation, said inwardly turned parts being at some distance below the lower surface of said block, and each being of a length approximately equal to half the length of said block.

1,751,110. CHANGE OF COURSE DETECTOR FOR COMPASSES. ERIC C. SPARLING, Garden City, N. Y., assignor, by mesne assignments, to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 24, 1925, Serial No. 77,451. Renewed Aug. 8, 1929. 10 Claims. (Cl. 33—226.)



10. In combination with a master gyro compass for a dirigible craft, said compass having damping means, means for preventing the damping error due to turning of the craft, said last-named means including a two-part device for actuating said first-named means, one of said parts being in direct operating connection with said master compass and a friction drag device between said parts whereby the other of said parts is constrained to follow said first part.

1,751,111. HEADLIGHT VISOR. JAMES A. STEELE and JOSEPH D. BRANDES, Birmingham, Ala. Filed Aug. 23, 1928. Serial No. 301,572. 6 Claims. (Cl. 240—48.4.)



1. A headlight visor comprising glass molded to provide a series of forwardly extending prisms, and a reflective backing for the prisms, said prisms being so arranged that the light passing therethrough from the headlight is refracted downwardly from the visor.

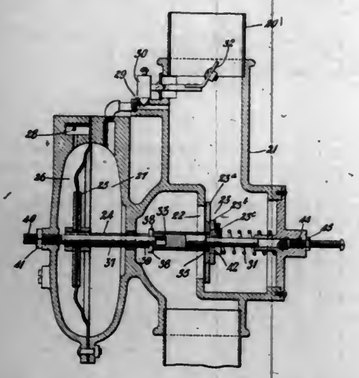
1,751,112. SCREW DRIVER AND NUT HOLDER. WILLIAM STEVER, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 15, 1926. Serial No. 94,651. 2 Claims. (Cl. 81—55.)

1. In an article of the class described, a driving shaft adapted to engage and rotate a screw, an element mounted on said driving means adapted to engage said screw and guide said driving means into central engagement therewith, a housing receiving and guiding said guiding element for free longitudinal movement therein, a device on said housing adapted to prevent the rotation of the nut while said driving means is operated to thread the screw therethrough, said housing adapted to be grasped by the hand for manipulation, and a manipulating shank on the shaft.

1,751,113. PUNCH-SHARPENING DEVICE. SWAN N. TEVANDER, Maywood, Ill. Filed Nov. 22, 1928. Serial No. 321,251. 6 Claims. (Cl. 76—89.2.)

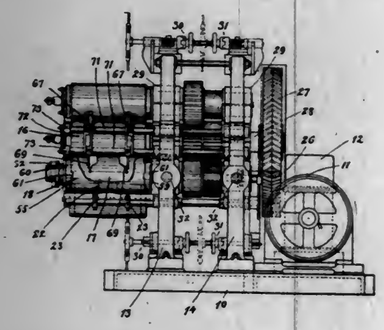
1. In a tool for the purpose indicated, a rotary member of non-circular cross section, a support adapted for directing said member against the cutting edge of a punch or like part and means for imparting rotary motion to said member independently of its contact with such part for causing upsetting of said cutting edge of the part.

1,751,114. LUBRICATING DEVICE. AXEL M. WALSTROM, Minneapolis, Minn. Filed Feb. 28, 1929. Serial No. 342,058. 2 Claims. (Cl. 221—47.4.)



1. A high pressure grease gun provided with a discharge nozzle, a reversible mouthpiece of yielding material projecting from the front end of said nozzle, a central orifice extending through said mouthpiece, and a projecting pilot tube secured in one end of said orifice, substantially as described.

1,751,115. PNEUMATIC-DISPATCH-TUBE SYSTEM. EDMUND WEIGELS, Bergenfield, N. J., assignor to G. & G. Atlas Systems, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 9, 1924. Serial No. 754,698. 3 Claims. (Cl. 243—15.)



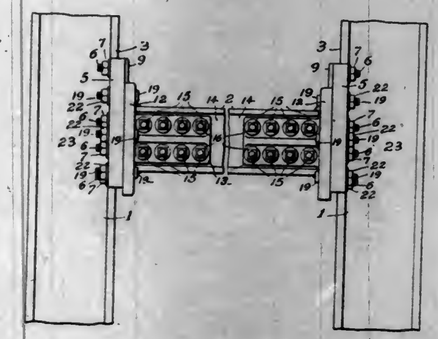
1. Power control apparatus for a pneumatic dispatch system of the vacuum minimum flow type comprising a transmission tube, a pneumatic exposed on one side to the

air pressure in said tube, a stem connected to said pneumatic for movement thereby, a rod slidably mounted in the stem and provided with a projection extending through

a slot in said stem, and a valve for controlling carrier impelling air flow through the tube, said valve comprising an element operated directly by said stem, and an element operated by said stem through the medium of said rod.

1,751,116. RUBBER CALENDER. PARK E. WELTON, Cuyahoga Falls, Ohio. Filed Sept. 22, 1928. Serial No. 307,765. 15 Claims. (Cl. 18—2.)

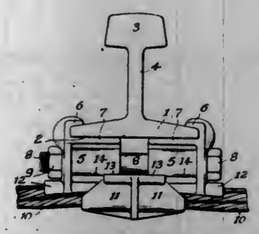
2. In a calender, a pair of roll-structures adapted to work a body of rubber between them, one of said structures including an overhanging shaft journaled at one side only of the working zone; and a profile shell detachably mounted on said shaft and removable endwise therefrom, said shell having a circumferential groove for imparting a predetermined cross-sectional shape to the rubber issuing from between the rolls.



9. In a calender, the combination of an overhanging shaft, a sleeve forming a chamber with said shaft, means for supplying a temperature-regulating fluid to said chamber, an external body shell, and means for detachably wedging said shell on said sleeve.

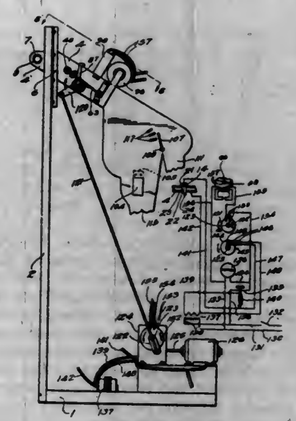
14. In a calender, the combination of an overhanging shaft having a shell support, an exterior body shell, a longitudinally-split wedging sleeve interposed between said shell and support, a sliding abutment for forcing said shell and sleeve inwardly over said support to secure them on the shaft, and longitudinal adjusting means between said abutment and sleeve.

1,751,117. MANUFACTURE OF COMBUSTIBLE GAS CONTAINING HYDROGEN AND CARBON MONOXIDE. GUSTAV WIETZEL, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Sept. 17, 1925, Serial No. 57,041, and in Germany Dec. 1, 1922. 4 Claims. (Cl. 48—206.)



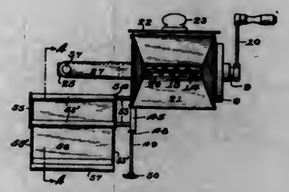
2. An exothermic process of manufacturing gases of high calorific and industrial value and rich in hydrogen and carbon monoxide, which comprises gasifying pulverulent solid fuel in a continuous process with the aid of a gas containing a higher percentage of free oxygen than atmospheric air.

1,751,118. ELECTRIC RAILWAY EQUIPMENT. ROLLAND G. WILLIAMS, Branford, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn., a Corporation of Connecticut. Filed Mar. 8, 1929. Serial No. 345,540. 4 Claims. (Cl. 189—22.)



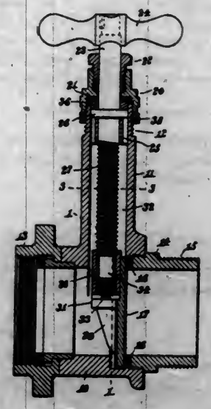
1. A support for electric railway equipment, comprising opposite poles having fixtures adjustably secured thereto, cross beams having fixtures secured across their ends, both of said fixtures formed with parts adapted to interengage at different elevations, and means for adjustably securing these fixtures together.

1,751,119. HIGHWAY-GUARD-FENCE FIXTURE. ROLLAND G. WILLIAMS, Branford, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn., a Corporation of Connecticut. Filed May 18, 1929. Serial No. 364,074. 2 Claims. (Cl. 248—32.)



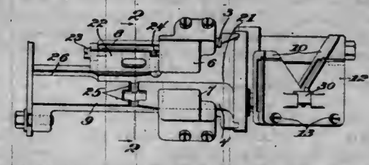
1. The hereindescribed highway guard fence fixture, comprising a post, vise members including a screw bolt for securing the members to the post, a cable and a stirrup having inclined parts that are slidably supported from said members, said stirrup and members having complementary parts with inclined faces that embrace the cable, whereby when said bolt is tightened said members and stirrup will be clamped against the cable in inclined planes.

1,751,120. METHOD AND APPARATUS FOR SELECTING METAL CHECKS. HUGH E. WURZBACH and LESLIE H. WADSWORTH, Magna, Utah, assignors to Selector Corporation, Salt Lake City, Utah, a Corporation of Utah. Filed July 28, 1928. Serial No. 296,067. 9 Claims. (Cl. 194—99.)



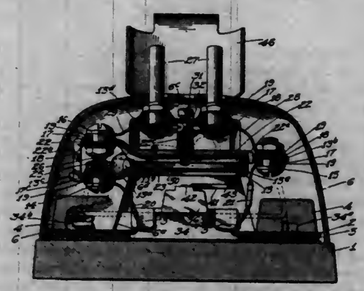
2. An apparatus for selecting metal checks comprising means for arresting a check in a certain position, means for gauging the average thickness of a check while in such position, means dependent upon the operation of said gauging means to determine the time of release of the check from such position dependent upon whether said check exceeds or falls below a certain average thickness, and means for selectively separating checks in accordance with the time of release thereof from said position.

1,751,121. CIGARETTE-MAKING MACHINE. MAURICE ALLAND, Atlantic City, N. J. Filed Jan. 8, 1929. Serial No. 331,071. 3 Claims. (Cl. 131—5.)



2. The combination of a cylinder, adapted to be surrounded by a cigarette tube, a support for said cylinder having parallel tracks, and a member having a wall in normal alignment with said cylinder and carried by said tracks, and slidable laterally so as to withdraw said wall from its normal position and permit the positioning of an empty tube.

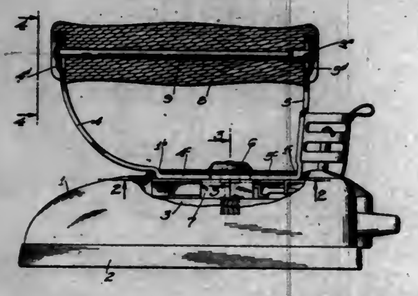
1,751,122. VALVE. JOHN J. BARKER, Allston, Mass. Filed May 16, 1928. Serial No. 278,157. 5 Claims. (Cl. 251—57.)



1. The combination of a valve casing provided with a valve seat; a gate reciprocable transversely of said seat; gate-moving means adapted to be disconnected from said gate when said gate is in closed position; and means for connecting said gate and moving means preparatory to moving the gate into open position.

1,751,123. ATTACHMENT OF BINDING AND LIKE STRIPS TO ARTICLES. ARTHUR BATES and FRED RICKS, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 12, 1925, Serial No. 29,735, and in Great Britain June 25, 1924. 8 Claims. (Cl. 112—137.)

1. In a machine for sewing bags or like articles, means for supporting the work with adjacent faces at an inclination to and intersecting the needle path, and means for guiding an edge binding strip across the needle path in position to be sewed to both of said faces.

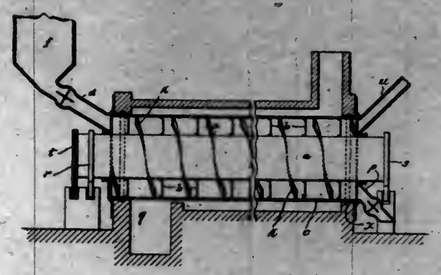


1,751,124. ELECTRIC FLATIRON. MARTIN C. BERSTED, San Diego, Calif. Filed Feb. 16, 1923. Serial No. 619,386. 5 Claims. (Cl. 200—137.)

1. In a heating apparatus, a contact making and breaking means, including a support, a single freely movable

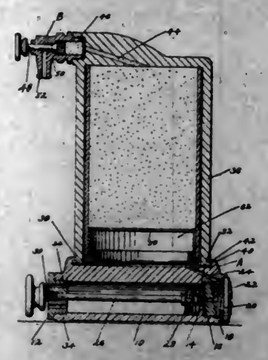
plate, capable of being distorted by heat, loosely mounted on and encircled by said support, an arm secured at one end, positioned contiguous to said plate, a screw mounted in said arm, adapted to be engaged by said plate, a contact member mounted in said support and another contact member mounted in said arm, adapted to engage said first mentioned contact member, and lever means secured to said adjusting screw for adjusting the latter.

1,751,125. FLATIRON CONSTRUCTION. MARTIN C. BERSTED, San Diego, Calif. Filed July 8, 1925. Serial No. 42,190. 5 Claims. (Cl. 68—26.)



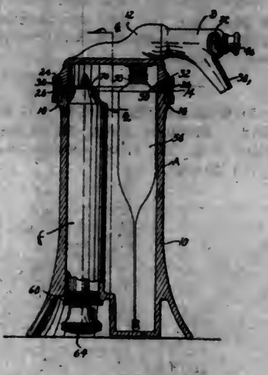
1. In a flat iron structure, including a hot plate, a casing provided at its upper portion with an inverted, upwardly extending channel portion, a handle, a pair of handle supporting straps of substantially the width of said channel, the one end portions of said straps being connected to opposite ends of said handle, the other end portions of said straps extending into said casing and lengthwise within said channel with their ends in abutment therein, the lower surface of said end portions lying substantially flush with the inner surface of said casing and in equal spaced relation with the upper surface of said hot plate, and unitary means for securing said members in and to said casing.

1,751,126. ADJUSTABLE FIXTURE FOR WINDOW-SHADE, CURTAIN, AND DRAPERY SUPPORTS. CHARLES A. BUNKER, Kansas City, Mo., assignor to Bunker-Clancey Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Oct. 3, 1927. Serial No. 223,639. 16 Claims. (Cl. 156—24.)



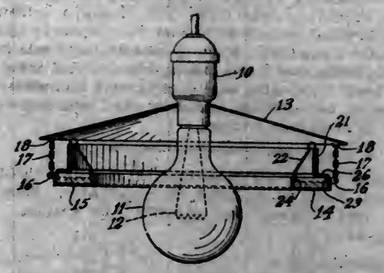
1. In an appliance of the character described, the combination of an extensible transverse member, gripping devices at opposite ends thereof provided with transverse slots and with outwardly-projecting compressible blocks, channelled brackets secured to the ends of the transverse member and fitting astride the gripping devices for preventing transverse movement thereof and transmitting outward pressure thereon from the transverse members to compress said blocks against the inner faces of the opposite sides of a window casing, said brackets having vertical slots in their sides having offsetting notches, and angle brackets fitting against the room faces of the sides of the window casing and extending through said vertical slots of said brackets and provided with longitudinal ribs extending through the said offsetting notches and the slots of the respective gripping devices.

1,751,127. ROTARY RETORT, KILN, OR DRUM. GEORG CANTIENY, Berlin, Germany, assignor, by mesne assignments, to International Coal Carbonisation Company, a Corporation of Delaware. Filed Mar. 8, 1924, Serial No. 697,694, and in Germany Mar. 24, 1923. 3 Claims. (Cl. 202—136.)



1. In an apparatus for distilling coal or analogous materials, the combination of a distillation chamber comprising a rotatable heat interchanging drum which constitutes an exterior drum of the distillation chamber, means for feeding the material to the interior of the distillation chamber, means for withdrawing from the distillation chamber vapors and hydro-carbons given off during the distillation process, means whereby the solid residuals may be removed from the apparatus, and an inner supporting frame for the distillation chamber, the construction being characterized in that said inner supporting frame projects beyond each end of the exterior drum ends and is provided with carrying running rings and also a driving wheel arranged for effecting the turning of the distillation chamber through the medium of the inner supporting frame and without the exertion of external force on the exterior drum for effecting the turning, and supporting members extending from the inner supporting frame to the exterior drum.

1,751,128. DISPENSING APPARATUS. HARRY J. COCKS, Des Moines, Iowa, assignor of one-half to Nathaniel C. Barnes, Des Moines, Iowa. Filed Oct. 29, 1927. Serial No. 229,593. 5 Claims. (Cl. 221—78.)



1. In a device of the character disclosed, a casing, a base separably connected with said casing, a pump in said base comprising a cylinder portion, a dividing wall in said cylinder portion having an opening therein, a piston, a stem for said piston, a handle thereon, a plug in one end of said cylinder, said stem and said plug having coacting threads, said stem having a pointed end adapted to coact with the opening in said partition, a plug in the other end of said cylinder, a check valve in said last mentioned plug and a passageway leading from said check valve to said casing.

1,751,129. DISPENSER. HARRY J. COCKS, Des Moines, Iowa, assignor of one-half to Nathaniel C. Barnes, Des Moines, Iowa. Filed May 5, 1928. Serial No. 275,488. 4 Claims. (Cl. 221—60.)

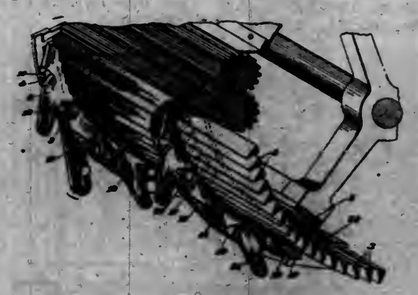
1. A dispenser of the character described, an air tight container, a tapered externally screw threaded adaptor mounted in said container, a tube having a neck of soft metal normally interiorly unthreaded but threaded by engagement with said adaptor for thereby retaining the tube in airtight connected relationship with said adaptor, means for placing the tube and its contents under pressure, and means to allow the contents of the tube to be discharged to atmosphere.

1,751,130. INSECT TRAP. WILLIAM F. CORNELIUS and HENRY JACOBS, Birmingham, Ala. Filed Aug. 25, 1928. Serial No. 302,040. 4 Claims. (Cl. 43—113.)

1. An insect trap adapted for association with an electric lamp, comprising a circular trough for an insect trapping liquid surrounding the lamp in spaced relation thereto, a translucent vertical baffle member removably supported above the trough between the sides thereof, and means for removably supporting the trough around the lamp with the light producing portion of the lamp below the trough.

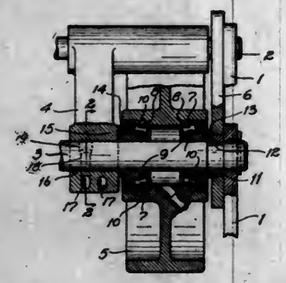
1,751,131. SCAFFOLD RAISING AND LOWERING DEVICE. JAMES F. COSTELLO, San Francisco, Calif. Filed July 27, 1927. Serial No. 208,726. 7 Claims. (Cl. 304—18.)

1. In a device of the character described, an overhead outrigger support, a cable suspended therefrom, a scaffold, a guide member on the scaffold through which the cable extends, a plurality of interspaced collars secured on the cable, a carriage reciprocally mounted on the guide member, means for imparting a reciprocal movement to the carriage, a pawl on the carriage, said pawl engaging one of the collars on the cable and supporting the scaffold when



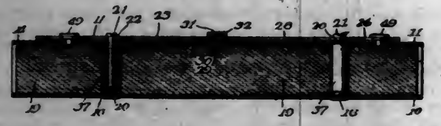
raising or lowering the same, and other means engaging the collars on the cable and supporting the scaffold when stationary.

1,751,132. PRODUCTION OF ALKALI FROM NATURAL BRINE. ROSS CUMMINGS, Berkeley, Calif., assignor to Robert D. Pike, Piedmont, Calif. Filed Dec. 14, 1927. Serial No. 239,892. 2 Claims. (Cl. 23—39.)



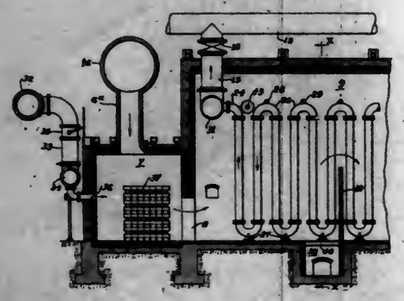
1. A process for treating natural brine of the described nature for recovery of its alkali content in commercially pure form, which consists of concentrating and crystallizing out at a temperature approximating the boiling point of water a portion of its contained alkali as sodium carbonate monohydrate until the mother liquor is a strongly concentrated solution with respect to both sodium carbonate and sodium chloride, and then carbonating the mother liquor for production of the major part of the remaining alkali as sodium bicarbonate.

1,751,133. COTTON-WORKING MACHINE. ROBERT S. CURLEY, Lowell, Mass., assignor to Kitson Machine Shop, Lowell, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1928. Serial No. 318,486. 6 Claims. (Cl. 19—95.)



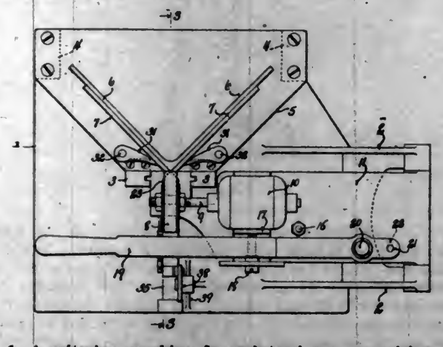
1. In a cotton cleaning machine having a beater, a grid positioned closely adjacent to said beater and comprising a series of bars, means for supporting the ends of said bars, and additional means for supporting said bars at points between their ends and connecting them rigidly together so that they cooperate to support each other, said additional means being supported solely by said bars.

1,751,134. BEARING CONSTRUCTION. GEORGE W. CURTIS, Milwaukee, Wis., assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Nov. 11, 1926. Serial No. 147,629. 9 Claims. (Cl. 308—207.)



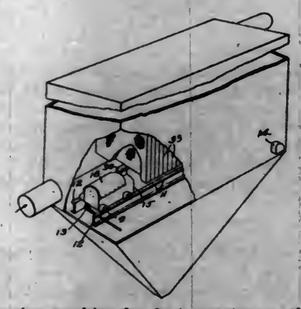
1. In a bearing construction, an axle having a smooth cylindrical surface, a bearing member thereon, a collar for holding said bearing member in place and angularly disposed pins extending through bores in said collar and engaging said axle along their sides.

1,751,135. LOOSE-LEAF BINDER. JAMES C. DAWSON, Webster Groves, Mo., assignor to Elma N. Dawson, Webster Groves, Mo. Filed Dec. 28, 1926. Serial No. 157,465. 2 Claims. (Cl. 129—13.)



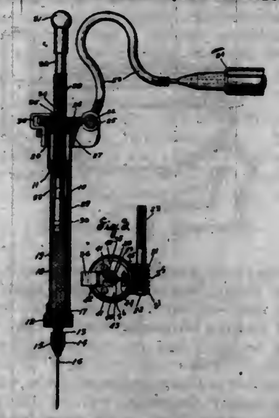
1. In a loose leaf binder, the combination of a lower binder bar, a post on said bar having means provided with a small head, an upper binder bar having a perforation permitting the head to pass through, a latch bar guide on the upper binder bar, means on the upper binder bar passing through said latch bar guide for attaching the latter thereto, and a latch bar slidably mounted on the guide bar and cooperating with the head of the post to lock the parts together and guided in its movement on the guide bar by said attaching means for the guide bar.

1,751,136. APPARATUS FOR HEATING THE AIR BLAST FOR FURNACES AND THE LIKE. JAMES P. DOVEL, Birmingham, Ala. Filed Dec. 16, 1926. Serial No. 155,277. 1 Claim. (Cl. 263—20.)



In combination, stoves having a main for the discharge of waste gases therefrom and a main for the supply of cold air thereto, a heat recuperating means having a combustion chamber provided with means to produce therein high temperatures by active combustion, means to commingle said waste gases with the high temperature gases of active combustion and pass the commingled gases through said combustion chamber and heat recuperating means, refractory elements in said combustion chamber interposed in the path of the waste gases and the gases of active combustion to more effectively mix the same before they pass into the heat recuperating means, and means to pass air through said heat recuperating means into said cold air main.

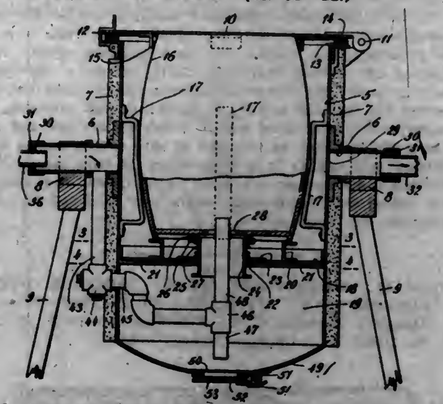
1,751,137. POWER-DRIVEN MITERING MACHINE FOR PRINTERS. EDMUND PAUL EHRLINGER, Janesville, Wis. Filed Feb. 27, 1928. Serial No. 257,526. 6 Claims. (Cl. 51—33.)



1. A mitering machine for printers' use comprising a table upon which slugs may be placed, a pair of guides set at ninety degrees to each other against which the slugs may bear, a pair of dogs for clamping said slugs against said guides, an adjustable stop positioned opposite the point of union of said guides and against which the ends of the slugs may be positioned, a slidable crosshead carrying said stop, a pivotally mounted frame operatively connected to said crosshead and adapted to move said crosshead downwardly when said frame is depressed, an electric motor carried by said frame and having a cylindrical grinding wheel adapted to remove the projecting ends of said slugs, a hand lever pivotally mounted upon said frame for depressing said frame, mechanism operated from said hand lever for rocking said dogs against said slugs, and mechanism for releasing said dogs when said frame completes its downward motion.

1,751,138. RAPPING MACHINE FOR DUST COLLECTORS. MICHAEL A. EIBEN, Cleveland, Ohio. Filed Oct. 29, 1927. Serial No. 229,673. 10 Claims. (Cl. 183—59.)

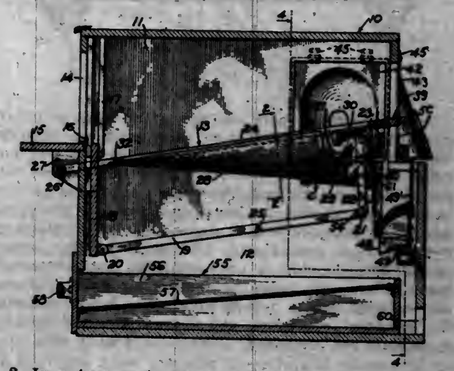
1. A rapping machine for dust arresters or the like having a series of screens, comprising a reciprocating carriage movable across the screens, a motor mounted on the carriage, a rapping device carried by the carriage, and a connecting mechanism to said device actuated by the motor to rap the screens.



1,751,139. POWER DRIVE FOR SYRINGES. SAMUEL FEINSTEIN, New York, N. Y. Filed Mar. 26, 1928. Serial No. 264,782. 8 Claims. (Cl. 128—218.)

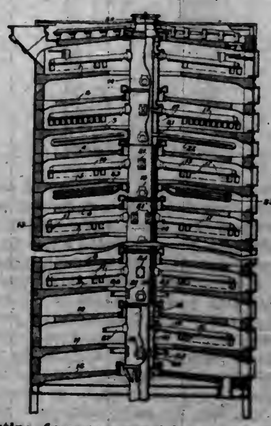
1. The combination with a syringe having a piston movable therein, of a screw stem on said piston, a worm wheel having an internal thread engaged on said stem, means for holding said wheel in operative position on the body of said syringe, means to prevent turning of said screw, said screw having reduced end portions limiting the operation of said wheel, a worm engaging the wheel, and power driven means to actuate said worm.

3. The combination with a syringe having a piston movable therein, of a screw stem on said piston, said stem being reduced in diameter at the ends of its screw threaded portion, means to prevent rotation of said stem, a wheel revoluble on the threaded portion of said stem, power means to rotate said wheel, a pair of half nuts pivoted on said wheel to engage the threads on said stem, a spring urging said nuts into engagement with said stem, and a manually operable cam for disengaging said nuts.



1,751,140. KEG-IMPREGNATING DEVICE, ETC. CROSBY FIELD, Yonkers, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 29, 1923. Serial No. 659,869. 14 Claims. (Cl. 91—11.)

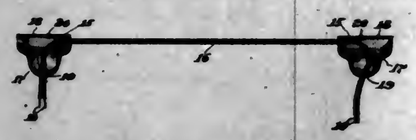
2. A process for partially impregnating the walls of a container which comprises subjecting the container to a vacuum, filling the container with a liquid impregnating medium, allowing the medium to drain from the container to leave a thin film of the medium on the walls thereof and then breaking the vacuum while the material in the film is still liquid.



4. A process for partially impregnating the walls of a container which comprises placing the container in a closed chamber, exhausting the chamber and container, introducing molten paraffin into the container while maintaining the vacuum, allowing the excess paraffin to drain from the container into the chamber to leave a thin film of paraffin on the inner walls of the container and then breaking the vacuum to solidify this film.

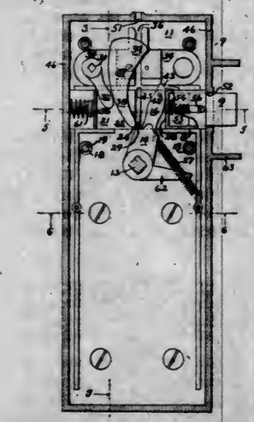
1,751,141. TRAP NEST. ALBERT O. FORSTER and PERCY M. FORSTER, Berkeley, Calif., assignors of one-fourth to Thomas I. Forster and one-fourth to Tony L. Kelly, Berkeley, Calif. Filed June 30, 1924. Serial No. 723,099. 5 Claims. (Cl. 119—47.)

2. In a trap nest, structure comprising a rigid frame having spaced sides provided with inwardly extending supporting leaves, a cross bar connecting the sides of the frame and having a projecting flange arranged in spaced relation with the supporting leaves, a permanent nest section secured at its upper edges to the supporting leaves of the frame and spaced from the cross bar, and a removable nest section detachably interlocked at one end with the flanged portion of the cross bar and supported by said leaves and overlapped at the other end with the permanent nest section.



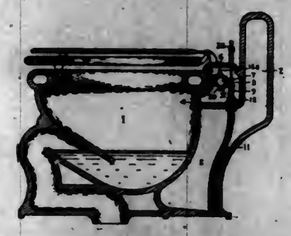
1,751,142. MULTIPLE HEARTH FURNACE. EDWARD J. FOWLER, deceased, Redwood City, Calif., by Edith Mary-Fowler, executrix, Redwood City, Calif., and DUDLEY BAIRD, Berkeley, Calif., assignors to Nichols Copper Company, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1928. Serial No. 260,032. 10 Claims. (Cl. 263—26.)

1. A roasting furnace comprising a plurality of superposed hearths, a rotatable shaft extending vertically of the furnace and carrying rabbling means, and additional means also carried by said rotatable shaft at one or more or the intermediate hearths for absorbing heat therefrom,



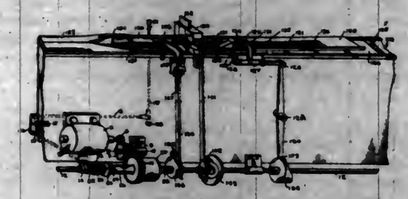
said additional means providing a greater heat absorbing capacity at said intermediate hearths than is provided in the other hearths.

1,751,143. ELECTRICAL CABLE. OTTO A. FREDRICKSON, Wethersfield, Conn., assignor to The Wiremold Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 15, 1926. Serial No. 154,912. 3 Claims. (Cl. 173—264.)



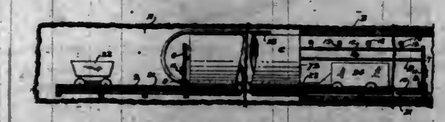
3. In combination with electrical outlet boxes or fixtures mounted in spaced relation to each other, an electrical cable extending between said boxes or fixtures and provided with a pair of conductor wires that extend into the boxes or fixtures and which wires are insulated from each other and from the boxes or fixtures, a filler strip laid in the valley formed at the one side of the insulated conductors, a ground wire laid in the valley formed at the opposite side of the conductors and electrically connected to said boxes or fixtures to form a ground therebetween, and a non-metallic outer jacket enclosing the insulated conductors and ground wire and adapted to insulate and electrically protect the ground wire.

1,751,144. COIN-CONTROLLED LOCK. ALPHONSE GABRIEL, Oakland, Calif. Filed June 11, 1926. Serial No. 115,223. 4 Claims. (Cl. 194—74.)



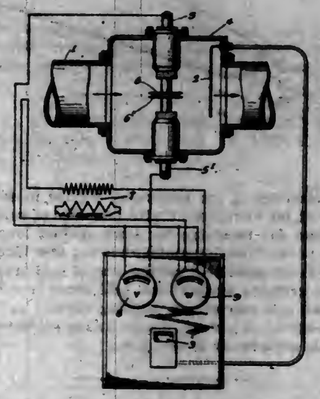
2. In a coin-controlled lock mechanism, a movable bolt, means operative to displace said bolt, bolt operating means independent of said first means and normally inoperative to displace said bolts, means utilizing a coin to operatively connect said second means with said bolt, means normally operative to retain a coin operatively disposed in the mechanism following a displacement of the bolt through the actuation of said second bolt operating means, means operable upon operative actuation of said first bolt displacing means to release the coin from the mechanism; and a pivoted guard member arranged to be engaged, moved and maintained in position to prevent the insertion of a coin into the mechanism, by a coin held by said retaining means, and means carried by the second bolt operating means for engaging and moving the guard member into operative position when the said second means is operated without a coin in the mechanism.

1,751,145. FLUSHING FOR WATER-CLOSETS. PAUL H. GEORGIOU, Bingham, Utah. Filed May 27, 1929. Serial No. 366,336. 4 Claims. (Cl. 4—13.)



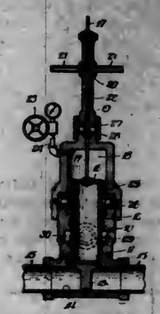
1. A water closet comprising a pneumatic compression reservoir for storing water to flush the bowl, a pipe connecting the reservoir with the rim of the bowl for conducting the flushing water thereinto, a valve in said pipe between the reservoir and the rim of the bowl, a water compartment in which said valve is located provided with overflow and drainage openings and having a capacity sufficient to supply the water seal for the bowl, means adapted to be manipulated by the user for opening said valve and means associated with the valve for filling said compartment when the valve is opened for flushing the bowl.

1,751,146. MATCHMAKING MACHINE. LEO GREENBAUM, Far Rockaway, EDWARD VAN HOOFSTADT, Oceanside, and CHARLES GUSTAVSON, Brooklyn, N. Y., assignors, by mesne assignments, to Lion Match Company, Inc., a Corporation of New York. Filed Sept. 4, 1928. Serial No. 660,781. 31 Claims. (Cl. 93—7.)



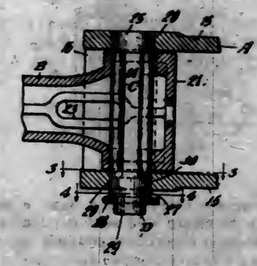
1. In a match book forming machine, means for intermittently feeding a strip of paper stock from a roll in predetermined lengths into said machine, means for cutting off sections thereof to form covers, a conveyor having separating members between which said cut-off covers are fed, and means for operating said conveyor, a superposed chute along which match splints are fed in the same direction as the feed of said covers, means for cutting said splints in predetermined lengths, means for placing same successively upon said covers, and means for thereafter folding said covers over said splints and securing the same together.

1,751,147. METHOD OF LINING TUNNELS WITH CONCRETE AND APPARATUS THEREFOR. ROY C. HACKLEY, Berkeley, Calif. Filed Mar. 11, 1929. Serial No. 346,118. 5 Claims. (Cl. 25—131.5.)



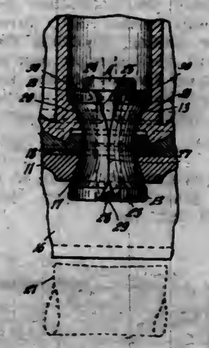
5. An apparatus for lining tunnels with concrete comprising an elongated carriage, a pair of longitudinally separated trackways within the tunnel, one track supporting the forward end and the other track supporting the rear end of a carriage, a roller track on the carriage, a form supported by the roller track, said form completely surrounding the roller track and the carriage, said form and carriage having a central unobstructed passage formed therethrough, and a second trackway extending through the tunnel, the carriage and the form.

1,751,148. APPARATUS FOR CRACKING OILS. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 28, 1925. Serial No. 53,032. 2 Claims. (Cl. 196—137.)



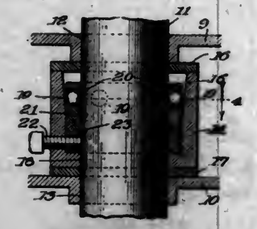
1. An apparatus for measuring the free carbon content of oil in a cracking apparatus which comprises electrodes positioned within the cracking apparatus and submerged in the oil, said electrodes being maintained at a difference of electrical potential, and means for measuring the electrical energy absorbed by the oil between the electrodes.

1,751,149. FILLING-MACHINE GOVERNOR. BERTIE S. HARRINGTON, Fort Worth, Tex. Filed July 5, 1927. Serial No. 203,807. 8 Claims. (Cl. 226—129.)



1. In a measuring and dispensing machine of the volumetric type, a measuring cylinder, means for conducting to the cylinder the substance to be measured, and means associated with said substance-conducting means and controlled by the pressure on the substance therein for automatically preventing the substance in the cylinder from leaving the same until after the pressure on the substance has reached a predetermined amount.

1,751,150. COUPLER AND YOKE CONNECTION. STACY B. HASSELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed June 18, 1928. Serial No. 286,175. 5 Claims. (Cl. 213—71.)



1. In a railway draft rigging, the combination with a coupler; of a yoke having spaced arms adapted to receive the butt end of the coupler shank therebetween; a connecting element extending through the shank and held against rotation with respect to said shank, said connecting element having a fixed head at one end and a detachable head at the other end secured thereto against relative rotation, the heads being swiveled in said top and bottom arms of the yoke and forming trunnion members of relatively large diameter for pivotally connecting the coupler shank to the yoke.

1,751,151. CAR CONSTRUCTION. STACY B. HASSELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 15, 1929. Serial No. 355,031. 8 Claims. (Cl. 105—200.)

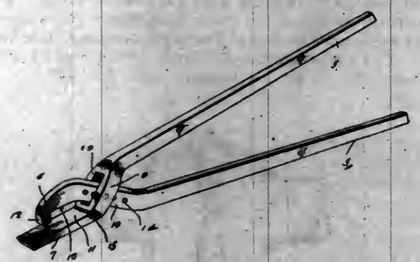
1. In car construction, the combination with cooperating body and truck bolsters having aligned center pin receiving openings, the opening of the body bolster being of greatest cross sectional area at the upper end and the opening of the truck bolster being of greatest cross sectional area at the bottom end; of a locking center pin for connecting said bolsters, said pin being of greatest cross sectional area at the opposite ends thereof, said pin including outer sections adapted for rocking sliding movement on the walls of the center pin openings while being assembled and disassembled therewith; and a filler member interposed between said outer sections holding the same against sliding rocking movement and in interlocked relation with the body and truck bolsters.

1,751,152. SEAT STRUCTURE. EVAN C. HARTER, Sturgis, Mich. Filed Mar. 6, 1929. Serial No. 344,809. 8 Claims. (Cl. 155—94.)

1. A seat structure comprising a base, a seat-portion, means operating to clamp said seat portion in vertically adjusted position, and means for releasing said first-named means comprising a rotary member operating to effect such release when raised, and means operating upon rotation of said member to raise the latter.

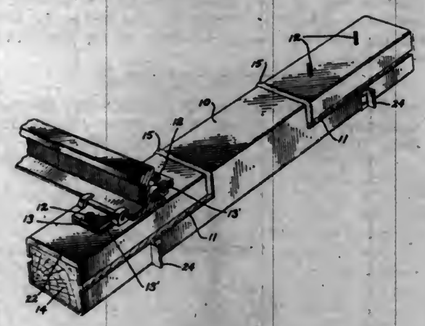
1,751,153. GUIDE FOR LOCKS. ADALBERT HAUSER, New York, N. Y. Filed Oct. 16, 1928. Serial No. 312,841. 5 Claims. (Cl. 70—16.)

1. In a cylinder lock of the type comprising a cylinder housing and a cylinder rotatable therein having a key slot in the front thereof, the combination therewith of a key guide having a body member rigidly disposed with respect to said cylinder housing, straddling the lower part of said key slot with its lowermost part spaced below the lower end of the key slot whereby the usual cylinder lock key with its bevelled end and insertion limiting lug will readily be guided into the key slot.



1,751,154. CAR COUPLING. FRANK W. HENRIKSON, Mulberry, Kans. Filed Feb. 24, 1927. Serial No. 170,543. 7 Claims. (Cl. 213—188.)

2. In a pin and link coupling, a link drawhead fastened to the end of the vehicle, a coupling link, a bumper, and devices connected to said bumper to project said link upon impact of another vehicle, said means including a rod and cam mechanism whereby the rate of said projection progressively decreases with increments of movement of said bumper.

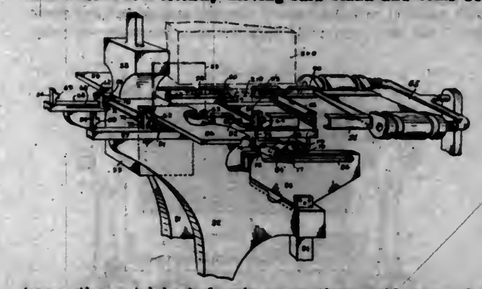


1,751,155. TONGS. WALTER G. HENY and ERNEST G. SCHUTZ, Elwood, Nebr. Filed July 12, 1927. Serial No. 205,109. 1 Claim. (Cl. 81—51.3.)

In a tool of the class described, a pair of jaws having handles formed at one end thereof, said jaws being offset longitudinally with respect to said handles, one of said jaws having its offset section provided with a longitudinally extending slotted opening adapted to receive the offset sections of said opposite jaw therein for the opening and closing movement of the jaws upon the operaiton of the handles and also providing a mounting for the longitudinal movement of the jaws with respect to each other, said other offset sections having a plurality of transversely

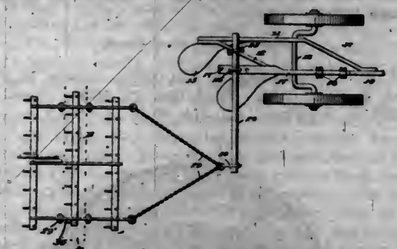
arranged openings, a pin removably carried in said openings adapted for engagement with one edge of said slotted offset section for retaining the jaws against longitudinal movement in one direction and permitting free longitudinal movement in an opposite direction, one of said jaws having a flattened gripping surface, and said other jaw having a hook shaped end providing a gripping surface at its inner edge and adapted to have its gripping area regulated by the longitudinal adjustment of said jaws.

1,751,156. RAILROAD TIE. WILLIAM R. HEWITT, New York, N. Y. Filed Dec. 29, 1928. Serial No. 329,138. 5 Claims. (Cl. 238—96.)



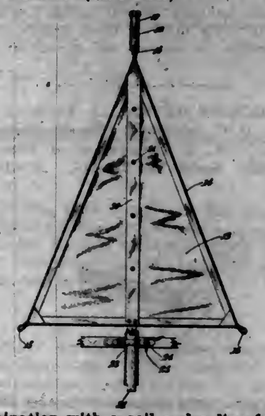
4. A railroad tie comprising a hollow metallic body member of rectangular cross section having cuts extending into the side walls thereof from each end, and means cooperating with said cuts adapted to render the upper portions of the ends of said tie resilient.

1,751,157. AUTOMATIC PACKAGING MACHINE. THOMAS A. HILL, Manhattan Beach, N. Y., assignor to Lion Match Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 8, 1924. Serial No. 730,829. 29 Claims. (Cl. 93—2.)



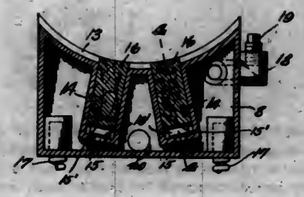
1. In a match-book making machine, means for supporting a superimposed cover blank and comb, means for centralizing said comb upon said blank, means for partly folding said blank around said comb, means for continuing the centralizing of said comb upon said blank while

the same is completely folded and secured thereupon, and means for intermittently moving said blank and comb be-



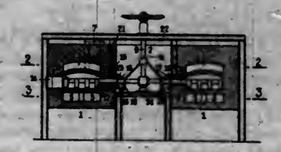
tween the match-book forming operations, said means for intermittently moving said blank and comb comprising reciprocating racks between which the same are engaged.

1,751,158. ATTACHMENT FOR HARROWS. HENRY JASS, Sabula, Iowa. Filed Aug. 18, 1928. Serial No. 300,526. 7 Claims. (Cl. 97—5.)



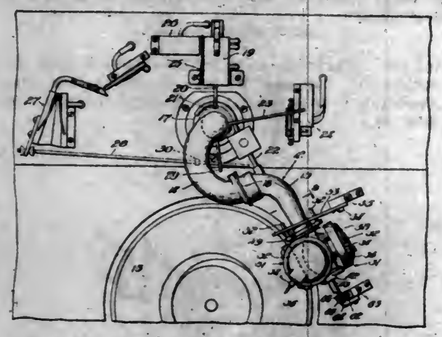
1. A harrow attachment for plows comprising a pliant one-piece bracket bent to form an angle and adapted to be secured to the frame of a plow with said angle portion free, means for adjusting the bracket relative to the frame to vary the elevation of the angle portion, a transverse bar arranged above the bracket and projecting beyond one side of the plow, and means for adjustably securing the transverse bar to the bracket at said angle portion.

1,751,159. MEANS FOR AND METHOD OF ESTABLISHING COMMUNICATION. HANS F. JORGENSEN, Brooklyn, N. Y.; Norman F. Jorgensen executor of said Hans F. Jorgensen, deceased. Filed May 25, 1926. Serial No. 111,499. 1 Claim. (Cl. 9—14.)



The combination with a sail and a line for raising the same, of means for holding said sail against a mast comprising a plurality of rings slidable on said mast, a plurality of eyelets riveted in said sail, and a line looped through each of said eyelets in such a manner as to encircle an individual ring with each loop, said second-mentioned line being secured to said first-mentioned line near the top of the sail.

1,751,160. DRIVING AND ENGINE-TRUCK BOX LUBRICATOR. GEORGE W. KELLER, Portsmouth, Ohio. Filed July 6, 1928. Serial No. 290,828. 1 Claim. (Cl. 308—88.)

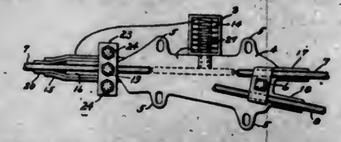


In a shaft lubricator, a reservoir having a curved upper surface to be fitted against a shaft, compartments formed throughout the length of the reservoir and having their upper ends open at the curved surfaces of the reservoir, the bottoms of the compartments being spaced from the bottom of the reservoir, the bottoms of the compartments having spaced openings disposed throughout the lengths of the compartments to permit oil to pass into the compartments, wicks in the compartments, plates fitted in the compartments and engaging the wicks, springs within the compartments and engaging the plates to force the wicks outwardly into engagement with a shaft, and said reservoir having an opening to permit oil to be poured into the reservoir.

1,751,161. CALCINING FURNACE AND METHOD OF OPERATING THE SAME. ERNST KLÖHN, Berlin-Wilmersdorf, Germany, assignor to the Firm Zahn & Co., G. m. b. H., Berlin, Germany. Filed Aug. 3, 1927, Serial No. 210,350, and in Germany Dec. 30, 1926. 6 Claims. (Cl. 23—277.)

1. A circular muffle calcining furnace, comprising an annular hearth having an inner circumferential wall formed with a continuous circumferential slot, heating means for said hearth, stirrer arms projecting through said annular slot from the median part of the furnace into the hearth, a ring carried by said stirrer arms in position for covering said slot, packing members fixed to said circumferential wall and cooperating with said ring for closing said slot, and means for rotating said stirrer arms.

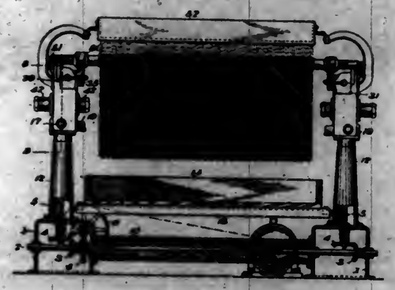
1,751,162. TALKING MACHINE. AXEL F. LARSON, Chicago, Ill., assignor to Western Electric Piano Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1927. Serial No. 230,545. 32 Claims. (Cl. 274—24.)



1. In a talking machine, the combination of a record-support, a tone-passage-equipped supporting member mounted for movement relative to said support, and a plurality of reproducer-devices mounted on said member and bodily movable into and out of operative position relative to the record and comprising substantially similar stylus holders.

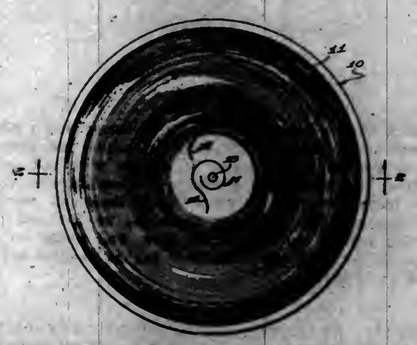
1,751,163. METHOD OF MANUFACTURING CERAMIC MATERIALS, BUILDING ELEMENTS, AND THE LIKE, FROM MUD. ARTHUR LOESSIN, Berlin-Charlottenburg, Germany. Filed Sept. 20, 1926, Serial No. 136,734, and in Germany Oct. 1, 1925. 6 Claims. (Cl. 25—156.)

1. The method of manufacturing ceramic materials and articles from mud, comprising mixing the mud with a substance adapted to counteract the detrimental influence of impurities in, or constituents of, the mud and with the sand, subjecting the mixture to two preliminary burning stages with intermediate cooling, and finish-burning it.



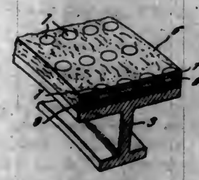
1,751,164. ELECTRICALLY-OPERATED SWITCH. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 18, 1927. Serial No. 176,351. 11 Claims. (Cl. 191—38.)

1. A switch operating system comprising a trolley wire, a trolley frog with a movable tongue and electrically operated means to move the tongue at the will of the motorman in one direction only, a contact section insulated from the trolley wire and frog except as connected by the electrically operated means, connections from the electrically operated means to the trolley wire and the said contact section whereby the movement of the tongue can be controlled by the motorman only when the current collector engages the said insulated contact section and the motorman operates his motor controller at such time with power "on" or power "off."



1,751,165. APPARATUS FOR CHEMICAL TREATMENT OF FIBROUS MATERIAL. WILLIAM W. MCELRATH, Roanoke, Va. Filed Nov. 9, 1927. Serial No. 232,126. 27 Claims. (Cl. 8—19.)

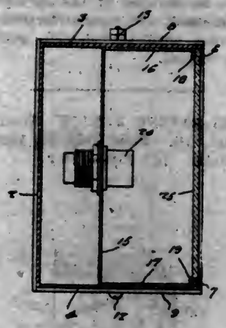
1. A machine for subjecting skeins of fibrous material to the action of liquid, and having skein supporting rods, parallel rails adapted to carry said rods, said rails having a forward and backward movement in combination with parallel rails having an upward and downward movement, the last said rails supporting a plurality of rotat-



able rollers adapted to engage said rods for lifting them from said carrying rails, means for operating said rails and rollers, and means for synchronizing the movements of said rails whereby said rods are progressively moved through said machine.

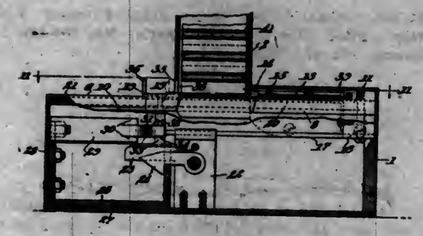
1,751,166. PHONOGRAPH RECORD. ISIDORE E. NEPT, Los Angeles, Calif. Filed Dec. 23, 1926. Serial No. 156,718. 4 Claims. (Cl. 274—42.)

1. A phonograph record disk having an extension projecting inwardly from the inner extremity of the sound groove thereof to cause inward movement of the stylus of a phonograph, said disk being provided with a wholly independent outwardly directed inner groove the walls of which are adapted to engage the stylus and move it outwardly.



1,751,167. FRICTION MATERIAL. RAYMOND J. NORTON, Washington, D. C., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Feb. 27, 1929. Serial No. 343,117. 20 Claims. (Cl. 188—259.)

11. A friction material comprising a woven asbestos tape through which is dispersed an elastic gel.



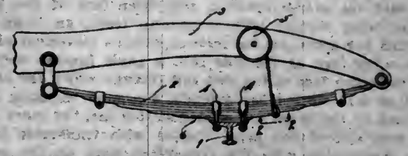
20. An auto-dehydratable friction material.

1,751,168. SIGNAL BOX. THOMAS O'DONNELL, Ironwood, Mich. Filed July 19, 1928. Serial No. 293,944. 2 Claims. (Cl. 40—132.)

1. In a vehicle direction signal, a casing including top and bottom sides, a connecting rear wall, removable end walls, means for securing the removable end walls on the casing, the forward edges of the top and bottom sides being formed with inwardly directed flanges, a unit removably arranged in the casing and including a rear wall, top and bottom sides, inwardly directed flanges formed on the forward edges of the top and bottom sides and being spaced with respect to the respective aforementioned flanges, vertical partitions dividing the unit into independent compartments that are open at their front sides, a lamp socket for each compartment, a glass panel covering the open front side of the casing, and the open front side of the respective compartments, said glass panels being maintained in position between the aforementioned flanges, the glass panel being provided with signalling indicia thereon in front of the respective compartments, and an attaching bracket for the casing.

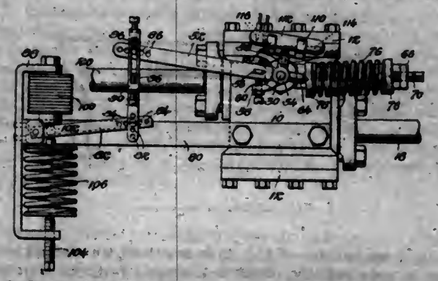
1,751,169. VENDING MACHINE. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed June 23, 1927. Serial No. 200,935. 9 Claims. (Cl. 312—35.)

1. In a vending machine and the like provided with a hopper, a supplementary hopper, the said supplementary hopper being the original container of the articles to be vended, and means for ejecting said articles from said supplementary hopper.



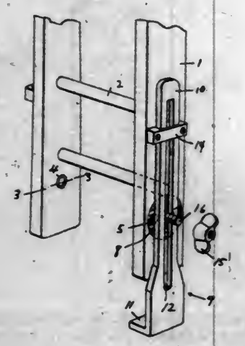
1,751,170. BOX. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Aug. 29, 1927. Serial No. 216,104. 5 Claims. (Cl. 312—35.)

1. An original container for salable units adapted for use in connection with a dispensing mechanism, the said container being in the shape of a box in which the salable units are adapted to be packed in an orderly manner and



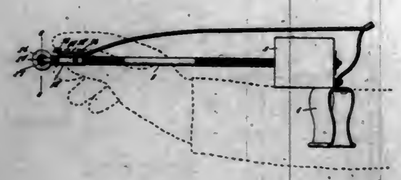
having a bottom provided with an aperture through which an ejector device is adapted to pass in order to discharge said units.

1,751,171. LEAF-SPRING STRUCTURE. JAMES S. REID, Cleveland, Ohio, assignor to The Newell Thompson Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 7, 1926. Serial No. 134,067. 2 Claims. (Cl. 267—47.)



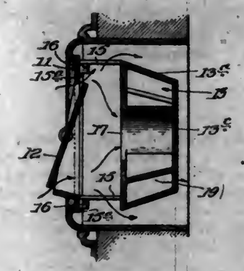
1. A spring and shock absorber mounting for a vehicle, comprising a shock absorber for attachment to the vehicle frame and having a movable actuating part, and a spring comprising a plurality of superposed leaves of various lengths with spaced members connecting said leaves and a lug secured to one of the lower-most leaves near the end thereof and spaced from said connecting members and attached to the actuating part of the shock absorber.

1,751,172. VALVE AND VALVE-OPERATING MECHANISM. GEORGE D. REINHARDT, Dallas, Tex. Filed Aug. 6, 1927. Serial No. 211,134. 3 Claims. (Cl. 236—48.)



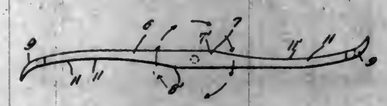
1. In mechanism of the class described, a shaft rotatable between two positions, a pin rigid with and extending radially with respect to said shaft, a spring support located in alinement with said pin when the latter is midway between its limits of movement as determined by the two positions of said shaft, a spring between said pin and said support whereby it is operable to hold said shaft in either of its two positions, a member movable with respect to said shaft, and a lost motion connection between said member and said shaft.

1,751,173. EXTENSIBLE LADDER FOOT. THOMAS G. RICE, Hammondsport, N. Y. Filed Mar. 30, 1928. Serial No. 265,876. 1 Claim. (Cl. 228—63.)



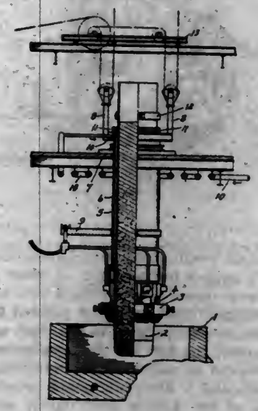
In an extensible foot for ladders, wherein one of the side rails of the ladder is formed with a transverse opening and a cutout portion in the outer face of the lower end thereof, a base plate for disposition in said cutout portion, a sleeve formed on the base plate for disposition in said transverse opening, the outer face of the base plate being formed with transverse teeth, an elongated slotted bar arranged for vertical slidable movement along the outer face of the side rail, a guide bracket secured on the outer face of the side rail through which the upper end of said slotted bar extends, a ground engaging foot formed on the lower end of said slotted bar, the inner face of said slotted bar being formed with transverse teeth for cooperation with the transverse teeth on the outer face of the base plate, a bolt extending through the sleeve and the slotted bar, and a nut threaded on the outer end of the bolt for engagement with the outer face of the bar to lock the bar in any vertically adjusted position.

1,751,174. CUTTING AND GRINDING MECHANISM. WARREN RICHARDS and EDWARD RICHARDS, Klamath Falls, Oreg. Filed June 6, 1929. Serial No. 368,830. 1 Claim. (Cl. 51—170.)



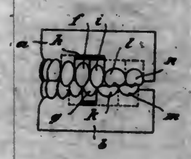
In a mechanism of the class described, an electric motor, a substantially inverted U-shaped resilient metallic clip for mounting the motor on the arm of an operator, a flexible shaft operatively connected with the motor, flexible sheathing about the flexible shaft, an elongated housing connected to the sheath, a shaft in the housing connected with the flexible shaft, a gear on the shaft in the housing, an ear projecting from the housing, a removable bracket mounted on the side of the housing, a shaft journaled between the ear and the bracket, and a gear on the last mentioned shaft meshing with the first mentioned gear, a spring contact, means for mounting the spring contact on the housing, and insulating it therefrom, a headed screw threaded in the housing and extending into a groove on the shaft in the housing in a manner to prevent longitudinal movement of said shaft therein, said head adapted to be engaged by the spring contact when the latter is depressed, and means electrically connecting the spring contact with the electric motor to control the energization thereof.

1,751,175. FUEL-SAVING DEVICE. WILLIAM E. ROTHERMEL, Chicago, Ill. Filed July 30, 1928. Serial No. 296,174. 1 Claim. (Cl. 110—175.)



In combination with a fuel-feed passage of a furnace or the like and a door therefor provided with a damper, an air-heating casing, bar means connecting the door and casing and normally disposing the latter in said passage in spaced relation to the door and to the walls of the passage, said casing having its marginal wall inwardly tapering and also having a centrally arranged air inlet opening facing said door, whereby the air passing the damper will partly pass around said marginal wall and will partly enter said opening, and the casing adjacent its inner lower corner having air outlet openings, and baffle means in said casing providing a tortuous passage to be followed by the air in its travel from said inlet means to said outlet means.

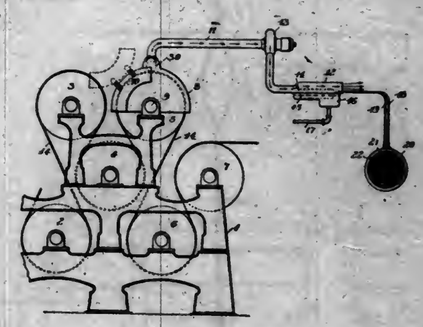
1,751,176. ROAD SIGN. OSCAR ALBIN RYSTROM, York, Nebr. Filed July 21, 1927. Serial No. 207,489. 2 Claims. (Cl. 40—39.)



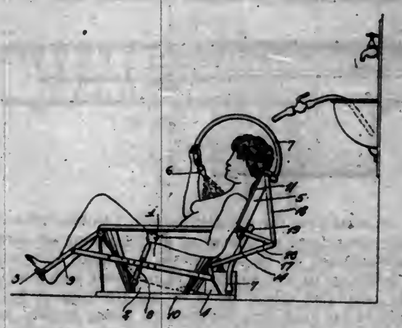
1. In a revolving sign of the character described, an elongated and narrow board member, the center of said member being of enlarged thickness, the portions of the member extending outwardly from the enlarged portion being of curvilinear formation, the curved portions being curved in inverse directions from the enlarged portion, the innermost point of each curved portion being located at a point substantially one-fourth of the distance inwardly from the outer end of the member, and on an extension of the longitudinal axis of the enlarged portion, and a support, upon which the board member is adapted to be pivotally mounted at its enlarged portion.

1,751,177. PROCESS IN THE MANUFACTURE OF SELF-BAKING ELECTRODES. MATHIAS OVROM SEM, Buffalo, N. Y., and CARL WILHELM SÖDERBERG, Oslo, Norway, assignors to Det Norske Aktieselskab for Elektrokemisk Industri of Norway, Oslo, Norway. Filed Dec. 6, 1928, Serial No. 324,171, and in Germany Sept. 26, 1928. 7 Claims. (Cl. 266—1.5.)

1. The process of forming an electrode baked while in use in the electric furnace and including electrode paste and an enclosing mantle comprising filling in paste at temperatures below the melting point of the binder material, applying heat to the filled in paste and causing the paste to flow and form a solid electrode.



1,751,178. PROCESS FOR THE PRODUCTION OF ARTIFICIAL TEETH. KURT TARSCHNER, Duren, Germany. Filed June 14, 1927, Serial No. 198,799, and in Germany Jan. 22, 1927. 5 Claims. (Cl. 32—9.)



1. A method of producing artificial teeth consisting in moulding models of the upper and lower jaws from natural teeth in a hard material, removing from one of the models a tooth to be replaced, replacing said tooth by an artificial anatomical tooth of an easily grindable material imitating with said models the movements of the jaws in the natural biting, chewing and griding motions and making an artificial tooth of hard material from the tooth thus shaped.

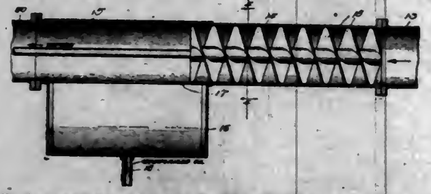
1,751,179. MOISTURE-CONTENT TESTER FOR PAPER-MAKING MACHINES. CHARLES A. UPSON, Lockport, N. Y., assignor of one-half to W. Harrison Upson, Lockport, N. Y. Filed Aug. 26, 1926. Serial No. 131,778. 4 Claims. (Cl. 34—48.)

1. In a paper making machine, the combination with a heated drier over which the paper web continuously travels, of a hood extending transversely widthwise of the web from side to side and adapted to trap the vapor issuing from a complete section of the web while on the roll, and a psychrometer embodying wet and dry bulbs exposed to the action of such vapor.

1,751,180. COMBINED SITZ BATH. JOHANN WENISCHNIOMR, Gras-Eggenberg, Austria. Filed Nov. 20, 1928, Serial No. 320,562, and in Austria Nov. 26, 1927. 6 Claims. (Cl. 4—166.)

1. Collapsible portable bathing device comprising in combination a sitz-bath, a hollow back-rest movably secured to the latter so as to be adjusted and fixed in any desired position, a water supply device arranged outside the sitz-bath, means connecting the water supply device to the sitz-bath, means for operating the former arranged outside the sitz-bath, an adjustable water conduit passing from the water supply device to the hollow back-rest, a tube leading away from the latter, and a rose secured to the end of the said tube.

1,751,181. TOOL FOR REMOVING GLASS AND OTHER OBJECTS FROM AUTOMOBILES. CLARENCE OSCAR WILLIAMS, Evansville, Ind. Filed Jan. 26, 1927. Serial No. 163,680. 2 Claims. (Cl. 294—86.)

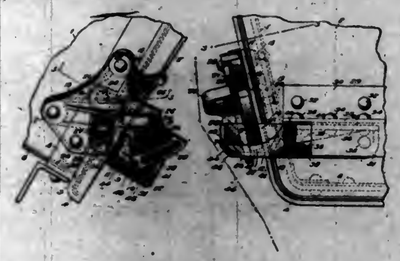


1. A tool adapted for grasping broken pieces of glass and withdrawing them from a limited space, comprising a pair of elongated contacting flat metal resilient strips free from each other at one end and constituting spring jaws thereat which can spread apart to grasp broken pieces of glass, said strips being riveted together at a plurality of points to afford the requisite stiffness with resiliency to enable the tool to be manipulated and yet to permit it to yield when necessary during use in a limited space, the end

parts of said strips at the other end of the tool being spread or offset, and a foldable hook having one end pivoted to the

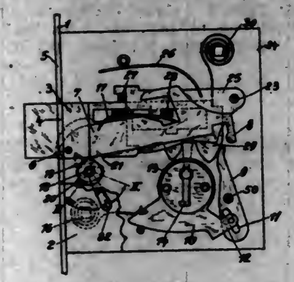
said other end parts of said strips and adapted to be folded between them or to be extended in continuation of the strips for use.

1,751,182. ART OF CONTINUOUS DISTILLATION OF HEAVY HYDROCARBON OILS. ROBERT E. WILSON, Chicago, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Apr. 3, 1925. Serial No. 20,423. 12 Claims. (Cl. 196—85.)



5. An apparatus for the distillation of hydrocarbon oils, a mixer comprising an expanding nozzle, means for supplying unvaporized oil to said nozzle, a conduit into which said nozzle opens, the nozzle being provided with openings on its expanding side directed in the direction of flow of oil, means for supplying superheated steam to said openings, the steam being expanded on passage through the openings and immediately intermingling with the oil and traversing the conduit, means at the end of the conduit for imparting a rapid whirling movement to the mixture of oil and vapors, thereby throwing out unvaporized oil particles, and means for collecting the unvaporized oil.

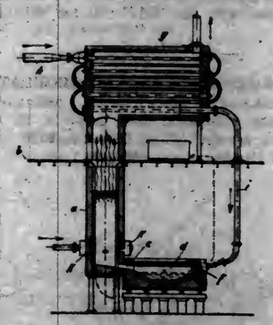
12. In the distillation of hydrocarbon oils, subjecting a mixture of hydrocarbon oil and steam in substantial thermal equilibrium to a whirling movement while in continuous flow at a rate of 200 to 500 feet per second, thereby throwing out unvaporized oil in the form of a layer, and substantially immediately separating out such layer of unvaporized oil.



1,751,183. DOOR MECHANISM FOR RAILWAY CARS. WILLIAM E. WINE, Toledo, Ohio, and BYRES W. KADEL, Baltimore, Md. Filed May 26, 1926. Serial No. 111,741. 26 Claims. (Cl. 105—308.)

1. In car door mechanism, the combination with a car body having a hopper provided with an offset portion adjacent its discharge opening, of a hinged door for closing the discharge opening of said hopper, and means operatively interposed between the car body and the door for retaining the latter in closed position, said means including an arm secured to the door and projecting outwardly beyond the side of the hopper, a pivoted hook for cooperating with said arm, and means for mounting the hook upon the car body, said last named means including a filler interposed between the hook and the side of the hopper and engaging the said offset portion of the hopper, for transmitting directly to the latter a portion of the force imparted to the hook when supporting the door in closed position.

2. In car door mechanism, the combination with a car body having a hopper formed with an offset portion adjacent its discharge opening, of a hinged door for closing the discharge opening of said hopper, a pivoted hook mounted on the hopper, an arm secured to the door and projecting outwardly beyond the side of the hopper, said hook and arm being adapted to cooperate for retaining the door in closed position, and a filler interposed between said hook and the side of the hopper and rigidly secured to the latter, the hook being pivotally secured to the filler and the latter being provided with projections adapted to engage the said offset portion of the hopper, for transmitting directly to the latter a portion of the force imparted to the hook when supporting the door in closed position.

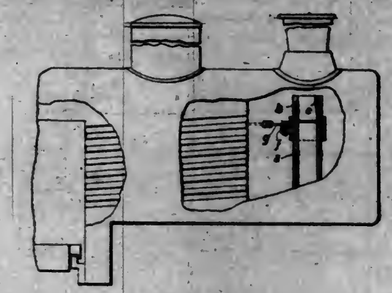


1,751,184. DOOR LOCK. ADOLF WODARRA, Berlin-Lankwitz, Germany. Filed Dec. 24, 1926, Serial No. 156,916, and in Germany Dec. 24, 1925. 3 Claims. (Cl. 70—91.)

1. A door-lock including a cam having a keyhole extending therethrough, said cam being adapted as a guiding member for the keybit, and having a key-shield upon the front-surface of said cam, the bore of the keyhole for the shaft of the key being mounted eccentrically with respect to the axis of said cam, and a safety device including a cam-shaft adjustable from the inside of the lock, a bolt and spring pressed talon thereon, said cam-shaft having cams adapted to move the spring pressed talon on the bolt.

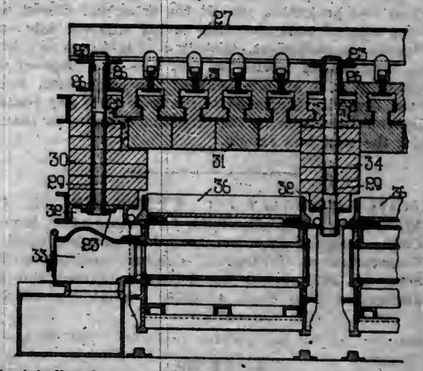
1,751,185. SMELTING PROCESS. FRITZ WÜST, Duesseldorf, Germany. Filed Oct. 18, 1927, Serial No. 227,029, and in Germany Aug. 6, 1926. 2 Claims. (Cl. 75—27.)

1. Method of smelting low carbon cast iron having a definite carbon content in a combined cupola and reverberatory furnace, which consists in melting scrap iron, with carbonaceous material in the cupola furnace by flue gases drawn from the reverberatory furnace and running the melted iron into the reverberatory furnace and subjecting



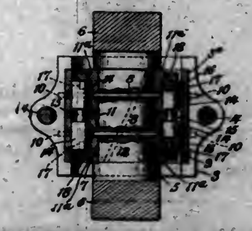
the same to greater heat therein, the carbon content being regulated by measurment of quantity of coke in the cupola furnace.

1,751,186. SAFETY BUMPER-ACTUATED CONTROL FOR VEHICLES. WILLIAM ADAM, Staunton, Ill. Filed Aug. 15, 1928. Serial No. 299,814. 1 Claim. (Cl. 180—83.)



A bumper operated switch comprising a pair of bars, one of said bars being secured rigidly to a stationary structure, yieldable means for mounting the other bar in substantially parallel relation with respect to the rigidly secured bar, said last mentioned bar being provided with an opening, a pivotally mounted rack bar on the yieldably mounted bar for disposition through said opening in the rigidly secured bar, and switch means interposed between the said bars.

1,751,187. LOCOMOTIVE-ENGINE-DRAFT REGULATOR. KARL ALTE, Dortmund, Germany. Filed Aug. 16, 1927, Serial No. 213,371, and in Germany June 25, 1927. 5 Claims. (Cl. 230—99.)



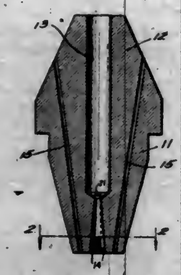
1. Locomotive engine draft in connection with a blast pipe, through which the exhaust passes, disposed below the chimney, and having a tubular top rotatably disposed on its outlet, the inner wall of the top being provided with a throttling enlargement having an increasing section in upward direction.

1,751,188. FURNACE CONSTRUCTION. ALFRED WILLIAM BENNIS, Bolton, England. Filed Nov. 2, 1925, Serial No. 66,423, and in Great Britain Nov. 10, 1924. 4 Claims. (Cl. 110—1.)

1. A boiler furnace comprising an overhead frame work, tension bars depending from said frame work, walls solely supported upon said tension bars, protective tubes around said tension bars, and means whereby air may be passed through the space between said tubes and said bars.

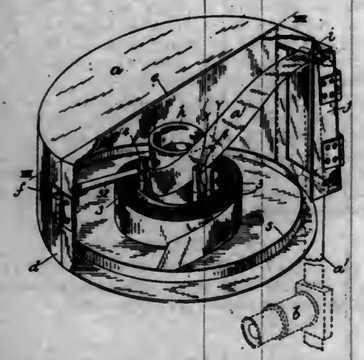
1,751,189. ROLLER BEARING. WILLIAM F. BERGER and JOHN A. BERGER, Canton, Ohio. Filed Apr. 10, 1928. Serial No. 268,895. 2 Claims. (Cl. 308—179.)

1. In an anti-friction bearing for cranks and connecting rods, a two-part bearing, each part formed with an internal recess to receive a cup-shaped segmental member seated in said recesses, having their ends adjacent to the end walls of the recesses, and keyed against rotation, a crank-pin, segmental bushings keyed to the crank-pin to rotate therewith, spaced from the segmental cup-shaped members and formed externally with end flanges and a centrally disposed flange, twin-rollers disposed between the segmental bushings and cup-shaped members in rolling contact with the bushings and cup-shaped members, the ends of the rollers being disposed for engagement with side faces of the end and centrally disposed flanges of the bushing, and rings upon which the rollers are rotatably mounted, said rings being tied one to the other and disposed to contact with the peripheral faces of the end flanges of the segmental bushings.



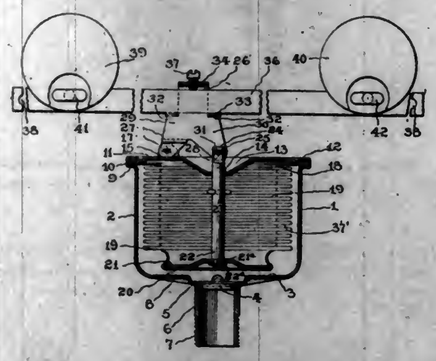
1,751,190. JACK FOR FENCE-WIRE STRETCHERS. JAMES M. BOYER, Urbana, Ill. Filed July 2, 1928. Serial No. 289,732. 1 Claim. (Cl. 254—161.)

A jack for fence-wire stretchers, comprising a body plate having arcuate slots adjacent to one of its ends,



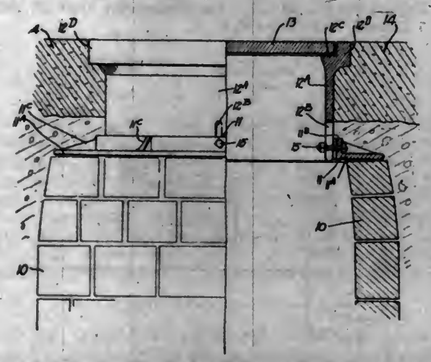
said slots being also adjacent to its side edges, means associated with said body plate for the attachment of a wire stretcher thereto, bars arranged alongside of and pivotally connected to the body plate adjacent to one end thereof and projecting beyond the other end thereof and having pointed ends and also having adjacent said ends cables for the individual connection of said bars to a fence post, headed pins carried by said bars and disposed and movable in said arcuate slots of the body plate, and a tie rod pivotally connected to the body plate and adapted to extend therefrom in the direction opposite to that in which the said bars extend.

1,751,191. AUXILIARY JET CUTTING TIP FOR CUTTING TORCHES. CLARENCE J. COBERLY, Los Angeles, Calif., assignor to Kobe, Inc., Los Angeles, Calif., a Corporation of California. Original application filed Sept. 29, 1923, Serial No. 665,645. Divided and this application filed Sept. 4, 1928. Serial No. 303,720. 7 Claims. (Cl. 158—27.4.)



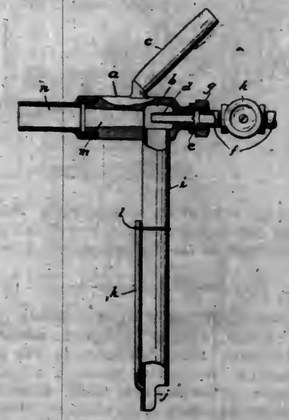
7. As a new article of manufacture, a cutting tip having a pair of relatively diverging cutting jet orifices, and a third cutting jet orifice cooperating therewith, there being means for forming a heating jet outside the area including said cutting jet orifices.

1,751,192. FILM-WINDING MECHANISM FOR CINEMATOGRAPH APPARATUS. FLORENCE COWIE, London, England. Filed Mar. 8, 1928, Serial No. 260,181, and in Great Britain June 13, 1927. 13 Claims. (Cl. 88—18.7.)



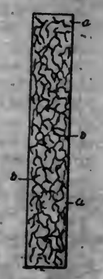
1. In cinematograph film winding apparatus, a horizontal revoluble pan formed with a central circular depression and adapted for carrying a roll of film to be unwound, a central vertical capstan device upstanding above the plane of said pan and supported by the latter, a ring fence of pillars surrounding said capstan at a fixed radial distance therefrom, revoluble sleeves on said pillars, a carrier for said pillars said carrier being disposed within the depression of said pan, and anti-friction bearings between said pan and its support and between said pan and the fence carrier substantially as set forth.

1,751,193. PRESSURE-OPERATED REGULATOR. EARNEST J. DILLMAN, Kenmore, N. Y., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 11, 1926. Serial No. 154,262. 7 Claims. (Cl. 236—26.)



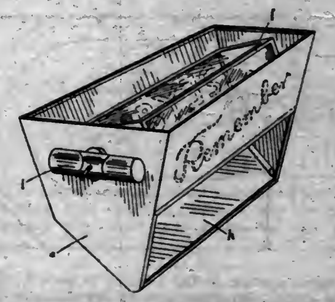
1. In a device of the character described, a casing, a pivoted rocker member, a resilient pressure-responsive element in said casing having a static condition, means operatively connecting said element to said rocker member to rock said member, a weighted operating member carried by said rocker member and opposing operation of said element, the distance between the pivotal point of said rocker member and the point of connection between said element and rocker member, and the distance between said pivotal point and the center of weight of said operating member when said element is in static condition being such that the system is in substantial equilibrium for all increases or decreases of potential energy stored in said pressure-responsive element due to movement of said pressure-responsive element.

1,751,194. MANHOLE COVER. CHARLES NORMAN ELSY, Glen Ellyn, Ill. Filed Feb. 13, 1928. Serial No. 253,885. 9 Claims. (Cl. 94—34.)



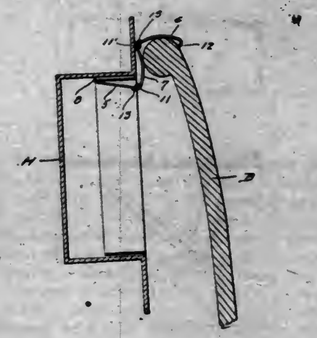
1. In a structure of the character described, the combination of a surrounding wall structure forming a manhole and containing an opening in its top, a cover-plate-supporting hollow member open at its opposite ends and forming a continuation of the opening in said wall structure and free of support by said wall structure, a concrete slab in which said member is located, and means supporting said member on said slab, said member and slab being capable of downward movement as a unit relative to said wall-structure.

1,751,195. APPARATUS FOR APPLYING REFRACTORY CEMENT. LEON FABER, Philadelphia, Pa., assignor to Leonard B. Botfield, trading as Botfield Refractories Company, Philadelphia, Pa. Filed Feb. 15, 1927. Serial No. 168,268. 2 Claims. (Cl. 91—45.)



1. Apparatus for applying plastic material comprising a head having therein a chamber, a discharge passage from said chamber increasing in area outwardly from the chamber, an inlet passage to the chamber for compressed air or vapor aligned with the discharge passage, and a second inlet passage to the chamber, a tube communicating with said second inlet passage, and an air conduit communicating at one end with the interior of the tube adjacent its intake end, the other end of said conduit being arranged to open to the atmosphere when the intake end of the tube is immersed in the plastic material, whereby compressed air or vapor admitted through the first inlet passage serves to produce a flow of plastic material and air through the tube into the chamber and to discharge the same therefrom through the discharge passage.

1,751,196. CONSTRUCTIONAL MATERIAL. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Original application filed May 10, 1922, Serial No. 559,908. Patent No. 1,680,144. Divided and this application filed Oct. 16, 1925, Serial No. 62,908. Renewed Apr. 20, 1929. 18 Claims. (Cl. 94—18.)

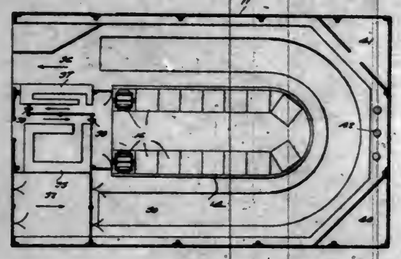


15. A preformed constructional unit composed of bituminous material having hardened areas therein formed as a skeletonized, internal reinforcement, certain other portions of the bituminous material being relatively softer.

1,751,197. ADVERTISING DEVICE. HENRY RICHARD FLOOD, South Chingford, England, assignor to Cecil Gordon Vokes, London, England. Filed Dec. 19, 1928, Serial No. 327,096, and in Great Britain Dec. 20, 1927. 3 Claims. (Cl. 40—40.)

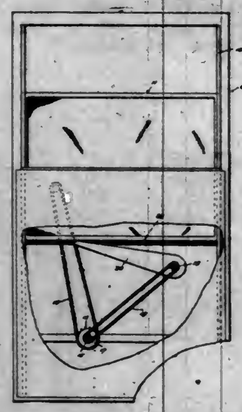
1. A daylight reflecting advertising device comprising a casing, an inclined mirror in said casing arranged to reflect daylight to an observer, a plurality of transparencies, a pivoted casing carrying said transparencies, and means to oscillate said casing so as to bring said transparencies into operative position one at a time.

1,751,198. GARMENT HANGER. JOHN B. FRANCK, Richlands, N. C. Filed July 10, 1929. Serial No. 377,179. 3 Claims. (Cl. 248—24.)



1. A collapsible garment hanger comprising a plurality of hingedly connected sections embodying a pair of end sections and an intermediate section, one of said end sections and said intermediate section being of substantially arcuate formation, said end sections being provided at their outer free ends with hook-like extremities, said arcuate shaped end section adapted to be disposed over the top edge of a chair back, the hooked end of said end section engaging said chair back for suspending the hanger from the back, when said sections are in an unfolded position, and a hooked end of the other of said sections adapted to be engaged by a garment for suspending said garment from the hook, and said arcuate end section being adapted to have its concaved side in abutting relation to the convex side of the intermediate section when said sections are moved to a folded position substantially as described.

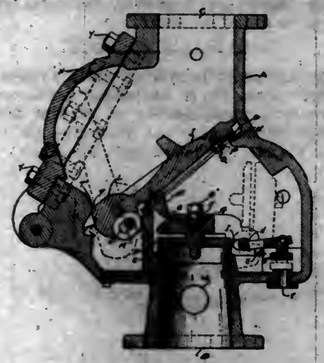
1,751,199. SELF-SERVING STORE. JOSEPH N. GRANT, Louisville, Ky., assignor to The Grant Stores Inc., a Corporation of Delaware. Filed Mar. 12, 1928. Serial No. 260,962. 3 Claims. (Cl. 186—1.)



1. In combination with a store of the character described having separate vehicle and pedestrian passage-

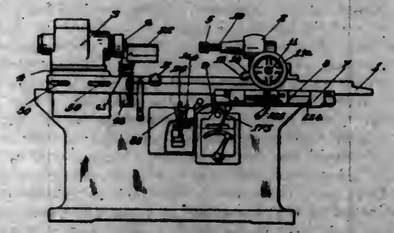
ways with a counter interposed therebetween, of a display rack rotatably supported upon said counter, said counter having its central portion immediately beneath said rack arranged at a relatively lower horizontal plane

to the upper portion of the counter to permit rotation of the rack without interference with said counter, operating means for the rack and means accessible to either side of the counter for controlling the operation thereof.



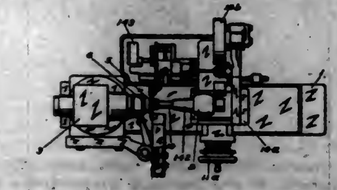
1,751,200. AUTOMOBILE SCREEN. MARY L. GRAY and ELIZABETH FORD, Waverly, Va. Filed Sept. 17, 1928. Serial No. 306,435. 1 Claim. (Cl. 156—14.)

In an operating mechanism for the screen frame of an automobile door, said frame having at the bottom thereof a horizontal guide channel, a crank shaft rotatably mounted in the door, a crank arm carried by said shaft and having on its free end a roller arranged to said guide channel, a sprocket wheel on said shaft, a second shaft, a pair of sprocket wheels on said second shaft, an endless flexible chain trained over the first mentioned sprocket wheel and one of the sprocket wheels of said pair for operatively connecting said shaft, a sprocket wheel having means for manual rotation thereof and a second endless flexible chain trained over the last mentioned sprocket wheel and the other sprocket wheel of said pair, substantially as described.



1,751,201. DRY-PIPE VALVE. LESTER A. GRIMES, Montclair, N. J., assignor to Grimes Sprinkler Company, Inc., Newark, N. J., a Corporation of New Jersey. Filed June 25, 1925. Serial No. 39,433. 9 Claims. (Cl. 169—22.)

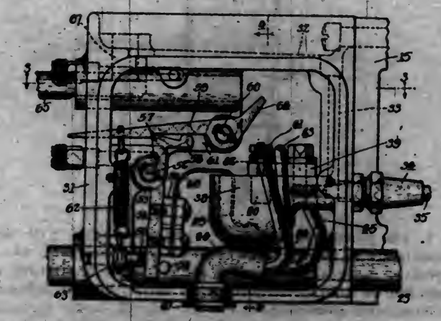
1. A dry pipe valve comprising a casing, an air-clapper and a water-clapper therein, means for transmitting pressure from one to the other when seated, projections carried by the casing, and independent supporting means for each clapper, each adapted to coact with one of said projections to impart to the clapper upon opening a combined motion of rotation and of translation in a plane approximately parallel to that of the clapper, the said



projections and supporting means being relatively so arranged that the supporting means will fall by gravity past the projections as the clappers move to the full open position.

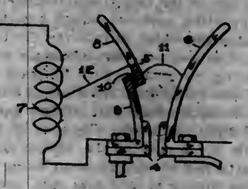
1,751,202. GRINDING MACHINE. ROGER N. HEALD, WALDO J. GUILD, ALFRED P. BURNS, and GEORGE E. GARNO, Worcester, Mass., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 24, 1925. Serial No. 4,466. 9 Claims. (Cl. 51—50.)

1. In a grinding machine, a grinding wheel having a reciprocatory working traverse relative to the work, a grinding wheel dresser, a work calipering device, means set in operation by said work calipering device for disposing said dresser in the line of movement of said wheel, and means, dependent upon the operation of said last named means, for increasing the traverse of said wheel, to include the dresser in its path.



1,751,203. GRINDING MACHINE. ROGER N. HEALD, WALDO J. GUILD, ALFRED P. BURNS, and GEORGE E. GARNO, Worcester, Mass., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Original application filed Jan. 24, 1925, Serial No. 4,466. Divided and this application filed Apr. 6, 1927. Serial No. 181,439. Renewed Dec. 18, 1929. 15 Claims. (Cl. 125—11.)

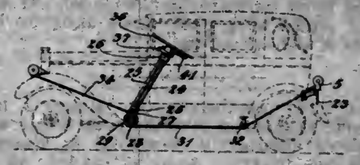
1. In a grinding machine, a reciprocating table, a wheel dressing device having its point normally out of the path



of the grinding wheel, mechanism adapted, when actuated, to move said dressing point into the path of the grinding wheel, a cam member to actuate said mechanism, and electromagnetic means for connecting said reciprocating table to said cam member.

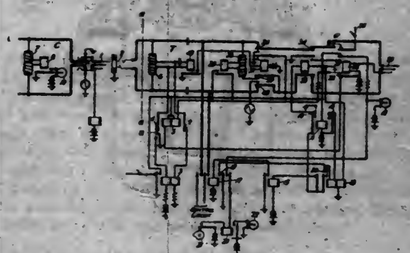
1,751,204. SWITCH. HERBERT B. KEMPTON, Chicago, Ill., and KEITH F. GALLIMORE, Fond du Lac, Wis., assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 16, 1925, Serial No. 15,849. Renewed Aug. 24, 1929. 11 Claims. (Cl. 200—47.)

1. A switch having, in combination, a casing, an oil trough mounted in said casing, a plurality of fixed contacts mounted in said oil trough, two spring contacts movable in said oil trough and with said fixed contacts constituting a pair of switches, two pivotal latches one for each spring contact and supporting the same, means for moving said latches to open said switches, spring means tending to move said latches to close said switches, two catch members one for each latch adapted to resiliently engage and to hold said latch in open position, and means for tripping said catches to close said switches.



1,751,205. ELECTROMAGNETIC BLOW-OUT DEVICE. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1922. Serial No. 585,957. 3 Claims. (Cl. 200—147.)

1. The combination with a pair of relatively movable contact members, of an arc horn secured to each of the said contact members, one of the arc horns being made in upper and lower sections, a blowout coil, and a connection between an intermediate turn of said coil and the said upper section whereby a portion of the coil is short circuited when one of the arc terminals reaches the said upper section.



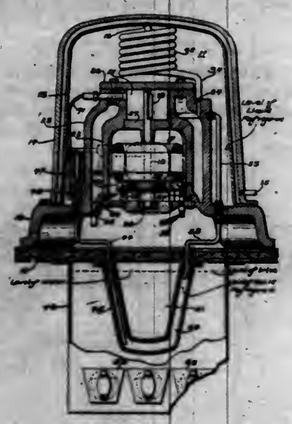
1,751,206. INDICATOR FOR MOTOR VEHICLES. WALTER HUELLER, West New York, N. J. Filed Feb. 12, 1929. Serial No. 339,339. 6 Claims. (Cl. 116—43.)

1. In combination with a motor vehicle, indicating means carried by the vehicle and having a movable indicator member, and operating means for said indicator member including a manually operable part for actuating said operating means mounted for independent movement in a plane at right angles to the plane of the steering

wheel and having means to releasably engage a part of said wheel whereby said operating means may be actuated simultaneously with the manipulation of the steering wheel.

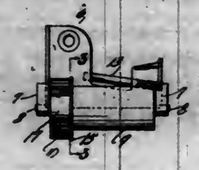
1,751,207. TELEPHONE TRUNK CIRCUIT. HERBERT B. JOHNSON, Flushing, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 26, 1928. Serial No. 272,898. 2 Claims. (Cl. 179—41.)

1. In a telephone system, a toll operator's position, a cord circuit thereat, a tandem position, a tandem trunk line interconnecting said toll and tandem positions, a switching position, a switching trunk interconnecting said tandem and switching positions, means for interconnecting said trunks at said tandem position, called lines outgoing from said switching position, means for connecting said switching trunk with one of said called lines, a supervisory relay associated with said cord circuit, a first relay associated with said tandem trunk at the tandem position end thereof, a circuit including a source of current, a winding of said supervisory relay and contacts of said first trunk relay, a second relay associated with said tandem trunk adapted to disable said first relay, and a third relay associated with said switching trunk and controlled by said called line for controlling said second relay.



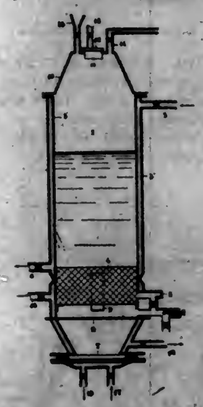
1,751,208. CONFECTION PACKAGE. ANDREW C. KAPPES, Chicago, Ill., assignor to Wm. Wrigley Jr. Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 14, 1929. Serial No. 346,963. 5 Claims. (Cl. 206—46.)

1. A confection package comprising a row of lozenge shape confections having spaces between their edges, a



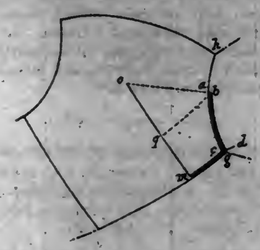
wrapper enclosing said confections and depressed within the spaces to form corrugations extending around the package, and an outer wrapper surrounding said package with its opposite marginal portions overlapping on one face thereof, the underlapping portion being corrugated to conform to the corrugated surface beneath and the overlapping portion being glued thereto along the elevated portions of said corrugations.

1,751,209. REFRIGERATOR. ANDREW A. KUCHER, Chester, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 10, 1923. Serial No. 650,668. 13 Claims. (Cl. 62—116.)



1. In a refrigerating apparatus, the combination of an evaporator, a compressor, cooling means for condensing the refrigerant vapor discharged by the compressor, a motor for driving the compressor, a chamber enclosing the compressor and the motor, a single jacket both surrounding the motor and the compressor and disposed in direct heat-exchanging relation therewith, and means for conveying a cooling medium through said jacket.

1,751,210. THREAD PROTECTOR. JOHN P. LEONARD, Hawley, Pa. Filed Aug. 14, 1929. Serial No. 385,827. 1 Claim. (Cl. 117—21.)

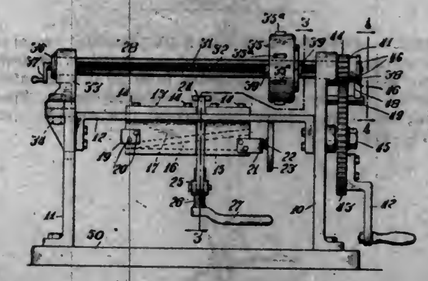


In a device of the character described, in combination with a feed roller having a reduced end, a pinion adapted to be mounted on the said reduced end and being of greater diameter than the feed roller, a thread protecting washer of greater diameter than the said pinion and having a central aperture to receive the said reduced end of the feed roller, the said thread protecting washer being mounted on the said reduced end between the feed roller and pinion.

1,751,211. PROCESS FOR PRODUCING ANHYDROUS ALCOHOL. OVIDIO LEONORI, Narni, Italy. Filed June 9, 1927, Serial No. 197,769, and in Italy June 26, 1926. 4 Claims. (Cl. 260—156.)

1. The process of producing anhydrous alcohol to be used principally in the preparation of fuels and solvents, which consists in treating aqueous alcohol with a mixture of metallic carbides decomposable by water, and hydrides of calcium and aluminum.

1,751,212. BREAST SUPPORTER, CORSELET, CORSET, AND THE LIKE. JULES LINDAUER, Paris, France. Filed Feb. 17, 1928, Serial No. 254,993, and in France Apr. 5, 1927. 6 Claims. (Cl. 2—42.)

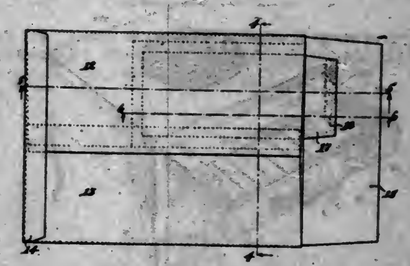


6. In each one of the two symmetrically disposed halves of a bust supporting garment joined together by stitching on their front edges which fit into the vertical front center line of the bust between the two breasts, a reinforcing piece of fabric having an outline with at least three adjacent sides, a first side being attached along a part of said front edge of the corresponding half of the garment and two other sides forming an angle, the apex of which is placed directly below the nipple of the breast, one side of said angle being attached on said garment along a substantially horizontal line ending at said first side, and the other side of said angle being attached on said garment along a line extending towards the lower part of said garment, transverse stitchings joining the reinforcing piece and the garment, and extending from an intermediate point of said line extending towards the lower part of said garment to a point of one of the other sides of said reinforcing piece.

1,751,213. INSULATING COATING ON ALUMINUM OR ALUMINUM ALLOYS. LEON MCCULLOCH, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1927. Serial No. 234,560. 15 Claims. (Cl. 148—6.)

11. The process of coating aluminum or aluminum alloys containing a major proportion of aluminum which comprises immersing a body of the material in a bath containing water, an alkaline-earth-metal oxide that is only slightly soluble in water at room temperature and an alkaline-earth-metal salt for a sufficient length of time to cause the deposition of a film upon the body, withdrawing the film-coated body from the bath and then drying the deposited film.

1,751,214. BRASS-TRUING MACHINE. EDWARD J. MCKERNAN, Topeka, Kans. Filed July 6, 1926. Serial No. 120,550. 2 Claims. (Cl. 77—63.)



1. In a brass truing machine, a chuck box having upstanding sides whereby the box may be secured to a supporting member, said side walls having vertical slot-ways, the ends of the chuck box being open; a chuck block the lower surface thereof is tapered, a similarly tapered wedge block slidable on the bottom of said box and beneath the chuck block, said wedge block having a threaded bore extending longitudinally from one end of the wedge block, a bracket disposed about one of the open ends of the chuck box for preventing lengthwise movement of the chuck block, an adjusting screw extending into the threaded bore of the wedge block, a second bracket disposed at the same end of the chuck box and through which the adjusting screw extends whereby lengthwise movement of the screw is prevented, a pair of upstanding arms disposed in the slots in the sides of the chuck box, having inwardly disposed upper ends above the chuck box, a transversely disposed member beneath the chuck box pivotally connected at its ends to the lower ends of the arms whereby both arms are operatively connected together, and a clamp screw threaded through said last member and engaging the bottom of the chuck box whereby screwing of the clamp screw causes said transversely disposed member to ride lengthwise of the clamp screw and both arms simultaneously moved together.

1,751,215. GUARD FOR SAFETY-RAZOR BLADES. PAUL MÜLLER, Solingen, Germany. Filed Jan. 15, 1929, Serial No. 332,642, and in Germany Oct. 4, 1928. 1 Claim. (Cl. 30—12.)

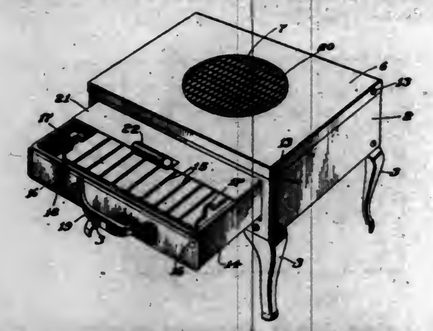
In a safety razor for double edged flexible blades a frame like guard plate without teeth, said guard plate having along the sides hollowed ledges, said ledges being rounded off and lower than the main top surface of the guard plate and being provided with a novel safety device in form of needle-like bearing points, said needle-like bearing points being positioned to support a double edged flexible blade, although the edge is quite free across its whole breadth, quite immovably right up to the very cutting edges, dividing said cutting edges into small closed sections for the purpose set forth in the specification.

1,751,216. DUPLEX ENVELOPE. WILLIAM H. RIPP, Chicago, Ill. Filed Sept. 18, 1928. Serial No. 305,670. 5 Claims. (Cl. 229—72.)

1. A duplex envelope comprising a body portion having top, bottom and side flaps, one of said side flaps providing a permanent closure for said envelope when affixed to the folded and glued top and bottom flaps, said top flap having a single sheet of paper glued to its inner side to provide a small receptacle between said paper sheet and said top flap, said small receptacle being within the large compartment provided by the body portion and the co-acting top, bottom and side flaps, and an individual sealing flap for said small receptacle and said large compartment.

1,751,217. EMULSION. OTTO RÖHM, Darmstadt, Germany. Filed Oct. 5, 1927, Serial No. 224,280, and in Germany Nov. 13, 1926. 1 Claim. (Cl. 149—6.)

An emulsion for tanning purposes comprising a mixture of a fatty substance and freshly precipitated aluminum hydroxide.

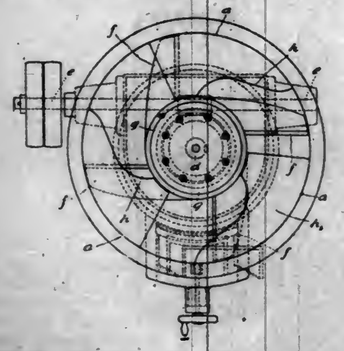


1,751,218. PORTABLE FIRE EXTINGUISHER. KARL SCHMIDT, Neuruppin, Germany. Filed Aug. 8, 1927, Serial No. 210,358, and in Germany Aug. 7, 1926. 2 Claims. (Cl. 169—31.)

1. In a portable liquid fire extinguisher, a container for the squirting liquid provided with a charge opening in the top and a squirting nozzle, a cover for closing said

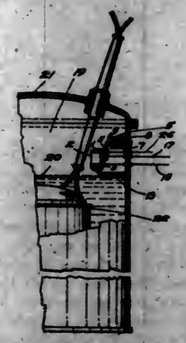
opening, a stuffing box in said cover, a rod passing through said stuffing box and adapted to be axially displaced from outside, a cartridge containing liquid gas and provided with a striking pin suspended from the inner end of said rod so that said pin is located near the bottom of said container.

1,751,219. ELECTRIC BROILER. PERCY R. SEAMON, Cambridge, Mass., assignor to Florence Stove Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 26, 1928. Serial No. 315,278. 5 Claims. (Cl. 219—37.)



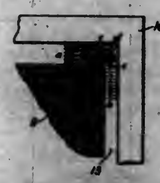
1. In a broiler, the combination of a casing, a horizontal electric heating unit supported in said casing and extending across the greater part of the area of the casing, said casing having a chamber therein immediately below said unit, a tray slidable into and out of said chamber, and means adjustable to reflect the heat from said unit either upward or downward, as desired.

1,751,220. LIGHT FILTER. ICHITARO SHOJI, Higashi Yodogawa-Ku, Osaka, Japan, assignor to Sankyo Kabushiki Kaisha, Tokyo, Japan, a Corporation of Japan. Filed Aug. 3, 1926, Serial No. 126,984, and in Japan Dec. 24, 1925. 2 Claims. (Cl. 95—31.5.)



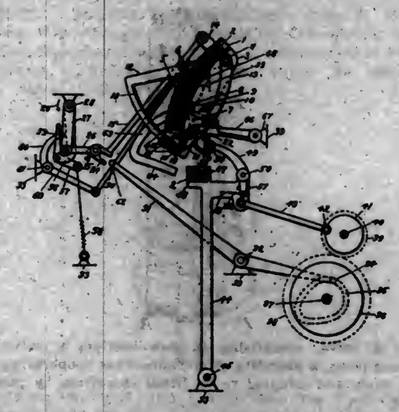
1. A light filter capable of absorbing ultra violet rays, comprising a film containing hexamethylene-tetramine-triphenol obtained by condensing phenol and formaldehyde in the presence of ammonia.

1,751,221. MIXING APPARATUS. ALFRED BARTLETT SMITH and CLIFFORD ROSS SMITH, Wolverhampton, England. Filed Sept. 24, 1927, Serial No. 221,677, and in Great Britain Oct. 5, 1926. 4 Claims. (Cl. 259—107.)



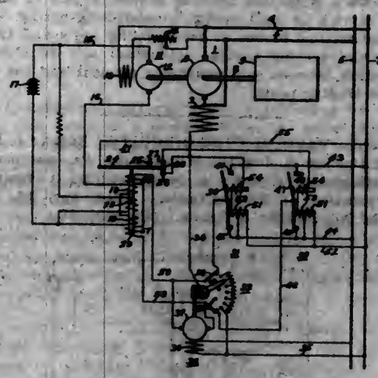
1. Apparatus for mixing finely divided materials with a binder, comprising a cylindrical container, a spindle rotatable about a vertical axis in the centre of the container, a domed distributing member above the centre of the container, backwardly raked and inclined blades carried by and rotating with the spindle and extending substantially from it to the inner face of the container, fixed members extending from the inner face of the container substantially to the spindle and provided with pressure surfaces forwardly curved towards the walls of the container and downwardly inclined from their leading edges, the said surfaces becoming increasingly close to and co-operating with the rotating blades to form squeezing pockets with lateral escape, and means for discharging the mixed materials from the container.

1,751,222. COMPENSATED GAS DETECTOR. CHARLES A. STYER, Wilkinsburg, and WALTER M. DANN, Sharon, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 30, 1928. Serial No. 303,092. 9 Claims. (Cl. 175—361.)



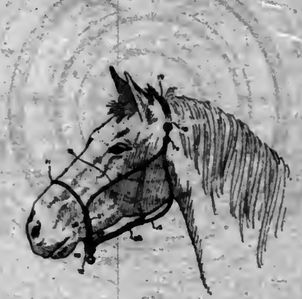
1. In an inclosed vessel, the combination with a gas detector, of means including a device responsive to pressure changes within the vessel for compensating said detector for errors incident to changes in pressure within the vessel.

1,751,223. TRANSFORMER. FRED J. VOGEL, Sharon, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 22, 1928. Serial No. 301,228. 3 Claims. (Cl. 175—356.)



1. A transformer having a core, windings disposed upon said core and spaced therefrom causing an electrostatic field to exist between said core and windings, the intensity of said electrostatic field varying uniformly as the length of the windings and means for shaping the electrostatic field at the angle of the winding structure comprising a layer of insulation disposed upon the end of said windings at which the electrostatic field is most intense, said insulation having a higher specific inductive capacity than the medium of the space between the core and windings, whereby said space may be reduced to a minimum.

1,751,224. AUTOMATIC BOBBIN-CHANGING MECHANISM FOR LOOMS. NIKOLAI I. ASAFOFF, Moscow, Union of Socialist Soviet Republics. Filed Nov. 12, 1928. Serial No. 318,934. 4 Claims. (Cl. 139—242.)



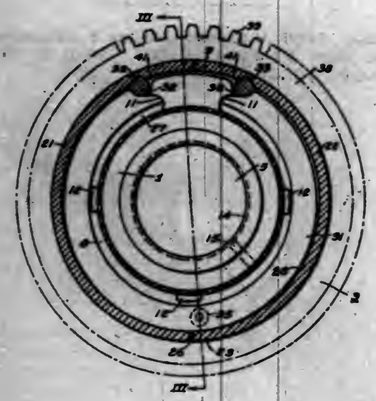
1. In an automatic bobbin changing mechanism for a loom, the combination with a magazine for bobbins, of a cage, a frame for said loom, arms supporting said cage and rotatively mounted in a coordination with said magazine box, said arms being adapted to move said cage from the position under said magazine box to a position above the shuttle box in the lay of a loom, said cage being adapted to receive a bobbin from said magazine, means to operate said arms, a change shaft adapted to be operated by a filling motion of said loom, means to control said arm operating means by said change shaft, a pusher lever on the lay of said loom adapted to transfer said bobbin from said cage into the shuttle in said shuttle box, a board pivotally mounted on said frame in a cooperative relation with said pusher lever, and means to move said board into an operating position, said means being controlled by said change shaft.

1,751,225. REGULATOR SYSTEM. JOHN H. ASHBAUGH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 9, 1927. Serial No. 238,808. 6 Claims. (Cl. 171—229.)

1. In a regulator system, a dynamo-electric machine having a field winding, means for governing the excitation of said dynamo-electric machine comprising a source of electric energy having a potential that varies in accordance with the regulated quantity of said machine, a second source of electric energy, a circuit for connecting said two sources of energy in voltage opposition and a regulator comprising a magnet having a movable core member and three fixed coils wound about said core member, means for energising the middle one of said coils for magnetising the core member and for normally holding said core member centrally thereof, means for energising the remaining two coils for varying the position of the maximum flux density with respect to the position of the coils in accordance with the direction of current flow between said two sources.

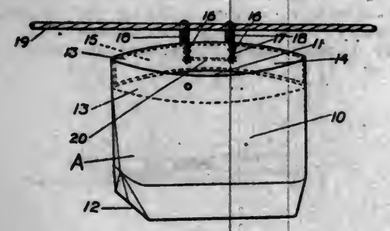
1,751,226. ROPE HALTER. EDWARD S. BECKWITH, Albion, Nebr. Filed Apr. 27, 1928. Serial No. 273,898. 2 Claims. (Cl. 54—24.)

1. A rope halter, comprising a single length of rope looped circularly and continuously in one direction to provide a continuous front loop of approximately circular form having an upper nose piece of single thickness and a lower chin piece of double thickness, the rope extending backwardly in single thickness from the upper ends of the chin piece to provide opposite side cheek pieces, the rear end of the cheek piece at one side terminating in a short loop and the rear end of the other cheek piece terminating in a returned long loop providing a double thick crown piece, means for detachably connecting the short and long loops together at one side of the halter, the portions of the rope extending downwardly from the short and long loops providing a throat latch of double thickness, and a lead strap connection carried on the forward end of the throat latch and slidably engaging the double thick throat latch portion of the front loop.



1,751,227. SURGEON'S KNIFE. MARCUS B. BEHRMAN, Brooklyn, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 6, 1925. Serial No. 41,514. 10 Claims. (Cl. 30—9.)

1. In a device of the character described, a blade holder base plate including a hand grip portion, a blade seat extending from one end thereof and positioned below the upper surface of the base plate and means for holding the blade on said seat, said means including a member carried by the base plate and hand grip portion and ar-

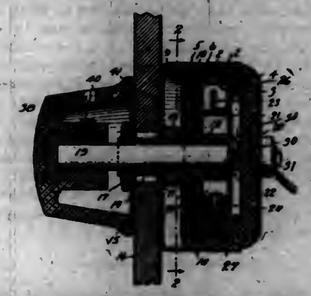


ranged to have a sliding engagement with reference thereto, to and from a position over the blade seat, and undercut means extending upwardly from the base plate for holding said member in sliding association with the holder.

1,751,228. FLEXIBLE GEAR WHEEL. CLAUDE BETHEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 27, 1927. Serial No. 208,712. 9 Claims. (Cl. 74—29.)

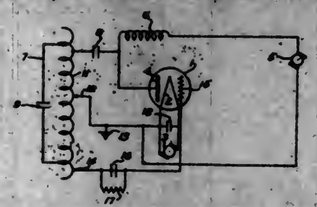
1. A flexible gear wheel comprising a hub member having a spherical peripheral bearing surface, a rim member carried by the hub member, said rim member having an inner bearing surface complementary to the bearing surface of the hub member, and a resilient member interposed between the hub member and the rim member for transmitting torque, said resilient member being in the shape of a segment of an annulus of different radius than the inner radius of the gear rim and adapted to be forced into contact with the gear rim when the rim member is displaced tangentially in either direction with respect to the hub member.

1,751,229. BAG. LEON G. BIGELOW, St. Paul, Minn. Filed Sept. 25, 1924. Serial No. 739,858. 1 Claim. (Cl. 68—11.)



A bag having an open end and two pairs of parallel openings near the open end, a handle formed of a single piece of wire having parallel legs slidably mounted in said pairs of openings, and the ends of said legs being formed into hooks for attaching said handle to said bag or to a clothes line.

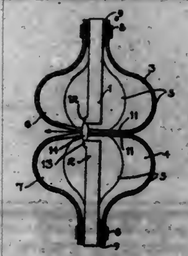
1,751,230. COMPRESSOR VALVE. ARTHUR J. BRIGGS, Syracuse, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 21, 1928. Serial No. 248,420. 4 Claims. (Cl. 277—46.)



1. A valve, comprising in combination, a valve seat having ports, a plurality of movable tubes cooperating with the ports and adapted to be lifted therefrom by pressure fluid.

1,751,231. VARIABLE RESISTANCE UNIT. BRUCE W. DAVID, Cleveland, Ohio, assignor to Walter M. Scott, Lakewood, Ohio. Filed Feb. 24, 1925. Serial No. 11,092. 5 Claims. (Cl. 201—55.)

1. A resistance unit comprising a casing, a resistance element carried by said casing, a shaft, and a resilient contact element connected to said shaft and adapted to engage with said resistance element, said contact element being substantially circular in shape and provided at one side with a projection forming a shoe, a pair of binding posts carried by said casing, a conducting spring having one end secured to one of said binding posts and the opposite end bearing against said shaft and an electrical connection between said resistance element and the other of said binding posts.

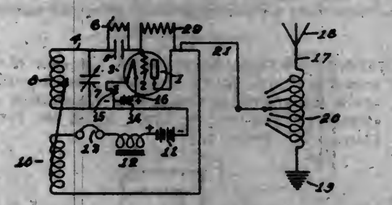


1,751,232. VACUUM-TUBE CIRCUITS. ROBERT L. DAVIS and DONALD G. LITTLE, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 15, 1925. Serial No. 23,429. 3 Claims. (Cl. 250—36.)

3. In combination, a power-tube device adapted to generate oscillations at radio-frequencies, said tube-device

comprising a cathode having external terminals, a large condenser permanently connected between said terminals, and means distinct from said condenser for maintaining one of said terminals at ground-potential.

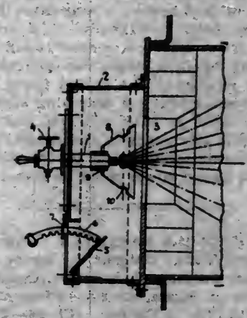
1,751,233. CIRCUIT INTERRUPTER. OTTO H. ESCHHOLZ, Wilkinsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 18, 1922. Serial No. 606,570. 11 Claims. (Cl. 200—144.)



1. In an electrical circuit interrupter the combination with a contact member for interrupting a circuit, of a shield of resilient material associated therewith.

1,751,234. COMPOSITION AND MANUFACTURE OF REFRACTORY BASIC BRICK AND THE LIKE. CECIL STEVENSON GARNETT, Derby, England. Filed Mar. 6, 1928, Serial No. 623,286, and in Great Britain Mar. 18, 1922. 4 Claims. (Cl. 106—9.)

1. The process of manufacturing bricks from dolomite, which consists in calcining the dolomite until it contains 8 to 12 per cent by weight of carbon dioxide, grinding said calcined dolomite, adding thereto a substance calculated to prevent hydration of the finished article, adding water to the mixture, molding said mixture into the required shape, drying the same, and firing.

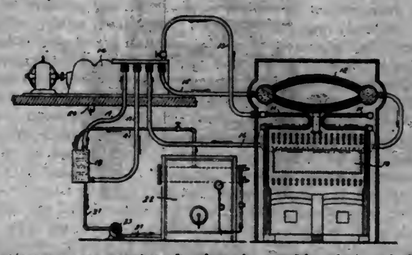


1,751,235. RADIO RECEIVING SYSTEM. THOMAS GONORA, Jr., St. Louis, Mo. Filed Feb. 10, 1927. Serial No. 167,212. 4 Claims. (Cl. 250—20.)

1. A radio-receiving system for reproducing the modulating side bands of a modulated carrier wave that comprises a space discharge device and input and output circuits therefor having a common cathode, means for tuning the system to the frequency of the incoming wave, wave-collecting means coupled to the output circuit, and a filter offering high impedance to the frequency of the carrier wave but resonant to the modulating frequencies of the carrier wave, said filter being located in the output circuit connection to the common cathode to exclude the carrier wave from the input circuit.

1,751,236. SYSTEM FOR THE COMBUSTION OF OIL. GILBERTO GONTARD, Buenos Aires, Argentina. Filed July 26, 1927. Serial No. 208,464. 1 Claim. (Cl. 158—1.5.)

In oil burning appliances, the combination with a furnace front having an opening, of a closed casing attached thereto about said opening and having an air inlet opening extending across substantially the entire width thereof, and at the bottom thereof, a deflecting closure plate for said air inlet opening pivoted within said casing, a burner supported by said casing above said air inlet opening, a conical screen carried by and surrounding said burner near its discharge end, said burner and screen being disposed externally of the furnace front and with the edge of the screen spaced from the edges of said furnace opening and said conical screen having openings for the admission of air both axially and circumferentially whereby the air may be deflected by said closure plate so as to direct the major portion thereof towards said various openings in said screen and about the same so as to vary the type of flame.

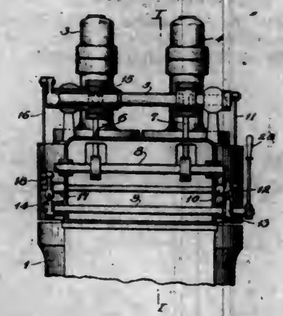


1,751,237. VALVE-CONTROLLED CLOSURE FOR BOTTLES CONTAINING CARBONATED BEVERAGES. FAIRFIELD W. HOBAN, New York, N. Y., assignor to Fairfield Specialties Corporation, New York, N. Y., a Corporation of New York. Filed May 31, 1928. Serial No. 281,735. 14 Claims. (Cl. 215—78.)

1. A device of the character described comprising a recessed closure having a discharge passage provided with an entrance portion projecting into the recess, and a resilient valve member disposed within said recess and having a portion of yieldable material adapted to engage said projecting entrance portion, said valve member having a spring action normally closing said passage and providing a fluid tight joint between said entrance portion and said yieldable portion.

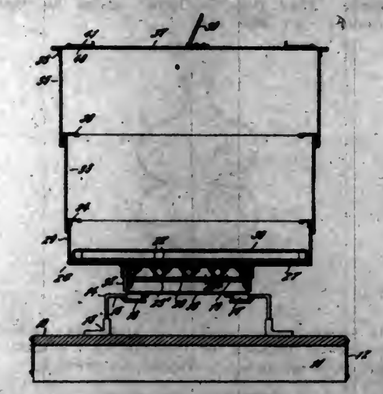
1,751,238. STEAM-POWER SYSTEM. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 26, 1925. Serial No. 32,907. 1 Claim. (Cl. 60—78.)

A steam power system having, in combination, a boiler setting including a steam-generating boiler, a boiler fur-



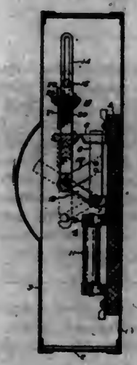
nace associated therewith and provided with a passage for the flow of heating gases over said boiler, a multi-stage prime mover, a connection for conveying operating steam from said boiler to a high-pressure stage of said prime mover, a heating element located so as to absorb heat from the gases flowing through said passage, a connection for delivering steam exhausted from said high-pressure stage to said heater, a connection for conveying re-heated steam from said heater to a lower pressure stage of said prime mover, a second re-heater, a second vapor-generating boiler, a closed vapor-circulating system including said re-heater, said second boiler and connections therebetween, means for conveying steam from said lower pressure stage to said re-heater and thence to a third stage of said prime mover, and means for generating vapor for circulation through said closed system independent of said first-named steam boiler or furnace.

1,751,239. SEPARABLE FASTENER. GUSTAV JOHNSON, West Roxbury, Mass., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Aug. 11, 1927. Serial No. 212,279. 3 Claims. (Cl. 24—216.)



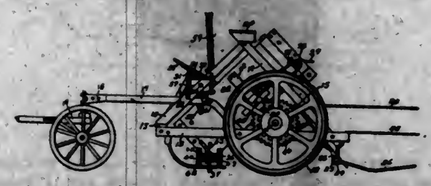
1. In a fastener socket installation, a stud-receiving part, an attaching plate and a socket-carrying medium located between support-engaging faces of the stud-receiving part and attaching plate, said stud-receiving part presenting a plurality of resilient fingers of substantial length passing through the carrying medium and terminating at the opposite side to present a stud-receiving aperture at the free ends of said fingers surrounded by a plurality of neck-engaging jaw portions for engagement with a stud when presented from that side of the carrying medium at which the attaching part is located and attaching prongs formed integral with said stud-receiving part and passing through the socket-carrying medium thereby to engage the attaching plate and secure the parts of the socket installation together.

1,751,240. INLET-VALVE GEAR FOR INTERNAL-COMBUSTION ENGINES. EMIL KÄGI, Winterthur, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 5, 1926, Serial No. 146,346, and in Germany Nov. 11, 1925. 4 Claims. (Cl. 123—32.)



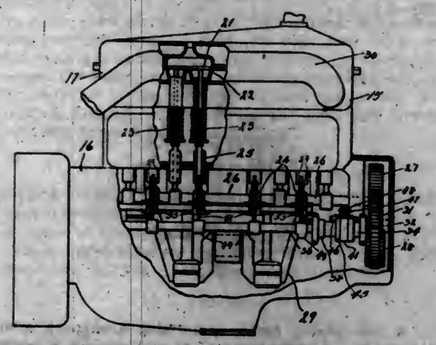
1. In an internal combustion engine, a plurality of injection valves, valve operating means therefor, adjustment means for varying the valve opening action of each of the valve operating means, a control shaft and a plurality of operating cams thereon adapted for successive engagement each with its said adjustment means.

1,751,241. ELECTRIC STOVE AND ATTACHMENT. VICTORIA A. KINCANNON, New York, N. Y. Filed June 2, 1926. Serial No. 113,224. 1 Claim. (Cl. 126—38.)



In an electric stove, a supporting stand, a relatively small pan spaced above the stand, socket members on the bottom of said pan, substantially inverted L-shaped legs rising from the stand and having their corresponding horizontal branches received by said sockets to support the pan, a heating unit reposing upon said pan, socket members arranged on the sides of said pan, a shell structure arranged above the pan, depending legs carried by the shell and received by the last mentioned sockets, a relatively large pan member supported on said shell, an oven member formed with an inwardly directed flange adjacent the lower edge thereof, and engaging the upper edge of the second mentioned pan to support the oven member thereon, a casing like member arranged above the oven like member and including inwardly directed flanges reposing upon the upper edge of said oven like member, said members being of different sizes whereby they are capable of adjustment in telescoped relation, and a removable cover for the uppermost casing like member.

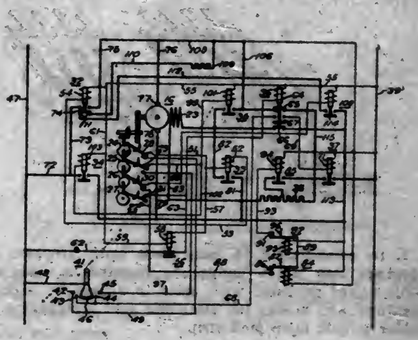
1,751,242. SWITCH MECHANISM. HUBERT K. KRANTZ, Rockville Center, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 20, 1926. Serial No. 155,800. 4 Claims. (Cl. 200—144.)



1. Switch mechanism comprising a contact jaw member, a switch-blade member movable into and out of engagement with the contact member, an arc-quenching device comprising separate, insulating metal plates provided with aligned slots through which the switch blade moves to open position and means for moving the arc-quenching device into a position between the jaw member and the swinging end of said blade member.

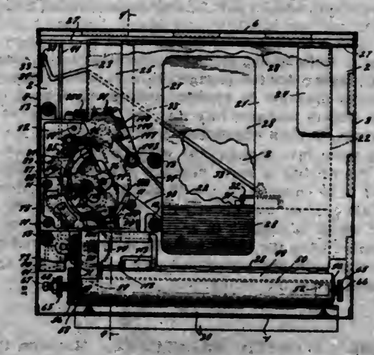
1,751,243. VINE-CROP SHOCKER. CLAUDE E. LEE, Adams County, Colo. Filed May 2, 1927. Serial No. 188,161. 3 Claims. (Cl. 56—348.)

1. A machine for the shocking of vine crops comprising a wheel-supported axle, a skeleton frame carried by said axle, draft means on the forward end of said frame, a manually-operable dumping carrier on the rear end of said frame, a conveyor box mounted for oscillation on said axle within said frame, spaced, parallel opposed drapers mounted for opposite travel within said conveyor box and adapted to discharge on said carrier, driving connections between said axle and drapers and manually operable means on said frame whereby said conveyor may be oscillated relative to said axle; together with ground-contacting means hinged to the forward end of said frame and engaging said conveyor box whereby the latter may be raised and lowered in conformity with the contour of the ground.



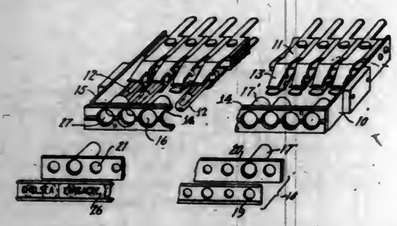
1,751,244. VALVE-ACTUATING MECHANISM. JOSEPH MCNULTY, Philadelphia, Pa. Filed Apr. 19, 1928. Serial No. 271,188. 10 Claims. (Cl. 123—90.)

1. In combination with a gas engine provided with spring actuated inlet valves, a cam shaft and cams for opening said valves, of levers co-operating with the valves and adapted to temporarily hold them in open positions, a pair of shaft sections, one of which is axially adjustable relative to the other, one of said sections being geared to the cam shaft, and cams carried by the other shaft section for actuating the levers to release the valves.



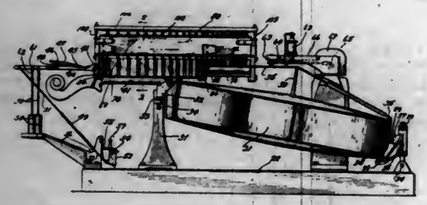
1,751,245. MANIPULATOR PUSHER HEAD. PHELAN MCSHANE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 18, 1927. Serial No. 212,619. 7 Claims. (Cl. 80—48.)

7. In a rolling mill, in combination, a manipulator pusher head, a motor for actuating the pusher head, a resistor to control the current flowing in the motor, switches for short-circuiting a portion of the resistor, actuating coils for the switches, said actuating coils being connected across the armature of the motor and being responsive to the counter-electromotive force developed by the motor and



adapted to operate the switches upon different voltages to vary the resistance in series with the armature during starting and acceleration and to provide resistance in series with the motor armature after it has reached full speed and before it is stalled by the jamming of the pusher head.

1,751,246. COIN-CONTROLLED MECHANISM. LOUIS H. MORIN, New York, N. Y., assignor, by mesne assignments, to Doehler Vending Machines, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 7, 1927. Serial No. 238,288. 17 Claims. (Cl. 194—88.)

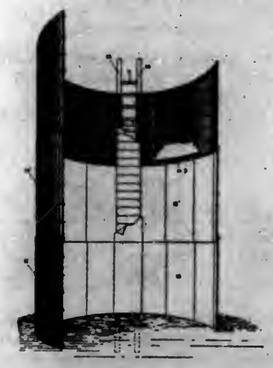


1. In combination in a coin controlled mechanism, a normally continuously idly rotatable driving member, a rotatable operating member which is normally idle and disconnected from said driving member, a normally freely idly movable coin carrier, manually operable means independent of a coin for concomitantly operating the coin carrier and rotating said driving member in one direction to an unlimited extent, and a normally ineffective coupling device to be made effective by a coin moved by the coin carrier to connect said operating member to said driving member to be driven thereby independently of the coin through the intermediary of the coupling device and then after said operating member has been rotated to a predetermined extent said coupling device acting automatically to disconnect said operating member from said driving member.

1,751,247. DESIGNATION DEVICE. EMIL C. MUELLER, Jr., Elizabeth, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 18, 1925. Serial No. 37,957. 7 Claims. (Cl. 40—10.)

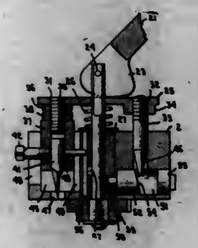
1. In combination, a lamp jack strip provided with openings into which lamps are inserted, a designation strip holder provided with holes in alignment with said openings, and means for attaching said designation strip holder to said lamp jack strip.

1,751,248. SELF-PLAYING STRINGED INSTRUMENT. BRUNO RADTKE, Libertyville, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 8, 1928. Serial No. 259,994. 5 Claims. (Cl. 84—11.)



4. In a self-playing stringed instrument, the combination of playing devices engageable with the strings, tremolo devices operable to produce endwise movement of the strings, fingers movable into and out of engagement with the strings, devices engageable with said fingers for moving the same into engagement with the strings, each said finger comprising a split member one part of which is adapted to be engaged by one of said actuating devices and to be held against movement with the string and the other part of which is adapted to engage the string and to move therewith during the playing of the instrument, and means for holding said first-mentioned part of the finger against movement with the string.

1,751,249. ACOUSTIC TREATMENT. MAURICE C. ROSENBLATT, Philadelphia, Pa. Filed June 23, 1927. Serial No. 201,021. 6 Claims. (Cl. 181—30.)

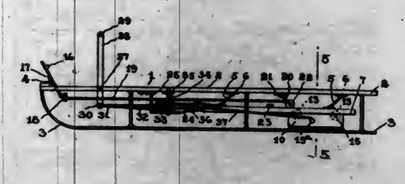


1. A step in an acoustic treatment process that consists in mechanically forming a multiplicity of substantially identical visually insignificant surface piercing pores in an otherwise relatively non-porous surface of acoustic material.

1,751,250. PORTABLE SILO. SAMUEL D. RUTH, Beatrice, Nebr., assignor to The John H. Von Steen Company, Beatrice, Nebr., a Corporation of Nebraska. Filed June 29, 1928. Serial No. 289,280. 2 Claims. (Cl. 20—1.4.)

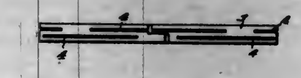
2. In a portable silo, a plurality of cylindrical sections adapted to be placed in superposed relation and consecutively decreasing in diameter from the bottom section upwardly and adapted to overlap at their adjacent ends, an impervious lining carried by each section and secured to the upper edge portion thereof and adapted to be clamped between the overlapping ends of adjacent sections to hold the lining in place, and means for securing the overlapping ends together for securing the sections one upon the other.

1,751,251. CAN-OPENING APPARATUS. DAVID P. SAWYER, Cleveland, Ohio, assignor to Economy Products Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 14, 1925. Serial No. 9,123. 2 Claims. (Cl. 30—3.)



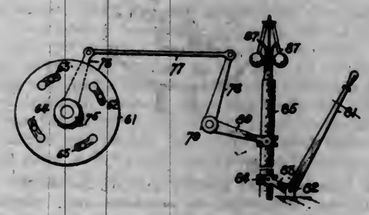
1. A can-opening device comprising a support, a vertical spindle rotatably mounted in said support, a toothed wheel carried by the lower end of said spindle, a crank handle pivoted to the upper end of said spindle for rotating the same, a cutter reciprocably associated with said support, means on said crank handle for moving said cutter downwardly beneath said support, means permitting said toothed wheel and cutter to be moved toward each other before said cutter has reached its limit of downward motion, and cam means for moving said wheel toward said cutter.

1,751,252. SELF-PROPELLED SLED. CHARLES SCHUBERT, Long Island City, N. Y. Filed Mar. 22, 1928. Serial No. 263,660. 3 Claims. (Cl. 208—158.)



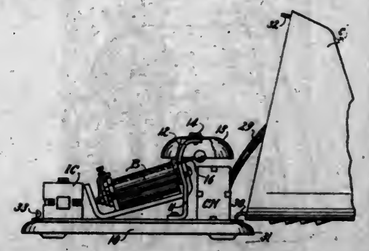
1. A device of the character described comprising a sled supporting structure, a swinging carriage disposed beneath said structure, foot controlled means for actuating

said swinging table means controlling the limit of movement of said carriage, spring controlled means for assisting the movement of said carriage, a single propeller shoe mounted in and slidable with relation to said swinging carriage, hand controlled means for actuating said propelling shoe, means arranged to thrust said propelling



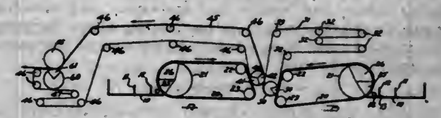
shoe into contact with the riding surface of said sled by reason of the forward movement of said swinging carriage, means for actuating said propelling shoe when same is in contact with such riding surface independent of the means for actuating said carriage, and brake means provided by said propelling shoe when the actuating means therefore is held against movement.

1,751,253. PISTON RING. DEAN M. SOLENBERGER, Cleveland, Ohio, assignor to The Simplex Piston Ring Company of America, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 16, 1923, Serial No. 632,290. Renewed Sept. 12, 1929. 3 Claims. (Cl. 74—109.)



1. A one piece piston ring having an upper and a lower circumferential series of slots, the said ring being provided with a stepped split joint comprising overlapping tongues, the slots in one series being staggered with respect to those in the other series, and one of the slots extending circumferentially across the joint and dividing one of said tongues into two portions.

1,751,254. FUEL INJECTING AND IGNITING MEANS FOR OIL ENGINES. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Sperry Development Company, Dover Green, Del., a Corporation of Delaware. Filed May 25, 1922. Serial No. 563,735. 18 Claims. (Cl. 123—32.)

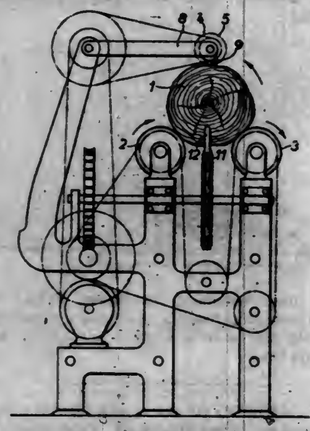


1. In an internal combustion engine, a cylinder, a plurality of fuel inlet valves therefor, means for opening said valves, and adjustable means whereby the number of valves opened by said first-named means may be varied.

1,751,255. CRADLE-TYPE TELEPHONE DESK SET. RUDOLPH FRANK STEHLIK, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Apr. 2, 1928, Serial No. 266,576, and in Belgium Dec. 20, 1927. 7 Claims. (Cl. 179—100.)

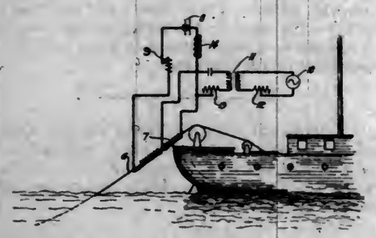
1. In a desk telephone instrument having a hinged cover with a sloping front, a base, and a signalling device supported on said base in a plane parallel to the sloping front of said cover.

1,751,256. METHOD OF AND APPARATUS FOR MAKING PAPER. JOHN TRAQUAIR, Chillicothe, Ohio, assignor to The Mead Pulp & Paper Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 3, 1926. Serial No. 99,530. 11 Claims. (Cl. 92—39.)



1. In the manufacture of paper, the method of forming a composite web which is free from two-sidedness which comprises forming a component web on one traveling wire, forming a second component web on another traveling wire, removing by suction each component web from its respective traveling wire, and bringing the said component webs so formed in contact with each other with the wire sides together to unite the same.

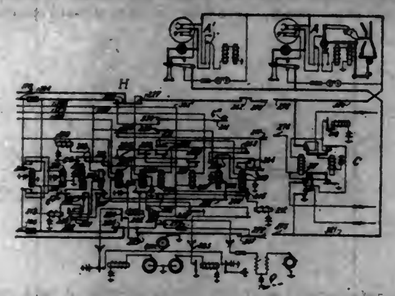
1,751,257. HOLDER FOR DISINFECTANTS, DEODORANTS, AND THE LIKE. JULIUS C. VALLEBUONA, Atlanta, Ga., assignor of fifty per cent to Leo Loeb, New York, N. Y. Filed Jan. 12, 1927. Serial No. 160,536. 4 Claims. (Cl. 299—24.)



1. A device of the character described comprising a holder for disinfectant and the like, said holder having provision for free escape of fumes therefrom and having an aperture in the bottom thereof and a removable receptacle arranged below said aperture to collect liquid dripping from said holder through said aperture.

1,751,258. BARK-STRIPPING MACHINE. HUBERT VOGL, Neu Ullersdorf, Austria. Filed July 3, 1928. Serial No. 290,206, and in Austria June 28, 1927. 7 Claims. (Cl. 144—208.)

1. In a machine for stripping the branches and then the bark from logs, the combination of means for simultaneously rotating and conveying the logs longitudinally thereof, means for stripping the bark from the logs during rotary and longitudinal movement, and swinging angularly disposed rotary driven cutting means for stripping the branches from the logs in advance of the means for stripping the bark.

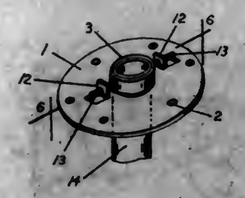


1,751,259. TREATING LOADED SUBMARINE CABLES. JESSE F. WENTZ, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 24, 1927. Serial No. 221,714. 5 Claims. (Cl. 178—45.)

1. The method of treating a loaded submarine signaling cable, which comprises applying a direct current field to the cable in a direction opposite to and commensurate in intensity to that expected to be produced in said cable by the earth's field when in use, and simultaneously applying an alternating field sufficient to saturate the loading of said cable, and gradually reducing to zero the alternating field acting upon successive portions of said cable.

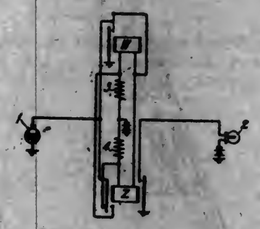
1,751,260. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Oak Park, Ill., assignor to Automatic Electric, Inc., Chicago, Ill., a Corporation of Delaware. Original application filed May 6, 1920, Serial No. 379,217. Divided and this application filed Dec. 11, 1925. Serial No. 74,679. 10 Claims. (Cl. 179—17.)

1. In a telephone system, a party line, a series of automatic switches including a final connector switch for extending a connection to said line, a common code ringing machine and a plurality of common generator leads extending therefrom, a source of ringing current, means in said ringing machine for connecting said source to said leads at intervals in accordance with different codes, a pick up relay in said connector for connecting one of said leads to the connected called line to signal a desired



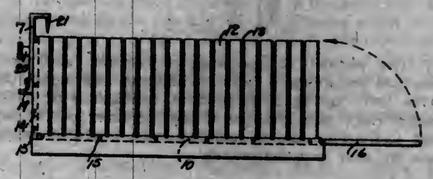
station thereon, and a circuit for said relay controlled by said ringing machine and effective to energize said relay only while the said generator leads are disconnected from said source of ringing current.

1,751,261. SPRING. WYLIE G. WILSON, Jersey City, N. J., assignor to Everlasting Valve Company, a Corporation of New Jersey. Filed Oct. 3, 1928. Serial No. 310,170. 7 Claims. (Cl. 267—62.)



1. A new article of manufacture comprising a spring in the form of a progressive helix or hollow cone, the convolutions of said helix being such that when the spring is axially compressed said convolutions can pass each the other without contact, the termini of said helix lying approximately in a plane parallel with said axis and common to one radius of said axis.

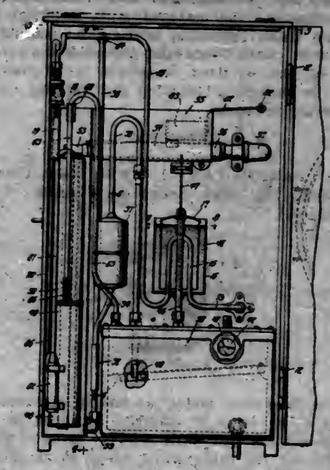
1,751,262. BRACKET COUPLING FOR APPARATUS FOR ELECTRIC-LIGHTING SYSTEMS. GEORGE RUDSTON BROWN, Croydon, near Sydney, Australia. Filed Aug. 31, 1926, Serial No. 132,718, and in Australia Dec. 11, 1925. 2 Claims. (Cl. 247—20.)



1. A stamped metal bracket coupling for electric lighting systems, comprising a relatively thin metal disc having a struck up cylindrically shaped neck portion provided externally and internally with smooth surfaces, the disc being provided with integral lugs struck up from the thin metal on opposite sides of the neck portion, and clamping screws adjustable through said lugs and neck, whereby close electrical joint connections may be established with said neck.

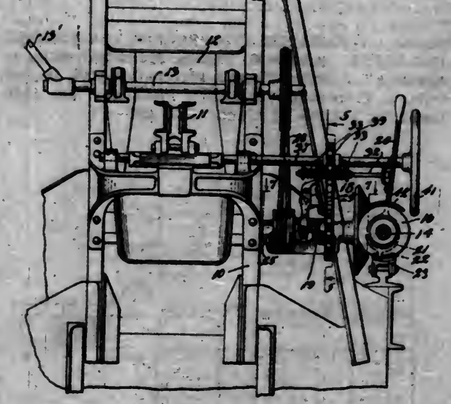
1,751,263. ELECTRICAL SWITCHING SYSTEM. OTTO CESARINI, Englewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 30, 1927. Serial No. 187,971. 6 Claims. (Cl. 175—378.)

4. A relay arrangement for translating a series of electrical impulses received at one rate into a series of electrical impulses at another rate comprising a control relay having an armature and a make-before-break contact point arrangement, a signal relay having an armature, a front and back contact point arrangement, a protective resistance for each of said relays, a means for producing a series of electrical impulses at one rate and a circuit arrangement interconnecting said relays, said resistances, said contact points and said impulse producing means whereby in response to two complete cyles of said impulse producing means said relays will operate in a cycle consisting of first an energization of said control relay, second an energization of said signal relay, third a deenergization of said control relay and fourth a deenergization of said signal relay, and a signal circuit contact point controlled by said signal relay.



1,751,264. CHEESE CUTTER. HERMAN CROSS and THOMAS J. SLAGLE, Blytheville, Ark. Filed Mar. 1, 1928. Serial No. 258,156. 1 Claim. (Cl. 31—22.)

In a cheese cutter, the combination with a rectangular casing, comprising a base plate, side walls having equally spaced slots extending from the top thereof to said base, through which slots cutting means may be operated, a rigid end wall, and a hinged end wall, of a member carrying a plurality of vertically depending teeth, said member being mounted on said rigid end plate and vertically slidable thereon, and means for clamping said member to said end plate, whereby said teeth may be forced into and rigidly secure a block of cheese to be cut.



1,751,265. CO_2 RECORDER. ARTHUR B. CUNNINGHAM, Chicago, Ill., assignor to Republic Flow Meters Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 16, 1921. Serial No. 501,077. 17 Claims. (Cl. 23—256.)

1. An instrument for indicating the nature of gases comprising means for drawing a definite predetermined quantity of gas from a source of supply, and means establishing free communication between the gas and the

atmosphere for submitting the gas thus drawn to the pressure of the atmosphere and for sealing off the predetermined quantity while at said atmospheric pressure.

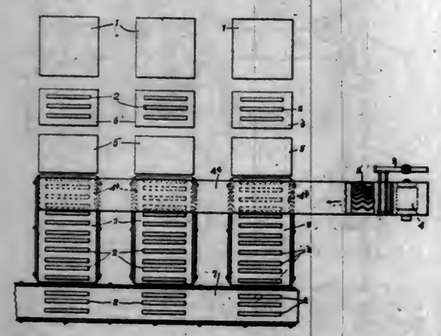
1,751,266. POWER SWING MECHANISM FOR PAVER BOOMS. JOHN DANIEL, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Sept. 13, 1927. Serial No. 219,342. 10 Claims. (Cl. 214—17.)

1. In a concrete paver in combination, a movable chute for a mixing drum, a swingable boom adjacent said chute, an operating shaft operatively connected to said chute and said boom, and common control means for effecting operation of either said chute or said boom from said shaft.

1,751,267. NONFIBROUS CELLULOSE FLOUR AND PROCESS OF MAKING SAME. ELTON R. DARLING, Decatur, Ill., assignor, by mesne assignments, to Cornstalk Products Company, Inc., New York, N. Y., a Corporation of Delaware. Filed June 7, 1928. Serial No. 283,743. 9 Claims. (Cl. 83—42.)

1. The process of preparing non-fibrous cellulose flour from cotton seed hulls which comprises heating said hulls

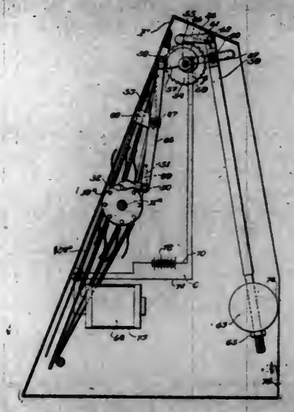
for a predetermined time and at a predetermined pressure in an oxidation solution of such strength that the constituents of the said hulls other than cellulose are oxidised; washing the material with water at the end of the said time; thereupon heating the material under pressure with caustic soda and sodium sulphite whereby removal of the oxidised materials is effected; again washing the material; bleaching the material and washing and drying the same.



1,751,268. BAKING PAN. LOUIS H. DEBS, Chicago, Ill. Filed Sept. 27, 1928. Serial No. 308,669. 6 Claims. (Cl. 153—2.)

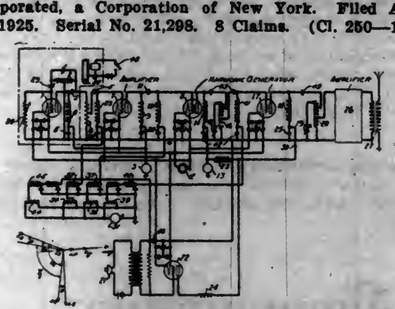
1. A one-piece sheet metal pan having upstanding angular walls with excess of material arranged in two ply folds adjacent the pan walls, one ply being extended upwardly beyond the other which stops short of the edge of the proximate wall, the edges of the pan, including those of the higher fold plies, being curled laterally to provide a curved reinforcement extending around the pan edges and corners.

6. The method of producing a one-piece pan having a self-reinforcing edge which consists in forming from a suitable blank of sheet metal a plurality of angular marginal walls having at each corner a two ply fold, in bending the folds around adjacent certain of the pan sides, and in curling outwardly the edges of the several walls and proximate edges of the folds in such manner as to interlock the fold edges with those of the adjacent pan sides.



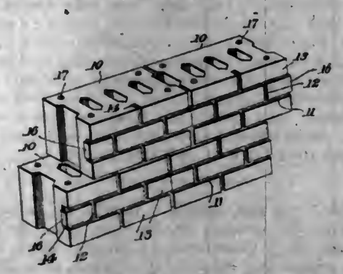
1,751,269. APPARATUS AND PROCESS FOR TEMPERING STEEL. ALBERT O. DENNIS, Springfield, Ohio, assignor to The Central Brass & Fixture Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 20, 1928. Serial No. 271,596. 1 Claim. (Cl. 266—6.)

In a bar-tempering apparatus, means for forming and directing a stream of air, means for injecting sprays of water into said stream, means for removing the surplus of water from said air stream, and means for directing said stream onto said bars.



1,751,270. DISPLAY APPARATUS. JOSEPH EITEL, Chicago, Ill. Filed Jan. 17, 1924. Serial No. 686,855. 14 Claims. (Cl. 40—51.)

1. In a display apparatus, in combination, a revoluble support, a plurality of relatively angularly displaceable radial display members carried by said support, and compressible means on one of said display members acting on an adjacent member when released for moving said mem-



bers to cause such relative angular displacement, and means for imparting movement to said revoluble support whereby to cause such displacement of said display members.

1,751,271. RADIO TRANSMITTING APPARATUS. JOHN F. FARRINGTON, Flushing, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Apr. 7, 1925. Serial No. 21,298. 8 Claims. (Cl. 250—17.)

7. The method of operating a vacuum tube which comprises supplying it with oscillations and modulating waves and causing it to produce oscillations of a frequency which is a multiple of the frequency of the supplied oscillations and to modulate said produced oscillations by said supplied waves.

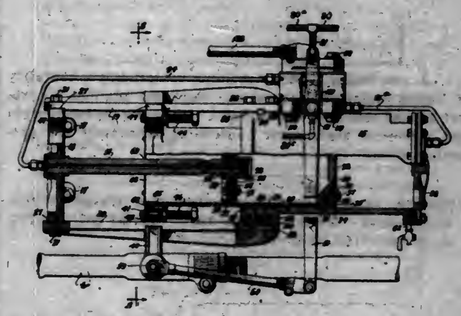
1,751,272. BUILDING BLOCK. DAVID O. FORMAN, Morgantown, W. Va. Filed July 27, 1927. Serial No. 208,851. 2 Claims. (Cl. 72—86.)

1. In a cement building block, a block having its main body portion formed of a cement mixture and having longitudinal and transverse intersecting grooves in one face to simulate brick and mortar courses and strips of a material colored differently from the bricks and forming the bottoms of the grooves of the mortar courses, flat parallel ends for the block and spacing projections extending beyond the ends and one horizontal face of the block, the projections at the ends of the block having V-shaped mortar receiving notches therein.

1,751,273. DISPLAY FIGURE AND METHOD OF MAKING SAME. RALPH A. FREUNDLICH, Brooklyn, N. Y. Filed July 20, 1929. Serial No. 379,711. 2 Claims. (Cl. 92—54.)

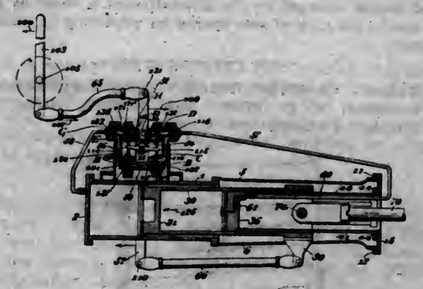
1. A display figure or the like, provided with a coating, comprising glue, white lead, French zinc, glycerine and cottonseed oil in about the proportions specified.

1,751,274. PROCESS FOR OBTAINING THIOCYANATES OF THE ALKALINE-EARTH METALS. ROBERT R. FULTON, Wilkinsburg, Pa., assignor to The Koppers Company, a Corporation of Pennsylvania. Filed Dec. 23, 1926. Serial No. 156,756. 10 Claims. (Cl. 23—76.)



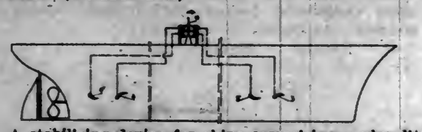
5. The process of obtaining a solution of alkaline earth metal thiocyanate from gas purification liquor containing sodium thiosulphate and sodium thiocyanate which compriaes treating the liquor with a soluble alkaline earth metal salt, heating the liquor to such a point that alkaline earth metal thiosulphate will be decomposed to insoluble alkaline earth metal sulphite and sulphur, cooling the liquor and filtering it to remove insoluble material.

1,751,275. PACKAGED PLAYING BALL. JOHN R. GAMMETER, Akron, Ohio, assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Apr. 19, 1928. Serial No. 271,818. 2 Claims. (Cl. 206—46.)



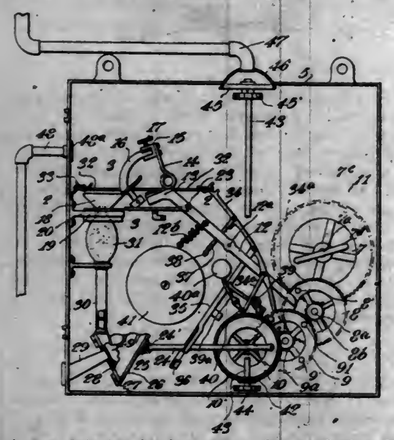
1. In combination, an inflated playing ball, the elastic components of which are at a reduced tension, a substantially rigid cap on the ball and a one-piece jacket enclosing the ball and cap and having a portion twisted upon itself over the cap, said jacket being shrunk on the ball and relieving the wall of pressure of the contained fluid.

1,751,276. POWER MECHANISM FOR CONTROLLING THE REVERSE GEARS OF LOCOMOTIVES. EDMOND C. KARIBO, EDWIN S. PEARCE, and RAYMOND W. RETTERER, Indianapolis, Ind., assignors to Transportation Devices Corporation. Filed Oct. 9, 1920. Serial No. 415,864. 18 Claims. (Cl. 121—41.)



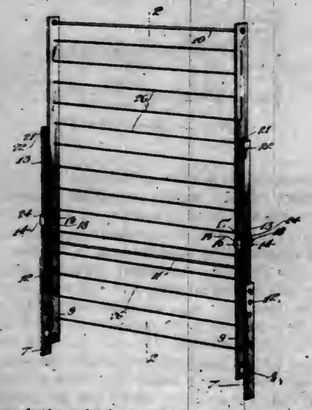
1. In a locomotive provided with a reverse gear, the combination of a reverse lever, a reach rod extending from said lever to the said reverse gear, means whereby the said lever may be disconnected from the said reach rod, a stationary cylinder, a floating cylinder having a closed end which projects into the said stationary cylinder, a stationary piston situated in the said floating cylinder, valve control means for regulating the inlet and outlet of a fluid under pressure into the said stationary and floating cylinders to effect reciprocal movements of the latter, and arms rigidly connected with and projecting laterally from said floating cylinder and having connection with said reach rod.

1,751,277. POWER-REVERSE-GEAR MECHANISM. EDMOND C. KARIBO, EDWIN S. PEARCE, and RAYMOND W. RETTERER, Indianapolis, Ind., assignors to Transportation Devices Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed June 22, 1922. Serial No. 570,182. 5 Claims. (Cl. 121—41.)



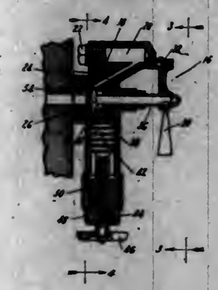
1. In a power reverse gear mechanism, the combination of a stationary cylinder having oppositely disposed projections which extend forwardly therefrom, the forward ends of which are provided with outwardly extending flanges, a head plate secured to said flanges, a floating cylinder projecting into the said stationary cylinder, which floating cylinder is provided at its outer end with a cross-head ring member, bearing blocks situated and slidable within the spaces between the said forwardly extending projections, a wrist pin extending through the said cross-head and supported at its opposite ends within the said bearing blocks, a reach rod having connection with the said wrist pin and extending forwardly therefrom in co-axial relation with respect to the said floating cylinder, and a stationary piston operating in said floating cylinder.

1,751,278. STABILIZING DEVICE FOR SHIPS. MICHEL KÉMÉLI, Paris, France. Filed Oct. 21, 1929, Serial No. 401,206, and in France Nov. 16, 1928. 6 Claims. (Cl. 114—126.)



1. A stabilizing device for ships comprising a plurality of blades distributed round the ship and adapted to project beyond same for impressing a stabilizing torque thereto and a control station for controlling selectively the projection of said blades.

1,751,279. GAS DETECTOR. RUDOLPH KRAUS, Whitestone, N. Y. Filed Aug. 27, 1929. Serial No. 388,795. 9 Claims. (Cl. 116—104.)



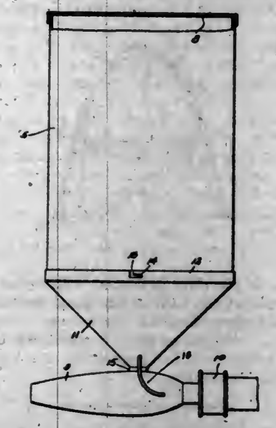
1. A gas detector having means for producing intermittently igniting sparks, means for causing a gas charged movement of air in the path of the sparks so produced, and means released by the generation of a flame by gas flowed in the path of said sparks for producing an audible signal.

1,751,280. CLOTHES DRIER. LOUIS LEITZENBERGER, Irvington, N. J. Filed Mar. 6, 1928. Serial No. 259,450. 4 Claims. (Cl. 211—99.)

2. In a clothes drying apparatus having a bar and a strut adapted to hold the bar in a position of adjustment, a bolt carried by said bar and adapted to engage a notch in an edge of the strut, and means engaging said strut and slidably mounted on the bolt to move the strut from engagement with the bolt.

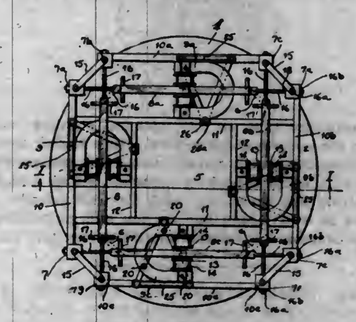
1,751,281. ENGINE. HOWARD M. LEONARD, South Bend, Ind., assignor to Gernandt Motor Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 29, 1927. Serial No. 202,263. 11 Claims. (Cl. 123—48.)

4. A compression-varying device comprising, in combination with an engine having a cylinder, a series of chambers arranged in an arc, and a valve movable through an angle corresponding to said arc for connecting and disconnecting said chambers from said cylinder.



1,751,282. SHOE AND METHOD OF MAKING SAME. HENRY LIFSCHUTZ, Brooklyn, N. Y. Filed Dec. 26, 1929. Serial No. 416,646. 7 Claims. (Cl. 36—18.)

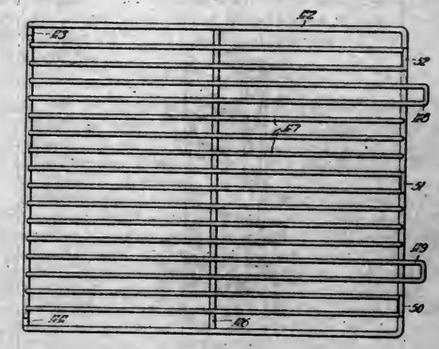
1. In a shoe of the class described, a sole, a heel base, an elongated shank portion integral with said sole and heel base and connecting same together, an upper stitched to said sole, shank and heel base portions, said upper including counters, said shank portion being bent to form a T in cross section and secured between the inner edges of said counters to form a rigid support between said sole and heel base, and a heel secured to said heel base.



1,751,283. PULVERIZED-FERTILIZER NOZZLE SPRAY. ASA B. LOWE, Seattle, Wash. Filed May 5, 1928. Serial No. 275,482. 1 Claim. (Cl. 299—84.)

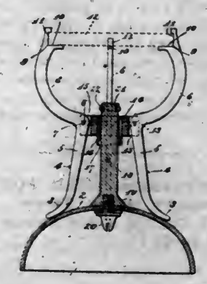
A device for spraying pulverized fertilizer comprising a hopper for the reception of the fertilizer having an inverted conical shaped bottom wall provided with an axial outlet feed opening, means for varying the effective size of the opening, an inverted feed cone receiving the bottom wall and detachably connected with the hopper having an axial outlet opening therein, the feed cone being of greater slope than the bottom wall to space the outlet opening from the feed opening, a water inlet pipe extending between the bottom wall of the hopper and the feed cone, a nozzle extending at right angles to the vertical axis of the hopper, and an outlet pipe communicating with the

axial outlet opening of the feed cone and extending into said nozzle and terminating in the same plane and concentric with the mouth of the nozzle.



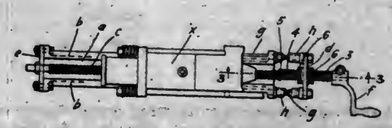
1,751,284. ELECTROMAGNETIC SOUND REPRODUCER. GEORGE MAEHREN, Pacific Grove, Calif., assignor of one-third to Rocco Elio and one-third to Francis H. Davis, Monterey, Calif. Filed Mar. 29, 1928. Serial No. 265,599. 7 Claims. (Cl. 179—109.)

4. An electromagnetic sound reproducer comprising a resonant body, two parallel armatures carried by the body and axially disposed over two companion magnets energized through the medium of an audio-frequency circuit, a duplicate set of armatures and magnets carried by the body and disposed at right angles to the former, said armatures crossing each other in different planes so as to form a diagrammatic square, and bridge means for the support of said armatures.



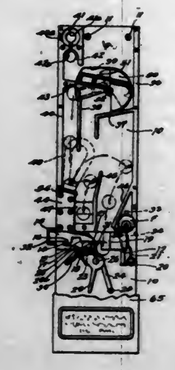
1,751,285. REFRIGERATOR COUNTER. ARTHUR MALLING, Cleveland, Ohio, assignor to The Schwenger-Klein Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 13, 1928. Serial No. 254,021. 1 Claim. (Cl. 211—181.)

A platter rack for refrigerator counters comprising a frame member having supporting legs thereon for supporting said rack with one end higher than the other, spaced bars extending longitudinally of and secured on said frame and certain of said bars having portions thereof extending beyond said frame at said lower end to form abutments to maintain said tray spaced from the wall



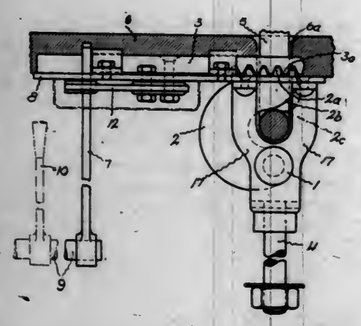
of the counter, certain other of said bars having the ends at the lower end of said tray turned up to prevent platters from sliding beyond the end.

1,751,286. WATCH STAND. FRANK XAVIER MANTSION, Philadelphia (Holmesburg), Pa. Filed Apr. 6, 1928. Serial No. 267,908. 5 Claims. (Cl. 81—6.)



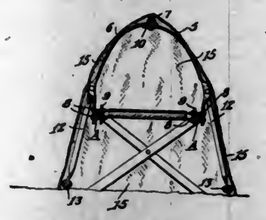
2. A watch stand, comprising a base, a standard, a member gravitationally slidably mounted on the standard, a plurality of arms pivotally mounted on said member, each of said arms having a section engaging said base and an upwardly-extending fork section for receiving an article to be supported.

1,751,287. MOUNT FOR PERCUSSIVE DRILLS. GUSTAVE M. NELL, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 24, 1927. Serial No. 242,356. 15 Claims. (Cl. 255—45.)



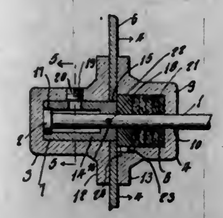
1. The combination with a percussive drill of a shell mounting providing slide ways for said drill, mechanism including a feed screw for moving said drill on said mounting, said mounting providing fixed bearings for said screw, and means permitting limited yielding movement of said screw relative to said bearings for absorbing the shocks and vibration incident to the operation of the drill.

1,751,288. COIN-CONTROLLED DOOR LOCK. JAMES E. OLVIS, Los Angeles, Calif. Filed Jan. 28, 1929. Serial No. 335,500. 8 Claims. (Cl. 194—74.)



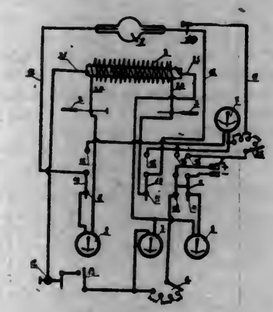
1. A door lock mechanism comprising the combination of a slidable bolt having a talon, means tending to project said bolt into locking position, a knob spindle, a coin wing connected to said spindle and having a projection for engaging said talon and retracting said bolt, said talon being disposed to be out of operative engagement by said projection when said bolt is in projected locking position, a coin seat on said coin wing, a coacting coin seat on said bolt whereby a coin may be interposed between said seats to form a coupling between said coin wing and bolt to provide for initiating retractive movement of said talon to position latter for engagement by said projection whereby completion of the retractive movement may be effected by said projection.

1,751,289. DISENGAGING GEAR FOR LIFEBOATS. PER BOTVID PERSSON, Malmo, Sweden. Filed July 16, 1929, Serial No. 378,719, and in Sweden July 21, 1928. 5 Claims. (Cl. 9—28.)



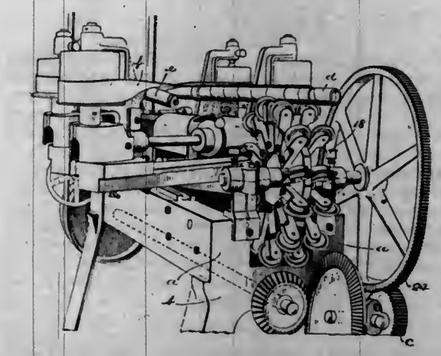
1. A disengaging gear for life boats comprising at each end of the boat, a turnable hook member, a toothed segment connected therewith, a slidable toothed rack member engaging said segment, locking means coacting with said rack member and normally preventing the displacement of the same into a hook releasing position, means for simultaneous release of said locking means at both ends of the boat, and means for positively displacing the rack member into a hook releasing position after release of the locking means.

1,751,290. NET SUPPORT FOR CAMPERS' COTS. HAROLD L. RACE, Idalia, Colo. Filed Aug. 5, 1929. Serial No. 383,487. 4 Claims. (Cl. 135—5.1.)



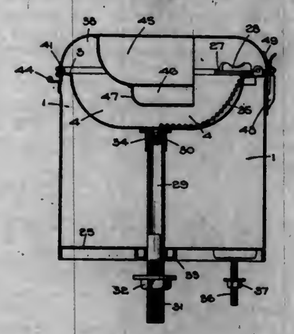
1. A frame of the class described, embodying end bows, clamping means at the ends of the bows for clamping the bows to a supporting structure, leg members pivotally connected with the bows, a bar for connecting the bows at the tops of the bows, bars for connecting the leg members, and a cover for the frame.

1,751,291. WHEEL HUB FOR AGRICULTURAL MACHINES AND THE LIKE. HENRY W. ROBBINS, Harlingen, Tex. Filed June 9, 1927, Serial No. 197,587. Renewed Aug. 8, 1929. 3 Claims. (Cl. 308—95.)



1. In combination, an axle spindle, a hollow axle box fixed to the spindle and provided with a radial opening, a hub section mounted on the axle box, a hub section mounted on the axle spindle, packing mounted within said second hub section and contacting with the axle spindle, a disk mounted in said second hub section and contacting with the axle box, and means securing the hub sections together.

1,751,292. COMBINATION X-RAY RADIATOR. STEFAN SCHVACHO, Trencianske Teplice, Lazne, Czechoslovakia. Filed Oct. 29, 1927. Serial No. 229,692. 1 Claim. (Cl. 171—97.)

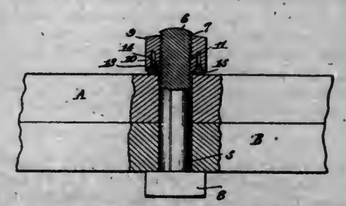


A convertible apparatus for the supply of current to an X-ray generator, a Finsen lamp, or quarts lamp, and an electromagnetic lamp, comprising a service distributing board, current supply connections, a two pole switch on said board in circuit with the current supply connections, switch contacts constituting the terminals of separate circuit leads, and arranged in pairs, a transformer, the primary coil of which is in said circuit through one pair of said switch contacts, and a current interrupter in circuit with said primary coil, and constituting a path through which said circuit is completed; a second circuit leading from the second pair of switch contacts through and including the secondary coil of said inductor and having connections adaptable to an X-ray tube, and to the other forms of lamps, the two circuits having their leads and conductors mounted on said distributing board and constituting a unitary system, controllable through said switches arranged and adapted to switch into use alternately high and low tension currents.

1,751,293. CUTTING DEVICE. HAROLD W. SHERMAN, Green Bay, Wis. Filed June 30, 1927. Serial No. 202,653. 4 Claims. (Cl. 164—61.)

1. A rotary cutter comprising a disc-like body having its peripheral edge of polygonal form, members extending radially from said body and in line with the transverse centers of each of the polygonal faces of the edge portion thereof, and pairs of rotary cutters journaled in the opposite sides of the outer ends of said members.

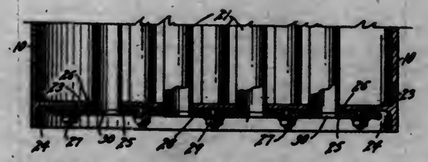
1,751,294. WASHBASIN APPLIANCE. CLIFFORD SPITAL, Birmingham, England. Filed Sept. 5, 1929, Serial No. 390,564, and in Great Britain Dec. 22, 1928. 5 Claims. (Cl. 4—167.)



1. A wash basin comprising a storage tank for water, the top of which is provided with a depression forming a basin, a lift pump for transferring liquid from the storage tank to the basin and disposed within the storage tank and supported by the top of the said tank, the top of the storage tank also having a filler opening, a closure member for the filler opening, a dished lid adapted to close over the tank so as to enclose the basin, the upper end of the pump, and the filler opening, and a discharge tube leading from the said basin through the storage tank to the exterior thereof, and serving as a means of securing the wash basin to a support.

1,751,295. PRODUCTION OF BASIC LEAD CHROMATE. ALEXANDER STEWART, Roselle, N. J., assignor, by mesne assignments, to U. S. Chemical Products Co., Inc., a Corporation of Rhode Island. Filed Dec. 9, 1927. Serial No. 239,007. 8 Claims. (Cl. 23—57.)

6. The method of preparing basic lead chromate from lead sulfate, which comprises suspending 2000 lbs. of the lead sulfate in water, adding from 461 to 508 lbs. of sodium dichromate with 411 to 398 lbs. of sodium hydroxide thereto, heating to approximately 70° C. and agitating until the conversion to basic lead chromate is effected.

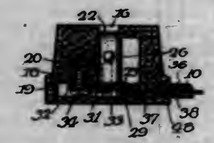


7. The method of preparing basic lead chromate from a sulfate compound of lead, which includes the treatment at a temperature not exceeding approximately 70° C. of the lead product simultaneously with sodium dichromate and sodium hydroxide, the amount of the latter being sufficient to render available all of the dichromate as chromate to provide for the conversion of not substantially exceeding 50% of the total lead content to chromate as well as to convert the remainder of the lead to oxide, allowing the basic lead chromate to settle and removing the liquid therefrom, washing the residue with warm water until free from sodium sulfate, filtering, and drying said residue at 120° C.

1,751,296. NUT LOCK. NATHANIEL SUTCLIFFE, Newark, N. J. Filed June 7, 1929. Serial No. 369,215. 1 Claim. (Cl. 151—19.)

A nut lock comprising a bolt having a threaded shank, a nut having concentric walls spaced apart, the outer one of said walls being continuous and the inner one split at diametrically opposite points, the said walls respectively provided with oppositely beveled faces, and a split washer of substantially spiral formation associated with the bolt and said nut and provided with oppositely beveled faces adapted to co-act with the corresponding faces of said concentric walls, one terminal of said washer having a beveled face adapted to permit of retrograde rotation of the nut upon the bolt and to freely cause the split ends of one of said concentric walls to freely pass over said washer.

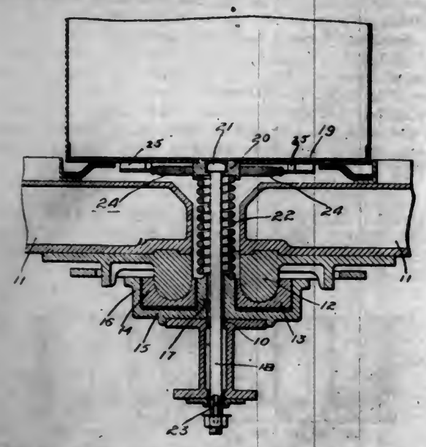
1,751,297. HEATING SYSTEM AND BOILER CONSTRUCTION. AMOS H. SWANDER, Worland, Wyo. Filed May 2, 1929. Serial No. 359,819. 4 Claims. (Cl. 122—512.)



1. A boiler comprising: a boiler shell, heads in each extremity of said shell having tube holes therein; tubes ex-

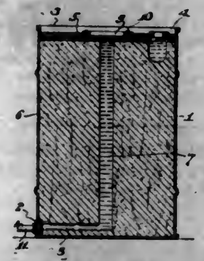
tending through said boiler and through said holes; flanges formed on said tubes on the outer faces of said heads; a tube plate provided with flow openings for said tubes; and means for clamping one of said tube plates against said flanges on each of said heads so as to seal said tubes to said heads.

1,751,298. ULTRAFINE, SOFT, GRANULATED SUCROSE SUGAR. BERNARD H. VARNAU and TRUMAN B. WAYNE, Sugar Land, Tex. Filed July 23, 1927. Serial No. 208,049. 7 Claims. (Cl. 127—58.)



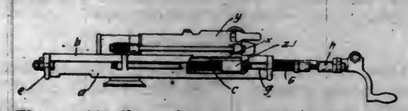
1. Granulated sucrose sugar consisting of ultra fine, soft, substantially uniform crystals substantially free from adhering syrup.

1,751,299. ELECTRIC CONNECTER. HUGO H. WERMINE, Villa Park, Ill., assignor to Belden Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1928. Serial No. 259,297. 6 Claims. (Cl. 173—338.)



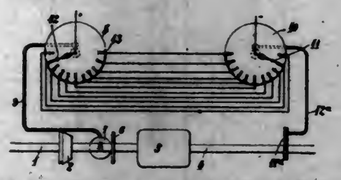
1. In a plug connecter of the class described, the combination of an insulating material body member provided with an aperture extending therethrough, a contact member having a leg portion and a flange portion extending at an angle from the leg portion, said contact member having its leg portion disposed in said aperture and its flange portion disposed against the bottom of the body member, a clamping plate independent of said contact member, disposed flatwise adjacent said flange portion, and screw means for forcing said clamping plate towards said flange whereby the clamping plate is operative to clamp an end portion of an electrical conductor between said flange portion and the plate, thereby to electrically connect said contact member and conductor.

1,751,300. VESTIBULE MOUNTING FOR HIGH-SPEED ARTICULATED CARS. WALTER S. ADAMS and ELMER LATSHAW, Philadelphia, Pa., assignors to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 28, 1929. Serial No. 389,004. 19 Claims. (Cl. 105—4.)



16. In combination with the adjacent ends of cars supported by a common truck, a single spring extending upwardly from the truck between the car ends, a vestibule supported therefrom and means connecting the truck and vestibule for limiting separation of the vestibule from the truck.

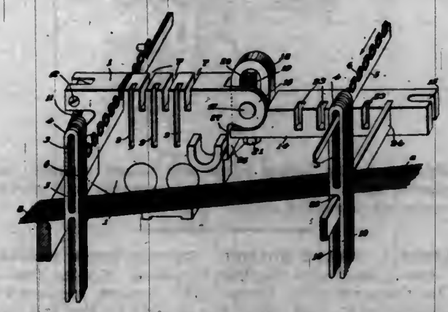
1,751,301. APPARATUS FOR MAKING SOAP SOLUTION. ROBERT M. BAGLEY, Haddonfield, N. J., assignor to The R. M. Hollingshead Co., a Corporation of New Jersey. Filed Mar. 20, 1929. Serial No. 348,445. 4 Claims. (Cl. 206—56.)



3. Combined shipping and solubilizing container adapted for containing a body of a comparatively solid coherent material, which must be transformed into a solution preliminary to use, said container having a lower opening and an upper opening, a liquid closure inoperatively carried in one of said openings, when the latter container is in transit and being adapted to be disposed in operative relation to the lower opening, when the container is in use, a body of comparatively solid material in said container intermediate said upper and lower openings, and a passageway intermediate said upper and lower openings and contiguous with said body of comparatively solid material, for the reception of a liquid solvent for solubilizing said body of comparatively solid material.

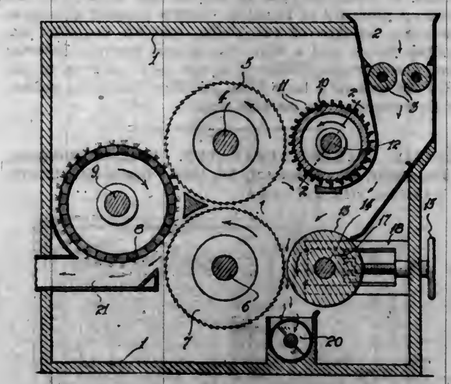
1,751,302. SHELL MOUNT FOR ROCK DRILLS. FRANK BAYLIFF, Butte, Mont., and GUSTAVE M. NELL, Detroit, Mich., assignors to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 24, 1927. Serial No. 242,383. 13 Claims. (Cl. 255—45.)

1. The combination with a percussive machine of a support providing for axial movement of said machine thereon, manually actuated means for moving said machine on said support, and resilient means for absorbing shocks and vibration of said machine in both directions.



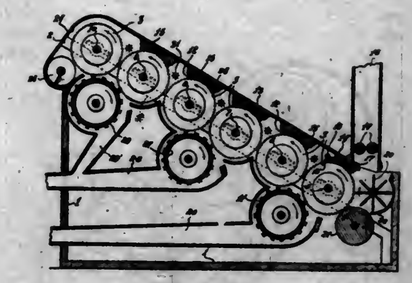
1,751,303. AUTOMATIC CHANGE-GEAR MECHANISM. RENÉ EDMOND BOUTET, Paris, France. Filed Dec. 30, 1929, Serial No. 417,461, and in France Jan. 2, 1929. 7 Claims. (Cl. 74—97.)

1. An automatic change gear mechanism comprising in combination with the driving and driven shafts of a gear box, two tachometers, means for coupling said tachometers to the two aforementioned shafts respectively,



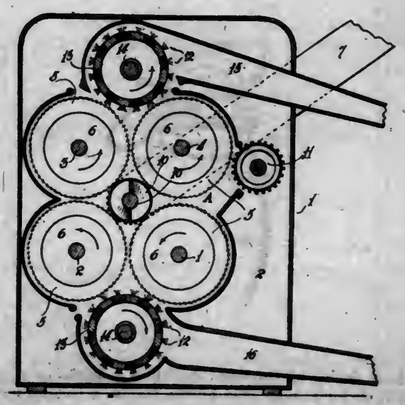
means for varying the transmission ratio between one of the aforementioned shafts and the corresponding tachometer, when it is desired to change gear, in such manner that the two tachometers will register alike when the ratio of the speeds of the two shafts is equal to the ratio of their speeds in direct drive and in the gear desired.

1,751,304. WARP-STOP MECHANISM FOR LOOMS. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Original application filed Feb. 14, 1928, Serial No. 254,201. Divided and this application filed May 22, 1929. Serial No. 365,068. 7 Claims. (Cl. 139—369.)



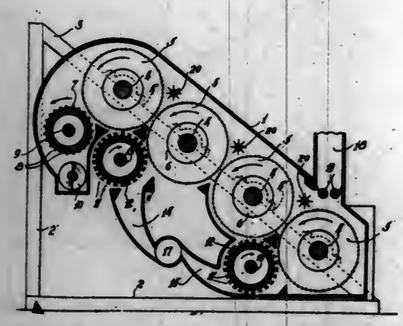
1. In a warp stop mechanism for looms, the combination of side supports, a series of drop wires having elongated slots, a stringer cap pivotally connected to each side support to swing lengthwise of the warp and provided with stringer bar supports, and a stringer bar adapted to be supported by the stringer caps when they are swung to assembly position relative to the side supports that the drop wires may be assembled on the warp thread and have the drop wire slots alined for the endwise introduction of an elongated bar.

1,751,305. COTTON GIN. FREDERICK B. CUMPSTON, Blooming Grove, Tex., assignor to Associated Factories Corporation, Dallas, Tex., a Corporation of Delaware. Filed Sept. 6, 1929. Serial No. 390,699. 17 Claims. (Cl. 19—57.)



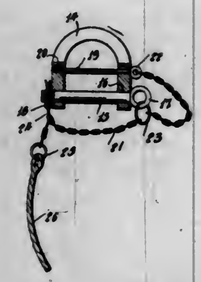
1. A ribless cotton gin, linter or delinter, comprising means for stripping cotton from the seed, said means consisting solely of coacting ginning instrumentalities rotating in the same direction about different axes and spaced apart so as not to intersect a plane placed between them and spaced just sufficently to permit passage of lint between the ginning instrumentalities, but without permitting passage of cotton seed.

1,751,306. COTTON GIN. FREDERICK B. CUMPSTON, Blooming Grove, Tex., assignor to Associated Factories Corporation, Dallas, Tex., a Corporation of Delaware. Filed Dec. 9, 1929. Serial No. 412,867. 9 Claims. (Cl. 19—57.)



1. A ribless cotton gin, linter or delinter, comprising means for stripping cotton from the seed, said means consisting solely of a series of coacting ginning instrumentalities rotating in the same direction and spaced apart just sufficiently to permit passage of lint between the ginning instrumentalities, but without permitting passage of cotton seed, the speeds of said rotating members increasing progressively from one to another, the peripheral speed of the ginning instrumentality at the high-speed end of the series being sufficient to remove cotton seed therefrom by centrifugal force.

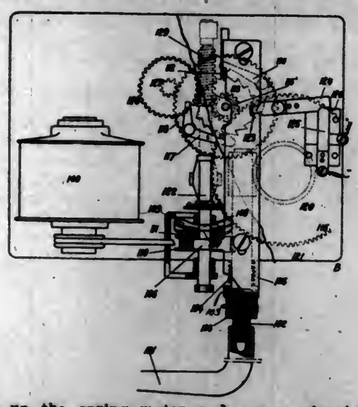
1,751,307. COTTON-GIN MACHINE. FREDERICK B. CUMPSTON, Blooming Grove, Tex., assignor to Associated Factories Corporation, Dallas, Tex., a Corporation of Delaware. Filed Jan. 7, 1930. Serial No. 419,125. 13 Claims. (Cl. 19—57.)



1. A cotton gin comprising a centrally located screw conveyor for passing cotton from a hopper between coacting ginning instrumentalities, said ginning instrumentalities comprising a plurality of rotating saw assemblies having their axes parallel to the axis of the conveyor, and substantially equidistant from the conveyor axis, the peripheries of adjacent saw assemblies being spaced part slightly from each other so as not to intersect a plane placed between them and spaced from the conveyor.

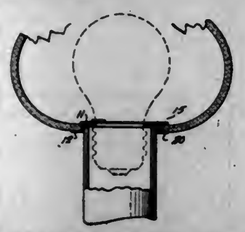
1,751,308. COTTON-GIN MACHINERY. FREDERICK B. CUMPSTON, Blooming Grove, Tex., assignor to Associated Factories Corporation, Dallas, Tex., a Corporation of Delaware. Filed Sept. 16, 1929. Serial No. 392,914. 15 Claims. (Cl. 19—57.)

1. A ribless cotton gin, linter or delinter, comprising means for stripping cotton from the seed, said means consisting solely of coacting ginning instrumentalities rotating in the same direction and spaced apart just sufficiently to permit passage of lint between the ginning instrumentalities, but without permitting passage of cotton seed, said ginning instrumentalities being mounted on parallel shafts whose axes are located in an inclined plane.



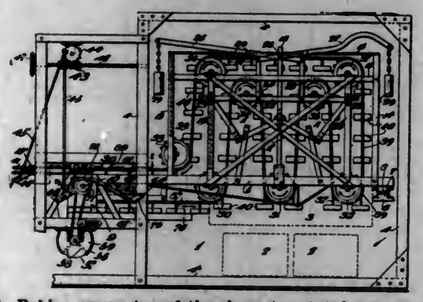
1,751,309. COLUMN SHACKLE. MILTON ENOCH DE MONE, Cambridge, Mass. Filed July 25, 1929. Serial No. 381,054. 4 Claims. (Cl. 24—115.)

1. A device of the class described comprising a frame, a pin movably supported by the frame, a locking member normally preventing detachment of the pin from the frame, and linking means attached to the locking means and pin and operable to first remove the locking means and then remove the pin.



1,751,310. TALKING MACHINE. MATHIEU DE WRANGELL, Paris, France. Filed Sept. 22, 1927, Serial No. 221,355, and in France Oct. 1, 1926. 6 Claims. (Cl. 185—2.)

1. In a talking machine a spring motor, an electric motor, a turntable spindle, means for connecting the spring motor with the turntable spindle, means for connecting the electric motor with the turntable spindle, means for



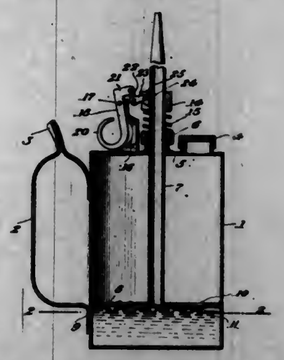
winding up the spring motor and means whereby the winding up means controls simultaneously both abovementioned connecting means.

1,751,311. SHADE HOLDER. LEROY C. DOANE, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Original application filed May 27, 1925, Serial No. 33,089. Divided and this application filed Mar. 25, 1929. Serial No. 349,631. 6 Claims. (Cl. 240—128.)

1. A device of the kind described, comprising a metallic ring adapted to pass through a hole in a glass shade and having a flange adapted to engage one surface of the shade, a plurality of bendable tongues adapted to engage the other surface of the shade, and an inwardly extending flange, and a fiber ring of less interior diameter than the inwardly directed flange and adapted to receive the base of a lamp bulb, the fiber ring being permanently secured to the metallic ring.

1,751,312. BAKING APPARATUS. WILLIAM EHRHART, Lancaster, Pa. Filed July 16, 1926. Serial No. 122,772. 7 Claims. (Cl. 107—57.)

1. Baking apparatus of the character stated comprising an oven proper, a horizontally disposed frame having ball

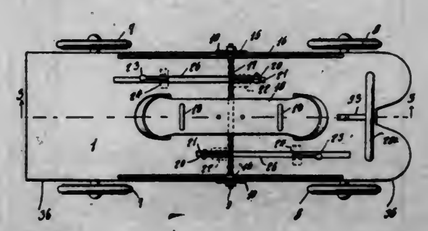


bearing connection at one end with said oven and having limited lateral movement at its opposite end with said oven, a fixed vertical frame carried by said horizontal frame, a counter-balanced, vertically movable frame interposed between said horizontal and vertical frames, said frames being entirely independent of the walls of the oven so as to be free to expand and contract wtihout disturbing said walls, and an endless conveyor carried by said frame for moving articles to be baked through said oven.

1,751,313. ELECTRIC ANIMAL POKE. CLARENCE F. FAULHABER, Middlebranch, Nebr. Filed Apr. 15, 1929. Serial No. 355,181. 5 Claims. (Cl. 175—311.)

5. In a device for the purpose described, a yoke of electrical insulating material having hingeably connected arms, a pair of metallic casings on said arms, electrical contact-elements carried by and electrically insulated from the casings, and a normally open energized electrical circuit including the casings and electrical contact-elements, said electrical circuit being arranged to be closed by establishing an electrical communication between the metallic casings of said pair.

1,751,314. OIL CAN. PHILIZA FOUNTAINE, Dahlen, N. Dak., assignor of one-half to Ingman Swinland, Lakota, N. Dak. Filed Sept. 7, 1928. Serial No. 304,517. 1 Claim. (Cl. 221—47.)

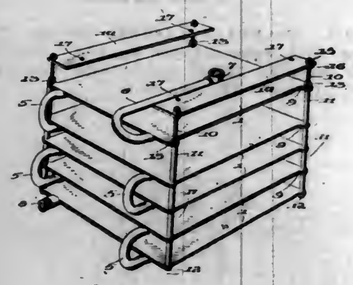


In an oiler, a can for containing a lubricating oil having a handle provided with a finger piece extension, a spout, a packing box on the top of the can through which the spout is movable, a disc on the inner end of the spout providing a plunger, a compressible disc on the periphery of the plunger, said plunger having an opening therein, a spring arm fixed on the under face of the plunger and having an enlarged free end providing a valve for closing the opening in the plunger, a block slidable on the spout, spring means for influencing the block to one position, an upstanding bracket on the can, a lever pivoted to the bracket and having a ring end disposed opposite the finger piece on the handle, and its opposite end offset, a link pivotally secured to the said end, a dog pivotally secured in the block and likewise pivoted to the link and said dog engageable with the spout when the lever is swung in one direction, for the purpose set forth.

1,751,315. COCKTAIL SHAKER. RICHARD WILLIAM HENRY FOX, Palmers Green, England. Filed June 21, 1926, Serial No. 117,507, and in Great Britain Mar. 29, 1926. 1 Claim. (Cl. 220—23.)

A cocktail shaker including a beverage-containing vessel having its lower end formed as an internally threaded flange, a refrigerant-containing chamber having a stepped cylindrical part forming an orifice, the outer surface of said stepped cylindrical part being threaded to screw into the threads of the flange at the lower end of the beverage-containing vessel, the upper ends of the threaded flange and the stepped cylindrical part together forming the bottom of the beverage-containing vessel, and a closure fitting into the orifice of the reduced stepped cylindrical part and having its outer face within the plane of the outer face of said stepped cylindrical part.

1,751,316. VEHICLE. GEORGE W. FRANKLIN, Muskogee, Okla. Filed May 24, 1928. Serial No. 280,258. 1 Claim. (Cl. 208—34.)

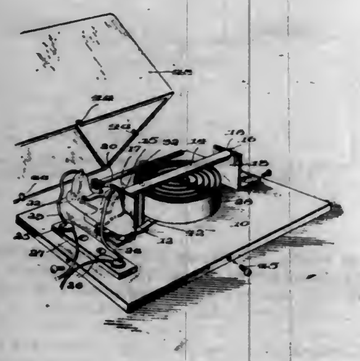


In a vehicle, a body, an axle journaled in the body, driving wheels secured for rotation with said axle, a shaft journaled on the body and geared to the axle, crank stirrups on said shaft, uprights supported on the body, a rock shaft journaled in said uprights, crank arms on said rock shaft, links connecting said crank arms and crank stirrups, and an operating member secured to said rock shaft.

1,751,317. EVAPORATOR ELEMENT. GEORGE W. GAIL, Ruxton, Md., assignor to Kulair Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 23, 1928. Serial No. 264,243. 7 Claims. (Cl. 257—256.)

1. An expander element for refrigerating machines, comprising a series of substantially flat plate like heat ex-

change units provided with passageways, superimposed one upon the other, conduits connecting the passageways of

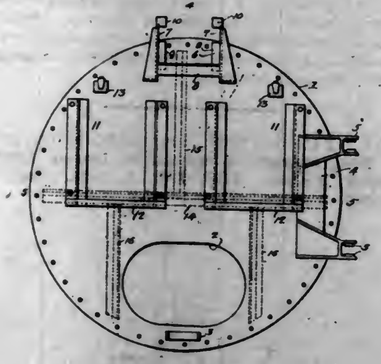


the respective units and means independent of said conduits for rigidly clamping the said units together in spaced relation.

1,751,318. PROCESS FOR OBTAINING PHOTOGRAPHIC IMAGES. EUGÈNE GAY, Lyon, France. Filed Oct. 14, 1926, Serial No. 141,671, and in France Oct. 23, 1925. 1 Claim. (Cl. 95—7.)

A process for obtaining a photographic image of the kind described, consisting in impregnating a substance having a surface adapted for the reception of a photographic image in a bath of 1-8-diacetyldioxynaphthalene-3-6-disulphonic acid and diazohydroquinonedimethyl ether, drying the said substance and exposing the substance under a transparent design having substantially opaque parts and developing by an alkali to yield a positive violet red image, substantially as hereinbefore described.

1,751,319. THERMOSTAT. GEORGE W. GAIL, Ruxton, Md., assignor to Kulair Corporation, Norristown, Pa., a Corporation of Delaware. Filed Jan. 12, 1928. Serial No. 246,226. 5 Claims. (Cl. 200—139.)

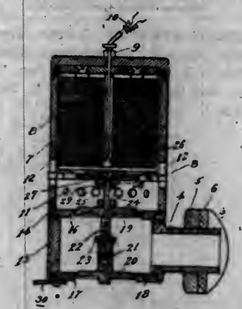


1. In a thermostat, the combination with a base plate, of a thermal coil, means for adjustably securing the outer end of said thermal coil to said base plate to provide a metal to metal contact therebetween, an electric circuit breaker also mounted on said base, and an adjustable arm secured to the inner free end of said coil for operating said circuit controlling device.

1,751,320. SOUND-DEADENING PLATE AND METHOD OF MAKING SAME. WERNER GENEST, Berlin-Lichterfelde, Germany, assignor to The Korfund Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 6, 1926, Serial No. 92,984, and in Germany Mar. 13, 1925. 4 Claims. (Cl. 144—309.)

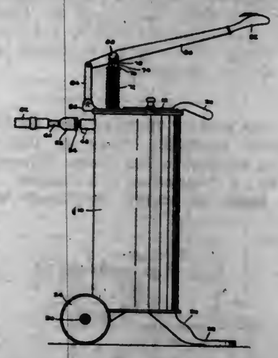
3. The method of manufacturing sound deadening plates wherein a plurality of cork strips are employed to form the plate, which consists in passing each cork strip of the plate between pairs of opposed rolls, the axles of certain of which are disposed at right angles to the other.

1,751,321. LOCOMOTIVE SMOKE-BOX FRONT. HARRY GLAENZER, Philadelphia, Pa. Filed Feb. 13, 1929. Serial No. 339,653. 1 Claim. (Cl. 105—37.)



The combination in a locomotive fire-box front plate, of a sheet metal plate circular in form, having perforations near its periphery for the bolts by which the plate is secured to the smoke-box; two sets of vertically arranged angle bars welded to the face of the plate, the bars of each set spactd a given distance apart; a supporting cross-bar extending from one bar of each set to the other bar, said bars acting to reinforce the plate; reinforcing braces at the back of the plate, one of said braces extending horizontally directly back of the cross-bar at the front of the plate.

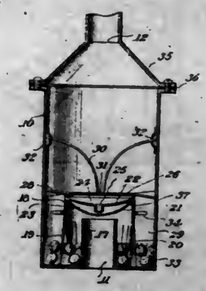
1,751,322. CARBURETOR SUCTION-RELEASE DEVICE. EDWIN L. GRAUEL, Cincinnati, Ohio, assignor to The Graulock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 6, 1923. Serial No. 661,275. 5 Claims. (Cl. 123—124.)



1. Means of scavening an internal combustion engine comprising in an internal combustion engine, the combination with the manifold thereof, of a valve chamber having an opening into the manifold, and a pair of interconnected valves arranged for simultaneously closing and opening two

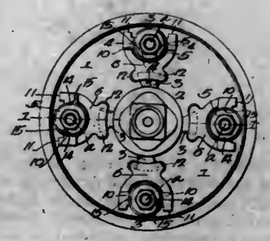
other ports in the chamber that open to the air and means for closing said valves, one of said valves being slightly

larger than the other, so that under a slight vacuum in the manifold the tendency to move to open position will be greater than to move to closed position.



1,751,323. GREASE GUN. RUSSELL J. GRAY, Minneapolis, Minn., assignor to Gray Company, Inc., Minneapolis, Minn. Filed May 21, 1927. Serial No. 193,359. 3 Claims. (Cl. 221—80.)

1. A grease gun comprising a grease receptacle, a member containing a chamber secured to the upper end of said receptacle, a delivery tube connected with said chamber, a cylinder extending from said chamber to a place near the bottom of said receptacle, an upwardly opening check valve at the bottom of said cylinder, a plunger of smaller diameter than the interior dimension of said cylinder and working therein, said plunger extending up through said chambered member, an enlargement on the upper end of said plunger, a coiled spring interposed between said enlargement and said chambered member, a handle fixedly secured to the upper end of said plunger, and an operating lever pivotally connected with said receptacle for downward engagement only with the upper end of said plunger.

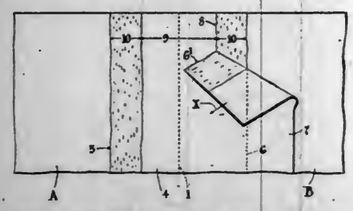


1,751,324. FLUID AIR CLEANER. JOHN L. GREEN, El Dorado, Ark. Filed May 21, 1928. Serial No. 279,585. 4 Claims. (Cl. 183—25.)

1. An air cleaner comprising a housing having an inlet, an outlet spaced from the inlet and adapted to be connected with the intake manifold of an engine, a flange surrounding the inlet and extending into the housing and providing therewith a fluid chamber between said flange and housing, an air trap positioned in the path of the incoming air between the inlet and outlet to direct said air downwardly into fluid contained within the fluid chamber, and a guard comprising a disk arranged transversely of the housing between the inlet and outlet to direct said air downwardly radially disposed slits therein and inclined blades between

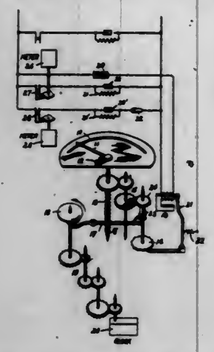
the slits, and a substantially V-shaped resilient locking member having its centrad portion bearing upon the guard and at its opposite ends detachably secured to the wall of the housing to removably hold the parts in position.

1,751,325. SWITCH TERMINAL. MONROE GUETT, Hartford, Conn., assignor, by mesne assignments, to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 5, 1925. Serial No. 13,416. 5 Claims. (Cl. 200—166.)



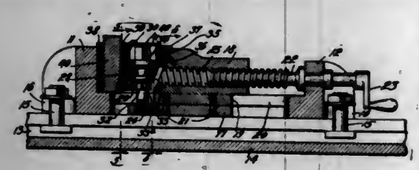
1. The combination in a switch terminal, of a post having a groove therein; two contact plates, one of said plates being forked to span the post, the forked ends being bent upon themselves to form a long spring member and two short spring members extending back of the centre line of the post to provide an extended spring contact plate, the short members of the plate having lateral extensions located in the groove in the post; and means for retaining the said short members to the post.

1,751,326. PROCESS FOR PRODUCING AN EXPLOSIVE. MARTIN HAHN, Boritz, near Riesa-on-the-Elbe, Germany. Filed Mar. 20, 1920, Serial No. 348,665, and in Germany Jan. 31, 1929. 1 Claim. (Cl. 52—21.)



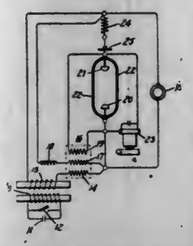
A process for producing explosives consisting in dissolving lime in nitric acid, diluting the solution with water, adding cellulose to the mixture until a consistent mass is obtained, drying said mass, adding further solution of lime in nitric acid to the dried mass, and re-drying it for use after such addition.

1,751,327. METHOD OF AND MEANS FOR FINISHING WALL JOINTS. ROBERT E. HAIRE, Paris, Ontario, and GEORGE MILLER THOMSON, Caledonia, Ontario, Canada, assignors to Canada Gypsum and Alabastine, Limited, Paris, Ontario, Canada. Filed Mar. 14, 1929. Serial No. 347,107. 6 Claims. (Cl. 72—16.)



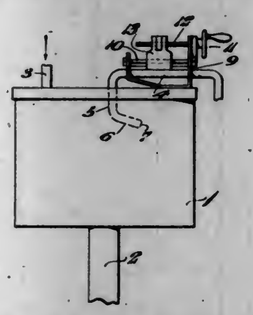
1. A process of finishing the joints of walls, which comprises sticking the central, longitudinal portion of a paper strip over the joint and removing the marginal portions of the strip in such a manner as to divide or split the marginal portions of the strip.

1,751,328. RELAY CIRCUITS. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed July 6, 1923. Serial No. 649,787. 5 Claims. (Cl. 171—34.)



1. In combination, a translating device, a source of direct current for operating said device and an energizing circuit between said source and device including a plurality of parallel branches each branch containing a circuit closer and a condenser connected in series, each of said condensers being of sufficient capacity to take a charging current from said source sufficient to operate said translating device and means for individually discharging each condenser when its circuit is open.

1,751,329. VISE. HARRY H. HANCOCK, Beach Bluff, Mass.; Henry A. Sawyer administrator of said Harry H. Hancock, deceased. Filed Aug. 31, 1927. Serial No. 216,754. 6 Claims. (Cl. 90—60.)



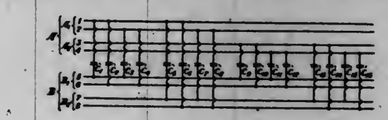
2. In a vise, the combination of two jaws, a movable head supporting and for advancing one of the jaws toward the other jaw to preliminarily engage the work, the head and its jaw having mutual bearing surfaces out of parallel with the gripping plane of the jaws, a swivel for connecting the movable jaw with the head, and means for adjusting the movable jaw relatively to said head.

1,751,330. RELAY SYSTEM. FRANZ HIRT, Berlin-Steglitz, Germany, assignor to General Electric Company, a Corporation of New York. Filed Jan. 29, 1929, Serial No. 335,980, and in Germany Feb. 2, 1928. 6 Claims. (Cl. 175—320.)

3. The combination of current supply means, a relay connected to said supply means, a glow tube connected to said supply means in parallel with said relay and operable to transmit current only at a voltage exceeding that of said supply means, a pair of magnetically balanced windings connected to said supply means in parallel with said relay, a tertiary winding inductively related to said balanced windings and connected to said supply means in parallel with said relay, and means for subjecting one of said magnetically balanced coils to a voltage whereby the induced voltage of said tertiary winding is caused to exceed that of said supply means.

1,751,331. PROCESS OF EXTRACTION OF OILS FROM VEGETABLE MATTER. IVAN S. HOCKER, Philadelphia, Pa., assignor to The Hocker Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 10, 1926. Serial No. 93,787. 4 Claims. (Cl. 87—6.)

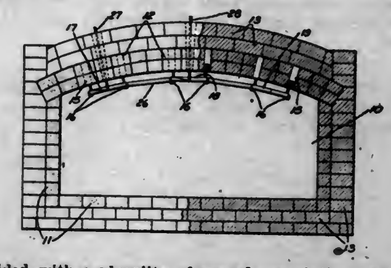
1. A process of separating oil bearing vegetable material into its solid, water-soluble and oily constituents, comprising roasting and finely dividing the material, thoroughly mixing water therewith at a temperature above the melting point of said oily constituent, subjecting the mixture to a temperature approaching the boiling point, cooling said mixture and adding saccharifying enzyme and sugar to said mixture, heating and rotating said mixture, to cause the different liquids to separate radially, and withdrawing the different liquids thus separated.



1,751,332. COTTON TRAMPER. EUGENE A. HOLMGREEN, San Antonio, Tex. Filed Aug. 4, 1928. Serial No. 297,490. 5 Claims. (Cl. 100—25.)

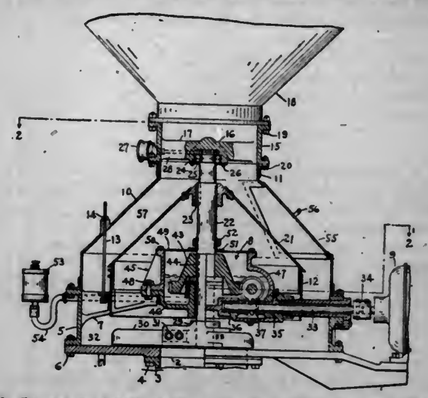
1. A tramper comprising a base, posts vertically mounted upon said base, a stationary beam mounted vertically upon said base and secured at its upper end to the upper end of the said posts, a cross head mounted for vertical reciprocation upon said posts, a tramper beam having rack teeth on one side positioned in guides upon said base, a guide roller upon said cross head engageable by said tramper beam, the said cross head having a pinion engaging the teeth of the tramper beam on one side and

having the other side engaging rack teeth on the said stationary beam, a plurality of gears rotatably mounted upon said base, a connecting rod secured to a crank pin on one of said gears and to a pin on the said cross head, and means for rotating the said gears to vertically reciprocate the said cross head and the said tramper, substantially as set forth.



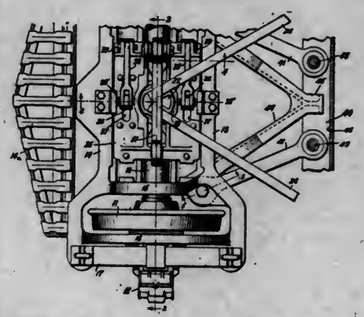
1,751,333. INTERQUAD CAPACITY BALANCING OF TELEPHONE CABLE CIRCUITS. HANS JORDAN and ROBERT GOLDSCHMIDT, Berlin-Karlshorst, Germany, assignors to General Electric Company, a Corporation of New York. Filed Dec. 4, 1928, Serial No. 323,674, and in Germany Dec. 22, 1927. 5 Claims. (Cl. 179—79.)

1. Method for balancing the couplings between adjacent quads, especially in telephone cables, which consists in measuring the interquad couplings between the transmission circuits of the one and of the other quad, calculating from such measured couplings directly the values of the nine capacities for balancing the same, suitably connecting between the conductors of the one and of the other quad, nine such capacities whereby the inter-quad couplings are simultaneously made to disappear.



1,751,334. ELECTRIC FURNACE. WILLIAM KEENAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 27, 1924. Serial No. 758,473. 24 Claims. (Cl. 266—1.5.)

18. An electric furnace comprising a heating chamber provided with a roof formed of heat refractory material, heat refractory bricks built in said roof, said bricks being each provided with an outer elongated recess and an inner transversely extending recess, metallic pins inserted in said recesses having end portions bent at right angles, said pins being detachably locked by turning said end portions into said inner recesses whereby said pins are free to swing on said end portions in said elongated recesses, and a heating resistor mounted on said pins



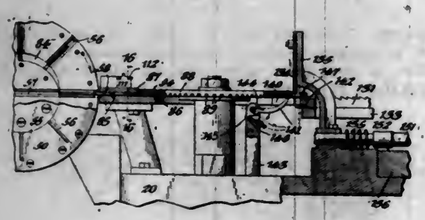
provided with a plurality of spaced convolutions extending substantially in the directions in which said pins are free to swing, whereby said resistor is free to expand and contract independently of said roof.

1,751,335. FEEDING DEVICE FOR MATERIALS. JOSEPH E. KENNEDY, New York, N. Y. Filed Dec. 10, 1927. Serial No. 239,156. 9 Claims. (Cl. 214—17.)

1. In an enclosed feeding device for materials, means for guiding materials from the center of an inlet between two spaced cones outwardly from a center into a ring shaped pile and means for scraping materials centripetally to a central outlet vertically below the center of said inlet.

1,751,336. RAILWAY TRUCK. OLE K. KJOLSETH, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 19, 1928. Serial No. 327,094. 15 Claims. (Cl. 105—189.)

1. In combination with a locomotive or car having a frame and a truck movable laterally with respect thereto,

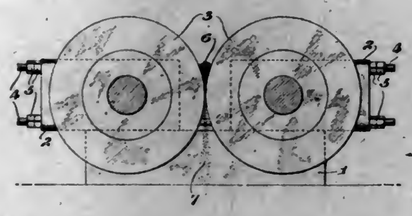


a gravity centering mechanism comprising a movable member for supporting the weight carried by said frame on said truck, and a linkage connected to said truck and said frame for moving said member upon displacement of said truck laterally in either direction from the center of said frame.

1,751,337. CLINKER SHOVEL. ABRAHAM KRISBERG, Milwaukee, Wis. Filed July 23, 1928. Serial No. 294,663. 1 Claim. (Cl. 294—14.)

A clinker shovel comprising a handle one end of which is provided with a net that is laterally inclined to one side of the axis of the handle, the other end of the handle being fashioned into a grip, and the extremity of the grip forming a shoulder, the shoulder being disposed on the same side of the axis of the handle as the net, so that when an operator takes hold the grip and feels the shoulder, he will know that the laterally inclined net is in proper position for use.

1,751,338. MACHINE FOR MAKING HORSESHOE NAILS. GUSTAV W. LANGE and GUSTAV M. LANGE, Buffalo, N. Y., assignors to The Fowler and Union Horse Nail Co., Inc., Tonowanda Township, N. Y., a Corporation of Connecticut. Filed Nov. 18, 1922. Serial No. 601,702. 8 Claims. (Cl. 10—69.)



7. In a horse-nail machine, the combination of a rotary carrier having radial slots to receive nail blanks, a second rotary carrier having radial grooves for the blanks, a guide-channel for the blanks leading from the first to the second-named carrier, a plunger for ejecting said blanks lengthwise through said slots and said channel into said radial grooves with the butt ends of the blanks projecting beyond the edge of said grooved carrier, said channel having an opening at one side to permit said butt ends to pass laterally out of the same, and a yieldable gate applied to the side opening of said channel.

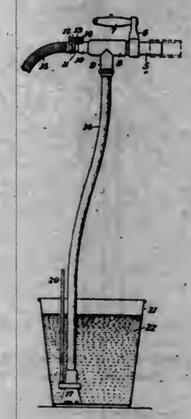
1,751,339. CONSTRUCTION UNIT OF WOOD PLIES BOUND BY VEGETABLE-PROTEIN ADHESIVES. IRVING F. LAUCKS and GLENN DAVIDSON, Seattle, Wash., assignors to I. F. Laucks, Inc., Seattle, Wash., a Corporation of Washington. Original application filed Oct. 29, 1923, Serial No. 671,881. Patent No. 1,689,732. Divided and this application filed Nov. 2, 1927. Serial No. 230,686. 17 Claims. (Cl. 20—91.)

11. In a laminated construction unit, a wooden ply bound by a waterproof adhesive including the reaction products of a leguminous seed flour and carbon bisulphide.

1,751,340. METHOD OF PRODUCING STEEL ABRASIVE MATERIAL. SAMUEL D. LAYTON, Galion, Ohio. Filed Nov. 4, 1927. Serial No. 231,141. 6 Claims. (Cl. 83—94.)

1. The herein described method of producing a carbonaceous metal abrasive material, which consists in introducing the raw material in form of shot into the gap between relatively opposed crushing surfaces moving at substantially the same rate of speed through said gap and subjecting the material to the crushing action thereof.

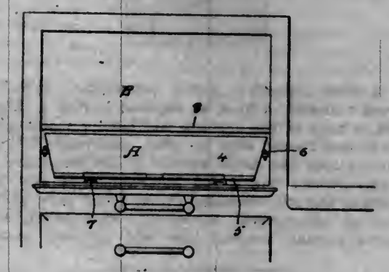
1,751,341. CONTAINER. MATTHIAS LEISSE, Duisburg-Meiderich, Germany. Filed Oct. 28, 1926, Serial No. 143,681, and in Germany Nov. 4, 1925. 10 Claims. (Cl. 221—60.)



1. A container for plastic substances such as pastes, ointments and the like of the type in which the contents are expelled by squeezing, comprising in combination a rigid wall having a concavity on its inner face and a collapsible wall connected to the said rigid wall near their respective oppositely disposed peripheral edges, the said collapsible wall having radial channel-shaped projections and recesses and a concavity on its inner side, said projections and recesses being adapted on the external application of pressure to contract or expand in succession and to come finally in contact with the inner-face of the said rigid wall, substantially as hereinbefore described.

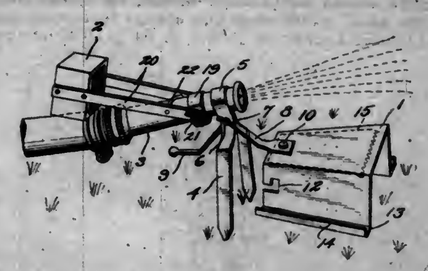
1,751,342. BELT DRESSING. GIOACCHINO LEONE, Pittsburgh, Pa. Filed Aug. 4, 1928. Serial No. 297,556. 1 Claim. (Cl. 134—8.)

A belt dressing composition comprising, in proportions by weight, five hundred twenty-five pounds of asphalt, twenty-five pounds of white lead, twenty-six pounds of neat's-foot oil, twenty-six pounds of tallow, three-fourths of a pound of citronella, and five pounds of paraffin.



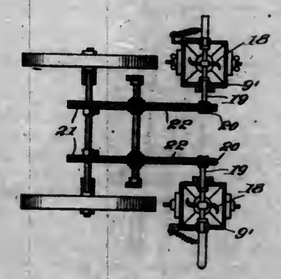
1,751,343. METHOD AND APPARATUS FOR APPLYING PLASTIC MATERIAL TO SURFACES. JOHN R. MACK, Caldwell, N. J., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Sept. 19, 1925. Serial No. 57,432. 8 Claims. (Cl. 91—45.)

1. A cement sprayer including an ejector nozzle, a cement chamber at the inner end of the nozzle in alinement therewith, and a restricted fluid pressure nozzle passing through the cement chamber and having a divergent end portion terminating adjacent the inner end of the ejector nozzle, said fluid pressure nozzle being adjustable in the cement chamber toward or away from the ejector nozzle, and means on the exterior of the sprayer for adjusting the said fluid pressure nozzle.



7. The method of providing a surface with a coating of plastic material having a consistency sufficient to preclude washing, which consists in diluting said plastic material with air at less than atmospheric pressure, then drawing the plastic material through a conduit by aspiration and projecting it on the surface by means of a jet of gas directed through a nozzle against the surface to be coated.

1,751,344. DRIP PAN. LORA MASON, Jacksonville, Ill. Filed Dec. 15, 1928. Serial No. 326,358. 1 Claim. (Cl. 53—5.)

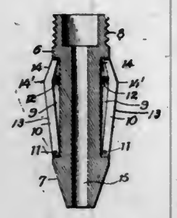


A drip pan comprising a bottom, a side and a pair of end pieces rigidly connected with the bottom, a second side hingedly connected at its lower edge with the bottom, latch means for holding said hinged side in raised position and inverted channel-shaped strips having their bight portions connected with the lower face of the bottom and extending transversely of the pan.

1,751,345. SPRINKLER. TASHIRO MATSUI, Tacoma, Wash. Filed Jan. 5, 1927. Serial No. 159,207. 7 Claims. (Cl. 299—76.)

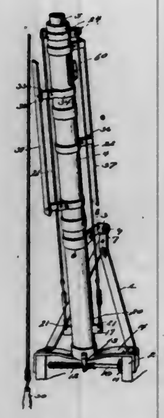
1. An attachment for a nozzle of a hose comprising a channel shaped member, means for supporting said nozzle and means for positioning said member with respect to the nozzle so that the water coming from the nozzle will strike either the inner or outer face of the bottom wall of said member, or the outer face of either side wall, each side wall having its free longitudinal edge bent outwardly into channel shape to prevent the water passing from the said edges of the side walls, a casing having a plurality of screens therein attached to the nozzle and adapted to be brought in front of the nozzle so that the water from the nozzle will pass through the screens, said casing resting in the channel shaped member when the said member is in a position with its channel part uppermost.

1,751,346. FERTILIZER DISTRIBUTOR. ANDREW MAZAK, Prince George, Va. Filed Aug. 22, 1928. Serial No. 301,342. 2 Claims. (Cl. 275—2.)



1. An implement of the character described comprising a wheeled frame, a casing supported by the frame at the outside of each wheel and having an opening in its bottom, means for adjusting the casing vertically with relation to the ground, means for adjusting the casing horizontally with relation to the frame, a gate valve pivoted on the bottom of the casing, a spring normally holding the valve in a position to close said opening, and a plant actuated bar forming a continuity of said valve and lying in the same plane therewith, whereby when said arm engages the plant the valve will be directly operated and moved to an open position.

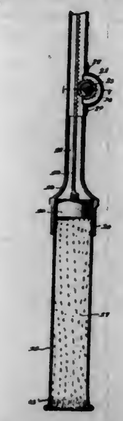
1,751,347. OIL-WELL DELIVERY APPARATUS. THEODORE J. MILLER, El Campo, Tex. Filed Mar. 24, 1927. Serial No. 178,041. 2 Claims. (Cl. 255—74.)



1. In oil delivery means for oil wells, an oil delivery pipe, an elongated plug at the intake end of the pipe, said plug being coupled to the pipe for connection and disconnection by relative rotation between the pipe and plug, said pipe having an annular series of longitudinal recesses in its periphery, cutters pivotally mounted at their lower ends in said recesses and having angularly

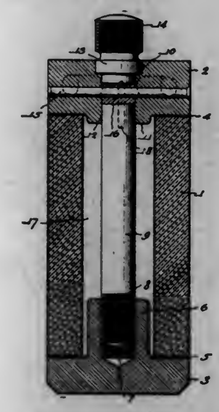
arranged upper ends relatively converging in an inward and upward direction, the bodies of said cutters being provided with longitudinal cutting edges disposed by said inclined ends to incline at a downward and upward angle to the plane of the plug, and springs in said recesses and bearing against the cutters at the juncture of their

inclined ends and inclined body portions, to yieldingly project the upper inclined ends of the cutters outwardly beyond the recesses, said spring-pressed upper inclined ends of the cutters being adapted for riding contact with the well wall for a yielding retraction of the cutters in the operation of withdrawing the plug with the delivery pipe from the well.



1,751,348. TUBULAR DERRICK. JOHN J. MITCHELL, Petersburg, Va. Filed Feb. 9, 1924. Serial No. 691,860. 2 Claims. (Cl. 255—1.)

1. A well drilling machine comprising a frame, a tubular boom pivotally connected to said frame, said boom comprising an outer tubular section and an inner section movable longitudinally within it, means interposed between said inner and outer sections for resiliently supporting the inner section from said outer section, and means for supporting a jerk-line, carried by the upper end of said inner section.

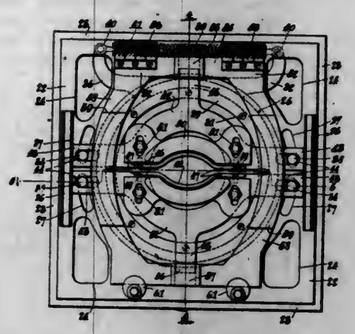


1,751,349. MOP. CLIFTON O. MORGAN, Youngstown, Ohio. Filed Mar. 2, 1929. Serial No. 343,886. 4 Claims. (Cl. 15—119.)

1. In a device of the class described, a telescopically sectional hollow handle open at its lower end, a mop head, supporting means for the mop head extending inwardly of the open end of said handle, and means carried by an intermediate portion of said handle for actuating said supporting means to project the mop head outwardly of the open end of said handle for use and to thereafter

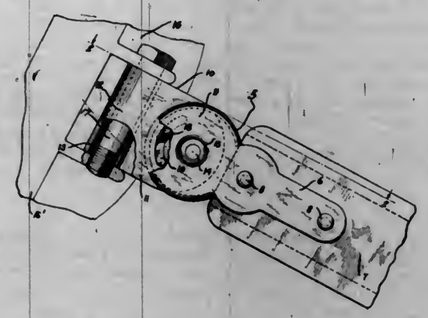
draw the same inwardly of the latter to wring water therefrom and to otherwise house it during periods of dis-use.

1,751,350. PUMP PLUNGER. FRED W. MOYER and FRANK J. RENINGER, Allentown, Pa., assignors to The Aldrich Pump Company, Allentown, Pa., a Corporation of Pennsylvania. Filed June 25, 1927. Serial No. 201,372. 8 Claims. (Cl. 74—108.)



1. A pump plunger or piston, comprising a cylinder of vitreous material, a head at one end having a threaded socket, a head at the opposite end having a passage-way therethrough formed with an offset, said heads fitting respectively over the entire surface of the respective ends of said cylinder and a rod independent of said heads but acting thereon extending through said bore, said rod having an enlargement fitting into said offset, and a threaded portion screwed into said threaded socket.

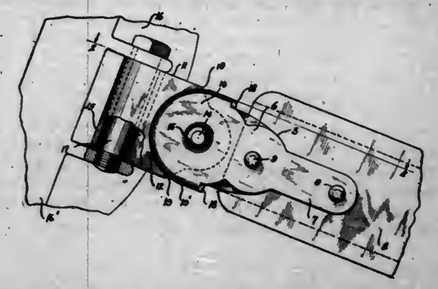
1,751,351. MACHINE FOR CUTTING GREEN CORN FROM THE COB. SAM D. NOGGLE, Canal Winchester, Ohio. Filed July 2, 1928. Serial No. 289,917. 23 Claims. (Cl. 130—9.)



4. In a machine for cutting green corn from the cob, a cutter unit comprising a carrying body, opposed cutter elements carried by the body, and means actuated by engagement with the travelling corn to separate the cutter

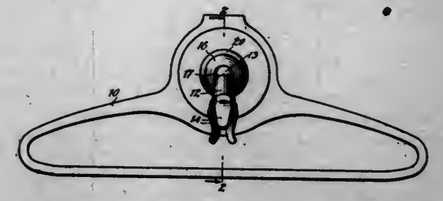
elements following the contour of the corn ears and to positively cause said elements to move in parallel relation while separating, said means including reversely rotatable rings connected to the cutter elements, means to

engage the travelling corn and be moved thereby to cause relative movement of the rings in one direction, and yieldable means to normally force the rings in the opposite direction.



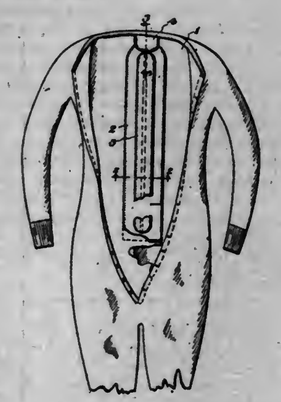
1,751,352. JOINTED CLIP. CLAIR P. NOURSE, Milwaukee, Wis., assignor to The Midland Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed May 19, 1927. Serial No. 192,705. 1 Claim. (Cl. 54—30.)

The combination with a hame having a hame bolt and a trace, of a two-piece jointed clip directly connecting the trace and hame bolt, comprising a pair of spaced apart arms, each having an attaching tongue and an enlarged disc portion, the trace being secured flatly between said tongues, and a swivel member having an inner bi-layered tongue portion extended between said disc portions and pivotally connected thereto and an integral outer inwardly offset looped portion, said hame bolt being pivotally extended through the looped portion, the tongue of the swivel member having a curved slot therein and a pin extending through the disc portions and said slot for limiting the pivotal movement of the swivel member with respect to the arms.



1,751,353. JOINTED CLIP. CLAIR P. NOURSE, Milwaukee, Wis., assignor to The Midland Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed May 19, 1927. Serial No. 192,706. 1 Claim. (Cl. 54—30.)

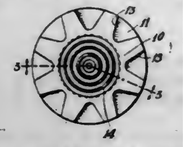
In combination, a trace engaging member having a pair of spaced apart tongues and enlarged outer end portions, one of said outer end portions being formed with opposed, inwardly projecting ears, a trace secured flatly between said tongues, a swivel member having a tongue projecting inwardly between said enlarged outer end portions of the trace engaging member and having an outer, intergral inwardly off-set looped portion, a pivot stud extending centrally through the tongue of the swivel



member, the tongue of said swivel member being formed with opposed shoulders for engagement with said ears, and a hame having a hame bolt, the hame bolt being extended through the looped portion of the swivel member and the swivel member being movable thereon.

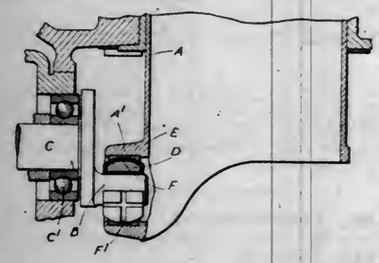
1,751,354. HOLDER FOR GRAPHIC INSTRUMENTS. ERNEST OLDENBUSCH, Brooklyn, N. Y. Filed Feb. 10, 1927. Serial No. 167,261. 8 Claims. (Cl. 120—108.)

1. A holder for a graphic instrument including restricted means for receiving and gripping and enclosing the writing end of the instrument, and flexible means for gripping the body of the instrument at a point beyond the restricted means.



1,751,355. UNDERGARMENT. HENRY V. OLDHAM, McRoberts, Ky. Filed July 21, 1927. Serial No. 207,478. 1 Claim. (Cl. 2—78.)

In combination with an undergarment, a protective pad for the spine applied to the inner face of the back of the



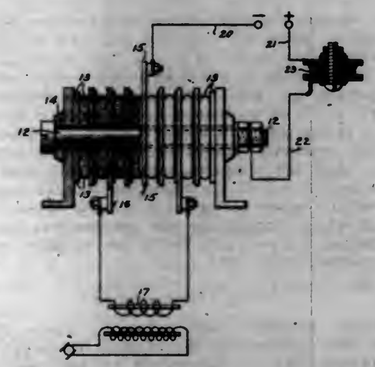
garment intermediate the width thereof and extending longitudinally thereof to cover the spinal column, said pad comprising a strip of fabric disposed flat against the garment longitudinally thereof, a second strip fitting flat against the first strip and of appreciably less length and width than the first strip and together with the frst strip forming a pad having a thick medial longitudinal portion and decreasing in thickness towards its ends and side edges, and a sheet extending from the upper edge of the back of the garment and having its lower edge contacting with the upper edge of the second-mentioned strip.

1,751,356. DIAPHRAGM. ARTHUR P. PINKLER, Waterbury, Conn., assignor, by mesne assignments, to Wm. H. Bristol Talking Picture Corporation, Waterbury, Conn., a Corporation of Connecticut. Filed July 21, 1925. Serial No. 44,991. 3 Claims. (Cl. 181—32.)

1. A diaphragm for sound recording or reproducing units, comprising a thin substantially flat disk having a plurality of integral free-ended arms extending radially outward therefrom in the plane of said disk, and an annular member of non-resonant material and more flexible than said disk secured to its arms to cover the intervening free spaces thereof.

1,751,357. SELF-ALIGNING SPHERICAL JOINT OR BEARING. HARRY RALPH RICARDO, London, England. Filed Jan. 14, 1925, Serial No. 2,417, and in Great Britain Feb. 22, 1924. 4 Claims. (Cl. 308—1.)

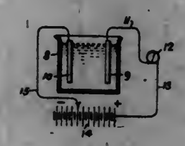
1. In a spherical bearing, in combination, an outer formed-one-piece bearing member of high fusion point metal having an inner circumferentially complete spherical surface, and an inner bearing member having an outer circumferentially complete spherical surface in movable operative engagement with the surface of said outer bearing member, said inner bearing member including a core of high fusion point metal having an outer parti-circumferential spherical surface and a surface covering of low fusion point metal molded on the outer spherical surface of the core so as to have no movement relative thereto, said core alone being of sufficient size and configuration as to be non-removable from the outer member when moved along its own axis but to be freely removable therefrom when tilted relative thereto.



1,751,358. WINDOW AND DOOR. HOWARD RICE and GEORGE ALEX MUTCH, Miami, Fla., assignors to Hidawae Products Corporation, Miami, Fla., a Corporation of Florida. Filed Sept. 7, 1928. Serial No. 304,496. 1 Claim. (Cl. 20—52.)

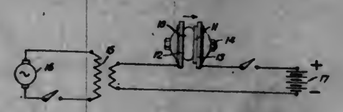
A device of the character described including a frame having sides provided with grooves and beads, a plurality of units slidable in said grooves, each unit including an upper rail and a lower rail, the lowermost rail of each unit being provided with an outwardly extending flange, and the lowermost rail of certain of the units being provided with an inwardly extending flange disposed in the paths of upward movement of the outwardly extending flanges of the adjacent units, the upper rail of certain of the units being provided with an outwardly extending flange arranged above the said inwardly extending flange

on the lower rail of its adjacent unit and in the path of downward movement thereof, the device being provided at its top with a pocket to receive and house all of the units, a cap mounted on and movable with the upper rail of the top unit to completely close off the said pocket when the said top unit is in normal lowered position, a side of the frame including a removable section for the application and removal of the units, and means for manually operating the units to raise and lower the same and including means for locking the units in any position.



1,751,359. ASYMMETRIC ELECTRIC COUPLE. SAMUEL RUBEN, New York, N. Y., assignor to Ruben Rectifier Corporation, Englewood, N. J., a Corporation of Delaware. Filed Aug. 20, 1925. Serial No. 51,524. 7 Claims. (Cl. 175—366.)

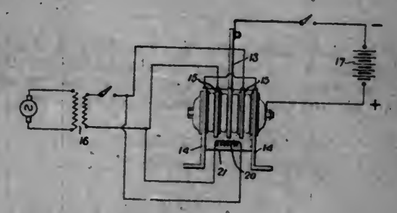
4. In dry surface contact rectifying devices and the like, an asymmetric couple comprising an electropositive electrode element of magnesium, and an electronegative electrode element formed of an alloy of the metals copper and zinc compounded with a chemical element from the sixth periodic group beginning with the letter "S" whereby the electronegative electrode element has inherently reaction properties adapted for the formation and maintenance of an inverse current blocking film at the junction of said electrode elements; said couple having means for maintaining the elements thereof united under pressure.



5. In dry surface contact rectifying devices and the like, an asymmetric couple comprising an electropositive electrode element of magnesium, and an electronegative electrode element formed of a metallic compound with an element of the sixth periodic group alloyed to have inherently reaction properties adapted for the formation and maintenance of an inverse current blocking film at the junction of said electrode elements.

1,751,360. ELECTRIC-CURRENT RECTIFIER. SAMUEL RUBEN, New York, N. Y., assignor to Ruben Rectifier Corporation, Englewood, N. J., a Corporation of Delaware. Original application filed Sept. 22, 1924, Serial No. 739,188. Divided and this application filed Apr. 29, 1926. Serial No. 105,404. 2 Claims. (Cl. 175—366.)

1. The method of forming a dense homogeneous coating containing a sulphide and a body of electro-positive metal adapted for use as an electrode element in a dry surface contact rectifier having a cooperating sulphur containing electrode, which comprises subjecting said body of electropositive metal to the action of a solution containing the sulphide of an alkaline metal while heated to a temperature of approximately 100 degrees C. and maintaining said body of metal at an electrical potential positive with respect to said solution.

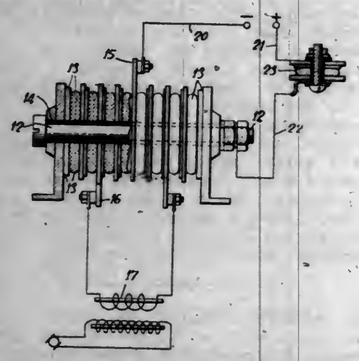


1,751,361. ELECTRIC-CURRENT RECTIFIER. SAMUEL RUBEN, New York, N. Y., assignor to Ruben Rectifier Corporation, Englewood, N. J., a Corporation of Delaware. Filed June 1, 1926. Serial No. 113,009. 16 Claims. (Cl. 175—366.)

1. In dry surface contact rectifying devices and the like, an asymmetric couple comprising an electropositive electrode element of a relatively electropositive metallic body, an electronegative electrode element of a compound of a metal with an electronegative chemical element of a character adapted for the formation electrochemically of an inverse current-blocking film at the junction of said electrode elements, and means for retaining said electrode elements operatively in contact under pressure, the pressure being of a magnitude sufficient to withstand the dynamic effects of the field at said junction; said electrode elements being cooperatively formed to provide asymmetric resistance distributed over the contacting surfaces at said junction of a value adapted, when passing inverse current, to provide energy sufficient for the formation and maintenance of said film, whereby rectified currents of appreciable magnitudes may be substantially continuously passed.

6. In dry surface contact rectifying devices and the like, an asymmetric couple comprising an electropositive electrode element of a metallic body comprising zinc, an electronegative electrode element comprising a maximum valent compound of a metal with tellurium of a character adapted for the formation electrochemically of an inverse current-blocking film at the junction of said electrode elements, and means for retaining said electrode elements in operative contact under pressure; said electrode elements being conjointly formed to have means for imparting contact resistance at said junction of a value adapted when passing inverse current to supply the chemical energy required as the heat of formation by said film, for substantially continuous self-maintenance.

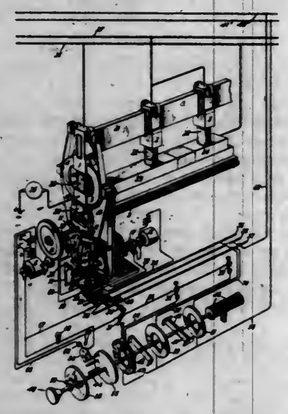
1,751,362. ELECTRIC-CURRENT RECTIFIER. SAMUEL RUBEN, New York, N. Y., assignor to Ruben Rectifier Corporation, Englewood, N. J., a Corporation of Delaware. Filed June 17, 1926. Serial No. 116,598. 14 Claims. (Cl. 175—366.)



1. In electric current rectifiers and the like, of the dry surface contact variety, an asymmetric couple arranged to have substantially uniform unilateral conductivity for relatively long periods of time, which comprises electropositive and electronegative electrode elements relatively widely divergent in the electrochemical series, said electronegative electrode element being a metallic compound of the oxygen family in the sixth periodic group having relatively high specific conductivity and provided with a crystalline surface coating of another compound of said sixth periodic group having relatively low specific conductivity.

13. In electric current rectifiers and the like, of the dry surface contact variety, an asymmetric couple arranged to have substantially uniform unilateral conductivity for relatively long periods of time, which comprises electropositive and electronegative electrode elements respectively of magnesium and of a compound of the oxygen family in the sixth periodic group having a base of copper, said electronegative electrode element having relatively high specific conductivity and provided with a surface coating of another compound of said oxygen family in the sixth periodic group having relatively low specific conductivity, an electric heating means associated with said couple for independently heating the same, and a heat conserving envelope arranged to enshroud both said couple and said heating means.

1,751,363. ELECTRIC-CURRENT RECTIFIER. SAMUEL RUBEN, New York, N. Y., assignor to Ruben Rectifier Corporation, Englewood, N. J., a Corporation of Delaware. Original application filed Aug. 20, 1925, Serial No. 51,524. Divided and this application filed Dec. 20, 1929. Serial No. 415,411. 3 Claims. (Cl. 175—366.)



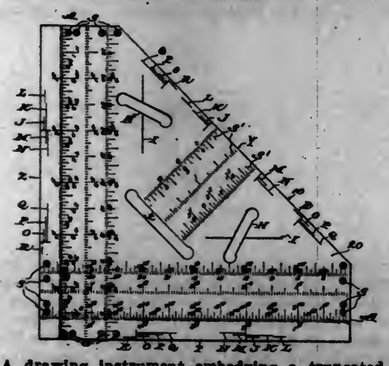
2. In dry surface contact rectifying devices and the like, an asymmetric couple comprising an electropositive electrode element of magnesium, and an electronegative electrode element formed of cupric sulphide whereby said electronegative electrode element when subject to normal

voltage has reaction properties adapted for the formation and maintenance of an inverse current-blocking film at

the junction of said electrode elements; said couple having means for maintaining the elements thereof united under pressure.

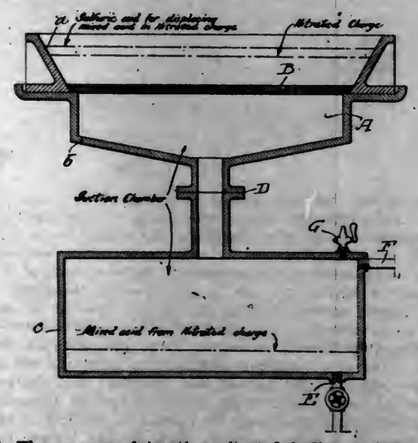
1,751,364. ELECTRIC SWITCH. CLARENCE H. SANDERSON, Nutley, N. J., assignor to General Electric Company, a Corporation of New York. Filed Apr. 29, 1924. Serial No. 709,894. 11 Claims. (Cl. 175—375.)

1. In an electric switch of the class described, a plurality of spaced stationary contacts, a cooperating movable contact, a movable supporting means therefor, power operated means adapted to be operated to move said supporting means to position said movable contact selectively for movement into circuit closing position with any one of said stationary contacts, a power operated collapsible mechanism mounted on said supporting means and adapted to be operated to move said movable contact into circuit closing position with the selected stationary contact, and means adapted to be operated to collapse said mechanism whereby to effect the movement of said movable contact to circuit opening position.



1,751,365. THUMB AND FINGER WARMER. CHARLES SCHAAF, Chicago, Ill. Filed Dec. 21, 1928. Serial No. 327,668. 1 Claim. (Cl. 219—46.)

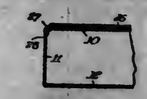
A hand and finger warmer for use upon the steering wheels of motor vehicles comprising pockets forming parallel horizontally apertured sleeves upon the opposed side edges thereof, laces for the pockets passed through the horizontal apertures of the sleeves to conveniently apply the pockets about the steering wheel, resistance coils series wound upon cards arranged within the pockets and connected in circuit through communicating lead wires



passed through the adjacent sleeves, and the coils being energized from the generating circuit of the vehicle by lead wires passed through the remaining sleeves of the pockets.

1,751,366. DRAWING INSTRUMENT. BENJAMIN M. SHAUB, Ithaca, N. Y. Filed Sept. 18, 1926. Serial No. 135,126. 6 Claims. (Cl. 33—104.)

1. A drawing instrument embodying a truncated triangle having its under edges beveled, there being a scale parallel to an edge of the triangle extending between two opposite edges, said scale having its zero line located in a vertical plane midway of the bevel at the respective adjacent edge.

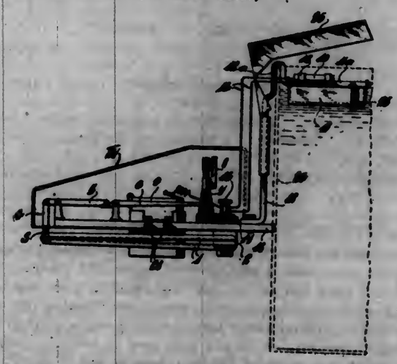


1,751,367. PROCESS OF TREATING NITRATED BODIES. JEAN V. SKOGLUND, New York, N. Y., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Oct. 8, 1921. Serial No. 506,445. 2 Claims. (Cl. 23—161.)

1. The process of treating nitrated bodies to free the same from mixed acid, which consists in displacing sub

stantially all of the free mixed acid by a mineral acid of substantially the same specific gravity recoverable in concentrated form after dilution by evaporation of the water content, and thereafter drowning the mass with water.

1,751,368. DRAWING KIT. JUSTIN R. SWIFT, Evanston, Ill., assignor to The Superior Type Company, Chicago, Ill., a Corporation of Illinois. Filed May 25, 1927. Serial No. 194,107. 2 Claims. (Cl. 45—131.)

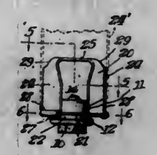


1. In combination, a box, the top wall thereof having an aperture near one edge, and a normally bowed, resilient member having hook ends, one of said hook ends including an off-set part adapted to engage with the underside of said top wall adjacent the aperture, and the other hook end of said member being adapted to engage another portion of the box to removably connect the member to the box.

1,751,369. MOLDING FLASK. JUSTIN R. SWIFT, Evanston, Ill., assignor to The Superior Type Company, Chicago, Ill., a Corporation of Illinois. Filed July 1, 1927. Serial No. 202,925. 3 Claims. (Cl. 18—42.)

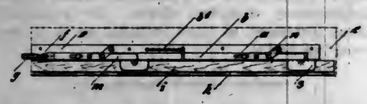
3. Molding apparatus of the class described, comprising in combination, a flask having a floor provided with a relatively large number of equally spaced through apertures, and a peg plate having a relatively large number of similarly spaced upwardly projecting pegs of an effective length slightly greater than the effective thickness of the flask floor, the flask and peg plate being adapted to be assembled during the placing of the molding material in the flask and the forming of the impressions in the material, and separated before the material is placed in a dryer.

1,751,370. TEMPERATURE-REGULATING APPARATUS. FREDERICK ALBERT TAYLOR and HENRY ALFRED TAYLOR, Kirton, near Boston, England. Filed Mar. 25, 1929, Serial No. 349,752, and in Great Britain Mar. 22, 1928. 8 Claims. (Cl. 136—59.5.)



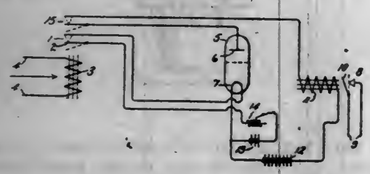
1. Temperature regulating apparatus comprising, in combination, a heating device, an electrical circuit adapted to fire said heating device, thermostatic means functioning automatically at a predetermined temperature to complete said electrical circuit, a supplementary electrical circuit and a supplementary delayed action contact device adapted to be controlled from the thermostatic means and to function in conjunction with said thermostat to control said supplementary electrical circuit, the supplemental circuit being arranged to have included in it a supplementary heating device.

1,751,371. WATER-LOCKING SUCTION VALVE FOR HYDROCARBON-FUEL-STORAGE TANKS. JOHN H. VIELE, Elmira, N. Y. Filed Feb. 11, 1929. Serial No. 339,191. 9 Claims. (Cl. 221—67.)



1. A water locking safety valve for the lower end of suction pipes of hydrocarbon fuel storage tanks having a casing provided with a bore therein communicating with the lower end of the suction pipe edged at its lower end with a valve seat and laterally extended to provide a lateral suction intake opening, a baffle plate at the lower side of said lateral suction opening, a valve supported on said baffle plate and positioned to cooperate with said valve seat, said valve having a stem depending through the baffle plate, and a float affixed to the lower depending end of said stem and shielded from suction at said lateral intake by the baffle plate, the combined specific gravity of the valve stem and float being greater than that of hydrocarbon fuel but providing for buoyancy thereof in water.

1,751,372. TIP. WILLIAM A. VOLLMER, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Apr. 10, 1924. Serial No. 705,451. 12 Claims. (Cl. 45—137.)

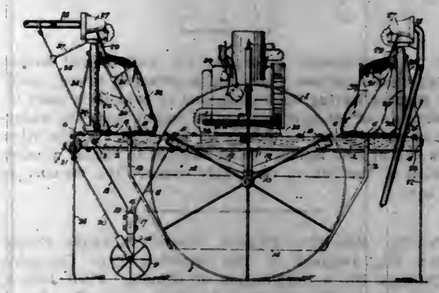


2. The combination with a leg having a recess in its base, of an axially vertical shell open at its lower end and having at said end an outwardly extending rim flange, a tip in said shell and projecting downwardly therefrom, a socket comprising a base plate provided with an opening to admit and frictionally hold said shell, the part of said plate surrounding the opening being supported by said rim flange and an inverted U-shaped member having its extremities connected to said plate and adapted to frictionally engage the walls of said recess and retain said socket in position.

1,751,373. ADJUSTABLE TIGHTENING DEVICE FOR DOORS AND THE LIKE. GERHARD WAGNER, FRIEDRICH FUNKE, and RUDOLF HEYMANNS, Duesseldorf, Oberkassel, Germany. Filed Feb. 24, 1927, Serial No. 170,634. Renewed Jan. 24, 1930. 2 Claims. (Cl. 20—68.)

1. In combination, a closure strip, a carrier therefor, and means for moving said strip, comprising a stationary support, a reciprocating rod, levers connected at their ends to said rod and to said carrier, and links connected to support and to said levers intermediate the ends thereof, whereby movement of said rod in one direction causes said carrier and closure strip to move in a direction at right angles thereto.

1,751,374. CONTROL APPARATUS. ADOLF WALTEMATH, Oberschoneweide, Germany, assignor to General Electric Company, a Corporation of New York. Filed Oct. 9, 1926, Serial No. 140,667, and in Germany Sept. 3, 1925. 2 Claims. (Cl. 175—320.)

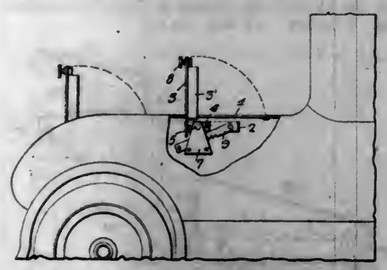


2. The combination of an electrical circuit, an electron discharge device provided with anode and cathode heating circuits; electro-responsive means connected in said anode circuit for controlling the connections of said electrical circuit, and means associated with said anode and cathode heating circuits for instantaneously deenergizing said electroresponsive means and for energizing said electroresponsive means only after a predetermined interval of time.

1,751,375. APPARATUS FOR MEASURING PRESSURES. CHARLES WARLUZEL, Paris, France. Filed Jan. 10, 1927, Serial No. 160,248, and in France Jan. 12, 1926. 5 Claims. (Cl. 73—5.)

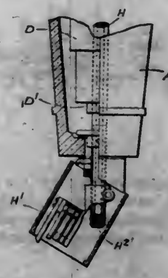
1. Apparatus for measuring the pressure of a liquid by confining a constant volume of gas, comprising a manometric receiver, adapted to hold a quantity of liquid up to a predetermined level, and a confined atmosphere of gas above said liquid level, a vessel forming a chamber containing a gas subject to the pressure of the liquid to be measured and a tube of slight diameter relative to the manometric receiver, said tube establishing direct communication between the lower part of the manometric receiver and a gas subject to the pressure of the liquid to be measured.

1,751,376. COTTON PICKER. BENJAMIN F. WATKINS, Philadelphia, Pa., assignor to Electric Cotton Picker Co., Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 23, 1925. Serial No. 77,332. 4 Claims. (Cl. 302—27.)



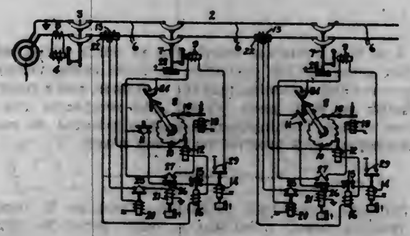
1. In a cotton picker, the combination with a mobile carriage, of source of electrical power mounted on the carriage, an electrically operated suction device also mounted on the carriage and movable on a vertical axis and operatively connected with the said source of power, and a flexible duct connected with said suction device.

1,751,377. NITRATED CARBOHYDRATE EXPLOSIVE AND METHOD OF PRODUCING THE SAME. PHILIP G. WRIGHTSMAN, Chester, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 7, 1927. Serial No. 231,779. 10 Claims. (Cl. 52—22.)



1. A process of manufacturing an explosive containing a nitrated sugar, comprising forming a suspension of 25% to 50% sugar in a chlorhydrin containing mixture, said mixture having a viscosity less than glycerin, and nitrating the suspension.

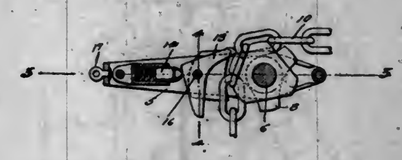
1,751,378. RUMBLE SEAT AND LOCKING DEVICE. JOSEPH R. ZAIDEN, Pittsburgh, Pa. Filed Oct. 5, 1928. Serial No. 310,530. 2 Claims. (Cl. 296—66.)



1. An automobile of the class described having an opening in its rear deck, a seat pivoted below said opening and having its back adapted to close the opening when the seat is in inoperative position, latch means for latching the seat in operative position, such means comprising a toothed bar pivotally connected with the seat and a toothed member with which the teeth of the bar engage and a handle on the bar for moving the same out of engagement with the teeth of said toothed member.

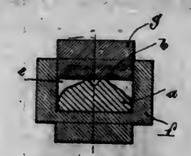
1,751,370. INSULATING BUSHING FOR ELECTRICAL APPARATUS. ARCHIBALD ALLAN, North Shields, England, assignor to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a Company of Great Britain. Filed Mar. 4, 1926, Serial No. 92,269, and in Great Britain Mar. 10, 1925. 12 Claims. (Cl. 173—318.)

1. An insulating bushing for high voltage electrical apparatus, comprising two external insulators in substantial alignment, a connecting member between the insulators serving as a support for the bushing, a rigid central conductor fixed near one end to one of the insulators, a conducting member fixed to the other insulator, and an electrical connection between the free end of the central conductor and the conducting member which is such as to allow longitudinal expansion and contraction of the central conductor relative to the external insulators.



1,751,380. SYSTEM OF ELECTRIC DISTRIBUTION. ARVID E. ANDERSON, Lansdowne, Pa., assignor to General Electric Company, a Corporation of New York. Filed May 25, 1929. Serial No. 366,030. 7 Claims. (Cl. 175—298.)

1. In combination, an electric circuit including a plurality of sections connected in series by sectionalising switches, a source of current connected to one end of said circuit, means associated with each switch for effecting the opening thereof including a device responsive to a predetermined abnormal circuit condition, said devices being arranged so that the number of operations thereof required to effect the opening of the respective switches varies inversely with the distance of the respective switches from the source, and means associated with each device and responsive to a predetermined electric condition of the circuit for resetting the device when said predetermined electric condition lasts for a predetermined time.



1,751,381. WIRE STRETCHER. AUGUST ANDERSON, Shoshoni, Wyo. Filed Oct. 7, 1926. Serial No. 61,069. 1 Claim. (Cl. 74—31.)

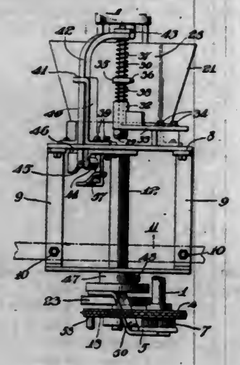
A wire stretcher including a chain wheel mounted for rotation, a chain, said wheel comprising opposed side plates each of substantially triangular contour providing corner projections, the corner projections of the respective plates being arranged in confronting relation, said wheel also including center projections arranged between the corner projections and the triangular-shaped side plates and extending an appreciable distance beyond the edges of

said triangular plates to receive the links of the chain, the side edges of the triangular-shaped plates being of a length substantially equal to the length of the link, whereby the latter lies flat upon the adjacent side edges of the triangular-shaped plates throughout their length while engaged by the adjacent center projection.

1,751,382. PROCESS OF MOUNTING THE DIES USED AS IN PRODUCTION OF METAL THREADS OR WIRES. CLODIEN ARCHER, Meximieux, France. Filed Jan. 18, 1928, Serial No. 246,623, and in France May 9, 1927. 1 Claim. (Cl. 205—29.)

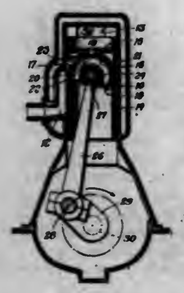
A process for the setting of diamonds employed as dies for the drawing of metal wire consisting in squaring two opposite faces of the stone, making a central point on one such face, placing the stone in a soft steel holder, closing the top with a plate of the same material, subjecting the holder to heat applied electrically to soften the metal and to pressure to cause it to surround the stone.

1,751,383. BEAD CORD. FRANK P. ATKINS, Cincinnati, Ohio, assignor to Atkins & Pearce Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 22, 1928. Serial No. 263,725. 1 Claim. (Cl. 96—26.)



A bead cord having a central strand of fibrous silk material having desired tensile strength with strands of pliable wire braided thereabout providing an outer surface for the cord which will resist frictional wear.

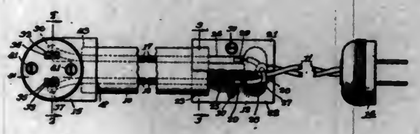
1,751,384. DEPOSITOR. HARRY D. AYARS, Salem, N. J. Filed Apr. 20, 1927. Serial No. 185,247. 7 Claims. (Cl. 226—103.)



2. In a depositor having a hopper provided with measuring and conveying means for a deposit of substance contained in the hopper, a spring tensioned plunger adapted

to force the deposit from the measuring and conveying means and provided with a guide element movable with

the plunger, and means intermittently actuated on an arc concentric with the hopper to depress the guide element, and thereby in turn intermittently actuating the plunger.

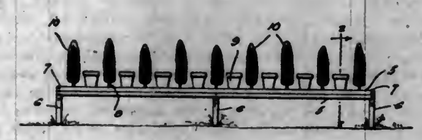


1,751,385. INTERNAL-COMBUSTION ENGINE. GEORGE PAUL BEAUDRY, Montreal, Quebec, Canada. Filed Sept. 8, 1927. Serial No. 218,265. 3 Claims. (Cl. 123—70.)

1. In an internal combustion engine, a first cylinder to which fuel is admitted and in which the fuel is compressed, a second cylinder in which the fuel compressed in the first cylinder is exploded and from which the spent gas is exhausted, the compressed fuel entering the second cylinder from the first cylinder by a passage establishing communication between the interiors of both cylinders, and a power piston operable in the second cylinder, said piston being provided with a delivery passage for the purpose of admitting the compressed fuel to the second cylinder through the first mentioned passage, said piston being provided with valve means operated by the movement of the piston for the purpose of controlling the discharge of exhaust gas from the second cylinder.

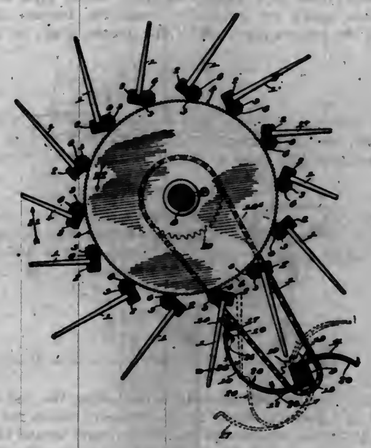
1,751,386. FLOOR CORD. JOSEPH C. BELDEN, Chicago, Ill., assignor to Belden Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 7, 1928. Serial No. 290,949. 2 Claims. (Cl. 173—324.)

1. As a new article of manufacture, an electric floor cord comprising a flat strip of insulating material having a pair of conductors embedded in and projecting at opposite ends thereof, a duplex conductor cord connected to one pair of projecting ends of the conductors, a connection member carried by the outer end of the duplex conductor cord, a casing detachably carried by one end of the strip and housing the connection between the duplex conductor cord and the conductors of the flat strip, and



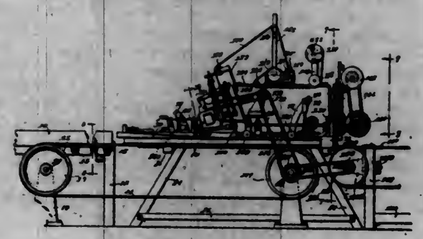
a connector detachably carried by the other end of the strip and provided with contacts connected to the projecting ends of the conductors of the strip, said connector housing the connection between the conductors of the strip and the contacts.

1,751,387. HEATING DEVICE. STANLEY M. BIBLER, Pittsburgh, Pa. Filed Sept. 22, 1928. Serial No. 307,661. 2 Claims. (Cl. 126—263.)



1. A food container comprising an outer casing, an annular cover for the container, an inner casing secured to the cover and extending into the container, and a receptacle slidable in said inner casing, said receptacle and said inner casing forming compartments adapted to contain substances which produce heat when mixed.

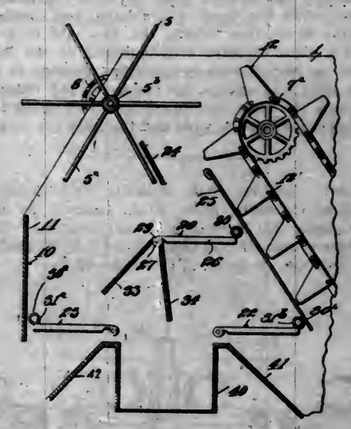
1,751,388. POULTRY FEEDER. CHARLES E. BIECHER, Hedrick, Iowa. Filed Mar. 4, 1927. Serial No. 172,904. 2 Claims. (Cl. 119—51.)



1. In a poultry feeding device of the class described, a horizontal base board, ground supporting legs therefor, vertically projecting spaced pins extending through the board at spaced intervals throughout the length of the base board, and feed receiving receptacles removably disposed over the respective projecting pins for rest upon the upper face of the base board.

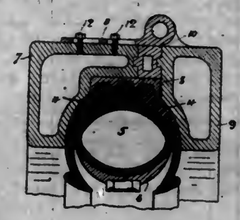
1,751,389. DOFFING DEVICE. OSCAR F. BLEDSOE, Jr., Greenwood, Miss. Filed Feb. 7, 1928. Serial No. 252,551. 13 Claims. (Cl. 56—44.)

1. A doffing device comprising an arm, a claw carried by the arm, and means for moving the arm to periodically engage the claw with a needle to perform a scraping action.



1,751,390. BOX FORMING AND SEALING DEVICE. WALTER W. BRUST, Weston, W. Va. Filed May 13, 1927. Serial No. 191,209. 12 Claims. (Cl. 93—2.)

1. A device of the character described comprising a supporting structure, a pair of spaced box-forming plates located longitudinally of the structure, a traveling carrier for moving a box filled with materials through the plates, means for varying the spacing between said plates, adjusting bars carrying the plates, traveling belts engaging the sides of the box and supported by the bars whereby spacing of the plates and belts may be varied simultaneously.



1,751,391. POTATO SEPARATOR. WILLIAM G. BUNKER, Augusta, Me. Filed May 20, 1927. Serial No. 192,997. 5 Claims. (Cl. 209—477.)

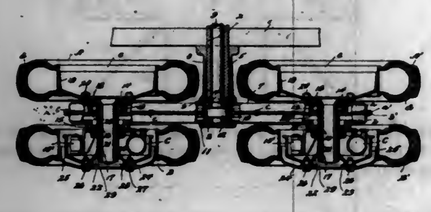
1. In a gravity separator for potatoes and the like, a supporting structure, a tilting platform on said structure to receive the material to be separated, means for passing an air blast over said platform to separate the lighter from the heavier material and conduct it to a place of deposit, means for normally holding said platform in elevated operative position and releasable when the material on the

platform reaches a predetermined weight, whereby the platform is tilted and the heavier material discharged therefrom.

1,751,392. APPLIANCE FOR VULCANIZING COVERS OF PNEUMATIC TIRES. ALFRED EDWARD BURCH, Melbourne, Victoria, Australia. Filed May 19, 1926, Serial No. 110,228, and in Australia June 10, 1925. 1 Claim. (Cl. 18—18.)

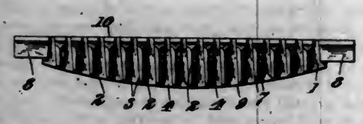
In a retreading machine, a full annular mould divided in a plane transverse to its axis into two unequal parts, a removable annular matrix carried solely by said larger part of such width as to extend beyond the plane of the open end of said larger part, said smaller part constituting a door for said mould, means for adjustably securing said door to said larger part to position it in the plane of the extended end of said matrix, and a detachable liner filling the space between said larger part and said door when the latter is so positioned.

1,751,393. COMBINED TRACK LEVEL AND GAUGE. JUNIUS E. BUSBY, Jackson, Ky., assignor of one-half to Thomas Arthur Gabbard, Oakdale, Ky. Filed Feb. 12, 1929. Serial No. 339,463. 9 Claims. (Cl. 240—6.4.)



9. A track gauge having a sliding member at one end and having a lug adapted to be disposed against the inside face of one rail, a slide mounted upon the beam adjacent the other end thereof and having a downwardly extending lug adapted to be disposed against the other rail, the slide being graduated, a pointer on said beam with which said

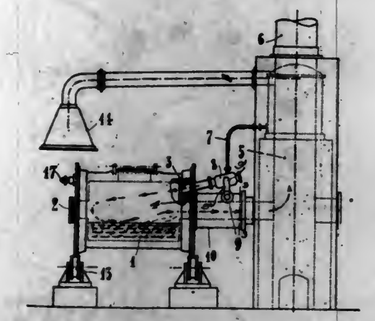
CARNEGIE LIBRARY OF ATLANTA



graduations coact, a vertically movable scale carried by the beam just beyond the last named lug and adapted to be disposed against the head of the rail, a split level mounted upon the beam, a flashlight, and means on the beam for detachably holding the flashlight in a position with the light directed longitudinally of the beam and toward one end thereof, and mirrors disposed in the path of the light and carried by the beam and reflecting the light from the beam downward onto said spirit level and the graduations on the slide and the scale.

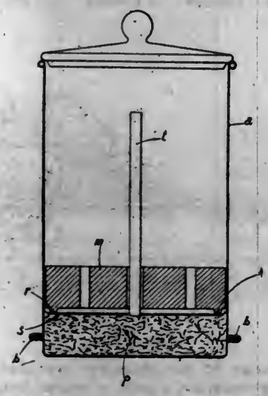
1,751,394. DRIVE FOR MOTOR VEHICLES. JOHN WALTER CHRISTIE, Avon, N. J., assignor, by mesne assignments, to Browning Crane Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 23, 1929. Serial No. 342,004. 8 Claims. (Cl. 180—22.)

1. A driving mechanism for motor vehicles embodying in combination a carrier casing mounted on opposite sides of the vehicle, a pair of driven shafts rotatably journaled in the opposite ends of the casing, each shaft comprising keyed telescopic sections, a wheel supporting member attached to the free extremity of each telescopic section, a driving means, and a common means interconnecting said driving means and rotatable shafts, whereby power is transmitted from the former to the latter.



1,751,395. FIRE BAR. GEORGE HENRY COLLINS, Brentford, England. Filed Apr. 4, 1927, Serial No. 180,843, and in Great Britain Apr. 16, 1926. 3 Claims. (Cl. 126—167.)

1. A fire bar having a central body part, shoulder portions of similar shape in plan at the ends thereof wider than said body part and a like number of vertical integral ribs with parallel sides at the surface extending outwardly from said body part on each side all to the same distance as the shoulder portions, said ribs being tapered from back to front the tapering commencing at a point below the upper surface of the bar and extending to the lower ends of the ribs and the spaces between the ribs at the surface of the bar being narrower than the width of the ribs.

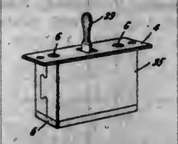


1,751,396. APPARATUS FOR MANUFACTURING ZINC WHITE. JOSEPH MARCEL HENRI CORNILLAT, Paris, France. Filed July 9, 1927, Serial No. 204,604, and in France July 15, 1926. 1 Claim. (Cl. 263—16.)

Apparatus for manufacturing zinc white, comprising a furnace; a refractory lining in the furnace, said furnace having a charging door to admit zinciferous material thereinto, and also having at one end a burner inlet and below the same a gas outlet; a burner having its mouth disposed in said inlet and inclined downward toward the opposite end of the furnace to cause the flames and gaseous products of combustion to travel in an extended path first toward the latter end and then back to the gas outlet; a pipe connected to the gas outlet end of the furnace and leading from said outlet, through which pipe the combustion gases are exhausted from the furnace together with the vapors given off by the molten zinc; an annular

chamber of limited capacity surrounding the gas exhaust pipe at a point external to the furnace; means for supplying air under pressure to the burner, said means including a pipe having a connection with said chamber to effect preheating of the air by the hot gases passing through the exhaust pipe; and means separate from the last-named supply means for supplying liquid fuel to the burner for admixture with the preheated air.

1,751,397. COFFEE FILTER. EMILE CAMILLE DELSUC, Nancy, France. Filed Mar. 27, 1929, Serial No. 350,407, and in Belgium Mar. 29, 1928. 5 Claims. (Cl. 53—3.)

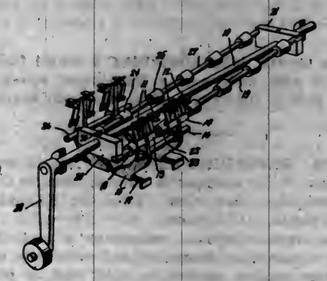


1. In a coffee filtering apparatus, a ground coffee receiving vessel having a perforated bottom, a perforated plate resting upon the ground coffee, a solid member disposed upon the said plate and having apertures for letting water pass through and having such a calorific capacity that boiling water poured into the vessel gives up a part of its heat before making contact with the coffee until its temperature is below 80°.

1,751,398. ELECTRIC SWITCH. FRANK C. DE REAMER, Bridgeport, and WILLIAM R. YOUNG, Fairfield, Conn., assignors to General Electric Company, a Corporation of New York. Filed Dec. 29, 1927. Serial No. 243,442. 5 Claims. (Cl. 200—6.)

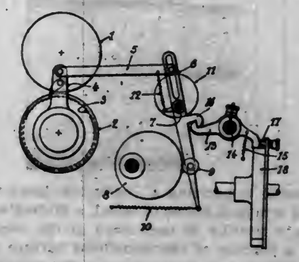
1. An electric switch comprising spaced stationary contacts, a bridge piece fixedly supported above said contacts,

two oppositely disposed switch arms pivotally mounted at their lower ends upon said bridge piece, a spring yieldingly connecting the upper ends of said arms, and an actu-



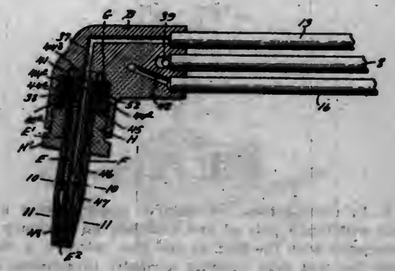
ating lever pivoted on said bridge piece transversely between said arms and adapted to engage and depress either of said switch arms into engagement with said stationary contacts.

1,751,399. GAS-OPERATED AIR-HEATING DEVICE. GUILLAUME DUCART, Paris, France. Filed May 31, 1927, Serial No. 195,520, and in France June 4, 1926. 4 Claims. (Cl. 126—90.)



1. An air heater of the character described, including a casing, a pair of identical shells of a heat conducting material arranged within the casing and provided on their adjacent inner faces with spaced vertical fins which when the shells are arranged together provide a series of vertical and parallel passages for air to be heated, said shells also provided on their outer surfaces with a series of vertical fins which coact with the inner surfaces of the side walls of the casing to form passages through which heated gas may be passed, the ends of the shells being extended beyond the fins and projected through the ends of the casing and forming inlet and outlet air connections, and gas burners arranged in the lower part of the casing beneath the fins on the outer surfaces of the shells.

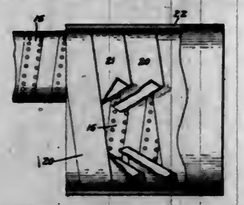
1,751,400. CONTROLLER. JOHN EATON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 4, 1927. Serial No. 188,808. 10 Claims. (Cl. 200—6.)



1. A controller comprising an operating member having a longitudinal axis and mounted for rotation about an axis other than said first axis and disposed at an angle to the said other axis, and a row of spaced apart devices disposed parallel with said other axis and operated in a predetermined succession by said member.

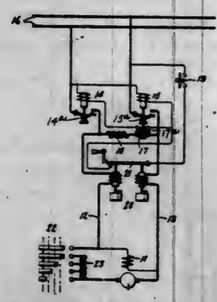
1,751,401. AUTOMATIC SPACING DEVICE FOR PLAITING MACHINES. GEORGES EZEELENT and ROGER EZEELENT, Paris, France. Filed June 28, 1926, Serial No. 119,212, and in France Jan. 28, 1926. 7 Claims. (Cl. 223—44.)

1. In a plaiting machine, the combination with a plait producing mechanism adapted to rotate intermittently one roller of the machine for spacing two consecutive plaits from each other, of means for imparting to said roller an additional rotative movement and means for adjusting the amplitude of said additional rotative movement quite independently from the plait producing mechanism.



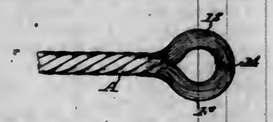
1,751,402. BLOWPIPE. JOHN HARRIS, Cleveland, Ohio, assignor to The Harris Calorific Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 12, 1925. Serial No. 55,987. 8 Claims. (Cl. 158—27.4.)

1. In a blowpipe, the combination of a head having a chamber extending upwardly from the lower end thereof, a passage for cutting oxygen leading from the central portion of said chamber and an annular chamber surrounding the delivery end of said passage and adapted to discharge into the said chamber, a tip assembly, the said assembly comprising a head block having a chamber extending upwardly from the lower end thereof with passages communicating with said chamber and adapted to receive a combustible mixture from the said annular chamber, an inner tip member secured to the central portion of said head block, within the chamber thereof, the said block having a passage adapted to communicate with the passage for cutting oxygen in the head and the said tip member having a bore registering with the last two passages, a second tip member surrounding the first mentioned tip member and fitted within the chamber in the head block, the said tip members being provided with passages for preheating gases, there being an annular distributing chamber above the upper end of the outer tip member and surrounding the inner tip member into which the first mentioned passages in the head block are adapted to discharge, a mixer in said head adapted to discharge substantially radially into the first mentioned



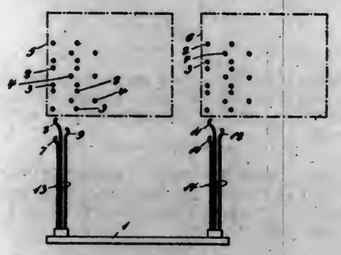
annular chamber and the said head being provided with passages for delivering oxygen and a combustible gas into said mixer, and means engaging the head block for securing the tip assembly within the first head chamber.

1,751,403. HIGH-TENSION CABLE. WILLIAM C. HAYMAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 14, 1928. Serial No. 325,991. 9 Claims. (Cl. 173—266.)



1. A cable comprising a conductor, insulation thereon, a spirally wrapped ribbon of metal, a protective strip which underlies a portion of each turn of the ribbon and also overlies a portion of the peripheral surface of the turns of said ribbon, and a protective metal covering which is in electrical communication with said metallic ribbon.

1,751,404. SYSTEM OF MOTOR CONTROL. JOHN A. HEPPERLEN, East Orange, N. J., assignor to General Electric Company, a Corporation of New York. Filed Aug. 2, 1926. Serial No. 126,397. 4 Claims. (Cl. 172—288.)



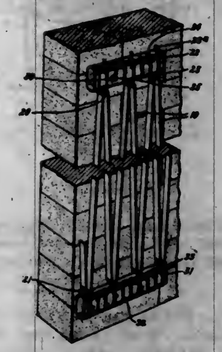
1. In combination, an electric motor having a shunt field winding, a pair of line switches, an auxiliary switch associated with the first of said line switches, a discharge path for said field winding normally established by said auxiliary switch when said first line switch is in its open position, and connections between said line switches requiring the closing of said first line switch and the opening of the said discharge path by said auxiliary switch prior to the closing of the second of said line switches.

1,751,405. TERMINAL AND METHOD OF MAKING SAME. ALBERT FRANK HERMAN, Cleveland, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Mar. 10, 1926. Serial No. 93,723. 9 Claims. (Cl. 29—155.5.)

1. A method of making a cable terminal that comprises forming an eye of portions of a cable; dipping said eye in a bath of molten metal; withdrawing said eye from said bath; and applying pressure to said eye and the metal adhering thereto to shape the same.

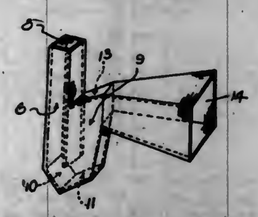
1,751,406. SELECTOR SWITCH FOR AUTOMATIC TELEPHONE SYSTEMS. CARL AXEL WILHELM HULTMAN, Djursholm, Sweden, assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden, a Company of Sweden. Filed Aug. 3, 1927, Serial No. 210,882, and in Sweden Apr. 11, 1922. 1 Claim. (Cl. 179—27.5.)

A selector arrangement comprising a group of selector switches each having a wiper carrier, a number of switch arms secured to said carrier, a plurality of sets of contact wipers carried by said switch arms, an incoming line, means for switching said incoming line onto one or the other of said sets of contact wipers, an operating mechanism for setting the wiper carrier in two different directions in the same plane and in one of said directions longitudinally of said switch arms, and a contact field consisting of rows of wires extending through a group of selectors perpendicularly to the plane of movement of the wiper carrier, said sets of contact wipers being arranged to be displaced along parallel paths and to make contact, in each setting position of the carrier, with a corresponding number of lines.



1,751,407. ELECTRIC LAMP FOR BEACON LIGHTS. EUGEN HURWITZ, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Apr. 27, 1929, Serial No. 358,668, and in Germany May 1, 1928. 6 Claims. (Cl. 176—16.)

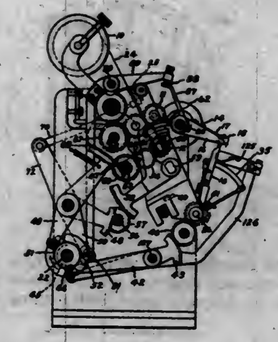
1. An electric lamp comprising a sealed bulb, a light source in said bulb, and a translucent screen mounted in said bulb to partially enclose said light source.



1,751,408. ELECTRIC FURNACE. CARL L. IPSEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 23, 1924. Serial No. 745,511. 13 Claims. (Cl. 266—1.5.)

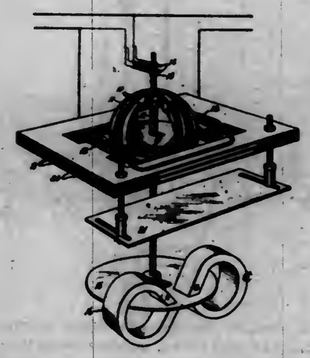
1. An electric furnace comprising a wall forming a heating chamber, an elongated heat refractory, electrically insulating member secured to said wall, a plurality of supports securing said member to said wall in spaced relation therewith at intervals along the length of said member, a sinuous heating resistor in said chamber, and members having good heat conductivity engaging and supporting said resistor and attached to said elongated member so that said resistor is hung therefrom in spaced

relation to said elongated member and said wall so as to provide for free radiation of heat from said resistor whereby hot spots are prevented when operating close to temperatures producing oxidation of the resistor material.



1,751,409. CHAMBER OR PASSAGEWAY FOR USE IN THE REPRODUCTION OF SOUND. SAMUEL JAMES JACKSON, Sydney, New South Wales, Australia. Filed Aug. 14, 1926, Serial No. 129,263, and in Australia Apr. 22, 1926. 1 Claim. (Cl. 181—27.)

In chambers or passageways for use in the reproduction of sound a plurality of passageways in successive communication and connected by sound deflecting members so arranged that the sound entering the chamber first strikes a deflecting member arranged at approximately right angles to a second deflecting member, having above it and parallel thereto a third deflecting member arranged at approximately right angles to a fourth deflecting member beneath which and parallel thereto is a fifth deflecting member, capable of deflecting the sound outwards, and the walls of the passageways gradually tapering outwardly towards the succeeding passageway so that each passageway is of increasing cross sectional area and the end of the passageway terminating in a bell shaped mouth.

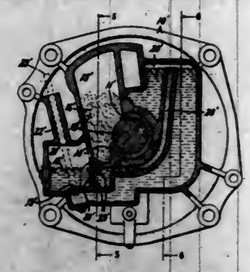


1,751,410. ANCHOR-INSERTING MACHINE. WILLEM KONING, Eindhoven, Netherlands, assignor to General Electric Company, a Corporation of New York. Filed May 20, 1926, Serial No. 110,577, and in the Netherlands June 25, 1925. 7 Claims. (Cl. 49—2.)

7. In a machine for inserting a row of anchors extending longitudinally of a glass rod, the combination of unitary devices mounted side by side on a line and each comprising an anchor making mechanism for making an anchor having one end bent into a hook, and a transfer mechanism for picking up an anchor out of said anchor making mechanism and carrying it into inserting position with its straight end at a predetermined place, means for varying at will the spacing of said devices, a rod holder comprising a longitudinally movable rock shaft mounted perpendicular to the anchors held in said transfer mechanisms and having rod holding arms projecting from said shaft to hold a glass rod parallel to said shaft, burners

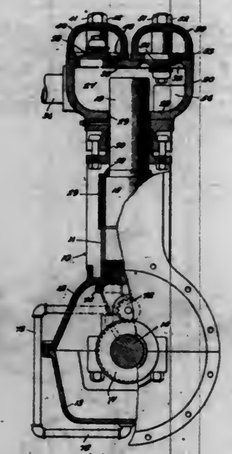
for softening on the rod in said holder spots in registry with said positioned anchors, driving means for said mechanisms, and rod actuating means for said shaft driven from said driving means to rock said shaft to carry said arms toward and away from the positioned anchors.

1,751,411. COMMUTATOR-TYPE DIRECT-CURRENT WATTHOUR METER. GEORGE LAMB, Pittsburgh, Pa., and ISAAC F. KINNARD, Lynnfield, Mass., assignors to General Electric Company, a Corporation of New York. Filed May 8, 1929. Serial No. 360,202. 8 Claims. (Cl. 171—265.)



3. A watthour meter of the direct current commutator type having a stationary field structure and rotating armature both containing magnetic material which, except for narrow air gaps between the field structure and armature, forms a closed magnetic circuit for the meter fluxes, said material comprising a nickel-iron alloy having an appreciably lower hysteresis loss than iron.

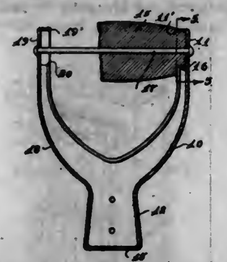
1,751,412. LUBRICATING DEVICE. JOHN O. LEWIS, Wesleyville, Pa., assignor to General Electric Company, a Corporation of New York. Filed Apr. 2, 1928. Serial No. 266,485. 11 Claims. (Cl. 308—182.)



1. In combination with a bearing, a lubricating device comprising a storage reservoir adapted to contain oil below

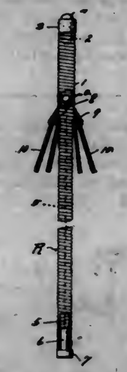
atmospheric pressure, said reservoir having an outlet in the lower portion thereof, and means for supplying oil to said bearing from said outlet formed and arranged to

provide for introducing a filling tube into said outlet to direct oil into said reservoir and to prevent the flow of oil therefrom through said outlet during filling said reservoir.



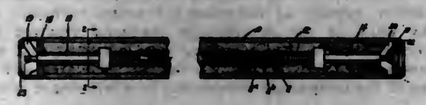
1,751,413. MULTIPLE-CYLINDER RECIPROCATING WATER PUMP. CHARLES I. LONGNECKER, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 23, 1928. Serial No. 272,078. 7 Claims. (Cl. 103—169.)

1. In a pump of the class described, a frame; a water box mounted on said frame, provided with inlet and outlet connections and a working chamber; a plunger working in said chamber; inlet and discharge valves communicating with said chamber; and an inlet and discharge manifold detachably secured to said water box, housing said valves.



1,751,414. HANDLE GRIP. CHARLES MARIENTHAL, Detroit, Mich., assignor to Columbus Handle & Tool Corporation, Columbus, Ind., a Corporation of Indiana. Filed June 2, 1926. Serial No. 113,118. 2 Claims. (Cl. 294—57.)

1. A handle grip of the class described formed from a single blank comprising a stem; a pair of arms diverging outwardly from said stem, the opposite edges of each of said arms being folded inwardly upon the body portion and spaced therefrom to form said arms tubular; a tongue projecting outwardly from each of said arms; a hand hold having a flat formed thereon; means projected through said hand hold and through said tongues for

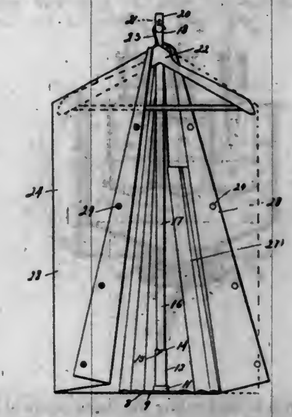


mounting said hand hold on said tongues, said flat engaging said doubled over edges of said arms for preventing rotation of said hand hold on its mountings.

1,751,415. CLEANING IMPLEMENT. THOMAS J. MCCAFFREY, Seattle, Wash. Filed Sept. 30, 1927. Serial No. 223,209. 3 Claims. (Cl. 137—70.)

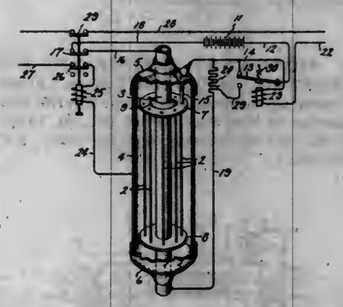
1. An implement of the class described comprising an elongated flexible rod, an end portion of the rod being of increased diameter, a ferrule engaged with the rod and abutting the inner end of the portion of the rod of increased diameter, and flexible claws carried by the ferrule and extending outwardly from the rod.

1,751,416. ELECTRIC HEATING UNIT. JOHN C. MUSGROVE, Lanesboro, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 4, 1926. Serial No. 92,280. 3 Claims. (Cl. 201—67.)



1. An electric heating unit comprising a metallic sheath, compacted powdered insulating material in said sheath, a pair of metallic terminal members projecting from said sheath, and a plurality of sinuous resistance conductors embedded in said insulating material, each of said resistance conductors having a plurality of turns at each end surrounding said terminal members respectively and secured thereto.

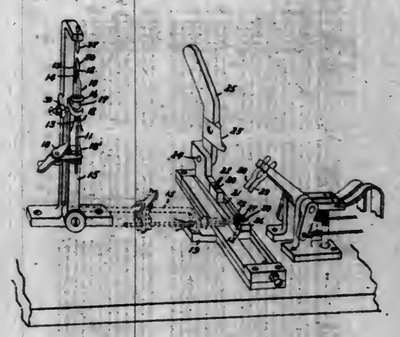
1,751,417. AUTOMOBILE COAT TREE. GARRETT L. NEWMAN, Philadelphia, Pa. Filed Nov. 2, 1926. Serial No. 145,750. 1 Claim. (Cl. 312—6.)



A device of the kind described comprising a support including an upright, a horizontal arm projecting only

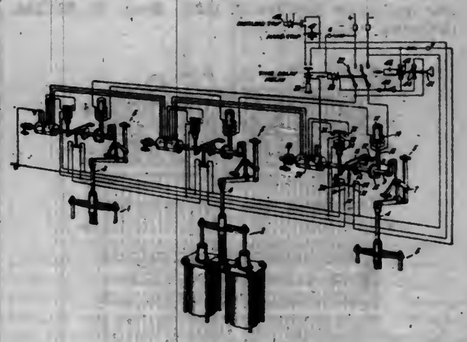
to one side of said upright at its upper end, said arm having notches at the top portion thereof, a vertical finger projecting upwardly from the outer end of the arm to act as a stop and a pin projecting upwardly from said arm adjacent the point of its connection with upright, said pin also acting as a stop, clothes hangers having

portions engaging the horizontal arm and registering with the notches for spacing said clothes hangers, said clothes hangers being prevented from becoming accidentally displaced from the arm by the stops and a canopy supported by the horizontal arm and coacting with the clothes hangers whereby the latter will hold said canopy in a distended condition.



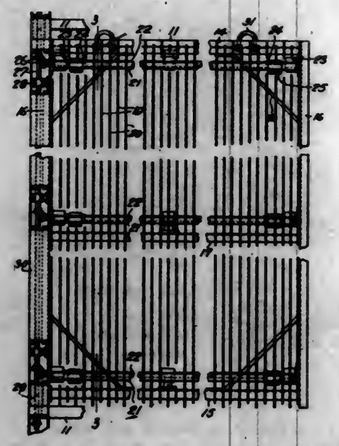
1,751,418. ELECTRON-DISCHARGE APPARATUS. WILLIAM E. PAUL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 10, 1925. Serial No. 61,759. 7 Claims. (Cl. 250—27.)

1. An electron discharge device comprising an evacuated container, a conductor located therein substantially in line with the main axis of said container, a cathode comprising elements grouped about said conductor in substantially the form of a revolute, a cooperating anode arranged in the form of a revolute about said cathode and means whereby a current, different in value from the cathode current, may be supplied to said conductor.



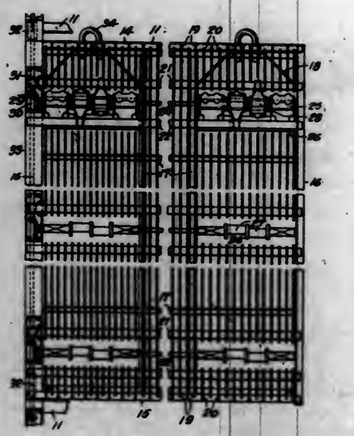
1,751,419. METHOD AND APPARATUS FOR MOUNTING FILAMENTS. ROSCOE G. PHELPS, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Original application filed May 7, 1927, Serial No. 189,514. Divided and this application filed June 9, 1927. Serial No. 197,568. 2 Claims. (Cl. 176—3.)

1. In an apparatus of the class described, the combination of an arm having thereon means for receiving and definitely positioning a stem having leading-in conductors sealed therein and projecting therefrom, a stop for holding said arm in a generally horizontal position, a trimming means comprising a block adapted to be positioned



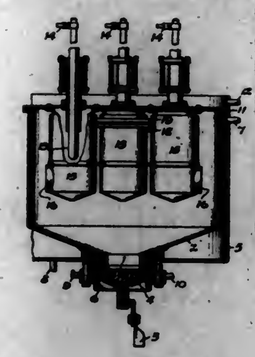
to receive the projecting ends of said conductors, a cutter operatively disposed relatively thereto, a block for receiving and positioning said filament and ends and means for uniting said filament to said ends.

1,751,420. ELECTRIC SWITCH MECHANISM. WILLIAM K. RANKIN, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 25, 1927. Serial No. 178,427. 7 Claims. (Cl. 175—375.)



4. A switch for a polyphase system comprising separate switch units for controlling the individual phases of said system, a separate electric operating mechanism for each unit, a common supply circuit therefor, a circuit controller drum associated with each mechanism and rotated thereby, a plurality of brushes engaging each drum, connections between the brushes of the respective drums whereby a continuous current flow is maintained through a plurality of successive series circuits in response to substantially equal rotative movements of the several drums, and means for interrupting said common supply circuit in response to an interruption in said current flow resulting from an unequal movement of said drums.

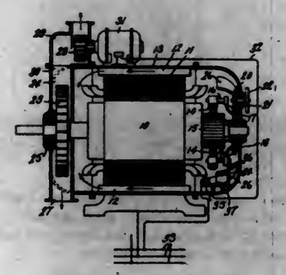
1,751,421. APPARATUS FOR REMOVING WATER-BORNE MATERIAL FROM RACEWAYS AND THE LIKE. CHARLES R. REID, Shawinigan Falls, Quebec, Canada. Filed Sept. 10, 1928. Serial No. 304,965. 15 Claims. (Cl. 210—172.)



1. A straining rack for water courses comprising a framework and a plurality of substantially vertical bars, and means for imparting an orbital movement to certain of the bars relatively to other bars while maintaining the upstream faces of all the bars in parallelism.

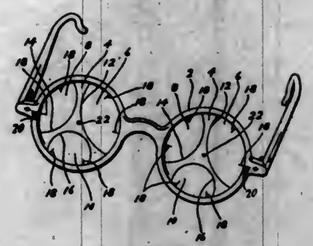
1,751,422. APPARATUS FOR REMOVING WATER-BORNE MATERIAL FROM RACEWAYS AND THE LIKE. CHARLES R. REID, Shawinigan Falls, Quebec, Canada. Original application filed Sept. 10, 1928, Serial No. 304,965, and in Canada Sept. 26, 1928. Divided and this application filed Jan. 9, 1929. Serial No. 331,164. 10 Claims. (Cl. 210—172.)

1. A straining rack for water courses comprising a framework, a plurality of series of substantially vertical bars movable relatively to the framework, a plurality of series of transverse carriers to which the bars of the several series are respectively fixed, a plurality of crankshafts journalled in the framework each having a plurality of cranks for each series of bars and connecting rods rigidly fixed to each series of bars and operatively engaging the cranks of said crankshafts.



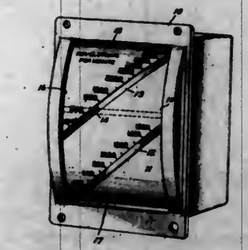
1,751,423. MERCURY RECTIFIER. LEWIS T. ROBINSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 30, 1925. Serial No. 72,234. 4 Claims. (Cl. 250—27.5.)

1. The method of controlling the temperature of a device comprising an anode and a mercury cathode located in a container having an insulated wall portion for supporting said cathode which comprises circulating a cooling medium in contact with the outer wall of said container from the top to the bottom thereof, circulating said medium in contact with the insulated wall portion upon which said cathode is supported and cooling the space surrounding said anode to a temperature at which the vapor pressure therein is maintained at a value below that at which arc-back is likely to occur.



3. A vapor electric device wherein a mercury cathode and an anode are mounted within a container and insulated therefrom comprising a baffle surrounding said anode, and means for circulating a cooling medium in contact with the surface of said baffle.

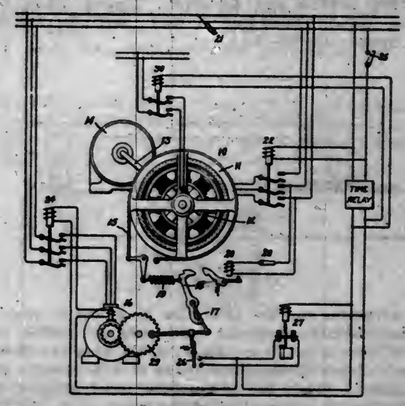
1,751,424. VENTILATING ARRANGEMENT FOR DYNAMO-ELECTRIC MACHINES. HANS ROSENTHAL, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Dec. 20, 1928, Serial No. 327,431, and in Germany Apr. 25, 1928. 5 Claims. (Cl. 171—252.)



1. A dynamo-electric machine operable over a wide range of speed having a ventilating system including main air-circulating means for said system driven by said machine, means for varying the speed of said machine, and auxiliary air-circulating means controlled by the speed varying means of said machine for supplementing said main air-circulating means when said machine is being operated at slow speed.

1,751,425. BIFOCAL-FITTING DEVICE. GEORGE M. SMITH, deceased, Arlington, Mass., by George William Perkins, administrator, Everett, Mass., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Original application filed June 25, 1925, Serial No. 39,509. Divided and this application filed Nov. 11, 1925. Serial No. 68,318. 4 Claims. (Cl. 33—200.)

1. A bifocal fitting device comprising a fitting lens having a plurality of imitation bifocal wafers of different types marked thereon and spaced along the circumference of the lens and an index associated with each wafer.



1,751,426. INSTRUMENT SCALE PLATE. GEORGE W. SPRENGER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 24, 1929. Serial No. 394,894. 7 Claims. Cl. 116—129.)

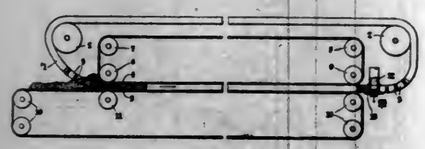
1. An indicating instrument having at least one diagonal scale and a movable pointer suitably arranged with respect to the said scale whereby the movement of the said pointer will cause a continually varying portion of the said scale to be indirect visual line with a continually varying portion of the said movable pointer.

1,751,427. SYNCHRONOUS-MOTOR CONTROL. FRED L. STONE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 16, 1926. Serial No. 135,958. 8 Claims. Cl. 172—289.)

1. In combination, a synchronous motor having a rotatable field and armature members, one of said members being arranged to drive a load, a brake for the other of said members, a supply circuit for said armature member, switching means for controlling the connections between said armature and said supply circuit, means for controlling the operation of said brake and means dependent upon an electrical condition in said supply circuit for controlling said switching means and said brake controlling means so that said armature is disconnected from said supply circuit and said brake is released upon a failure of the source of supply and upon resumption of the power

of the supply circuit, the connections between said armature and said supply circuit are reestablished and said brake is reapplied.

1,751,428. APPARATUS FOR STRETCHING THE MATERIAL FOR HANDKERCHIEF EMBROIDERY IN THE SHUTTLE EMBROIDERY MACHINE. EMILE STRAUB, Emmishofen, Switzerland. Filed Mar. 3, 1927, Serial No. 172,484, and in Switzerland Mar. 3, 1926. 3 Claims. (Cl. 112—90.)



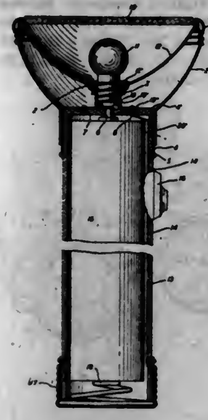
2. A stretching device of the class described comprising a frame for arrangement on the frame of an embroidery machine and provided with parallel shafts mounted for rotation and provided with means to prevent backward rotation and also provided with tubes in which said shafts are concentrically arranged and the inner diameter of which is greater than the diameter of said shafts to form annular spaces around the shafts, each tube being open on one side and each of said shafts comprising a pair of substantially semi-cylindrical members one separable from the other.

1,751,429. REENFORCED BUILDING MATERIAL AND PROCESS OF MAKING THE SAME. GEORGE MILLER THOMSON, Caledonia, Ontario, Canada, assignor to Canada Gypsum and Alabastine, Limited, Paris, Ontario, Canada. Filed June 20, 1927. Serial No. 200,302. 1 Claim. (Cl. 106—84.)

The process of reenforcing quick setting calcined gypsum which comprises treating vegetable fibre to open the pores thereof, drying the same and adding said open pore fibre to a slurry consisting of water and said calcined gypsum when the latter is most completely in solution.

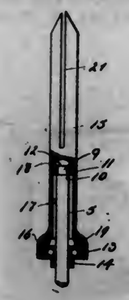
1,751,430. PROCESS AND APPARATUS FOR MAKING CELLULAR INSULATING MATERIAL. GEORGE MILLER THOMSON, Caledonia, Ontario, Canada, assignor to Canada Gypsum and Alabastine, Limited, Paris, Ontario, Canada. Filed July 25, 1928. Serial No. 295,295. 5 Claims. (Cl. 25—99.)

2. Apparatus for the production of a mobile mass of cellular insulating material comprising an endless perforated band, a belt in contact with said band and closing the upper ends of the perforations in a portion of said band, and a fabric belt closing the lower ends of the perforations in said portion of the band.



1,751,431. AUTOMATIC AND SEMIAUTOMATIC TELEPHONE SYSTEM. ROMAN TRECHCINSKI, Warsaw, Poland, assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden, a Company of Sweden. Filed Apr. 28, 1928, Serial No. 273,750, and in Sweden May 2, 1927. 3 Claims. (Cl. 179—18.)

1. In a telephone system the combination of subscribers' lines, junction lines, means for connecting a calling subscriber's line to a disengaged junction line, automatic switches for further extending the telephone connection from said junction line, registers for controlling the setting of said switches, automatic switching means for connecting an idle register to a junction line, and means under the control of a register for causing this register to be automatically connected to a disengaged junction immediately upon the register being set free for other connections.

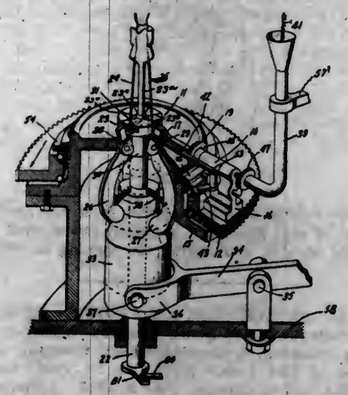


1,751,432. FOCUSING FLASHLIGHT. LEE G. VOORHEES, Long Island City, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed July 23, 1927. Serial No. 207,919. 8 Claims. (Cl. 240—10.5.)

1. In an electric hand lamp, the combination of a casing having a battery therein; a disk resting upon one end of said casing; a flanged collar securing said disk to said casing; a threaded lamp socket secured to said disk; a reflector having an aperture threaded upon said lamp socket; a head fitting movably mounted upon said collar; a cover glass over the open end of said reflector; a bezel securing said cover glass and said reflector to said head fitting; a lamp in said lamp socket; a conductive rivet in said disk connecting one terminal of said lamp

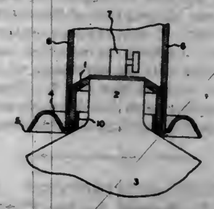
to one terminal of said battery; and means completing the circuit from the other terminal of said lamp to the other terminal of said battery.

1,751,433. WEATHER VANE. JAMES M. POWER WALLACE, Norristown, Pa. Filed Mar. 8, 1928. Serial No. 259,975. 2 Claims. (Cl. 73—55.)



1. In a weather vane, the combination of a staff for mounting upon a suitable support, the upper end of said staff having a reduced tip forming a shoulder, a ball bearing mounted on the extremity of the tip, a second ball bearing mounted on the staff below the first mentioned one and in spaced relation thereto, means to hold the second named ball bearing in place, a post having an enlarged lower end, the lower portion of said post being hollow, shoulders within the hollow portion of the post and spaced a distance equal to the space between the ball bearings and adapted to engage the movable race members of the ball bearings and substantially enclose said ball bearings when the post is placed over the upper end of the staff, said post having its upper end longitudinally slotted, and a vane element mounted within said slot and fixed to the post.

1,751,434. FILAMENT-MOUNTING MACHINE. MARINUS WILDEBOER, Eindhoven, Netherlands, assignor to General Electric Company, a Corporation of New York. Filed June 15, 1927, Serial No. 198,086, and in the Netherlands June 30, 1926. 9 Claims. (Cl. 176—4.)



1. In a machine of the character described, the combination of a holder for a mount having hooked leads and

hooked anchors in substantially the same plane, a filament feeding mechanism comprising a filament guide for delivering a filament lengthwise, and actuating mechanism for moving said guide relatively to the mount in said

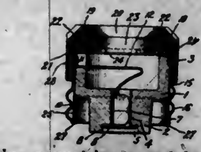
holder to move its delivery end in substantially said plane and from the hook on one lead past the hooks on said anchors to the hook on the other lead to deliver the filament into the hooks on said leads and on said anchors.

1,751,435. NECK RING FOR COMPRESSED-GAS CONTAINERS. GEORGE H. ZENNER, New York, N. Y., assignor to The Linde Air Products Co., a Company of Ohio. Filed Feb. 2, 1928. Serial No. 251,327. 4 Claims. (Cl. 220—3.)

1. The combination with a gas container, of a protective device comprising a collar secured to a portion of the container, a cap adapted to be secured to said collar and to enclose the same and a member projecting from said collar, said member being reversely curved and the extremity being spaced from the wall of the container.

1,751,436. BLASTING EXPLOSIVE. FRANK H. BERGEIM, Woodbury, N. J., assignor to E. I. Du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 3, 1928. Serial No. 274,976. 11 Claims. (Cl. 52—11.)

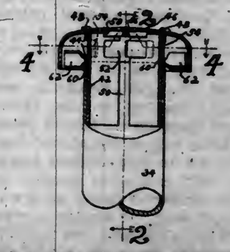
1. A dynamite comprising erythritol tetranitrate as the chief sensitizing explosive constituent.



1,751,437. GELATINIZED EXPLOSIVE AND PROCESS OF MANUFACTURE. FRANK H. BERGEIM, Woodbury, N. J., assignor to E. I. Du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 27, 1928. Serial No. 288,800. 19 Claims. (Cl. 52—11.)

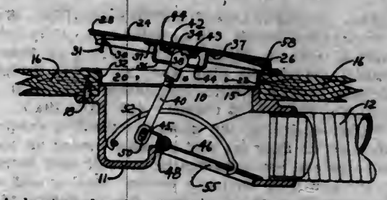
1. The process of making a gelatinized explosive which comprises mixing a liquid nitrate of a polyhydroxy alcohol with nitrocellulose in the presence of a nitrate of a polyhydroxy alcohol, having from four to six carbon atoms.

1,751,438. NITRATED SORBITOL. FRANK H. BERGEIM, Leonia, N. J., assignor to E. I. Du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 6, 1928. Serial No. 310,926. 8 Claims. (Cl. 260—144.)



1. As a new compound, solid nitrated sorbitol.

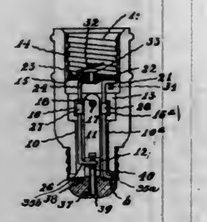
1,751,439. FUSE PLUG. GEORGE R. BROWN, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Feb. 28, 1928. Serial No. 257,704. 4 Claims. (Cl. 200—130.)



1. A fuse plug comprising a peripherally shouldered insulating base having a chamber open at the top thereof and a center contact in the bottom end thereof, an outer shell surrounding the top and sides of said base and provided with a screw-threaded contact, a holding ring mounted within and secured to said screw-threaded contact and engaging the peripheral shoulder of said base, and a fusible link extending through said chamber and connected at its ends with said center and screw-threaded contacts respectively.

1,751,440. OIL FILLER. MELBOURNE L. CARPENTIER, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 9, 1927. Serial No. 238,774. 6 Claims. (Cl. 121—194.)

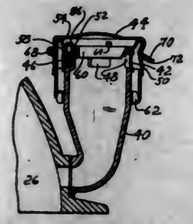
1. A filler pipe cover of the class described comprising a split tubular portion having a plurality of openings in the wall thereof at its outer end, a cap secured to said tubular portion closing the outer opening of said tubular portion and extended outwardly and downwardly over said openings, the outer edge of said cap being spaced from the onter periphery of said tubular portion, a sleeve having a plurality of openings in the wall thereof adapted for angular movement around said tubular portion, and a plurality of angularly disposed fins between said cap and the onter periphery of said tubular portion.



1,751,441. HEATER VALVE. ELBA E. CAMPBELL, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a Corporation of Delaware. Filed July 28, 1927. Serial No. 208,919. 7 Claims. (Cl. 98—2.)

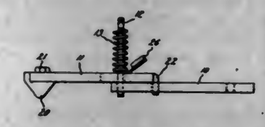
1. A heater chamber having an inlet and two outlet openings, a cover for one outlet opening, a valve positioned

between the other outlet opening and the inlet opening so as to divert air thru one by closing the other, an adjustable rod connecting said cover and said valve and a slot in said rod at said valve connection to allow the valve freedom of movement independent of said cover.



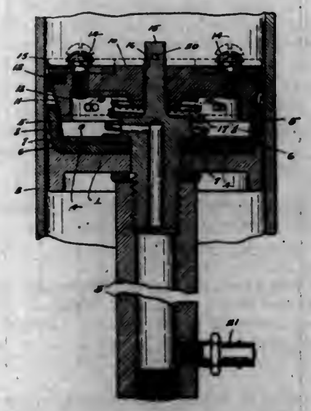
1,751,442. THREE-WAY CURRENT TAP SOCKET. ELLIOTT CLEMENCE, New York, N. Y., assignor, by mesne assignments, to The Monowatt Electric Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 12, 1926. Serial No. 128,815. 8 Claims. (Cl. 173—334.)

1. In a device of the character described, in combination, an insulating body having at one end thereof a chamber open at its face and bottom and having a second chamber communicating with the first chamber, said body having openings through opposite sides thereof communicating with the second chamber and longitudinally extending parallel passageways; said passageways being connected near their outer ends by a cross bore and communicating at their inner ends with the second chamber, a conductive socket shell in the first chamber having its bottom partly cut away, an insulating member in said shell and having a contact member thereon, electrical conductors in said passageways having angular inner and outer ends, the inner end of one of said conductors being electrically connected to said contact member by means passing through said insulating member and the inner end of the other conductor being electrically connected to a portion of said shell, the conductor connected to said contact member having its outer end located in said cross bore and the conductor connected to said shell having its outer end located adjacent to an end face of said body, electrical conductors connected at right angles to the first mentioned conductors intermediately of the outer and inner ends of said conductors and extending transversely of said body and having end portions located in said openings in opposite sides of the body, a conductive shell around the sides of said body near said end face and having an inturned edge portion contacting with the outer end of the conductor connected at its inner end to the first mentioned shell, an insulating cap resting against said inturned edge portion, and a conductive bolt passing through said cap and through said body and secured at its inner end in said cross bore to the outer end of the conductor connected at its inner end to said contact member.



1,751,443. INTERNAL-COMBUSTION ENGINE. WALTER S. COCHRANE, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Original application filed Apr. 20, 1927, Serial No. 185,208. Divided and this application filed Dec. 9, 1927. Serial No. 238,791. 5 Claims. (Cl. 121—194.)

3. In an engine of the class described, a crank case chamber, an oil filler for said chamber having an opening at its outer end and openings in the side wall thereof, a cover for said filler having a central opening and an inwardly extending flange around the periphery of said opening adapted to be received in the open end of said filler, means for securing said cover to said filler, a portion on said cover extending outwardly from said filler

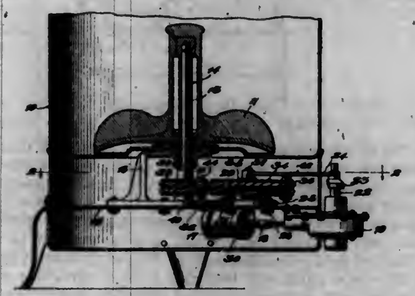


and downwardly over and spaced from the openings in the side of said filler, and a hinged cap secured to said cover for opening and closing the opening in said cover.

1,751,444. SWITCH CONTACT FINGER. ALFRED COHN, Charlottenburg, and ADOLF KUMMEL, Wilmersdorf, Germany, assignors to General Electric Company, a Corporation of New York. Filed Jan. 24, 1927, Serial No. 163,033, and in Germany Feb. 2, 1926. 2 Claims. (Cl. 200—166.)

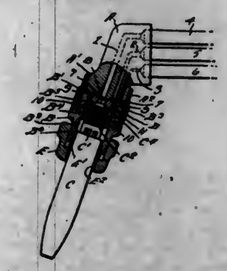
1. A contact finger comprising a supporting element and a contact element, each having a slot therein of substantially keyhole shape and one of said elements having a projection adapted to engage the enlarged end portion of the key-hole shaped slot of the other element when the restricted ends of the key-hole shaped slots in the two elements are disposed in reversed overlapping relation, and a headed bolt proportioned to separately pass through the slot in each element for detachably locking the elements together with the key-hole slots therein disposed in said reversed overlapping relation.

1,751,445. PISTON CONSTRUCTION. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Mar. 31, 1927, Serial No. 179,994. Renewed Aug. 9, 1929. 1 Claim. (Cl. 74—109.)



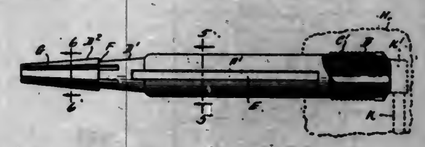
The combination with a cylinder, a piston movable in the cylinder comprising a head formed with a cup-shaped packing for engaging the cylinder wall, a second head

CARNEGIE LIBRARY OF ATLANTA



arranged on the pressure side of the first head and movable toward and from the first head and having a packing engaging the cylinder wall, the second head also having a conical portion for entering the cup-shaped portion and expanding the same against the wall of the cylinder, the piston also having a stem projecting in advance of the first head and the second head being slidable on the stem, the second head being formed with a recess formed on its inner face opposed to the first head, said recess and the packing forming a chamber between the heads, the second head having passages leading from the recess therein and opening through the conical face above the edge of the packing and a spring interposed between the heads.

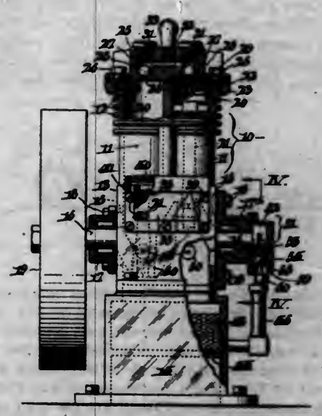
1,751,446. WASHING MACHINE. CLIFTON C. CAMMACK, Newton, Iowa, assignor to Automatic Washer Company, Newton, Iowa, a Corporation of Delaware. Filed June 21, 1929. Serial No. 372,629. 6 Claims. (Cl. 259—101.)



1. In a washing machine, a tub, an agitator disposed therein, driving mechanism for the agitator including a power driven reciprocating arm, a double grooved sheave adapted to be reciprocated by said arm, a second and smaller double grooved sheave connected to the agitator mechanism, and a single flexible cable cooperating with the double grooves in the sheaves to permit a quiet and vibrationless drive of the agitator.

1,751,447. ADAPTER FOR BLOWPIPES. LORN CAMPBELL, Jr., Lakewood, Ohio, assignor to The Harris Calorific Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 30, 1926. Serial No. 158,016. 7 Claims. (Cl. 158—27.4.)

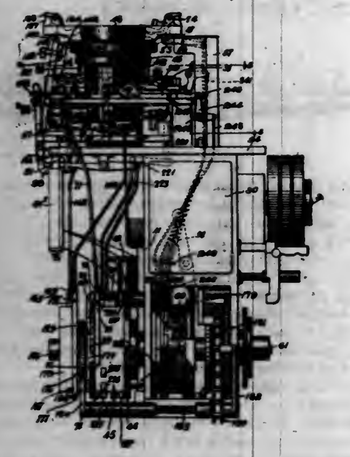
1. An adapter for securing to a blowpipe head a tip comprising an outer member surrounding an inner member with passages for preheating gases provided between the said members and with the inner member extending upwardly beyond the outer member and having a central bore for cutting oxygen, the said adapter having at its upper end a head and a chamber below the said head and into which the outer member of the tip is adapted to telescope, the said adapter being provided with means for securing the inner member of such tip to the adapter head, the adapter head being provided with a passage adapted to deliver oxygen from the passageway in said head to the passageway therefor in such inner tip member and also being provided with passages for delivering oxygen and combustible gas from such blowpipe head to said chamber and from said chamber to the passages formed between the inner and outer tip members, the said adapter being provided with means for securing the upper end thereof to such blowpipe head and with means for effecting a leak-proof joint between the outer tip member and the lower end of the chamber.



1,751,448. BLOWPIPE TIP AND PROCESS OF MAKING SAME. LORN CAMPBELL, Jr., Lakewood, Ohio, assignor to The Harris Calorific Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 20, 1928. Serial No. 286,988. 4 Claims. (Cl. 29—157.)

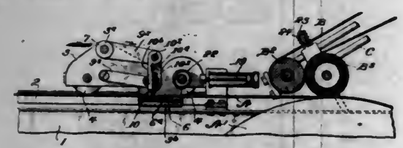
1. The process of making a blowpipe tip member which comprises providing a cylindrical blank of ductile metal with a central bore extending longitudinally therethrough, upsetting an end of the said blank to provide the same with an enlarged cylindrical projection, thereby compacting the metal comprising the said end and projection, swaging the opposite end of the said blank to substantially frusto-conical shape, and providing the enlarged cylindrical end of such blank with a thread and with a tapered seating portion extending from such threaded portion to the end of the body adjacent thereto.

4. A tip member for blowpipes comprising an elongated body having a central bore therethrough and having one end threaded to enable the said member to be secured in place within a blowpipe head and having a tapered seat-engaging portion extending from the thread, the metal comprising such threaded end being upset, whereby the threaded end is of greater diameter than the portion of the tip member adjacent thereto and the metal in such threaded end is compacted.



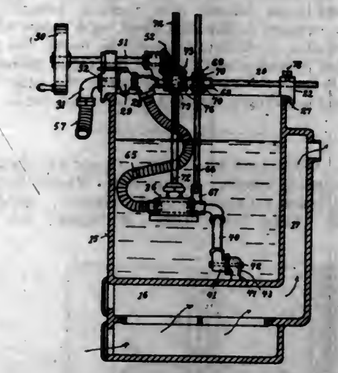
1,751,449. AIR COMPRESSOR. JAMES J. DILKS, Jr., West Collingswood, N. J., assignor to The Newmatix Equipment Co., Audubon, N. J., a Corporation of New Jersey. Filed June 6, 1928. Serial No. 283,148. 9 Claims. (Cl. 230—190.)

1. In an air compressor of the character described, the combination of a cylinder with an integrally formed crank



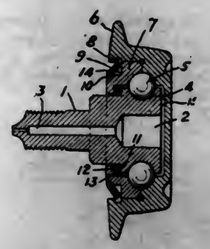
case supported by a hollow base embodying a communicating sump, a crank shaft, said crank case having aligned openings in opposite side walls permitting endwise insertion of the crank shaft, a piston reciprocating in the cylinder, a pitman connecting the piston with the crank shaft, and separate self contained outboard roller bearings for the ends of the crank shaft closing the side openings of the crank case.

1,751,450. MACHINE FOR MAKING FASHIONED HOSIERY. JOHN LAWSON, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Apr. 24, 1920. Serial No. 376,380. 57 Claims. (Cl. 66—48.)



1. A stocking knitting machine having means to knit upon two separate sets of needles two sections of fabric constituting, respectively, the front and back of the foot and leg portions of the stocking, means to form reinforcing loop formations of and by the main threads thereof upon the terminal needles of the said two sections of fabric, thereby reinforcing the selvage portions of each of said two sections by the main thread thereof, and means to fashion one of said sections.

1,751,451. APPARATUS FOR PRODUCING SPACED BLANKS FROM A CONTINUOUSLY-MOVING PLASTIC SHEET. ALBERT G. SMITH, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 16, 1928. Serial No. 319,870. 10 Claims. (Cl. 164—49.)



1. Apparatus for the purpose described comprising an endless carrier belt for sheet stock with means for imparting continuous movement thereto, and severing means for the stock comprising a platen beneath the belt and a knife movable towards and from the same, means whereby the movement of belt effects movement of the knife and platen when the belt and stock sheet are clamped between the knife and platen, and means for causing the knife and platen to travel in a direction contrary to that of the belt when the knife is elevated.

1,751,452. ASPHALTUM-HEATER APPARATUS. HERMAN H. STREITMANN, Cincinnati, Ohio, assignor to Littleford Brothers, Cincinnati, Ohio, a Firm composed of John S. Littleford, Thomas S. Littleford, John S. Littleford, jr., and Roger S. Littleford. Filed May 9, 1925. Serial No. 29,242. 3 Claims. (Cl. 103—218.)

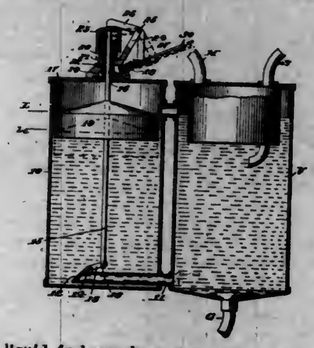
1. In an apparatus for pumping asphaltum and similar substances normally semi-solid at atmospheric temperatures, comprising a fluid container, a pump supporting member adapted to be supported upon said container, a fluid pump supported by said pump supporting member within said container in position to be submerged in the contents of said container, a fluid discharge conduit leading from said pump and having a portion extending over the rim of said container, a pump actuating means carried by said pump supporting means and adapted to be operated from the exterior of said container, and means for raising the pump without raising the height of the rim portion of said discharge conduit.

1,751,453. ANTIFRICTION WHEEL. FRANK BEMMER, Philadelphia, Pa. Filed June 25, 1927. Serial No. 201,408. 1 Claim. (Cl. 308—190.)

An antifriction wheel structure including a tubular axle element having a lubricant inlet and chamber and provided externally with a ball groove and with a shoulder, a hub element consisting of an outer portion having a half ball groove and an annular groove and of a ring shaped inner portion having a flange and a conical portion and a shoulder, there being a dust guard between said shoulders and an oil passage between the hub and axle element, balls in said races, and a washer expanded and permanently seated in said annular groove and engaging said flange.

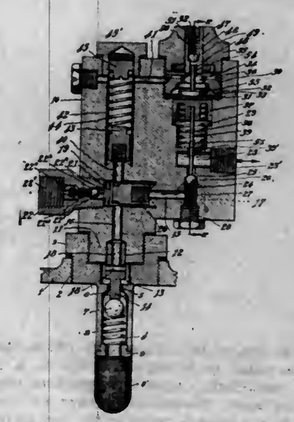
1,751,454. WEATHER STRIPPING. MAURICE E. BOSLEY, Chicago, Ill. Filed Apr. 4, 1924. Serial No. 704,112. 4 Claims. (Cl. 20—69.)

1. A weather stripping for sealing the space between co-operating closure members, comprising a strip folded intermediate its free edges to provide by the junction of said edges a tubular portion and outwardly extending free edges, a yieldable portion enclosed within said tubular portion, one of said free edges being longer than the other and arranged to lie in contact with one face of the shorter edge, and thence extending a fold over the free raw edge of the shorter edge and extending to the junction of said tubular portion and said shorter edge to wholly enclose said shorter edge, a stitching securing the three plies



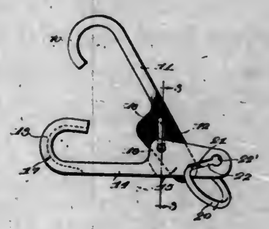
formed by said shorter edge and said folded longer edge substantially at said junction and waterproof adhesive material interposed between said opposite face and the adjacent folded over face of the longer edge of said strip, whereby said single stitch and such waterproof adhesive material maintain said tubular portion and said folded plies in position while providing a relatively stiff marginal tacking flange adapted to exclude moisture from entering the interior of said flange.

1,751,455. SIGN. JOHN J. DARBY, Washington, D. C. Filed June 28, 1929. Serial No. 374,443. 20 Claims. (Cl. 40—37.)



1. A sign comprising a mirror having a reflecting surface adapted to provide visible reflections, said surface being exposed to sunlight rays, stencil means disposed for the passage of light rays therethrough as they pass to the mirror, said stencil means being arranged to be visibly reflected by the mirror, and means movable for intermittently preventing and permitting passage of the light rays through the stencil means to the mirror without interrupting the visibility of the mirror, whereby to produce a flashing effect of the stencil indicia therein, said last-mentioned means when moved to light passing position being disposed so as not to produce a visible image in the mirror.

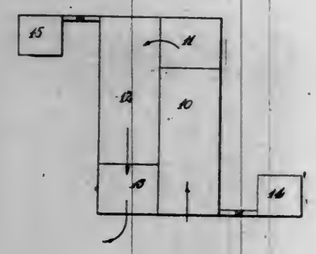
1,751,456. LIQUID-RESERVE TANK. ROBERT H. GILLESPIE, Little Rock, Ark., assignor to Mid-West Specialty Company, Little Rock, Ark. Filed Dec. 8, 1927. Serial No. 238,607. 4 Claims. (Cl. 158—46.5.)



1. In a liquid fuel supply system for an internal combustion engine, an emergency fuel supply tank, a conduit through which the liquid in said emergency tank may flow to the engine carburetor, normal fuel supply means connected to said conduit so that liquid fuel may pass through the conduit to fill the emergency tank during normal operation, a closing valve on said conduit, a float in said emergency tank, a vertically movable rod rigidly connected to said float and attached to said valve to close the same when the float is raised to a predetermined level by the liquid in said emergency tank, and a further conduit from said normal fuel supply means opening into said emergency tank at a point above said predetermined level to admit further liquid fuel into said emergency tank after said valve is closed whereby to maintain an excess buoyancy of said float over that required to close the valve.

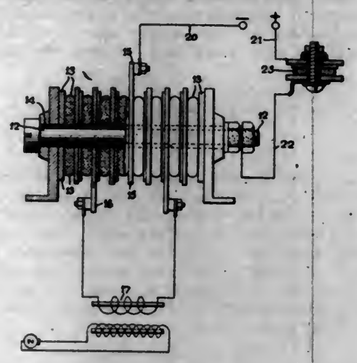
1,751,457. SAFETY VALVE. CHARLES F. HEYWOOD, Detroit, Mich., assignor to Sky Specialties Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 26, 1928. Serial No. 264,815. 10 Claims. (Cl. 137—53.)

5. A pressure regulating device adapted for connection between a pump and a receiver and establishing a path therebetween, said device having a chamber, a line of communication from said path to said chamber, pressure actuated relief means in said chamber, means opposing movement of said pressure member, and a normally closed check-valve-controlled vent from said line.



1,751,458. SAFETY SHACKLE SNAP. JOHN J. VAN VALKENBURG, Lowe Inlet, British Columbia, Canada. Filed July 12, 1929. Serial No. 377,829. 2 Claims. (Cl. 24—242.)

1. A snap hook comprising an elongated shank having a hook portion at one end and a flattened portion at its opposite end, a second shank having a guard portion at



one end for cooperation with said hook portion, a casing at the opposite end of said second shank and adapted to house said flattened portion when the hook and guard portions are engaged, a pin and slot connection between the inner end portions of the said flattened portion and said casing, and movable means in one position of its use being cooperative with the outer end portions of said flattened portion and said casing for locking said hook and guard portions in engaged positions and turnable to another position of use to allow the hook and guard portions to be released.

1,751,459. PROCESS FOR BIOLOGICAL PURIFICATION OF WASTE WATER. FRITZ SIMMER, Lesienice, near Lwow (Lemberg), Poland, assignor to Aktieselskabet Dansk Gaerings Industri, Copenhagen, Denmark, a Joint Stock Company. Filed Jan. 13, 1928, Serial No. 246,652, and in Austria Mar. 2, 1926. 20 Claims. (Cl. 210—9.)

1. The method of treating sewage which comprises subjecting the same to biological action in a plurality of successive metabiotic stages corresponding respectively to each of the main biochemical groups of the impurities contained in the sewage, wherein the sewage is acted upon by adding thereto at such successive stages particular micro-organisms specifically active for decomposing such particular main groups of polluting contents in the sewage, which particular organisms are brought to predominance within the said respective stages.

1,751,460. ASYMMETRIC ELECTRIC COUPLE. SAMUEL RUBEN, Brooklyn, N. Y., assignor to Ruben Rectifier Corporation, Englewood, N. J., a Corporation of Delaware. Filed Nov. 16, 1925. Serial No. 69,215. 12 Claims. (Cl. 175—366.)

1. In dry surface contact rectifying devices and the like, an asymmetric couple comprising an electro-positive electrode element chosen from the class of lighter chemical elements of the second and third periodic groups, an electronegative electrode element of a body containing a compound of a chemical element from the oxygen family in the sixth periodic group and resistance modifying material of a character adapted to impart self forming and self maintaining characteristics to the inverse current-blocking film which forms at the junction, and means for retaining said electrode elements operatively in contact under pressure.

5. In dry surface contact rectifying devices and the like, an asymmetric couple comprising an electropositive electrode element chosen from the class of lighter chemical elements of the second and third periodic groups, an electronegative electrode element of a body containing a compound of a chemical element from the oxygen family in the sixth periodic group with copper alloyed with a resistance increasing metal of a character adapted to impart self-forming and self-maintaining characteristics to the inverse current-blocking film which forms at the junction, and means for retaining said electrode elements operatively in contact under pressure.

CARNEGIE LIBRARY OF ATLANTA

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 392—No. 4 TUESDAY, MARCH 25, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interviews with Examiners

RULE 13. Interviews with Examiners concerning applications and other matters pending before the Office must be had in the Examiners' rooms at such times, within office hours, as the respective Examiners may designate; in the absence of the Primary Examiners, with the assistant in charge. Interviews will not be permitted at any other time or place without the written authority of the Commissioner. Interviews for the discussion of pending applications will not be had prior to the first official action thereon.

Disclaimers

1,388,434.—*Gustave V. Johnston*, Chicago, Ill. METHOD AND APPARATUS FOR BUTT-WELDING THIN-GAGE TUBING. Patent dated August 23, 1921. Disclaimer filed February 24, 1930, by the assignee by mesne assignments, *Steel and Tubes, Inc.*

Hereby does disclaim from the scope of claims 1 and 2 of the said Letters Patent any and all processes of butt-welding other than those in which the heavy electric current passing between the abutting edges to be welded is localized to a condensed stream going across the seam cleft, and in which the welding heat is produced in the edges only of the blank to form the weld at those edges and raise only a small burr; and your petitioner hereby does disclaim from the scope of claim 22 of the said Letters Patent any and all butt-welding apparatus other than those in which the welding throat is of slightly less sectional area than the cross section of the tube blank and the weld is effected by pressing together the contacting surfaces of the seam to a degree producing but a small burr accordant with the restriction of the greatest softening effect substantially to the contacting surfaces of the seam.

1,542,808.—*Charles Gordon*, Milwaukee, Wis., and *Alfred W. Redlin*, Saginaw, Mich. LATHE. Patent dated June 16, 1925. Disclaimer filed February 24, 1930, by the patentees and the assignee by mesne assignments, *The Gordon Form Lathe Company.*

Hereby enter this disclaimer and disclaim from the scope of claims 23 and 24 of said patent all lathes and other machine tools, except those employing single-point cutting tools for the turning of irregular or non-geometric forms out of metal.

1,586,764.—*Harold Joseph Wheston*, Lower Walton, near Warrington, England. BASE-EXCHANGE SILICATE AND PROCESS OF MAKING IT. Patent dated June 1, 1926. Disclaimer filed March 11, 1930, by the assignee by mesne assignments, *American Dowell Company.*

Enters this disclaimer to that part of the claims in the said specification which are in the following words, to wit:

"7. In the manufacture of a base-exchanging compound in the wet way the step which consists in forming a stiff or solid gel from and including the whole mass of a mixture of solutions of sodium silicate and sodium aluminate."

NOTICE

COPYING CLAIMS FROM PATENTS

Counsel prosecuting applications for patents are advised that in presenting any claim or claims copied or substantially copied from a previously issued patent there must be added a clear statement setting forth the origin of the claim or claims and the identifying data of the patent, since otherwise counsel may be deemed to be seeking, obviously improperly, to obtain a claim or claims to which the applicant is not entitled under the law without an interference, or the Examiner may be led into making an action different from what he would have made had he been in possession of all the facts. Examiners are directed to promptly call the personal attention of the Commissioner to any failure of counsel to follow the above indicated procedure.

THOMAS E. ROBERTSON,
Commissioner.

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

In re Williams

No. 2,141. Decided December 30, 1929

1. Patentability—Invention.

"There is no invention in changing the size and proportion of a device or machine so long as the construction and mode of operation remain the same. It is a settled principle of law that a mere carrying forward of an original patented conception involving only change of form, proportions or degree, or the substitution of equivalents doing the same thing as the original invention, by substantially the same means, is not such an invention as will sustain a patent, even though the changes of the kind may produce better results than prior inventions."

2. Same—Connectors for Electrical Conductors.

Certain claims for connectors for electrical conductors *Held* unpatentable over the prior art.

Appeal from the Patent Office. Affirmed.

Mr. J. H. Milans and *Mr. C. T. Milans* for Williams.

Mr. T. A. Hostetler for the Commissioner of Patents.

Graham, *P. J.:*

Paul F. Williams, the appellant, filed his claim in the Patent Office on January 8, 1921, for a patent on improvements in connectors for electrical conductors. The claims involved in this proceeding are numbered 11, 12, 13, 19, 20, and 21. Claims 11, 12, and 13 were rejected by the Examiner by reference to a patent to the appellant, Williams, No. 1,228,156, dated May 29, 1917, and claims 19, 20, and 21 on a patent to Wyman, No. 1,441,193, dated January 2, 1923. The Board of Appeals affirmed this decision and the applicant has appealed.

The disputed claims are as follows:

11. In a device of the class specified, plug and socket terminals and an arcing ring detachably mounted at the open end of the socket terminal.

12. In a device of the class specified, the combination of a tubular insulator and a cap therefor, a socket terminal carried by the tubular insulator, a plug terminal carried by the cap and an arcing ring detachably mounted at the open end of the socket terminal.

13. In a device of the class specified, the combination of a tubular insulator and a cap therefor, a socket terminal carried by the tubular insulator, a plug terminal carried by the cap and an arcing ring having threaded connection with the open end of the socket terminal.

19. A device of the class specified having separable terminals each of which has a detachable and replaceable arcing member.

20. In a device of the class specified a plug member having a detachable contact member and a socket member having a detachable arcing ring for preventing arcing on said socket member.

21. In a view of the class specified a connector having an elongated central recess, a plug member for contacting within said recess, said plug member having a removable outer contact member, and said connector having a removable shouldered annular member forming the exposed end of said connector.

The device which the appellant claims to have improved is that form of electrical conductor which is ordinarily known as a pothead conductor. In this device, which is intended to make an adjustable connection between a cable and an overhead conductor, two members are provided, both made of some sort of nonconducting material such as porcelain, one substantially tubular in form and the other a cap adapted to fit over and upon the upper end of the tubular member. The tubular member contains a metallic socket while the cap member contains a metallic pin or plug adapted to be inserted into the aforesaid socket. The said socket is connected by suitable devices to the cable, while the plug is likewise connected to the overhead conductor. When the two are in contact, an electrical connection is made.

The claimed novelty in appellant's device, as set out in said claims 11, 12, and 13, is a metallic ring surrounding the end of the metallic socket in the tubular member, and which is claimed to be so inserted for the purpose of constituting an arcing ring. It is small and removable, and it is claimed receives whatever burning or damaging effect there may be by the spark caused by the separation of the plug and socket. The specifications disclose that this arcing ring is attached to the socket member. These specifications are as follows:

> Another ring or member 25 is preferably placed upon the top of the threaded end 20, said member 25 being also screw threaded so that it may be screwed down on the top of the portion 20 and being also provided with an inwardly extending flange 26 adapted to fit down on the top of the portion 20. This ring or member 25 serves as a removable end or portion of the member 5, and so receives whatever burning or damaging effect there may be by the spark caused by the separation of the terminals 9 and 5. Being removable, the ring 25, which may be called the "arcing" ring, may be removed when worn or burnt out and another one may be put in its place. The arcing ring 26 is preferably provided with convenient means for turning it to put it in its proper place and remove it therefrom, as for example by providing its top flange with apertures 27—27, in which the prongs or pins of a wrench may be inserted.

The Examiner and the Board of Appeals both held that all these principles and elements were fully disclosed in the reference patent to Williams.

We have examined the Williams reference with care. There is considerable doubt, induced by the lack of clearness in the drawings and ambiguity of the specifications in the reference, as to the exact structure of the device therein described. The specifications are, in part, as follows:

> Referring to Fig. 4. I have shown an individual device involving a disconnecting arrangement. The body part 12 contains a socket member 47, into the lower end of which the bared end 23^b of the cable conductor is inserted. This member 47 has a socket 48 into which a plug member 49 is introduced and held by screws 26^b—26^b, passing through the upper end of the insulating tube or member 12. The plug member 49 is hollow or cylindrical having a collar 50 at its upper end fitting against the upper end of the socket member 47. A plug connecting device 51 has a reduced end portion 52 which fits into the member 49 * * *.

From the mere reading of these specifications it would appear that the member 49 of the reference, and which bears the cylindrical collar 50, might be considered as a plug which is withdrawn when the electrical connection is broken. The Examiner, however, and the Board of Appeals, both consider it as a bushing which is left in place in the socket on the withdrawal of the plug, leaving the collar 50 in place around the opening in the socket terminal. The appellant insists in his brief and argument that there are typographical errors in the specifications filed in the matter of said reference patent, and that by read-

ing certain language into these specifications, it will be found that the member 49 of the reference patent is not a bushing but a removable plug, and that the collar member 50 of the reference patent is attached to the base of the plug in the plug terminal. We are not permitted to thus enlarge the specifications which have been filed, and which have been made the basis of the issuance of the patent in question. In measuring the claims of the appellant here by the reference patent, the latter must be taken with its claims, drawings, and specifications as they appear of record.

It is apparent that appellant's position in this respect differs here from that taken by him in the Patent Office. In his petition for rehearing, filed with the Board of Appeals, he states "the part 49 is merely a lining for the terminal 37." Again he refers to it in this petition as "the whole lining of the socket recess." Further he states "in the second place the part 49 is not mounted at the open end of the socket terminal; instead the part 49 is a sleeve and it extends the whole length of the socket terminal and not merely at the open end thereof." Furtner expressions of the same kind are used to the extent that it is apparent that appellant considered part 49 to be a bushing or sleeve, bearing at its upper extremity, and at the orifice of the socket terminal, a brass collar extending outward over the edge of the socket member 48. This bushing 49 is removable, this being apparent from the specifications referred to, wherein it is stated that it is held in place by screws. It is also equally obvious that if member 49 was the removable plug member, it would not be held in place with set screws, as we have seen it is.

[1, 2] It is argued by appellant that the ring or member 25 shown in his present application, serves as a removable end, or portion of the socket member, and receives whatever burning or damaging effect there may be by the spark caused by the separation of the plug and socket terminals; that this is a comparatively cheap and inexpensive appliance which performs a useful function in protecting the expensive socket member from burning and injury. We are unable to see any material difference in this respect between the structure and function of appellant's member 25 and the bushing member 49 of the reference patent. It is true the member 25 is attached to the upper portion of the socket member and extends downwardly upon the exterior and not upon the interior portion thereof, as does member 49 of the reference patent. Their functions, however, and structure, are apparently the same. We agree with the tribunals in the Patent Office that there is no novelty in the claim and that the reference patent was properly cited in support of the refusal of claims 11, 12, and 13.

There is no invention in changing the size and proportion of a device or machine so long as the construction and mode of operation remain the same. *Kil-Nock Co.* v. *Chicago Plating Co.*, 10 F. (2d) 536; *Westinghouse Electric & Mfg. Co.* v. *Pittsburgh Transformer Co.*, 10 F. (2d) 593; *Linde Air Products Co.* v. *Morse Dry Dock Co.*, 239 F. 909–917. It is a settled principle of law that a mere carrying forward of an original patented conception involving only change of form, proportions or degree, or the substitution of equivalents doing the same thing as the original invention, by substantially the same means, is not such an invention as will sustain a patent, even though the changes of the kind may produce better results than prior inventions. *In re Iwan*, 95 O. G. 441, 17 App. D. C. 566; *In re Marshutz*, 85 O. G. 778, 13 App. D. C. 228; *Smith* v. *Nichols*, 21 Wall 112, 119.

Claims 19, 20, and 21 were rejected on Wyman. These claims are based upon the principle of terminals each having a detachable and replaceable arcing member. The Patent Office has concluded that Wyman shows this. On inspection we agree with the Office in this respect. While the arcing member 21 in the Wyman patent is not located at the end of the plug connection, nevertheless it is quite plainly apparent that it is detachable and can be removed without injury to the balance of the plug member. Its location is not particularly involved, so far as the claims are concerned. All these claims rest upon is that each terminal shall have a detachable and replaceable arcing member. These objects, we think, were accomplished in the Wyman reference.

We therefore conclude that the decision of the Board of Appeals as to all the claims should be affirmed. This will be the order.

Affirmed.

U. S. Court of Customs and Patent Appeals

JARDINE v. HARTOG

No. 2,143. Decided January 13, 1930

INTERFERENCE—PRIORITY.

Priority *Held* properly awarded to H. on the ground that he, the senior party, had established priority of conception and that J., the junior party, had not established a reduction to practice prior to his own filing date.

APPEAL from the Patent Office. Affirmed.

Mr. Frederic M. Bosworth, *Mr. F. O. Richey*, *Mr. B. D. Watts*, *Mr. A. H. Van Horn*, and *Mr. James A. Hoffman* for Jardine.

Mr. L. C. Kingsland and *Mr. J. D. Rippey* for Hartog.

HATFIELD, *J.*:

This is an appeal in an interference proceeding from a decision of the Commissioner of Patents.

The Examiner of Interferences, the Examiners in Chief, and the Commissioner of Patents have concurred in awarding priority of invention to appellee, Stephen D. Hartog.

The invention in issue relates to certain structural improvements in pistons for internal-combustion engines.

The counts in issue read as follows:

1. In a piston of the class described, a cup-like head comprising a pressure receiving end and a wall portion, a skirt circumferentially disconnected from the wall portion of the head and divided from end to end, and skirt carriers connecting said skirt to the pressure receiving end, said skirt carriers being disconnected from the wall portion of the head and susceptible of being slightly flexed radially.

2. A piston comprising a head, a skirt having resilient sections separated from said head by a slit extending continuously around the piston, and means for yieldingly connecting said skirt sections with said head.

As aluminum expands more rapidly than iron, when heated, it has always been necessary, when using aluminum pistons, to allow considerable clearing for expansion, so that, when heated, they would not "score" the iron cylinders. When the pistons were cold, they not only "slapped" and made considerable noise, but oil was permitted to enter into, and gas to escape from, the cylinders. These difficulties, according to the claims of the parties to this interference, have been solved by the involved invention.

Hartog's application, No. 359,137, was filed on February 16, 1920.

Jardine's application, No. 450,898, is a renewal of an application originally filed March 11, 1920. Jardine is, therefore, the junior party and has the burden of proof.

In his preliminary statement, Hartog made the following claims: that he conceived the invention and disclosed it to others on or about November 15, 1918; that he made his first drawings on or about August 1, 1919; and that, on or about September 1, 1919, he reduced the invention to practice by making a piston of the kind in issue.

In his preliminary statement as to count 1, Jardine alleged that he conceived the invention and disclosed it to others on or about May 11, 1919; that he made drawings on or about July 24, 1919; that on or about March 9, 1920, he made the first written description of the invention; and that he never made or operated any full-sized pistons embodying the invention.

Originally, there were two interferences—Nos. 49,578 and 49,583. Later these two interferences were consolidated, and count 2 involved here was taken from interference No. 49,583.

In his preliminary statement as to count 2, Jardine alleged that he conceived the invention and disclosed it to others on or about May 11, 1919; that on or about July 24, 1919, he made drawings; that on or about March 9, 1920, he prepared a written description; that he first embodied the invention "in the full sized piston casting which was made on or about December 13, 1919"; and that on or about March 5, 1920, pistons embodying the invention were first successfully operated. Thereafter, and during the progress of the taking of testimony, Jardine filed a motion to amend his preliminary statement as to count 2, in the following respects:

5. That he first embodied the invention of the said count in a full sized piston, which was made on or about August 5, 1919.

6. That on or about August 5, 1919, the first full sized piston embodying the invention of the said count was first successfully operated in Cleveland, Ohio; * * *.

A ruling on the motion to amend the preliminary statement was deferred by the Examiner of Interferences until after the evidence of the parties had been submitted. When the evidence was finally submitted, the Examiner of Interferences denied the motion on the ground that Jardine had failed to establish the facts alleged therein.

Each of the tribunals below have exhaustively considered and analyzed the evidence, and have concurred in awarding priority of invention to appellee, Hartog. Accordingly, this court ought not to reverse the decision of the Commissioner, unless it is manifestly erroneous. Authorities need not be cited in support of this proposition.

The Examiner of Interferences held that appellant was entitled to May 11, 1919, for conception and disclosure; that appellee, Hartog, was entitled to about October 6, 1919, for conception and disclosure. He found that neither party had reduced the invention to practice, prior to the filing of their respective applications; and that, while appellant was the first to conceive the invention, he was not diligent in reducing it to practice; and, therefore, as appellee was first to file his application, he was entitled to an award of priority.

The Examiners in Chief held, and properly so we think, that appellee actually conceived and disclosed the invention to others as early as December, 1918; that neither party had reduced the invention to practice prior to the filing of their respective applications; that appellant was entitled to no earlier date than July for conception and disclosure; and that, as appellee was the first to file an application for the invention, he was entitled to an award of priority.

In making these findings, the Examiners in Chief discussed the evidence in considerable detail. It is, therefore, unnecessary for us to restate the facts upon which the decision was based.

The Examiners in Chief further said that, if they were wrong in holding that appellee was the first to conceive the invention, nevertheless, he was entitled to an award of priority, because of the failure of appellant to exercise diligence in reducing the invention to practice.

The Commissioner of Patents affirmed the decision of the Examiners in Chief, and, again, the facts in the case were clearly, concisely, and, in our opinion, correctly stated.

Although he awarded priority of invention to appellee, the Examiner of Interferences, in considering the evidence in the case, extended the utmost consideration to appellant, the junior party. We quote from his decision:

There are some weak points in the testimony of Stark, Miller and Kaufman. Stark, for instance, fixes the date of disclosure by reference to a business conference between himself and Hartog which related to an altogether different matter and he admitted (Q. 8, p. 79, Hartog's printed record) he met Hartog on several occasions thereafter, and on some of these they discussed Hartog's piston. Stark, therefore, must be considered to fix the disclosure early in December, 1918, by sheer feat of memory. The same may be said about Kauffman (Q. 9) and Miller (X Q. 38).

Notwithstanding this and notwithstanding the witnesses were testifying some seven years after the event, it is believed to be proper if Jardine is to be accorded May 11, 1919, for disclosure to accept the testimony as establishing a date as early as July 22, 1919, for disclosure of the invention, since Hartog and his son Paul, Miller, Kauffman, and Stark all gave testimony to support a date as early as that and even much earlier. *Indeed, it would be as proper to accord Hartog a date for disclosure prior to May 11, 1919, but that is not important as will appear hereinafter.* (Italics ours.)

It is true that the witnesses, Stark and Miller, who said that Hartog disclosed the invention to them in

December, 1918, testified from memory. However, Stark's testimony was given in September, 1921, in another interference proceeding—No. 45,351, and it was incorporated into this record by stipulation of counsel. Therefore, the criticism that his testimony was given seven years after the matters involved therein had taken place, is not well founded.

The testimony of the witness, Stark, is clear, concise, and intelligently positive. Furthermore, the reasons he gave for recalling that Hartog disclosed the invention to him in December, 1918, are reasonable and plausible.

It is true that no drawings or other documentary evidence was offered to corroborate this witness. Had his testimony been fabricated, it would have been an easy matter for him to have produced corroborative documentary evidence. His testimony and that of Hartog is, to some extent, corroborated by that of the witness, Prudot, who recalled that Hartog and Stark had some conversation concerning Hartog's invention, and that Hartog explained the invention in detail to Stark. He frankly admitted, however, that he did not recall the details of the conversation.

It further appears that Hartog disclosed the invention to the witness, Miller, sometime in December, 1918. Miller was associated in business with Hartog during the years 1918 and 1919; and the reasons he gave for recalling the conversation with Hartog and the date when it occurred are reasonable, and in our opinion, his testimony is entitled to great weight.

We have searched the record to ascertain whether appellant is entitled to a finding that he reduced the invention to practice prior to his filing date. We are unable to find any evidence from which such a fact may be deduced.

For at least three months during the summer and fall of 1919, appellant's assignee—The Aluminum Castings Company—was engaged in testing a "Ricardo piston." There is testimony to the effect that someone "split" the "skirt" of one of the "Ricardo pistons"; that it was then tested by "hand pressure" to ascertain its flexibility; and that it was found to be sufficiently flexible for operative purposes. However, assuming that the altered "Ricardo piston" conformed to the subject matter of the issue, we are not impressed with the contention that the involved invention and its intended functions are sufficiently simple to make a "hand pressure" test an actual reduction to practice.

Counsel for appellant, in arguing that the hand-pressure test of the alleged invention was an actual reduction to practice, has gone so far as to say:

> We say that the Aluminum Castings Company was justified in continuing the tests on the Ricardo piston before testing the piston of Exhibits 1 and 2, both because the Ricardo piston was routed ahead of Exhibits 1 and 2 and because since the improvement of the piston of Exhibits 1 and 2 is so slightly different from that of the Ricardo piston and the effect of the changes were so well known that the work upon the Ricardo piston was work upon the Jardine piston of Exhibits 1 and 2. • • • We would not contend that this hand test was sufficient to demonstrate its operativeness, if the Ricardo piston had been a virgin piston. • • • The splitting of the skirt was an improvement which, as we have already said, had been tried out in a number of other types of pistons. The change in operation which it would effect in the Ricardo piston was well known. In fact, not even hand tests were necessary to prove to the skilled engineer the effect upon the Ricardo piston of splitting the skirt.

These statements come very close to suggesting that the alleged invention is not patentable.

It seems perfectly obvious from the testimony that the officers of The Aluminum Castings Company had but little confidence in the alleged invention of appellant until late in the year 1919 or early in the year 1920. As stated by the witness, Watts, (at that time counsel for appellant):

> The policy [of appellant's assignee—The Aluminum Castings Company] was always to be certain that an application was not being filed on a half-baked idea.

In concluding his opinion, the Commissioner of Patents said:

> The party Hartog was the first to conceive and the first to reduce to practice, constructively, but even if the party Jardine had been first to conceive, his lack of diligence would prevent him from prevailing. It follows therefore that priority should be awarded to Hartog.

We agree with the views expressed by the Commissioner of Patents and his decision is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE WALDHEIM

No. 2,168. Decided December 19, 1929

1. PATENTABILITY—WORK-WEB MAGAZINES.

Claims for a work-web magazine for feeding work webs to a typewriting machine *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Burnham C. Stickney and *Mr. L. H. Campbell* for Waldheim.

Mr. T. A. Hostetler for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from the decision of the Commissioner of Patents affirming that of the Examiners in Chief, holding unpatentable all the claims of applicant, 13 in number.

Claim 11 is illustrative of the claims in issue and reads as follows:

> 11. A work-web-magazine for feeding work-webs to a typewriting machine, comprising a series of tiers of work-web containers mounted for rotation about a vertical axis and arranged so that the containers of any tier of the series may be brought into effective work-feeding position by rotation of the magazine, each container having an open front end, and the containers of each tier being arranged with their open front ends projecting progressively outwardly from top to bottom to prevent interference of an upper container with the work being fed from the lower container.

The references are: Smith, 1,380,746, June 7, 1921; Williams, 489,665, January 10, 1893; Williams, 315,688, April 14, 1885; Nauerth, 317,175, May 5, 1885.

While the claim above quoted refers in general terms to a typewriting machine the specific typewriting machine involved is a continuous billing typewriting machine and the claimed invention is for a revolving magazine for selectively feeding work webs to such a machine. A work web comprises several layers or plies, usually having printed forms. Carbon sheets are interleaved between the plies and are mounted on a carbon carriage so as to advance with the web while typing. When a different set of forms is to be typed it is necessary to remove the web temporarily from the typewriter and bring into use a second web with its carbon sheets.

Appellant's device is described in his specification as follows:

> For convenience in handling and interchanging a plurality of webs, this invention provides, in connection with a table on which the typewriting machine is mounted, a magazine comprising a plurality of tiers of containers, each container or compartment having positioned therein a web-pack and its attached carbon-holder (when the latter is not in use.) The magazine is revolubly mounted for movement about a vertical axis and the tiers are so arranged that any one of them may be brought into effective feeding position, said position being preferably directly to the rear of the machine, by rotating said magazine about its vertical axis. The tiers are so arranged that the maximum depth of containers may be utilized within the lateral dimensions of the magazine. When a tier has been so positioned, the web from any of the containers in said tier may be fed to the machine. Each container, when in effective feeding position, has an open end to permit the unobstructed withdrawal of the web from the pack in that container. To prevent interference of an upper container of a tier with the web from a lower container in that tier, the containers may be arranged with their open ends projecting progressively outwardly from top to bottom. When the web in use is to be replaced by a second web, it is withdrawn from the machine together with its carbon-holder and deposited in its container. The second web with its carbon-holder is then mounted on the machine, the magazine having previously been rotated if the container of the second web is in a different tier from the container of the first web.

In the Smith patent, two web-feeding drawers are shown, one above the other, the two drawers being in vertical register with the typewriting machine. The drawers are located in the stand supporting the typewriting machine. The patent states that "the number of webs may be increased if desired, and additional drawers provided." Appellant points out, however, that in the Smith device there would not be room for additional drawers between the top of the stand and the floor.

The patent to Williams, No. 489,665, discloses a printer's cabinet, designed to be used by a printer and to hold leads, rules, etc., in a convenient position whereby they may be reached by rotating the cabinet.

The patent to Williams, No. 315,668, shows a bag rack adapted to hold a number of paper bags of different sizes. The frame is formed of a plurality of uprights and shelves, and is pyramidal in shape. It also states that the rack may be set upon a pivot to facilitate the turning of the frame.

The patent to Nauerth discloses a revolving book-case to enable a person to have easy access to the books without moving from one side to the other.

The Board of Appeals, after describing appellant's device, and the devices disclosed in the references above mentioned, said:

> In view of these patents we see no invention in arranging the plurality of containers of Smith on the respective sides of the revolving cabinets of Nauerth or Williams.

The Commissioner, in affirming this decision, said:

> The question for decision in its simplest form appears to be whether it involved invention to substitute for the plurality of web containers shown in the Smith patent a plurality of containers mounted for rotation about a vertical axis, such as disclosed in the Williams patent.

Appellant contends that this is not a correct statement of the issue, and insists that the question for decision was whether the magazine for feeding work webs to a typewriting machine, particularly pointed out and distinctly claimed in the claims appealed, was an invention. We think appellant is technically correct in this contention, but it is clear to us that the Commissioner was of the opinion that a plurality of containers mounted for rotation about a vertical axis, such as disclosed in the Williams patent, substituted for the plurality of web containers shown in the Smith patent, would be the equivalent of appellant's device, and therefore, as stated by him, the question was whether such substitution involved invention. He therefore stated the final question after resolving a preliminary question adversely to appellant.

All of the tribunals below have held that the device here in question did not involve invention, and we are of the same opinion.

We may take judicial notice that the continuous billing typewriting machines are of comparatively recent origin. It is stated in appellant's brief that the continuous billing typewriter machine is peculiar to his assignee; that it developed its manufacture and commercial use; that it is also the assignee of the Smith patent, and that said patent originated because a want arose in the art to feed two webs to the continuous billing machine, and that when a further want arose for feeding more than two webs to the machine the assignee produced the claimed invention here in issue. We may accept all this as true, although the record does not disclose all of these facts, but accepting the statements in the brief, it would seem that when the want arose for feeding more than two webs to the machine, the way had already been indicated by the disclosures in prior patents how it could be done, and that it did not involve invention to substitute the plurality of containers set out in such disclosures for the plurality of webs shown in the Smith patent.

The case of *In re Smith*, 367 O. G. 3, 23 F(2d) 771, involved a question very similar to that here in issue. In that case Smith, the patentee in one of the references in this case, and whose assignee is stated in appellant's brief to be the same as his assignee, involved the patentability of a revolving web container for feeding of a plurality of webs to a typewriting machine. The principal reference in that case was the same as the principal reference in the case at bar, viz, Smith, Patent No. 1,380,746. The Court of Appeals of the District of Columbia affirmed the decision of the Patent Office, holding that the substitution of the revolving carrier for the sliding drawers of the prior patents did not rise to the dignity of invention. The court said:

> The reel type of carrier was old, and we are constrained to agree with the Patent Office that invention was not involved in adapting it to the device shown in applicant's prior patents.

We think there is no difference in principle between that case and the case at bar.

We find no reversible error in the decision of the Commissioner and it is affirmed.

Affirmed.

CARNEGIE LIBRARY OF ATLANTA

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 25, 1930

[VOL. 392. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 286,863. BEARDMORE & COMPANY, Toronto, Ontario, Canada. Filed June 29, 1929.

FLEXOTAN

For Leather.
Claims use since July 2, 1928.

Ser. No. 288,978. PACATOME COMPANY, San Francisco, Calif. Filed Aug. 24, 1929.

Plastik-Pac

No claim is made to the word "Plastik" apart from the mark as shown in the drawing.
For Diatomaceous Silica Used as an Admixture for Concrete.
Claims use since Jan. 28, 1929.

Ser. No. 294,122. F. A. RUPERT COMPANY, INC., Gloversville, N. Y. Filed Dec. 27, 1929.

All the words appearing on the trade-mark except the words "Capeca" and "Abner Steele" apart from the mark are herewith disclaimed.
For Washable Leather.
Claims use since June 1, 1929.

QUAKER BLOCK

The exclusive use of the word "Block" is disclaimed except in connection with the mark as shown.
For Coal.
Claims use since Apr. 1, 1926.

CLASS 2

Receptacles

Ser. No. 280,713. KLAUER MANUFACTURING COMPANY, Dubuque, Iowa. Filed Mar. 14, 1929.

For Stock and Storage Tanks and Underground Garbage Receivers.
Claims use since January, 1906.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 284,743. GIOVANNI PERRONE, Genoa, Italy. Filed May 28, 1929.

ZAPOLAC

For Metal Polish.
Claims use since May 8, 1929.

Ser. No. 292,486. COLGATE-PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed Nov. 16, 1929.

BEAUTY BUBBLE

For Soap.
Claims use since Jan. 3, 1928.

CLASS 5

Adhesives

Ser. No. 295,366. EASTMAN KODAK COMPANY, Rochester, N. Y. Filed Jan. 30, 1930.

KODATAPE

For Adhesive Tape.
Claims use since Jan. 17, 1930.

Ser. No. 295,495. SIEGFRIED ROOZENDAAL, New York, N. Y. Filed Feb. 1, 1930.

IPAC

For Adhesive Patching Material (Used in the Mending or Patching of Worn or Torn Pieces in Fabric or Cloth).
Claims use since Aug. 27, 1927.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 276,460. ELSIE I. CONAN, doing business as Helene Crystal Laboratory, Venice, Los Angeles, Calif. Filed Dec. 8, 1928.

CRYSTAL

The portrait forming a feature of the mark is fanciful. The word "Crystal" is disclaimed apart from the mark as shown on the drawing.
For Skin Preparation Especially Designed for the Purpose of Peeling Skin in Beauty-Culture Work.
Claims use since Oct. 15, 1928.

Ser. No. 279,053. LEYDE & KIESWETTER, Milwaukee, Wis. Filed Feb. 8, 1929.

Leyde's Quick Relief

Raymond Leyde

The portrait shown in the drawing is that of Raymond Leyde, and the signature appearing in the drawing is that of Raymond Leyde, no claim being made to the words "Quick Relief" apart from the mark shown.
For Preparation for Treating Sore Throat, Tonsilitis, Pneumonia, Appendicitis, Mashed Fingers, Burns, Scalds, Headaches, Colds, Neuralgia, Lumbago, Inflammation of the Bowels, Asthma, and Bronchitis.
Claims use since Nov. 19, 1928.

Ser. No. 287,879. MAX LEWIS, doing business as Lewis Laboratories, Los Angeles, Calif. Filed July 30, 1929.

Femigiene
FEMININE HYGIENE

Applicant hereby waives and disclaims the words "Feminine" and "Hygiene" apart from the trade-mark as shown on the drawing.
For Vaginal Antiseptic Jelly.
Claims use since June 17, 1929.

Ser. No. 289,015. FEDERAL PHOSPHORUS COMPANY, Birmingham, Ala. Filed Aug. 26, 1929.

AROCLOR

For Chlorinated Aromatic Hydrocarbons and Their Derivatives, Including Chlorinated Diphenyl.
Claims use since Aug. 21, 1929.

Ser. No. 289,792. ROSCOE C. MENERAY, doing business as Radiator Seal Company, Council Bluffs, Iowa. Filed Sept. 14, 1929.

No claim being made to the words "Radiator Seal and Cleaner, Stops Leaks, No Repair No Pay" apart from the mark shown in the drawing.
For Sealing Solution Used in Repairing Leaks in Radiators.
Claims use since July 1, 1922.

Ser. No. 291,058. EDWARD J. KELLY, doing business as Hu-Kel Chemical Co., Washington, Pa. Filed Oct. 14, 1929.

HU-KEL
HK

For Preparation for Treating Pain, Burns, and Soreness.
Claims use since May, 1929

Ser. No. 291,093. STEVENS LUKE, doing business as Rose City Chemical Company and Stevens Luke Co., Thomasville, Ga. Filed Oct. 15, 1929.

LU-ORA

The linings shown on the drawing are used for shading purposes only.
For Preparation Used as a Mouth Wash, a Spray, Gargle, and Douche.
Claims use since Apr. 1, 1929.

Ser. No. 293,465. CHEMOSAN-UNION UND FRITZ-PEZOLDT A. G., Vienna, Austria. Filed Dec. 10, 1929.

NAUTISAN

For Medicaments in Solid and Liquid Form for Treating Vomiting.
Claims use since Feb. 23, 1927.

Ser. No. 293,466. CHEMOSAN-UNION UND FRITZ-PEZOLDT A. G., Vienna, Austria. Filed Dec. 10, 1929.

RHINOSTOP

For Medicaments in Solid and Liquid Form for Treating All Vasomotoric Diseases of the Mucous Membranes of the Nose and of the Ears.
Claims use since May 25, 1927.

Ser. No. 293,484. PHARMAZEUTISCHE INDUSTRIE A. G., Vienna, Austria. Filed Dec. 10, 1929.

VARICOSMON

For Medicinal Preparation in Solid and Liquid Form for the Unbloody Treatment of Varixes.
Claims use since Oct. 19, 1925.

Ser. No. 293,492. SWAMP & DIXIE LABORATORIES, INC., Fort Smith, Ark. Filed Dec. 10, 1929.

SWAMP

For Chill and Fever Tonic.
Claims use since 1899.

Ser. No. 293,713. THE CAREY SALT COMPANY, Hutchinson, Kans. Filed Dec. 16, 1929.

SAL
EL TORO
MARCA

No claim being made to the words "Sal" and "Marca" apart from the mark shown.
For Salt.
Claims use since May, 1929.

Ser. No. 293,881. LABORATOIRES DARRASSE, SOCIETE A RESPONSABILITE LIMITEE, Nanterre, France. Filed Dec. 19, 1929.

EUPNINE

For Solution of Iodine and Caffeine Used as a Heart Stimulant to Increase Intravascular Pressure, to Check Dyspnœa, and to Promote Diuresis.
Claims use since Aug. 20, 1924.

Ser. No. 293,945. DR. PAUL WANGEMANN, Berlin-Wilmersdorf, Germany. Filed Dec. 20, 1929.

Anticalcolum

For Medicinal Preparation for Gallstones.
Claims use since Oct. 12, 1927.

Ser. No. 293,951. BUNYAN B. BRANNAN, Roanoke, Ala. Filed Dec. 21, 1929.

B.C.P.

The photograph constituting a part of the mark is a pen and ink drawing of a portrait of the applicant, Bunyan B. Brannan.
For Preparation for the Treatment of Coughs and Colds.
Claims use since December, 1928.

Ser. No. 294,108. DUDLEY A. BURROWS, doing business as M. B. S. Prod. Co., Baltimore, Md. Filed Dec. 27, 1929.

For Salve Used in the Treatment of Boils, Bone Felons, Carbuncles, Sores, Ulcers, and Skin Diseases.
Claims use since Dec. 1, 1928.

Ser. No. 294,190. DORIS TOTTEN, doing business as Totten's Chemical Company, Chicago, Ill. Filed Dec. 28, 1929.

TOTTEN'S

The surname "Totten's" is disclaimed apart from the other features of the mark shown in the drawing.
For Chilblain Liniment.
Claims use since Sept. 1, 1929.

Ser. No. 294,191. DORIS TOTTEN, doing business as Totten's Chemical Company, Chicago, Ill. Filed Dec. 28, 1929.

TOTTEN'S

The surname "Totten's" is disclaimed apart from the other features of the mark shown in the drawing.
For Preparation for Treating Ulcerated Eyelids.
Claims use since Sept. 1, 1929.

Ser. No. 294,343. EDWARD C. DORNBUSCH, doing business as De Cue's Laboratories, Cleveland, Ohio. Filed Jan. 8, 1930.

For Ointment for the Treatment of Facial Eruptions, Ulcers, Hemorrhoids, Dry Catarrh, and Body Sores.
Claims use since Aug. 1, 1929.

Ser. No. 294,563. B. T. BABBITT, INC., New York, N. Y. Filed Jan. 9, 1930.

The drawing being lined to indicate the colors red and blue and no claim being made to the exclusive use of the word "Lye" apart from the mark as shown in the drawing.
For Lye.
Claims use since Feb. 1, 1912.

Ser. No. 294,567. B. T. BABBITT, INC., New York, N. Y. Filed Jan. 9, 1930.

OLD
HOMESTEAD
LYE

No claim being made to the exclusive use of the word "Lye" apart from the mark as shown in the drawing.
For Lye.
Claims use since 1926.

Ser. No. 294,571. B. T. BABBITT, INC., New York, N. Y Filed Jan. 9, 1930.

WASHINGTON

LYE

The portrait displayed in the drawing being that of George Washington and no claim being made to the exclusive use of the word "Lye" apart from the mark shown in the drawing.
For Lye.
Claims use since 1924.

Ser. No. 294,755. CHARLES FITZGERALD, doing business as Bovaid Company, New York, N. Y. Filed Jan. 14, 1930.

For Antiseptic Wash.
Claims use since Jan. 2, 1930.

Ser. No. 294,862. RENÉE THORNTON, New York, N. Y. Filed Jan. 16, 1930.

The linings appearing in the drawing are to indicate the color yellow or golden, an essential feature of the mark.

For Astringents, Astringent Cerates, Almond Meal, Bleach Creams, Cleansing Creams, Cold Creams, Complexion Creams, Face Creams, Pore Creams, Vanishing Creams, Brown Skin Face Powders, Cerates for Use as a Skin Cleanser and to Improve the Complexion, Complexion Powders, Face Powders, Talcum Powders, After-Shaving Lotions, Hand Lotions, Skin Lotions; Liquid Scalp Cleanser, for the Prevention of Dandruff and for Producing a Healthy Scarfskin upon the Scalp; Skin Tonics, Hair Oils, Muscle Oils, Shampoos, Hair Tonics, Bath Salts, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Powder and Rouge Compacts, Eyebrow and Eyelash Growers, Eyebrow Pencils, Lip Sticks; Rusmas, a Depilatory for the Removal of Superfluous Hair; Toilet Waters, Perfumes, and Solid Perfumes.

The trade-mark claimed consists of the characteristic design shown in the drawing irrespective of the particular color in which this design is printed, and although blue is the color in which the characteristic trade-mark is ordinarily printed the lines shown in the drawing are not intended to be restrictively indicative of any particular color.

For Phosphate and Lactate Mixture Suitable for Use with Sodium Bicarbonate for the Same Purpose as Baking Powder.

Claims use since Dec. 26, 1929.

Ser. No. 295,425. LE-ROY W. EARL, doing business as Hi-Rise Baking Powder Company, Chicago, Ill. Filed Jan. 31, 1930.

HI-RISE

For Baking Powder.
Claims use since Jan. 21, 1930.

Ser. No. 295,583. MAXIMO TABOAS, New York, N. Y. Filed Feb. 4, 1930.

NERVIOSAN

For General Tonic.
Claims use since January, 1928.

Ser. No. 295,623. KILSEM MANUFACTURING COMPANY, Baltimore, Md. Filed Feb. 5, 1930.

"BUG-GO"

For Liquid Insecticide.
Claims use since Jan. 1, 1929.

Ser. No. 295,824. ROBERT M. BRAME, Jr., doing business as The Jake Co., North Wilkesboro, N. C. Filed Feb. 8, 1930.

JAKE

For Medical Preparation for Headache, Nervousness, Neuralgia, Toothache, Colds, Rheumatic and Female Pains.
Claims use since Sept. 1, 1928.

Ser. No. 295,838. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Feb. 10, 1930.

SEMESAN JR.

For Fungicide, Seed Disinfectant.
Claims use since Mar. 29, 1926.

Ser. No. 295,839. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Feb. 10, 1930.

SEMESAN BEL

For Fungicide, Seed Disinfectant.
Claims use since Mar. 29, 1926.

Ser. No. 295,842. GENERAL DYESTUFF CORPORATION, New York, N. Y. Filed Feb. 10, 1930.

SAVANOL

For Sulphonated Oil.
Claims use since Aug. 27, 1929.

Ser. No. 295,849. INTERNATIONAL GAS PRODUCTS, INC., Monroe, La. Filed Feb. 10, 1930.

DANDY

For Carbon Black to be Used for General Purposes.
Claims use since Dec. 30, 1929.

Ser. No. 295,850. INTERNATIONAL GAS PRODUCTS, INC., Monroe, La. Filed Feb. 10, 1930.

HI TONE

For Carbon Black to be Used for General Purposes.
Claims use since Dec. 30, 1929.

Ser. No. 295,936. THE DRUG PRODUCTS CO., INC., Long Island City, N. Y. Filed Feb. 12, 1930.

Taurophen

For Biliary Stimulant for Intestinal Toxemia and as a Gall-Bladder Stimulant.
Claims use since Mar. 25, 1914.

Ser. No. 295,941. CHAS. L. EVERWINE, Newark, N. J. Filed Feb. 12, 1930.

Carbo Vac

For Chemical Preparation for Eliminating Carbon in Motors or Engines.
Claims use since Nov. 1, 1929.

Ser. No. 295,945. GOLD BOND STERILIZING POWDER CO., INC., Fairhaven, Mass. Filed Feb. 12, 1930.

GOLD BOND

For Baby Powder.
Claims use since Jan. 15, 1908.

Ser. No. 295,949. LUCIEN LELONG, INC., Chicago, Ill. Filed Feb. 12, 1930.

SOUTH WIND

For Face Powder.
Claims use since Jan. 22, 1930.

Ser. No. 296,027. ALOIS ROB, Weil-Friedlingen, Germany. Filed Feb. 14, 1930.

STELACTIV

For Chemical Substances for Regenerating and Refining Iron and Steel.
Claims use since about March, 1929.

CLASS 8

Smokers' Articles, Not Including Tobacco Products

Ser. No. 287,429. PERCIVAL TASKER SANDS, Vancouver, British Columbia, Canada. Filed July 20, 1929.

NEVAFAIL

For Tobacconists' Supplies—Namely, Ash Trays, Cigarette Holders, and Pipes.
Claims use since May 2, 1929.

CLASS 11

Inks and Inking Materials

Ser. No. 295,381. MITTAG & VOLGER, INCORPORATED, Park Ridge, N. J. Filed Jan. 30, 1930.

Dure Multiplex

For Carbon Paper.
Claims use since October, 1919.

CLASS 12

Construction Materials

Ser. No. 241,949. WILLIAM MOORE, doing business as William Moore Company, Philadelphia, Pa. Filed Dec. 24, 1926.

KOMFORT ROOF SLATE

The words "Roof Slate" are disclaimed apart from the mark as shown. The lining in the drawing is for the color red.
For Roofing Materials—Namely, Shingles, Slates, and Tiles, and Slabs for Terraces, Garden Walks, Stepping-Stones, and Flooring.
Claims use since on or about Jan. 15, 1911.

Ser. No. 261,295. WOOD AND ENGLISH, LIMITED, Vancouver, British Columbia, Canada. Filed Feb. 6, 1928.

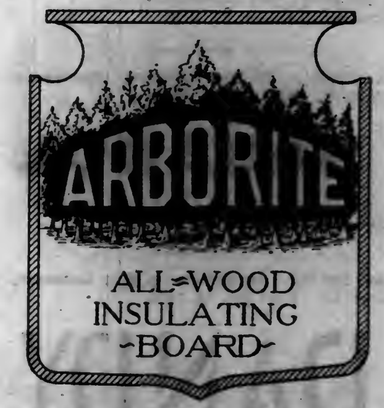
For Lumber Products—I. e., Dressed and Undressed Lumber, Flooring, Siding, Ship-Lap, Lath, Shingles, Joists or Studding, and Timbers.
Claims use since Nov. 28, 1927.

Ser. No. 285,077. WILLIAM GRUND, doing business as Detroit Caulking and Weatherproof Company, Detroit, Mich. Filed June 17, 1929.

The word "Superior" is disclaimed apart from the mark shown and also the representation of a "caulking gun" is disclaimed apart from the mark shown.
For Elastic Caulk for Caulking Wood and Steel Door and Window Frames, Terra-Cotta, Stone, Brick, and Masonry Joints, Glazing Skylights, Embedding and Sealing Cracked Glass, Embedding and Repairing Slate and Tile Roofs, and Used on Pipe Joints.
Claims use since Jan. 15, 1925.

Ser. No. 293,591. CLIFFORD A. PAYTON, doing business as Pieco Products Company, Philadelphia, Pa. Filed Dec. 12, 1929.

WIND-O-TITE



For Caulking Compounds (Gun and Knifing Grades).
Claims use since Oct. 1, 1928.

Ser. No. 294,329. THE WOOD-FIBRE BOARD CORPORATION, Brunswick, Me., and New York, N. Y. Filed Jan. 2, 1930.

ARBORITE

For Thermal Insulating Boards and Laths.
Claims use since Dec. 14, 1929.

Ser. No. 294,330. THE WOOD-FIBRE BOARD CORPORATION, Brunswick, Me., and New York, N. Y. Filed Jan. 2, 1930.

No claim is herein made to the words "All-Wood Insulating Board" apart from the mark as shown.
For Thermal Insulating Boards and Laths.
Claims use since about Dec. 14, 1929.

Ser. No. 294,508. THE STRUCTURAL SLATE CO., Pen Argyl, Pa. Filed Jan. 9, 1930.

Applicant disclaims the use of the words "Trade Mark, Roofing, Flagging, Flooring, Structural Slate, Pen Argyl, Pa." apart from the association as shown.
For Natural or Artificial Colored Slate Products—Namely, Stair Treads, Flooring, Roofing, Borders, Base and Caps for Columns, Wainscots, Copings, Hearths, Partitions, Stairways, Thresholds, Window Sills, Chimney Caps, Risers, Fireplace Facings, Steps, Pavings, Curbs, Tile; Natural or Artificially-Colored Slate for Use in the Construction of Garden Walks and Terraces.
Claims use since June 28, 1929.

Ser. No. 294,599. THE STRUCTURAL SLATE CO., Pen Argyl, Pa. Filed Jan. 9, 1930.

PENN-MONT

For Natural or Artificial Colored Slate Products—Namely, Stair Treads, Flooring, Roofing, Borders, Base and Caps for Columns, Wainscots, Copings, Hearths, Partitions, Stairways, Thresholds, Window Sills, Chimney Caps, Risers, Fireplace Facings, Steps, Pavings, Curbs, Tile; Natural or Artificially-Colored Slate for Use in the Construction of Garden Walks and Terraces.
Claims use since June 28, 1929.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 280,717. KLAUER MANUFACTURING COMPANY, Dubuque, Iowa. Filed Mar. 14, 1929.

K

For Gutter Hangers, Trough Hangers, Wire Strainers, Metal Washers, Conductor Hooks, Speaking Tubes, Well Tubing, Screen-Wire Cloth, Floor Fenders, Metal Pipe, Iron Centers for Clothesline Reels, Cistern Rings and Covers, Manhole Rings and Covers, Cast-Iron Inlets, and Pipe Hooks.
Claims use since January, 1870.

Ser. No. 286,748. ELJER COMPANY, Ford City, Pa. Filed July 8, 1929.

ELJER

For Plumbing Fixtures,—Namely, Fluid-Control Valves, Closets, Tanks, Urinals, Lavatories, Bidettes, Receptors, Baths, Showers, Fountains, Sinks, Laundry Trays, and Parts Thereof and Fittings Therefor.
Claims use since May 26, 1904.

Ser. No. 286,749. ELJER COMPANY, Ford City, Pa. Filed July 8, 1929.

The

ELJERETTE

For Plumbing Fixtures,—Namely, Fluid-Control Valves, Closets, Tanks, Urinals, Lavatories, Bidettes, Receptors, Baths, Showers, Fountains, Sinks, Laundry Trays, and Parts Thereof and Fittings Therefor.
Claims use since July 23, 1928.

Ser. No. 294,283. THE WIRE & STEEL PRODUCTS CO., INC., Brooklyn, N. Y. Filed Dec. 31, 1929.

"ROYAL"

For Metal Box Strapping, Steel Strapping, and Crimp Fastenings for Same.
Claims use since Mar. 6, 1919.

Ser. No. 295,046. PACIFIC STATES CAST IRON PIPE COMPANY, Provo, Utah. Filed Jan. 21, 1930.

FLEXPAN

For Metal Pipe and Pipe Fittings.
Claims use since Oct. 1, 1929.

CLASS 14.

Metals and Metal Castings and Forgings.

Ser. No. 280,712. KLAUER MANUFACTURING COMPANY, Dubuque, Iowa. Filed Mar. 14, 1929.

For Sheet Steel and Anvils.
Claims use since January, 1917.

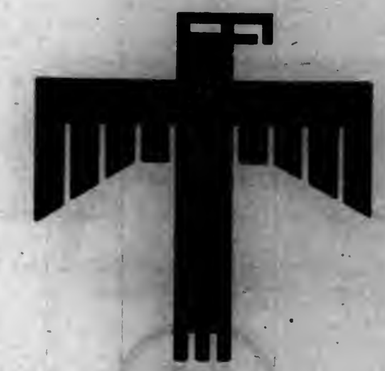
Ser. No. 288,558. THE INTERNATIONAL NICKEL COMPANY, INC., New York, N. Y. Filed Aug. 15, 1929.

No claim is made to the word "Resist" apart from the mark shown. The lining in the drawing designates color, the vertical crosshatching indicating red and the horizontal crosshatching indicating blue, the lighter crosshatching indicating a lighter shade of blue.
For Ferrous Castings.
Claims use since Mar. 26, 1929.

Ser. No. 293,997. GENERAL ELECTRIC COMPANY, Schenectady, N. Y. Filed Dec. 21, 1929.

For Babbitt Metal and Cemented Tungsten Carbide.
Claims use since 1923 on Babbitt metal; since December, 1928, on cemented tungsten carbide.

CLASS 15



Oils and Greases

Ser. No. 288,468. THE DERBY OIL COMPANY, Wichita, Kans. Filed Aug. 13, 1929.

The word "Aeroplane" is hereby disclaimed apart from the mark as shown in the drawing.
For Motor Fuels—Namely, Gasoline and Gasoline Compounds.

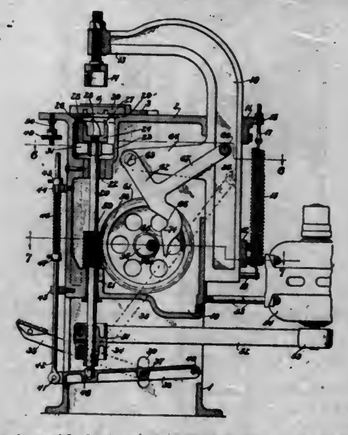
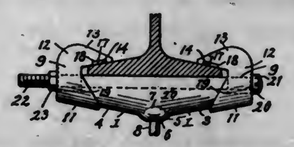
REISSUES

MARCH 25, 1930



17,627. ENGINE-COOLING SYSTEM. LESTER P. BARLOW, Detroit, Mich. Filed Mar. 18, 1929. Serial No. 348,101. Original No. 1,632,581, dated June 14, 1927, Serial No. 127,257, filed Aug. 5, 1926. 17 Claims. (Cl. 123—174.)

1. In an internal combustion engine vapor cooling system which is open continuously to the atmosphere and which operates at all times at atmospheric pressure, the combination with a cylinder jacket having a steam space above the same, of means providing a circuit whereby a cooling liquid may be continuously circulated without passing through said jacket, and means included in said circuit and connected with said jacket whereby a predetermined liquid level may be maintained in the jacket by supplying liquid thereto from the circuit in direct proportion to the amounts going off as steam in the jacket.

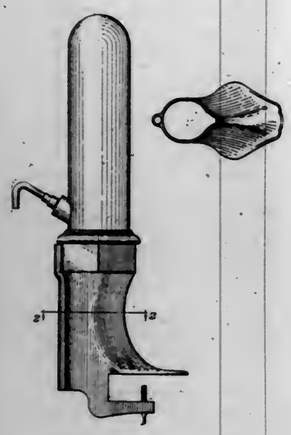


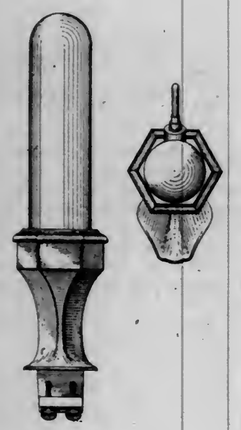
17,628. DEVICE FOR MAKING RING JOINTS. WILLIAM L. EVANS, Washington, Ind. Filed Feb. 14, 1929. Serial No. 339,968. Original No. 1,617,622, dated Feb. 15, 1927, Serial No. 52,445, filed Aug. 25, 1925. 21 Claims. (Cl. 144—2.)

1. In a machine of the class described, the combination of a table, a vertically movable bar having a head overhanging the table, a pedal having a connection with said bar to move the latter downwardly when said pedal is depressed, a power-driven shaft, means for temporarily connecting said shaft to the bar to forcibly urge the latter downwardly, a second pedal, and means connecting

the same to said first-mentioned means to establish the temporary connection between the shaft and the bar when said second pedal is depressed.

17,629. I-BEAM CLAMP. WILLIAM G. WEBB, East Cleveland, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed Jan. 18, 1930. Serial No. 420,619. Original No. 1,658,956, dated Feb. 14, 1928, Serial No. 174,609, filed Mar. 11, 1927. 9 Claims. (Cl. 104—111.)





1. A clamp for flanged beams comprising a pair of clips having oppositely inclined portions adapted to have wedging engagement with opposite flanges of a beam, a hanger bar supported by said clips and engageable with the bottom of the beam, said clips being capable of movement within the extremities of said bar, and means for drawing said clips together to grip the flanges of the beam between said inclined portions of the clips and said hanger bar.

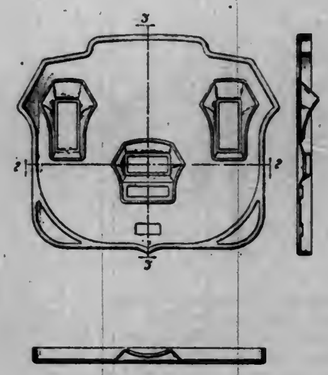
The ornamental design for a box, as shown.

80,812. EXERCISER CASING. WILLIAM E. SHARP, Chicago, Ill. Filed Dec. 12, 1928. Serial No. 29,242. Term of patent 14 years.

The ornamental design for an exerciser casing, as shown.

80,813. ASH TRAY. MORRIS SUSSMAN, New York, N. Y. Filed Mar. 29, 1928. Serial No. 26,056. Term of patent 3½ years.

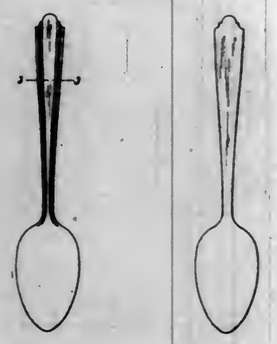


The ornamental design for an ash tray, as shown and described.

80,814. PORTABLE ELECTRIC LAMP. HARRY F. THURBER and FREDERICK E. GREENE, New Haven, Conn., assignors to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed May 29, 1929. Serial No. 31,468. Term of patent 7 years.

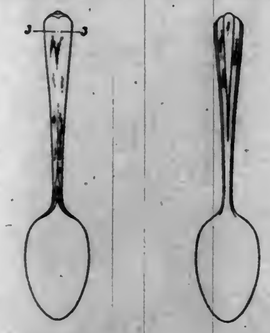
The ornamental design for a portable electric lamp substantially as shown.

80,815. ESCUTCHEON PLATE FOR AUTOMOBILE INSTRUMENT BOARDS. CORNELIUS W. VAN RANST, Auburn, Ind., assignor, by mesne assignments, to Manning & Co., Chicago, Ill., a Corporation of Illinois. Filed June 8, 1929. Serial No. 31,599. Term of patent 7 years.



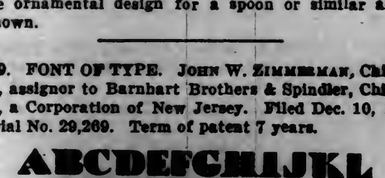
The ornamental design for an escutcheon plate for automobile instrument boards substantially as shown.

80,816. COMBINATION CIGARETTE HOLDER AND ASH TRAY OR THE LIKE ARTICLE. ARTHUR VON FRANKENBERG, New York, N. Y. Filed Dec. 28, 1929. Serial No. 33,892. Term of patent 7 years.



The ornamental design for a combination cigarette holder and ash tray or the like article, substantially as shown.

80,817. SPOON OR SIMILAR ARTICLE. WILLIAM S. WARREN, Meriden, Conn., assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn., a Corporation. Filed Nov. 23, 1929. Serial No. 33,527. Term of patent 14 years.

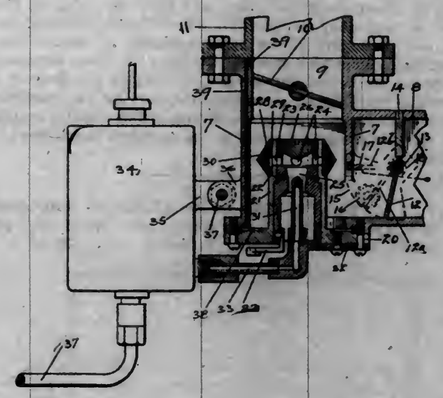


The ornamental design for a spoon or similar article as shown.

80,818. SPOON OR SIMILAR ARTICLE. WILLIAM S. WARREN, Meriden, Conn., assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn., a Corporation. Filed Jan. 8, 1930. Serial No. 34,055. Term of patent 14 years.

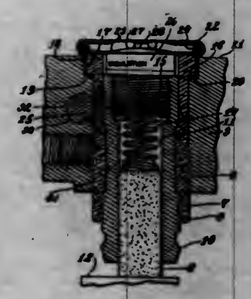
The ornamental design for a spoon or similar article as shown.

80,819. FONT OF TYPE. JOHN W. ZIMMERMAN, Chicago, Ill., assignor to Barnhart Brothers & Spindler, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 10, 1928. Serial No. 29,269. Term of patent 7 years.



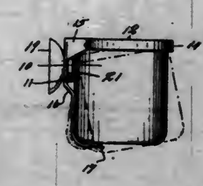
The ornamental design for a font of type, as shown.

PATENTS



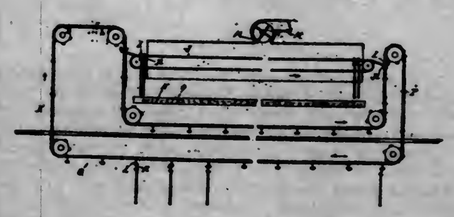
GRANTED MARCH 25, 1930

1,751,461. CARBURETOR. ALBERT D. AUSTIN, Portland, Oreg. Filed Aug. 26, 1926. Serial No. 131,788. 8 Claims. (Cl. 261—41.)



1. In a carburetor: a casing; a head within said casing open to the atmosphere, and having ports therein; a valve rotatable within said head, and having ports to communicate with said former ports in the head; a distributing cap upon said head in communication with coacting ports in said valve and in said head; a Venturi tube within said head; and a nozzle within said Venturi tube.

1,751,462. BRUSH HOLDER FOR ELECTRIC TOOLS. JAMES NELSON BAKER, Baltimore County, Md., assignor to The Black and Decker Manufacturing Company, Towson Heights, Md., a Corporation of Maryland. Filed Mar. 13, 1928. Serial No. 261,210. 7 Claims. (Cl. 171—324.)

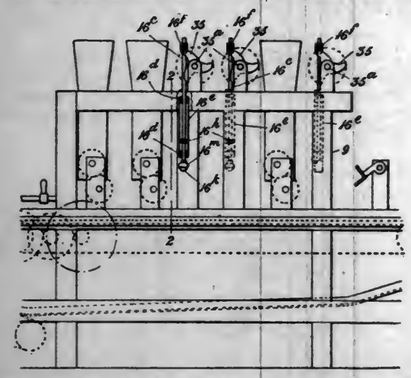


1. The combination in a portable electric tool of an electric motor, brushes, brush holders of circular cross section, a casing and a set screw seated in the casing substantially tangent to the brush holder so that the threads of the set screw bite into the side of the brush holder casing.

1,751,463. HANDY ASH TRAY AND EMERGENCY DRINKING CUP. JOHN CLAYTON BACKUS and WILLIAM L. PIEROTTI, Smethport, Pa.; said Pierotti assignor to said Backus. Filed Aug. 23, 1928. Serial No. 301,600. 3 Claims. (Cl. 206—19.5.)

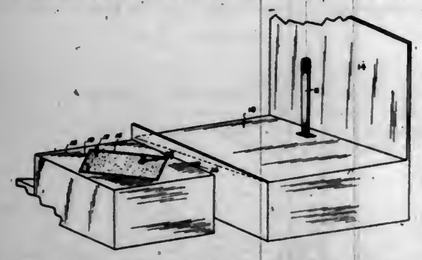
1. An article of the character described including a receptacle, a bracket with which the receptacle is detachably engaged, the bracket being outwardly offset away from the receptacle at its upper portion, the lower portion of the bracket fitting against the receptacle and said bracket having a vertically extending key hole slot intersecting the offset portion, and a bracket supporting device detachably engageable with the bracket in said slot.

1,751,464. METHOD OF MANUFACTURING LEATHER. WALTER A. BECK, Detroit, Mich., assignor to Leather Makers' Process Company, Detroit, Mich., a Corporation of Michigan. Filed July 2, 1923. Serial No. 649,152. 4 Claims. (Cl. 149—8.)



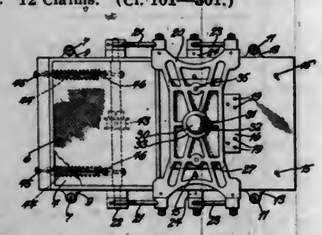
1. In a process for manufacturing leather, the mounting of pairs of separate adhesive coated skins on opposite faces of thin mounting boards to balance the stresses exerted on said boards when drying the skins.

1,751,465. TAMPING DEVICE FOR USE IN MOLDING OPERATIONS. FRANCIS BREEDEN, Birmingham, England, assignor to Automatic Moulding Machines Limited, Birmingham, England. Original application filed Feb. 8, 1928, Serial No. 251,613, and in Great Britain Feb. 8, 1927. Divided and this application filed Mar. 21, 1929. Serial No. 348,891. 3 Claims. (Cl. 22—41.)



1. A tamping device for use in molding operations comprising a base, a support for the molding box and pattern plate, a pair of standards supported from said base, guideways, formed in said standard, a rectangular frame slidably mounted in said guideways, aligned bearings formed in the upper and lower transverse bars of the frame, ver-

tically disposed tamping tools slidably mounted within said bearings, means for permitting of a limited free rising and falling motion of the tamping tools relatively to the frame and means for effecting a positive lifting at

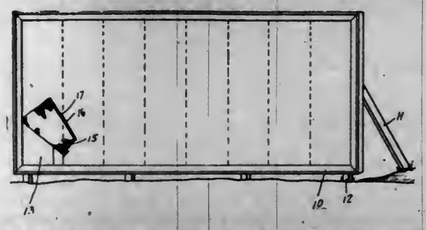


intermittent periods of the frame and tamping tools carried thereby said frame, subsequent to a lifting operation, being permitted to fall under the action of gravity to allow the tamping tools to effect the consolidation of the sand in the molding box.

1,751,466. GAME. EDWARD BREWER, Toronto, Ontario, Canada. Filed Mar. 25, 1929, Serial No. 349,654, and in Canada May 23, 1928. 5 Claims. (Cl. 273—88.)

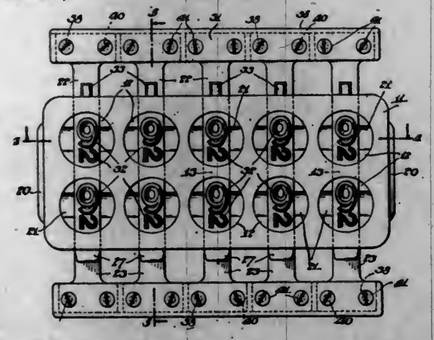
1. In a game of the class described, a field containing a baseball diamond, a batter disposed thereon, a bat yieldably mounted apart from the diamond, a rotatable arm mounted medially of the diamond, said arm being slotted lengthwise, a block slidably mounted in the slot thereof, a vertical rod rising from said block and attached to the aforesaid batter, means for rotating said arm, and control means associated therewith whereby said arm is released and arrested at points corresponding to the different bases, said control means being actuated by the yielding of the aforesaid bat.

1,751,467. MARKING MACHINE. ARTHUR W. ALTVATER, St. Louis County, Mo. Filed Dec. 13, 1928. Serial No. 325,704. 12 Claims. (Cl. 101—301.)



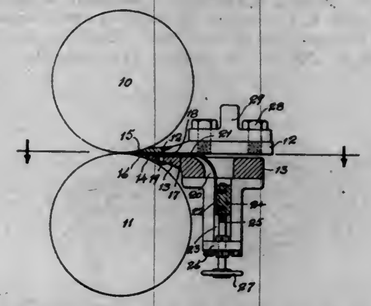
1. A marking device comprising two members, means for supporting a marking device upon one of said members, and a support upon the other member having spaces arranged to receive parts of a fitted shoe upper while another part of the upper is upon said support.

1,751,468. METHOD OF FORMING ARTICLES FROM HEAT-TREATABLE ALUMINUM-BASE ALLOYS. ROBERT S. ARCHER, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 24, 1927. Serial No. 242,531. 6 Claims. (Cl. 148—11.5.)



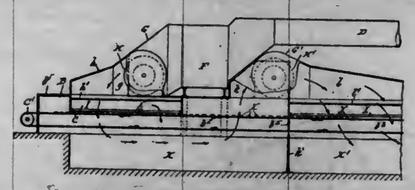
5. The method of forming an article capable of developing increased tensile strength and hardness from an aluminum base alloy containing a solid-solution forming constituent in excess of the amount soluble at normal temperature, comprising heating the alloy to cause increased solution of the soluble constituent, cooling the alloy to a suitable work-forming temperature, forging the partially cooled alloy, and cooling the forged article rapidly enough to retain the major portion of the dissolved constituent in solution.

1,751,469. POSTER-SIGN-REMOVAL PROCESS. WILLIAM REX BELL, Terre Haute, Ind. Filed Mar. 28, 1928. Serial No. 264,144. 2 Claims. (Cl. 216—62.)



1. A paper posting process comprising detachably securing to a poster sign surface, prior to the posting of paper copy thereon, a fabric sheet material for covering the poster copy receiving surface, applying thereto at successive intervals of desired duration a plurality of successively positioned sheets of paper copy, stripping said fabric sheet from said sign receiving surface for simultaneously removing the superposed accumulated paper copy therefrom, separating the adhering paper copy from the sheet material when removed from the sign surface, and immediately re-applying the paper detached fabric sheet to the sign receiving surface for subsequent use upon the latter.

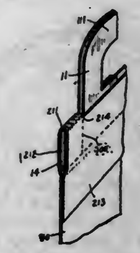
1,751,470. CORE-FORMING APPARATUS. THOMAS HAROLD BROWN, Lansdowne Borough, Pa., assignor, by mesne assignments, to National Sash Weight Corporation, Baltimore, Md., a Corporation of Maryland. Filed Oct. 26, 1926. Serial No. 144,208. 1 Claim. (Cl. 22—13.)



Core-forming apparatus comprising a box having a plurality of sets of core cavities, a plurality of bars, each bar being insertable in a set of cavities, a connector for the bars and forming a handle for the manipulation thereof, a plurality of wedging bars adapted for engaging bars aforesaid for maintaining them in operative position, and a connector for the wedging bars forming a handle for the manipulation of the wedging bars.

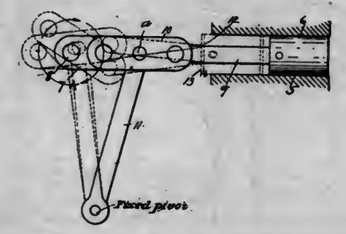
1,751,471. CREPING MECHANISM. SAMUEL J. CAMPBELL, Green Bay, Wis., assignor of one-half to Hudson-Sharp Machine Company, Green Bay, Wis., a Corporation of Wisconsin. Filed May 4, 1929. Serial No. 360,456. 10 Claims. (Cl. 92—69.)

10. In creping mechanism, creping devices in the form of closely spaced members affording a channel for the retarded passage of the paper web, one of said members being provided with a plurality of longitudinally extending slots, spring strips rigidly secured at their inner ends within said slots and having their intermediate portions bowed outwardly into said channel and having their free ends outwardly extending through said slots, a bar to which the free ends of the group of spring strips are secured, and means for adjusting said bar to vary the protrusion of said bowed portions into said channel to afford yieldable areas for accommodating variations in the thickness of the paper web.



1,751,472. DRYING PROCESS AND APPARATUS. ALBERT A. CRIQUI, Buffalo, N. Y., assignor to Buffalo Forge Company, Buffalo, N. Y. Filed May 1, 1926. Serial No. 105,975. 17 Claims. (Cl. 34—12.)

1. The process of drying articles which are pervious to air, including directing a blast of air at high velocity at close range through and around an article in a direction to hold the articles against displacement on their support and enable their penetration by the blast, changing the direction of the blast of air and decreasing the velocity thereof, and directing the same in said changed direction and at said decreased velocity through and around the article so as to avoid displacing said articles from their support.



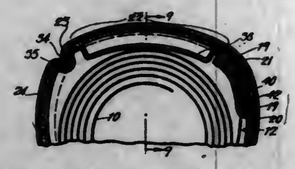
1,751,473. PAPER SHOPPING BAG. WALTER H. DRUBENER, Indianapolis, Ind. Filed Aug. 17, 1928. Serial No. 300,262. 2 Claims. (Cl. 229—54.)

1. A paper shopping bag including a paper bag with its upper end open, and bulky D-shaped handles, each including but a single layer piece of corrugated paper board having the desired resiliency and compressibility therein, said handles being adhesively secured to the opposite sides of the bag at the upper end thereof, the corrugations in the board extending longitudinally of the bag and the base portion of the handle being adhesively secured to the bag side and being longer than the remainder of the handle and extending laterally thereof

to increase the securing surface, the upper end of the bag having an integral hem with a slot therein adjacent the fold, the D-portion of the handle extending through and projecting beyond the slot and the base portion being included within the hem, the lateral extension of the base portion interlocking with the hem fold, and the hem being secured to the upper end of the bag in hem formation and to the handle base.

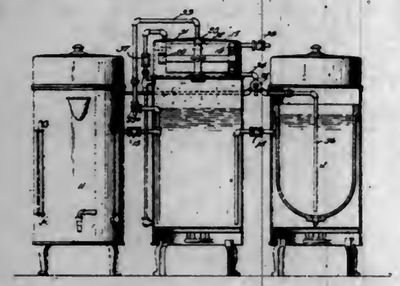
1,751,474. FLUCTUATING LEVERAGE ENGINE. FRANK L. EAGER, Waterbury, Conn. Filed Apr. 18, 1922. Serial No. 555,374. 5 Claims. (Cl. 74—14.)

1. In combination with the cylinder of an internal combustion engine, a piston, a driven member substantially in line with the direction of movement of said piston, including a crank, a connecting lever pivotally connecting said piston and crank, and a fulcrum lever pivotally supported and extending across a line between said piston and driven member, said fulcrum lever pivotally supporting said connecting lever.



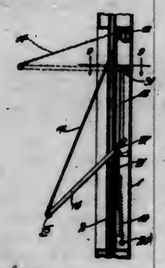
1,751,475. FLEXIBLE METALLIC STRAP. WILLIAM FORSTNER, Irvington, N. J., assignor to Forstner Chain Corporation, Irvington, N. J. Filed May 1, 1929. Serial No. 359,573. 4 Claims. (Cl. 59—80.)

1. An ornamental chain composed of plates embossed to present a series of longitudinal ribs extending equally on both faces and having thin flat connections therebetween, said connections being perforated in their end portions, links disposed on said connections, loops formed on said links to engage the perforations at one of the ends of said connections, re-entrantly turned elements extending from said loops to seat on the opposite faces



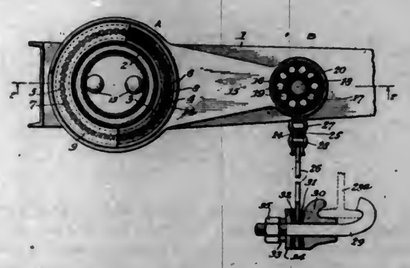
of said connections, and prongs on the extremities of said re-entrant elements to engage the perforations in the opposite ends of said connections.

1,751,476. SAFETY RAZOR AND BLADE. OTTO GOETZKE, Jersey City, N. J. Filed June 4, 1929. Serial No. 368,395. 6 Claims. (Cl. 30—12.)



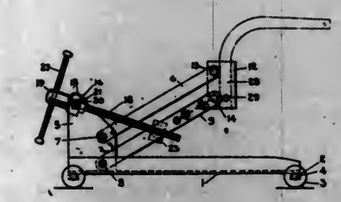
1. A safety razor which comprises a flat magazine having a blade-supporting length in its periphery, an opening to permit strip to be drawn from said magazine into said supporting length and a notch at the end of said length opposite said opening and a guard for said strip movable to a position to overlie said length and having means to enter said notch to engage and sever the strip therein.

1,751,477. METHOD OF AND APPARATUS FOR MAKING INFUSIONS OF COFFEE, TEA, AND THE LIKE. PAUL GREENWALD, Brooklyn, N. Y., assignor to United Kitchen Equipment Co., Inc., a Corporation of New York. Filed July 17, 1928. Serial No. 293,394. 19 Claims. (Cl. 53—3.)



1. The method of repouring coffee and the like which consists in passing steam through a grindings receiving chamber and a pipe leading nearly to the bottom of a coffee urn to expel air therefrom, shutting off the steam to allow the chamber to cool and reduce the pressure sufficiently to suck liquid from the urn into the chamber where it extracts the grindings, and thereafter venting the chamber to allow the liquid extract to drain into the urn.

1,751,478. AUTOMOBILE AWNING. CECIL G. HALE, St. Louis, Mo. Filed Oct. 31, 1927. Serial No. 229,850. 15 Claims. (Cl. 156—44.)



15. An awning of the character described comprising a roller, a sheet of awning material having one end attached to said roller, a spring in said roller for turning said roller in a direction to wind said sheet on said roller and permitting said sheet to be unwound and extended from said roller, a U-shaped frame having its intermediate portion attached to the opposite end of said sheet and having its free ends pivotally mounted, abutments cooperating with said frame to hold said frame in position to prevent said spring from operating said roller and to hold said sheet extended in an inclined position, and means for guiding said frame to and from engagement with said abutments.

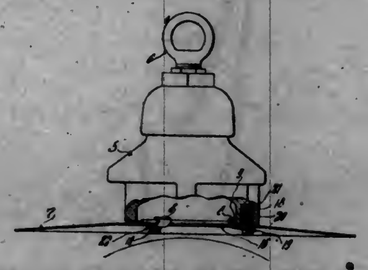
1,751,479. SHOCK ABSORBER. BRADFORD B. HOLMES, New York, N. Y., assignor to American Chain Company, Inc., a Corporation of New York. Filed July 27, 1927. Serial No. 208,752. 4 Claims. (Cl. 267—21.)

1. A shock absorber having rolling bearings as retarding elements, said bearings comprising a plurality of race members of resilient material and a plurality of metal rolling members cooperating therewith, said races being under compression.

1,751,480. ELEVATING MECHANISM. JAMES W. HOWELL, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 21, 1928. Serial No. 263,308. 1 Claim. (Cl. 254—7.)

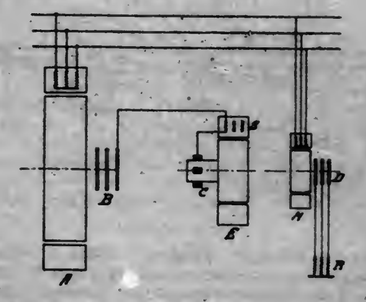
The combination with a dolly comprising a platform, of an elevating mechanism comprising a pair of spaced links of equal length pivotally connected to said dolly at spaced points, a third link in the form of a tool holder having a length equal to the distance between said points and connecting the free ends of the first named links in the order of their attachment to said dolly, a fourth link in the form of a screw pivotally attached to and connecting said dolly and one of said first named links, the point of attachment of said fourth link to said dolly being a substantial distance above the platform of said dolly, and an operating handle on said fourth link adjacent the aforesaid point of attachment.

1,751,481. DANDELION CUTTER AND LIFTER. WILLETT J. LA TOURRETTE, Denver, Colo. Filed June 16, 1928. Serial No. 285,935. 4 Claims. (Cl. 55—148.)



1. A device for cutting the root of and lifting a dandelion comprising: a handle; a blade secured to the lower extremity of said handle; a cutting edge on said blade; and a second blade formed on said first blade and positioned to one side thereof; ears turned outwardly on said blade; a clamping member; and a hinge pin securing said clamping member between said ears.

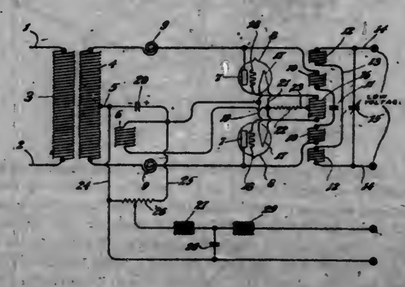
1,751,482. CORE AND PROCESS OF FORMING THE SAME. EMIL L. LEASMAN, Milwaukee, Wis. Filed June 20, 1927, Serial No. 200,283. Renewed June 27, 1929. 4 Claims. (Cl. 22—188.)



1. The hereindescribed process of forming a core, which consists in mixing a sand having a clay content with sodium phosphate in forming the core, and in drying the core.

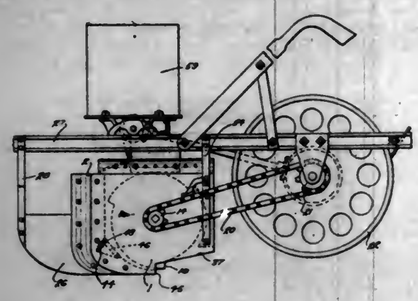
1,751,483. LIGHTING FIXTURE. CLARENCE J. LEMONT, South Milwaukee, Wis., assignor, by mesne assignments, to Line Material Company, South Milwaukee, Wis., a Corporation of Delaware. Filed Nov. 15, 1928. Serial No. 319,582. 8 Claims. (Cl. 240—128.)

1. The combination with a lighting fixture having a body member and a reflector, of means for connecting the reflector with the body member of the fixture, comprising a cushioning member adapted to be engaged over one edge of the reflector, and securing means passing through aligned apertures in the reflector and cushioning member and engaged with the body of the fixture.



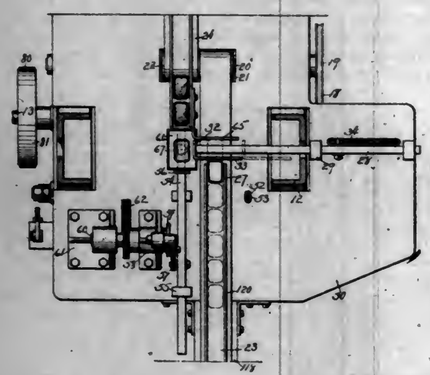
1,751,484. COMPENSATED ASYNCHRONOUS ELECTRIC MOTOR. PIERRE LETEILLIART, Paris, France, assignor to Forges & Ateliers de Constructions Electriques de Jeumont, Société Anonyme, Paris, France, a French Joint Stock Company. Filed June 11, 1928, Serial No. 284,333, and in France July 1, 1927. 6 Claims. (Cl. 172—274.)

1. In combination with an asynchronous electric motor, an exciter formed by a series commutator machine having its brushes set at negative lead angles and being connected in cascade with the rotor of said asynchronous motor, and an auxiliary motor driving said exciter independently of said asynchronous motor, said auxiliary motor being adapted to fall off in speed with an increase of load.



2. In combination with an asynchronous electric motor, an exciter formed by an alternating current commutator machine having its stator windings connected in cascade with the rotor of said asynchronous electric motor and in series with the respective commutator brushes, said brushes being set at angles less than 180 electrical degrees behind the neutral commutation axis, and an auxiliary motor driving said exciter independently of said asynchronous motor, said auxiliary motor being adapted to fall off in speed with an increase of load.

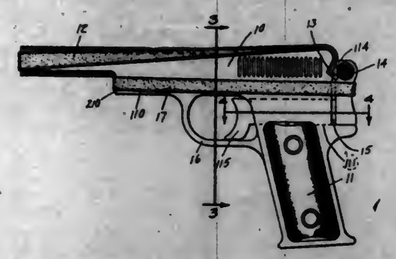
1,751,485. FREQUENCY-CHANGING METHOD AND MEANS. CHARLES V. LOGWOOD, Jersey City, N. J., assignor to De Forest Radio Telephone & Telegraph Company, Jersey City, N. J., a Corporation of Delaware. Filed May 1, 1924. Serial No. 710,292. 1 Claim. (Cl. 250—36.)



In an alternating current frequency changing system the combination with a source of low frequency current of a plurality of vacuum tube oscillators connected to said source, a high frequency output circuit connected to said oscillators and a low voltage circuit inductively related with said high frequency output circuit, the inductive relation being effected by a transformer having a primary of two portions connected through a low frequency choking condenser and another primary winding connected in the grid filament circuit of the oscillators.

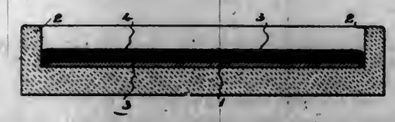
1,751,486. ATTACHMENT FOR PLANTERS. CLOVIS C. LUTZ, Canton, Miss. Filed July 5, 1927. Serial No. 203,645. 13 Claims. (Cl. 111—34.)

4. An attachment for planters including a casing having an arcuate inner surface and an outlet in the rear portion of the bottom thereof, an ejecting element mounted for rotation in the casing having outwardly extending peripheral abutments, the outer edges of which pass over said arcuate surface, and means in the casing for retarding the outward movement of the seed to maintain them close to the advancing or ejecting faces of the abutments.



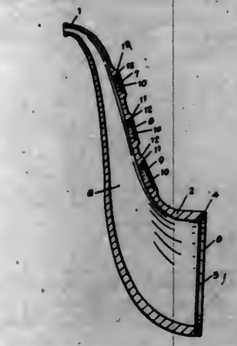
1,751,487. RECEPTACLE-FILLING MACHINE. REX W. MCINTYRE, South Manchester, Conn., assignor to The Orford Soap Company, Manchester, Conn., a Corporation of Connecticut. Filed Sept. 19, 1924. Serial No. 738,590. 19 Claims. (Cl. 226—95.)

1. A filling machine including a material supply chute, a receptacle supply member and a receptacle delivery member located adjacent to said material supply member, means for moving said receptacle supply member for delivery of receptacles to said material supply chute each to be filled therefrom, and separate means acting independently of said moving means for moving filled receptacles onto said delivery member.



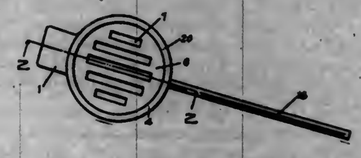
1,751,488. TOY PISTOL. CHARLES F. MEYER, Jr., Indianapolis, Ind. Filed Nov. 30, 1928. Serial No. 322,737. 5 Claims. (Cl. 124—14.)

1. In a toy pistol for discharging elastic projectiles which has a handle and a barrel on which the projectile is adapted to be stretched for discharge, a trigger for releasably holding the rear end of the projectile when under tension, and a rigid trigger bar mounted in the upper part of the handle and slidable longitudinally of the barrel with its front end extending in front of the



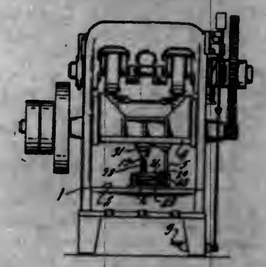
handle in position to be moved rearward by a finger of the hand holding the pistol to release the trigger, said trigger and trigger bar being united to form a rigid unit.

1,751,489. METHOD OF MAKING BIMETALLIC STRIPS FOR THERMOSTATS. FREDERICK WILLIAM MILLER, Hockley Heath, England. Filed Apr. 6, 1927, Serial No. 181,407, and in Great Britain Apr. 21, 1926. 5 Claims. (Cl. 29—188.)



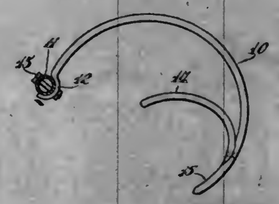
5. The process of making a bi-metallic slab which consists in placing a plate having a high melting point in a crucible, spreading over the entire surface of said plate a mixture of fine granular metal of a lower melting point and a flux, covering the entire upper surface of said mixture with a top layer of such metal of lower melting point, and subjecting the whole to the action of heat so that the metal of said mixture and top layer fuses and displaces said flux and unites with the first named plate to produce a bi-metallic slab.

1,751,490. MUSICAL TOY. HUBERT A. MYERS, Toledo, Ohio. Filed Jan. 30, 1929. Serial No. 336,031. 5 Claims. (Cl. 46—46.)



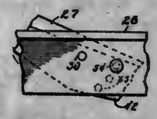
1. In a musical toy, the body of the toy having a chamber formed therein, a mouth piece communicating with the interior of the chamber, a diaphragm extending across the chamber for completely closing the chamber, the wall of the chamber and the body of the toy having a plurality of openings of different diameters and diaphragms extending across the said openings for completely closing the said openings, the edge portions of the last named openings having protruding rims.

1,751,491. MUSICAL TOY. HUBERT A. MYERS, Toledo, Ohio. Filed Jan. 30, 1929. Serial No. 336,032. 3 Claims. (Cl. 46—46.)



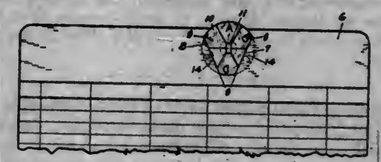
2. In a toy, a body having a recess, a diaphragm of elastic sheet material located over the said recess, part of the diaphragm drawn relatively tight across the recess and a part relatively loosely mounted for freer vibration, the diaphragm forming a closed chamber within the body of the toy, a second diaphragm having openings therein and located in close parallel relation to the first named diaphragm to form variable contact areas of the diaphragms, one against the other, by vocal sound waves, a mouth piece connected to the toy, the mouth piece having a passage-way communicating with the chamber.

1,751,492. BENDER. ALBERT J. NOWAKOWSKI, Toledo, Ohio, assignor to The Toledo Steel Tube Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 3, 1927. Serial No. 223,622. 7 Claims. (Cl. 153—46.)



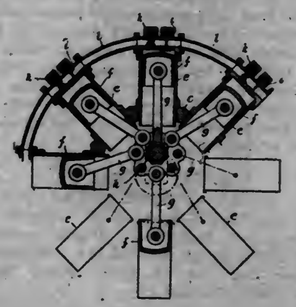
1. A bending machine embodying an inner die having an arc seat, an outer relatively movable shoe, a pair of radially extending arms embracing the die and mounting the shoe, a clamp for positioning the stock to be bent with the inner die at one point, and an actuator for rendering the clamp effective and for additionally effecting through the arms the relative shifting of the shoe as to the inner die.

1,751,493. HARROW TEETH. BERT B. PERKINS, Monticello, Minn. Filed Mar. 2, 1928. Serial No. 258,499. 4 Claims. (Cl. 55—36.)



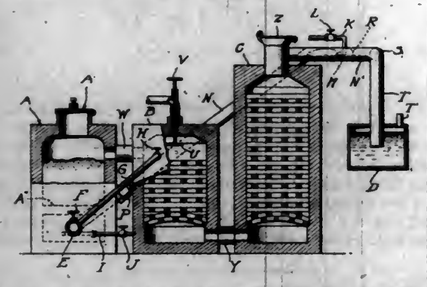
1. A harrow tooth formed with a deflecting arm extending forwardly and laterally therefrom at a point above the ground engaging end thereof.

1,751,494. ACCOUNTING TABLE. EDWARD C. RASMUSSEN, Chicago, Ill. Filed June 11, 1928. Serial No. 284,397. 4 Claims. (Cl. 45—6.)



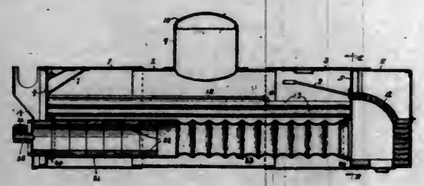
1. A recapitulation device adapted to hold a plurality of tubular sheets in closely assembled folded relation to display corresponding parts of the sheets, said device including a flat top provided with parallel, perforatory slots with resultant intervening slat-like portions to support the folded sheets with their edges depending beneath said top, and means to hold the sheets in variously predetermined positions depending on the parts to be exposed.

1,751,495. ADJUSTABLE LEDGER SHEET AND CARD FLAG. GALE S. ROBINSON, Seattle, Wash. Filed Feb. 25, 1929. Serial No. 342,487. 6 Claims. (Cl. 129—16.8.)



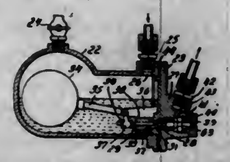
1. The combination with a flexible card or sheet having slots near one edge, of a flag adjustably supported in said slots and connected with said sheet solely by means of said slots and projecting beyond the adjacent edge of said card or sheet.

1,751,496. TORQUE CUSHIONING SHAFT COUPLING. ERICH SANDNER, Kobe, Japan. Filed July 28, 1927, Serial No. 209,031, and in Germany Apr. 21, 1925. 4 Claims. (Cl. 64—89.)



1. A shaft device adapted to be subjected to a pulsating torque, said device comprising separate shaft sections terminating in mutual adjacence at the nodes of torsional oscillation of the device, and coupling for said sections, said coupling comprising a set of positive-action hydraulic pumps, the latter comprising complementary pumping members carried by said sections respectively, and automatically operable means for normally preventing relative movement of said pumping members and hence of said sections, and for allowing such relative movement when resonance between shaft device and pulsations sets up torsional stresses at said nodes greater than a predetermined maximum.

1,751,497. WATER-GAS APPARATUS. FRANK W. STEERE, New York, N. Y., assignor, by mesne assignments, to Young-Whitwell Gas Process Company, Tacoma, Wash., a Corporation of Washington. Filed May 7, 1923, Serial No. 637,159. Renewed Aug. 6, 1927. 4 Claims. (Cl. 48—80.)

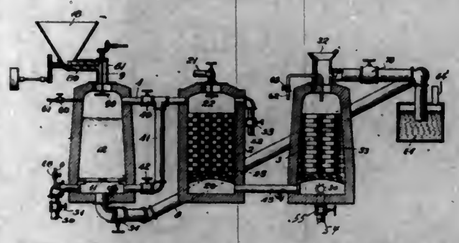


2. A carburetted water gas set including a generator, carburetter, and superheater, connected in series by a free and unobstructed main passage, a second passage leading from the generator to a gas offtake, and a by-pass connecting the said passages, said by-pass having a steam jet therein adapted to deliver steam in a direction at an angle to the normal gas flow through the main passage.

1,751,498. COMBUSTION APPARATUS. HUSTON TAYLOR, Detroit, Mich. Filed Dec. 12, 1923. Serial No. 680,100. 1 Claim. (Cl. 158—1.)

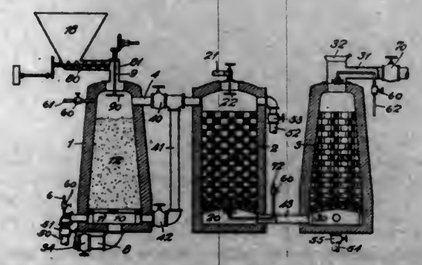
1. In combination an elongated tubular refractory combustion flue of restricted cross-sectional area, having an unobstructed bore, said bore being so proportioned that its radiant surface area of refractory material in square feet is approximately four or more times its volume in cubic feet, and having a length approximately four or more times its diameter; and means for delivering fluent fuel for combustion under pressure into said bore at a rate within the fuel consuming capacities for which said combustion flue is designed.

1,751,499. REFRIGERATING APPARATUS. ALFRED MORRIS THOMSON, Newark, N. J., assignor to Joseph Mercadante, New York, N. Y. Original application filed Nov. 22, 1926, Serial No. 149,844. Divided and this application filed May 16, 1927. Serial No. 191,562. 1 Claim. (Cl. 137—103.)



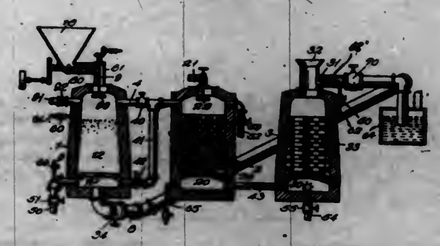
In a refrigerating apparatus, an expansion valve comprising a float chamber, a float therein, a support, a valve member carried by said support and connected to said float, a valve seat carried by said support and removable therefrom, removable means engaging said support accessible from the exterior of said float chamber for normally holding said valve seat in place, a valve chamber adjacent to said valve seat and having an opening in line with the longitudinal axis thereof said valve seat and said valve seat holding means being removable through said opening, a removable closure for the opening in the said valve chamber and a screened fluid intake port communicating with said float chamber and said valve chamber, said screened intake port being downwardly disposed in said float chamber.

1,751,500. METHOD OF FORMING ARTICLES FROM HEAT-TREATABLE ALUMINUM-BASE ALLOYS. WILLIAM C. WINTER, Parnassus, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 13, 1927. Serial No. 239,819. 7 Claims. (Cl. 148—11.5.)



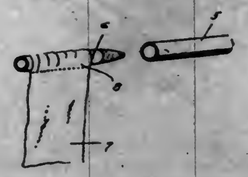
5. The method of forming an article capable of developing increased tensile strength and hardness from aluminum base alloy sheet containing copper in excess of the amount soluble at normal temperatures, comprising heating the alloy sheet to cause increased solution of the excess copper, and while thus heated die-pressing it in a cold die and simultaneously cooling the article therein rapidly enough to retain the major portion of the dissolved copper in solution.

1,751,501. BACK-RUN PROCESS OF MAKING WATER GAS. DANIEL J. YOUNG, Tacoma, Wash., assignor to Young-Whitwell Gas Process Company, Tacoma, Wash. Filed Nov. 25, 1924. Serial No. 752,104. 4 Claims. (Cl. 48—208.)



2. The improvement in the process of making carbureted water gas, which when carried out in a plant comprising a single water gas generator having a solid fuel bed, a single carburetor, and a single superheater, consists in introducing water into the highly heated superheater, whereby steam is produced, passing said steam successively through the superheater, carburetor, and the fuel bed in the generator, and withdrawing water gas from the generator.

1,751,502. PROCESS OF MAKING UNCARBURETED WATER GAS. DANIEL J. YOUNG, Tacoma, Wash., assignor to Young-Whitwell Gas Process Co., Tacoma, Wash. Filed July 6, 1925. Serial No. 41,733. 2 Claims. (Cl. 48—208.)



1. A three cycle process of making uncarbureted water gas; one cycle consisting in air blasting the fuel bed of a single gas generator containing a bed of solid fuel and passing the resulting blast gases through a heat interchanger, whereby the heat interchanger is highly heated; a second cycle consisting in making a forward steam run successively through the generator and the heat interchanger, the gas being withdrawn from the end of the heat interchanger remote from the generator; and the third cycle consisting of a backrun, comprising introducing water into the end of the heat interchanger remote from the generator, whereby steam is produced, passing said steam successively through the heat interchanger and through the fuel bed of the generator, and withdrawing the water gas generated during the backrun directly from the gas generator, and passing it directly to a place of storage or use.

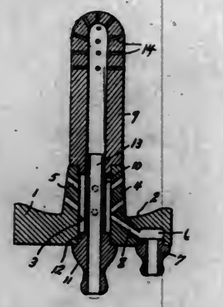
1,751,503. GAS MANUFACTURE. DANIEL J. YOUNG, Tacoma, Wash., assignor to Young-Whitwell Gas Process Company, Tacoma, Wash. Filed Mar. 26, 1926. Serial No. 97,604. 12 Claims. (Cl. 48—80.)

1. An apparatus of the character described, comprising a single gas generator, a single primary heat interchanger, a single secondary heat interchanger, and a wash box, the single units being connected in series and located in separate and detached shells, gas off-takes leading from the generator and secondary heat interchanger directly to the wash box, and means for introducing a fluid at both ends of the apparatus.

1,751,504. CURTAIN PROTECTOR. PHILLIP C. ZWINGLER, North Lima, Ohio. Filed May 1, 1929. Serial No. 359,564. 2 Claims. (Cl. 156—19.)

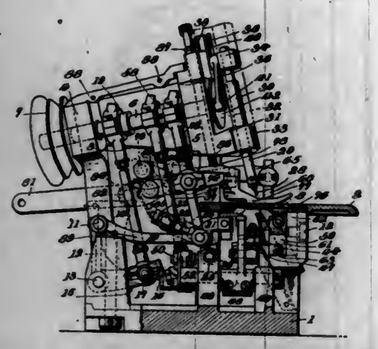
2. In combination, a pair of hollow curtain rods adapted to slide one within the other, a soft resilient body mounted in the end and projecting forwardly of the male rod and adapted for sliding relation within the female rod, said resilient body being pointed on the outer end for threading the hem of a curtain over the male rod, without tearing the curtain.

1,751,505. DISPLAY STAND. ARCHIE M. BORLAND, Jr., Albert Lea, Minn. Filed Feb. 23, 1929. Serial No. 341,997. 5 Claims. (Cl. 211—163.)



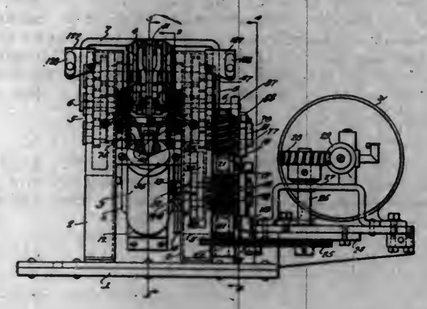
1. In a structure of the class described, a truncated conical base, a vertical socket supported in said base, and having its upper end extended through the truncated apex portion thereof, an article supporting standard having a coupling member extended below the lower end thereof and fitting telescopically and rotatably into said socket.

1,751,506. CORSET. MARY H. BOWNE, Worcester, Mass. Filed Apr. 26, 1929. Serial No. 358,243. 1 Claim. (Cl. 2—41.)



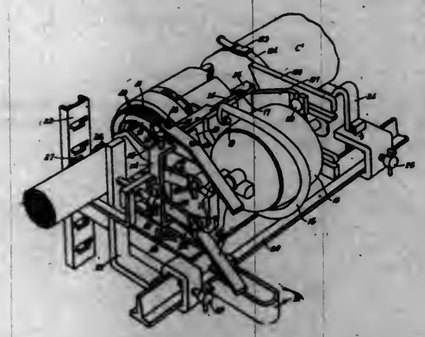
As an article of manufacture, a corset of the type described, comprising a rear section of elastic material, a front section of elastic material in a single piece extending from side to side, the back section being of uniform length and the front section being concave at the bottom so as to be narrower at the front than at the sides, said sections being secured together at the sides of the garment and a band of elastic material, less yielding than the material of said sections, and of uniform width secured by its upper edge to the lower edge of the corset body formed by said sections, and extending all around the bottom of the garment, whereby when on the wearer said band will extend across the bottom of the abdomen.

1,751,507. SYRINGE. JOSEPH W. BRUNETTE, Fordson, Mich. Filed Mar. 2, 1929. Serial No. 343,074. 1 Claim. (Cl. 128—241.)



A syringe comprising a substantially flat body having an enlarged intermediate portion in which a drain chamber is provided, a nipple for insertion within the chamber at one side of the body, a hollow perforated nozzle member, said nozzle member being internally threaded at one end, a reduced tubular extension on said nipple, said extension being adapted to have its free end portion threadedly engaged within the threaded end portion of the nozzle, a fluid inlet, said inlet being at one side of the body and communicating with the said chamber, and an outlet communicating with the chamber and opening through the opposite side of the body.

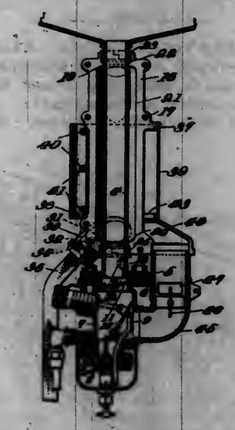
1,751,508. SEWING MACHINE. NORMAN V. CHRISTENSEN and FREDERICK F. ZEIBE, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Continuation of application Serial No. 270,446, filed Apr. 16, 1928. This application filed Mar. 25, 1929. Serial No. 349,795. 34 Claims. (Cl. 112—162.)



1. The combination of a work support, a stitch forming mechanism, a feeding mechanism, an actuating shaft arranged above the plane of the work support and disposed so as to extend in the general direction of the feed and located substantially in rear of the stitching point, actuating members carried by said shaft and devices operated thereby for operating, respectively, the feeding mechanism and the stitching mechanism, and a supporting standard for the actuating shaft arranged to one side of the line of feed whereby clearance for the material being stitched is afforded.

1,751,509. ELECTRIC SOLDERING MACHINE. JAMES CUNNINGHAM, Riverton, N. J., assignor, by mesne assignments, to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 30, 1927. Serial No. 179,647. 29 Claims. (Cl. 219—12.)

1. In a wire-splicing machine, the combination with a frame, of a soldering iron mounted in said frame, a plurality of wire-gripping elements, and means for moving said gripping elements to bring the wires held thereby successively into position to be acted upon by said soldering iron.

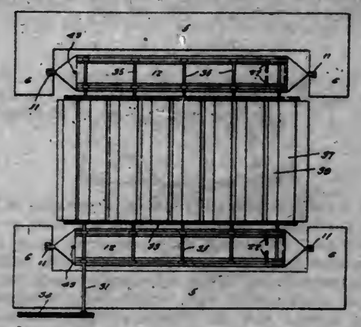


1,751,510. METHOD AND APPARATUS FOR MAKING JOINTS. JAMES CUNNINGHAM, Riverton, N. J., assignor, by mesne assignments, to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 9, 1928. Serial No. 298,564. 14 Claims. (Cl. 113—59.)

1. A method of making joints in cable comprising forcing a fine stream of molten metal at a high temperature and high velocity against the parts to be joined and automatically moving said stream at a uniform rate of speed around the cable over said parts.

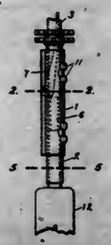
10. A machine for making joints in cable sheath comprising a frame, means for supporting the same to surround the cable, a solder tank on said frame, a nozzle and a valve therefor on said tank, manually controlled means for operating said valve, and driving means for rotating said frame about the cable.

1,751,511. COMBINED CHARGE AND AIR HEATER FOR INTERNAL-COMBUSTION ENGINES. JACOB RICHARD FRANCIS, Flint, Mich. Filed May 1, 1928. Serial No. 635,907. 16 Claims. (Cl. 123—122.)



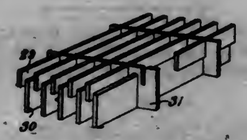
1. The combination with an internal combustion engine having an exhaust manifold, intake manifold and a charge forming device connected thereto, provided with a throttle valve, of a detachable heating jacket surrounding said intake manifold, means for conveying exhaust gases from said exhaust manifold to said heating jacket, means operated by the throttle for controlling the passage of exhaust gases through said jacket, a detachable concentric shell surrounding said jacket provided with an air inlet and means for conveying the air passing through said jacket to the air inlet of the charge forming device.

1,751,512. HOLD-DOWN DEVICE FOR AUTOMOBILES. ISIDORE LEO FRIEDLAENDER, Detroit, Mich. Filed Aug. 27, 1928. Serial No. 302,266. 7 Claims. (Cl. 188—32.)



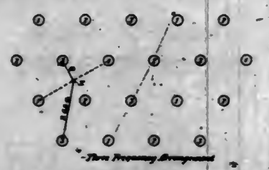
1. A device of the character described, comprising a single strip of sheet metal bent into substantially U-shape form to provide legs adapted to straddle apart of the vehicle, the ends of the legs being bent inwardly in overlapping relation and punched with registering bolt holes; a floor plate formed of sheet metal; means for securing the floor plate to the floor; a bolt relatively short extending through the floor plate and through the overlapping ends of the U-shape member; means between said floor plate and said bolt for maintaining the bolt in substantially vertical position against turning movement; and nuts screwed upon said bolt to adjustably secure the U-shape member on the bolt.

1,751,513. WATER-POWER GENERATOR. FRANK L. GARDE, Plymouth, Ind. Filed Jan. 31, 1929. Serial No. 336,544. 5 Claims. (Cl. 170—85.)



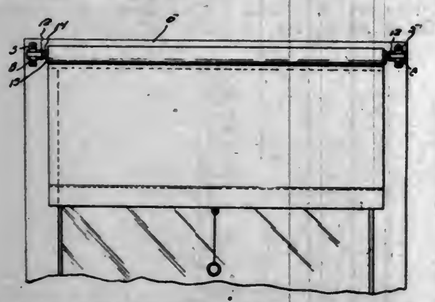
1. In an apparatus of the class described, a pair of vertical coextensive parallel spaced walls provided with inwardly directed end extensions, the inner surfaces of the extensions being provided with tracks vertically disposed, a pair of pontoons between the extensions and having arms at their ends, rollers journaled on the arms and disposed in the tracks, and power generator means supported on the platform.

1,751,514. UMBRELLA ATTACHMENT. THEODORE P. GARANKIN, New York, N. Y. Filed Apr. 18, 1929. Serial No. 356,158. 3 Claims. (Cl. 135—41.)



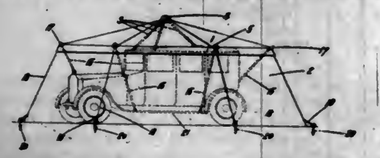
2. In an umbrella attachment, the combination of a tubular member loosely fitted over the sliding rib bushing of said umbrella, a hinge supporting said tubular member on said bushing, a portion of said member being adapted to cover a spring latch of said umbrella, said tubular member being adapted to be manually rocked on said hinge thereby operating said latch of said umbrella.

1,751,515. LOCOMOTIVE GRID SCREENING. HARRY E. GILLETTE, Lincoln, Nebr. Filed July 13, 1927. Serial No. 205,414. 5 Claims. (Cl. 110—122.)



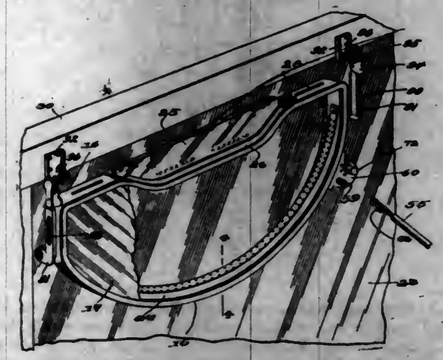
1. A spark arrester for locomotive smoke boxes, comprising a plurality of spaced apart supporting bars, a plurality of upper grid bars, a plurality of lower grid bars, the upper and lower grid bars being alternately positioned with adjacent grid bars having partially overlapping relationship and notched connections between the supporting bars and the grid bars.

1,751,516. COMMON-FREQUENCY BROADCASTING SYSTEM. ESTILL I. GREEN, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 8, 1927. Serial No. 211,518. 5 Claims. (Cl. 250—17.)



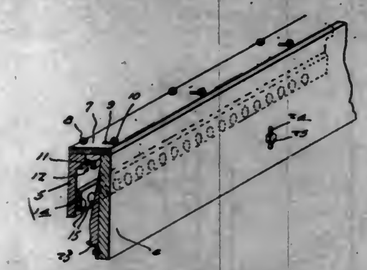
1. In a chain broadcasting system, a plurality of broadcasting stations arranged to transmit the same program, each station transmitting on but a single wave length, said stations being arranged in groups, each station of a group transmitting at the same wave length, but more than one transmitting wave length being employed for different groups and all of the groups simultaneously transmitting the same program, the stations of the different groups being so located with respect to each other and the stations of other groups, and the wave lengths being so assigned to the stations, that any set of four closely adjacent transmitting stations surrounding a common area will employ less than four but not less than two carrier frequencies.

1,751,517. SHADE HANGER. VICTOR C. HANSEN, Brooklyn, N. Y. Filed Aug. 13, 1928. Serial No. 299,326. 1 Claim. (Cl. 156—24.)



A shade hanger comprising a guide bracket, means for securing the bracket to the window sash, a supporting bracket having reinforcing flanges formed on its longitudinal edges and bent over one face thereof, said supporting bracket including right angularly extending arms, the flanges engaging the face of one arm and the flanges on the other arm being spaced from said face to provide guide ways, the arm having the flanges bent into engagement therewith being slidably mounted in said guide bracket for movement transversely of the window sash, and a shade roller-engaging section slidably carried in said guide flanges and having means formed at its outer end for receiving one end of a shade roller.

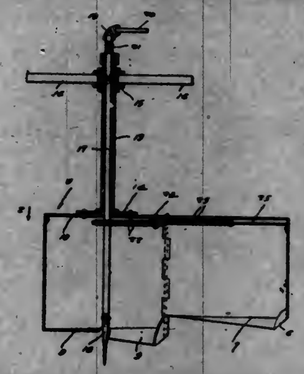
1,751,518. TENT. AGNES PATRICIA MACLEAN, Kentallen, Scotland. Filed Oct. 9, 1928, Serial No. 311,402, and in Great Britain July 17, 1928. 3 Claims. (Cl. 135—4.)



1. The combination with a vehicle, of a fabric tent covering, sockets secured to the vehicle, upwardly directed struts the lower ends of which are secured in said sockets and means connecting the upper ends together forming a supporting structure, extending well above the vehicle, which is rigid without dependence being placed upon the fabric of the tent.

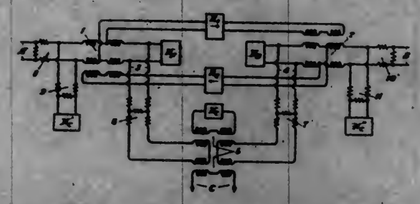
1,751,519. CLEAR-VISION DEVICE. KENNETH M. MACLENNAN, Ayer, and JOSEPH O. MARCHAIS, Fitchburg, Mass., assignors to Safety Clear Vision, Inc., Fitchburg, Mass., a Corporation of Massachusetts. Filed Nov. 26, 1928. Serial No. 321,969. 7 Claims. (Cl. 20—40.5.)

1. An attachment for windshields and the like including a glass-carrying frame, a plurality of separate successively operable heating elements carried thereby, and switch means for bringing said heating elements successively and additively into operation.



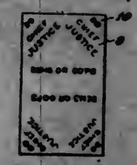
1,751,520. CAN COVER AND TOP FEED GUIDE. JOHN MENGEL, Oconomowoc, Wis. Filed Nov. 9, 1928. Serial No. 318,166. 7 Claims. (Cl. 113—114.)

1. A guide of the class described comprising a pair of spaced parallel guide members, a channeled guide formed on the inner face adjacent the upper edge of one of said guide members and a guide shelf secured at the inner face adjacent the lower edge of the other of said guide members, said channeled guide and said guide shelf cooperating to engage the upper and lower edges respectively of the work and forming a track upon which the same may be moved longitudinally of the guide, and guide means carried by each of said members for engaging opposite sides of the work intermediate its upper and lower edges and arranged to urge the lower edge of the work off the edge of the shelf when said work is placed in predetermined position in the guide.



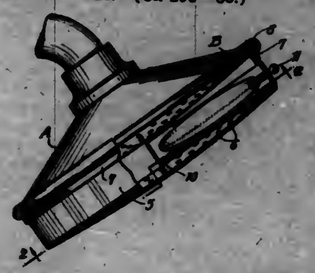
1,751,521. POST-HOLE DIGGER AND REAMER. ARTHUR EUGENE MILLER, Houston, Tex. Filed Mar. 29, 1929. Serial No. 350,993. 1 Claim. (Cl. 255—67.)

A post hole digger comprising an expansible head, a hollow handle extending from the head, a rod extending through said handle, and means connecting the rod to the expansible head, whereby the head may be adjusted, said head including a pivotal blade and said means consisting of an arm projecting from the rod, a pivotal pin connection



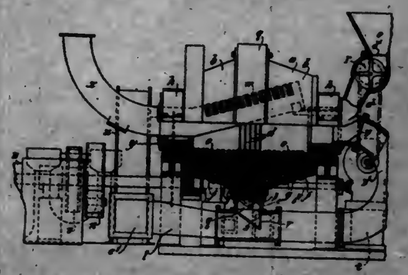
between the said arm and the said pivotal blade, and adjustable means whereby the blade may be retained in an adjusted position, said means consisting in providing the head with a plurality of openings, said pivotal pin being adapted to engagement in one of the said openings.

1,751,522. MULTIPLE-WAY CONNECTION FOR TRANSMISSION LINES. DOREN MITCHELL, New York, and HAROLD C. SILENT, Larchmont, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 23, 1928. Serial No. 301,659. 4 Claims. (Cl. 179—170.)



1. Two line sections interconnected by repeater apparatus, comprising hybrid coils, balancing networks, and repeater gain elements for transmission in opposite directions, circuits connected to the network side of each of said hybrid coils and terminating in the windings of another hybrid coil, and a third line section connected to said last mentioned hybrid coil.

1,751,523. CARD GAME. WILLIAM MCKINLEY MORGAN, Wynona, Okla. Filed July 28, 1928. Serial No. 295,924. 1 Claim. (Cl. 273—152.)



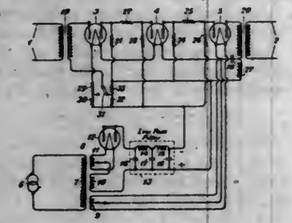
A deck of ninety-nine cards, ninety-six of said cards representing Senators from the forty-eight States and being divided equally between the two leading political parties and bearing data indicative of the order of admission of the respective States to the Union, and the other three cards being marked as belonging to either political party and bearing designations representing the Vice-President, the President and the Chief Justice, the President card being marked "Veto" and the Vice-President card being marked "Deciding vote", and the cards representing Senators from Virginia and Massachusetts being also designated "Leader".

1,751,524. SHOWER-NOZZLE ATTACHMENT. HAROLD J. MOSS, New York, N. Y. Filed Feb. 1, 1929. Serial No. 336,833. 2 Claims. (Cl. 299—83.)

1. In a shower nozzle attachment, a pan-shaped member having an annular side wall and perforations in its bottom wall, means associated with the side wall of the member to facilitate its attachment to the rim of the shower nozzle, and means normally located within the member for the reception of soap or bath pellets and constructed to permit the water to pass therethrough when leaving the nozzle, said means consisting of a drawer slidable through an opening in the side wall of the member and having openings in at least its bottom wall.

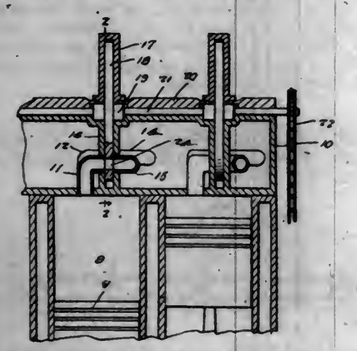
1,751,525. APPARATUS FOR PULVERIZING COAL OR OTHER FUEL. JOHN MULLIN, Enfield, England. Filed Mar. 30, 1929, Serial No. 351,370, and in Great Britain Apr. 2, 1928. 6 Claims. (Cl. 83—9.)

1. A ball and drum pulverising mill comprising a rotatable drum, balls therein, and means for delivering material into one end of the drum, the drum having imperforate conical end portions and an intermediate cylindrical portion which is in free communication with the end portions and is provided with openings through which pulverized material is discharged.



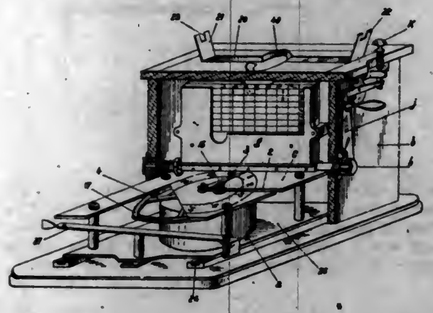
1,751,526. WEATHER STRIP. LARS C. NEILSEN, Bradley, Ill. Filed Apr. 15, 1929. Serial No. 355,219. 3 Claims. (Cl. 20—68.)

1. In a weather strip, a pair of bars arranged longitudinally beneath the lower edge of the door and secured



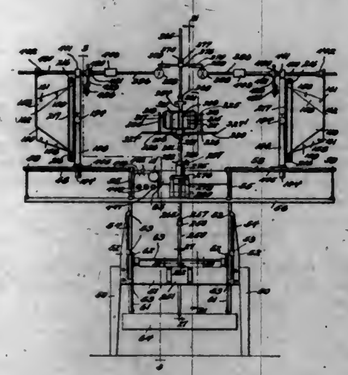
thereto, strips secured to the bottom faces of the bars and having the inner edge portion thereof extending inwardly beyond the inner side faces of the bar to provide supporting ledges, vertically extending pins secured at their lower ends on the ledges, a plate arranged longitudinally between the bars and mounted for vertical movement on the pins, an additional plate arranged longitudinally between the bars and mounted for lateral sliding movement on said pins, a door jamb engaging element carried by one end of the sliding upper plate, coacting means between the upper and lower plates for normally holding the lower plate in the lowered position, a floor engaging strip attached to the lower plate for disposition between the supporting ledges and engaging with the floor when the lower plate is moved downwardly, means for automatically sliding the upper plate longitudinally when the door jamb engaging element is moved out of engagement therewith to move the coacting members out of engagement with each other, and additional means for automatically raising the lower plate and the floor engaging strip carried thereby to inoperative position when said aforementioned coacting means is disposed in an inoperative position.

1,751,527. DISTORTIONLESS AMPLIFYING SYSTEM. HARRY NYQUIST, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 24, 1926. Serial No. 150,525. 2 Claims. (Cl. 179—171.)



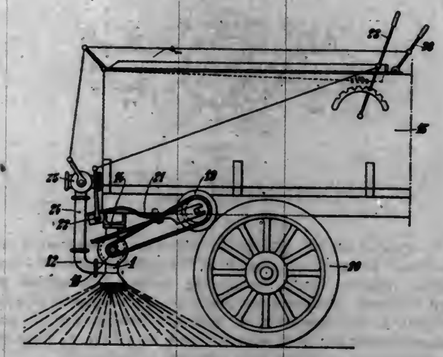
1. A distortionless coupling arrangement for an amplifying system comprising two three-element vacuum tubes, a resistance connecting the plate of the first vacuum tube to the grid of the second vacuum tube, a source of alternating current, means for rectifying said alternating current, a filter connected to said rectifying means, said filter having a cutoff frequency lower than the frequency of said alternating current, and two other resistances, said latter resistances connecting opposite terminals of the first resistance to opposite terminals of said filter, respectively.

1,751,528. ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES. HANS C. PETERSON and FRANK H. RUSSELL, Weyauwega, Wis. Filed May 8, 1928. Serial No. 276,083. 1 Claim. (Cl. 123—59.)



In a valve structure for internal combustion engines comprising an engine head of hollow construction having casings extending transversely therein, intake and exhaust conduits leading to and extending from the casings, each casing comprising in construction a pair of spaced side walls, a disc valve operable within each casing, said disc having ports to register with the conduits, caps for disposition over the said casings and the upper portions of the said discs, a shaft on which said discs are mounted, and means for mounting the shaft.

1,751,529. TIME-RECORDING APPARATUS. FERDINAND PHILIPPE ANDRÉ ERNEST DELPECH, Paris, France. Filed Nov. 9, 1926, Serial No. 147,273, and in France Nov. 27, 1925. 9 Claims. (Cl. 234—43.)



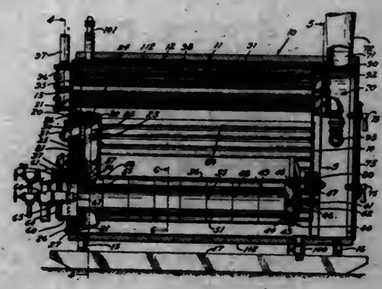
1. A card holder for a recorder of the type described comprising a pair of hingedly connected card guides and card centering means carried by one of said guides engaging the other of said guides when said guides are moved to closed position.

1,751,530. STEREOSCOPIC APPARATUS. WILLIAM P. REAVES, Greensboro, N. C. Filed Dec. 16, 1925, Serial No. 75,822. Renewed Sept. 2, 1926. 36 Claims. (Cl. 88—29.)

1. A stereoscopic apparatus, comprising in combination, a support, two radiograph supports mounted thereon, a binocular reflecting device mounted on the support between said radiograph supports, and means for tilting said radiograph supports about both vertical and horizontal axes, including means for moving said reflecting device vertically or horizontally with respect to said support, a rod slidably mounted on each of said radiograph supports, and a universal pivotal connection between each of said rods and said reflecting device.

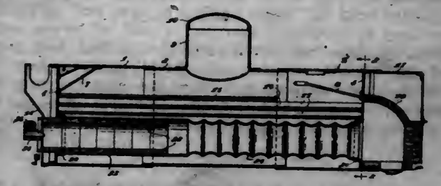
1,751,531. CENTRIFUGAL DIFFUSING APPARATUS FOR SPREADING PRODUCTS FOR THE MAINTENANCE OF ROADWAYS. ALPHONSE JOSEPH SCHARS, Bordeaux, France. Filed Jan. 10, 1928, Serial No. 245,751, and in France Jan. 26, 1927. 4 Claims. (Cl. 299—38.)

1. In a centrifugal diffusing apparatus for spreading products on roadways, a fixed frustum-shaped casing, means for feeding said casing at its part of smallest diameter with the product to be spread, said casing being open at its part of largest diameter, a rotating member fitted in the said casing, a shaft co-axial with the casing and keyed on the said rotating member, and means to rotate the said shaft.



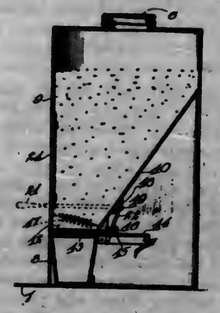
1,751,532. AUTOMATIC MACHINE-CONTROL MECHANISM. FLETCHER SCHAUM, Philadelphia, Pa., assignor to Fletcher Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 11, 1928. Serial No. 325,858. 5 Claims. (Cl. 139—66.)

1. An automatic control comprising a series of slidable elements respectively connected with the instrumentalities to be controlled and a series of predeterminedly arranged elements mounted for movement in an orbital path having a section disposed parallel with the plane of movement of the slidable elements, said slidable and movable elements having shoulder lugs, the edges of which overlap each other at said section of parallelism and adapted to have contact to slide certain of the slidable elements concurrently with the movable elements to actuate the control and means for reciprocating the series of elements.



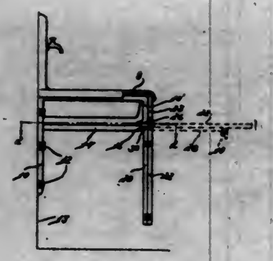
1,751,533. OIL HEATER. HUSTON TAYLOR, Pasadena, Calif. Filed July 7, 1926. Serial No. 120,907. 2 Claims. (Cl. 122—33.)

1. An oil heating apparatus comprising a shell containing a heat exchange fluid, a combustion chamber projecting into said shell, a relatively large outlet vestibule for receiving the combusted gases and discharging them to the atmosphere, a multiplicity of small oil conveying tubes situated within said shell, and a large oil distributing pipe connected to said tubes and extending through



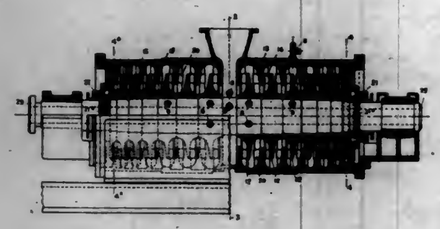
said outlet vestibule with its outer surface in direct contact with the outlet gases passing through said vestibule.

1,751,534. BOILER. HUSTON TAYLOR, Pittsburgh, Pa. Filed May 22, 1929. Serial No. 365,187. 5 Claims. (Cl. 122—149.)



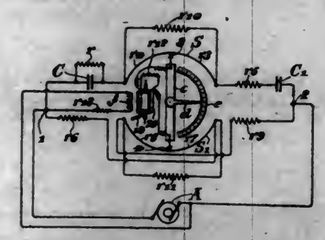
1. A boiler comprising an elongated waterholding shell, a metal tubular member of flue proportions disposed in said shell below the normal water level therein and serving as a combined furnace and flue, the furnace portion of said member being lined with refractory to provide a combustion chamber whose surface area in square feet is equal to three or more times its volume in cubic feet, and of sufficient length to cause efficient combustion of fuel within the combustion chamber when the boiler is operating within its rated capacities.

1,751,535. COFFEE DISPENSER. JOHN TERBORG, Demotte, Ind. Filed Oct. 10, 1928. Serial No. 311,601. 2 Claims. (Cl. 221—146.)



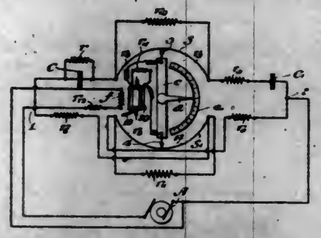
1. A dispensing apparatus comprising a container having a bottom outlet, a slide for closing said outlet, a cross rod movable with the slide and projecting beyond the side edge of the same, a rock shaft pivoted adjacent said cross rod and having an arm projecting transversely of the path of movement of the cross rod and adapted to move the cross rod and associated slide to permit discharge through said bottom opening.

1,751,536. TABLE. WILLIAM R. THOMSON, Fordson, Mich. Filed Oct. 29, 1928. Serial No. 315,653. 2 Claims. (Cl. 45—17.)



1. In a table of the class described a supporting frame; a pair of supporting arms slidably mounted on said frame; a cross bar connecting said supporting arms; and a pair of bars slidably mounted in said cross bar; a board mounted on said supporting frame; a leaf swingably mounted on said board, said supporting bars upon engagement with the under surface of said leaf, retaining the same in horizontal position; a pair of leaves, each swingably connected to one edge of said first mentioned leaf and foldable thereon, said slidably mounted bars in said cross bar adapted to engage the under surface of said pair of leaves and maintain said pair of leaves in alignment with said first mentioned leaf.

1,751,537. APPARATUS FOR COMPRESSING AIR, GASES, OR VAPORS. EMILIO VIANELLO, Milan, Italy. Filed July 9, 1926, Serial No. 121,455, and in Italy Feb. 25, 1921. 2 Claims. (Cl. 230—130.)

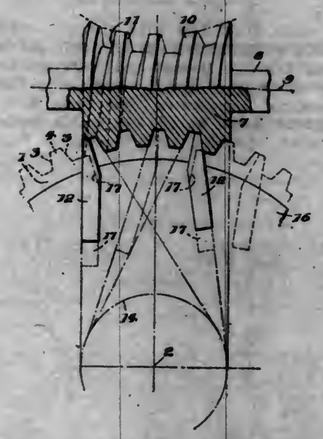


1. A centrifugal compressor for air, gases, vapors and the like including a plurality of rotating wheels each having an integral rim projecting towards the suction side of the compressor and a plurality of ports changing in number and size from wheel to wheel and disposed at an angle of 50–60 degrees to the radius at the inner periphery of the rim and radial at the outer periphery thereof, said ports presenting successive sections of passage varying in the same rim according to the change of the velocity and the change of the specific volume of the fluid dependent on the isothermal compression, diaphragms preceding each rotating wheel and provided on the side towards the ports of said wheel with rings axially displaceable from the outside of the casing to effect tightness of said ports and provided on the opposite side with a crown of deflectors each disposed at an angle of 50–60 degrees at the outer periphery of the crown and radial at the inner periphery, means for maintaining the temperature of the fluid undergoing compression at a predetermined value and means for securing tightness between the shaft and the ends of the casing.

1,751,538. SYSTEM OF FREQUENCY OR SPEED MEASUREMENT AND CONTROL. FELIX WUNSCH, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 27, 1925. Serial No. 18,794. 10 Claims. (Cl. 172—245.)

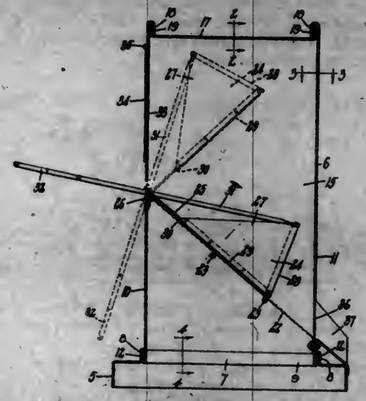
9. Apparatus for measuring frequency comprising an electrical network, a source of fluctuating current connected thereto, means indicating balanced condition of said network, structure movable to effect balance of said network at the frequency of said fluctuating current, and means associated with said movable structure to indicate the frequency at which said network is balanced.

1,751,539. FREQUENCY AND SPEED CONTROL. FELIX WUNSCH, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Mar. 27, 1925, Serial No. 18,794. Divided and this application filed June 27, 1928. Serial No. 288,688. 13 Claims. (Cl. 171—119.)



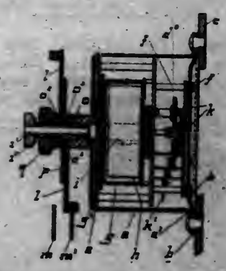
4. In a system comprising a moving system, means for regulating delivery of energy thereto to maintain the speed within a range, an alternator driven by said system, and an electrical balancing network, the method of controlling the speed of the moving system, which comprises producing unbalance of said electrical network by departure of the frequency of said alternator from a predetermined frequency at which the network is balanced, and utilizing the unbalanced network to modify the action of said regulating means.

10. A system comprising an alternator, a prime mover therefor, a governor maintaining the speed of said prime mover substantially constant, and means for determining the governor setting comprising an electrical network responsive to the alternator frequency and means operable when the network is not balanced at a predetermined frequency to change the setting of said governor.



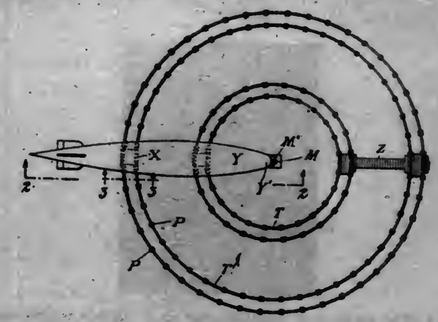
1,751,540. METHOD OF GENERATING WORM GEARING. SAMUEL I. COSS, Portsmouth, Va., assignor to Cone Gearing Corporation, Norfolk, Va., a Corporation of Virginia. Filed June 27, 1925. Serial No. 40,115. 14 Claims. (Cl. 90—4.)

1. The method of generating worm wheels consisting in simultaneously rotating an edge cutting tool and a wheel blank, said cutting tool being radiated while rotated in a plane parallel with and spaced apart from a plane passing through the axis of the wheel blank and perpendicular to the axis of rotation of the cutting tool, the cutting edge lying at all times entirely within a plane passing through the axis of rotation of said tool.



4. The method of generating worm wheels of the character described, consisting in rotating and radiating an edge cutting tool and a worm wheel blank simultaneously about two axes perpendicular to each other to generate the faces of the worm wheel teeth, the plane of the cutting edge of the tool being spaced apart from a plane passing through the axis of the worm wheel blank a distance equal to the radius of the co-axial circle formed by the projections of the faces of the worm wheel teeth and said plane of the cutting edge of said tool being parallel with the axis of the worm wheel blank and perpendicular to the axis of rotation of said tool and the distance between said axes being maintained constant throughout the operation, and cutting teeth upon said wheel blank with a long helical twist and with sides at a constant angle to each other.

1,751,541. ASH SIFTER. GEORGE G. DONNELLY, Somerville, Mass. Filed May 8, 1929. Serial No. 361,434. 4 Claims. (Cl. 209—357.)



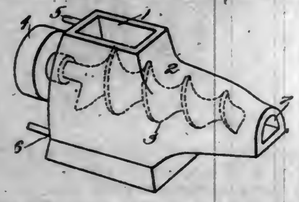
1. An ash sifter comprising, in combination, a cover for an ash receptacle, a housing mounted upon said cover, a screen mounted in an inclined position within said housing and a sieve pivotally mounted within the housing and normally resting upon the screen.

1,751,542. CLOCK. ARTHUR DORSEY, Brooklyn, N. Y. Filed Dec. 23, 1922. Serial No. 608,600. 2 Claims. (Cl. 161—1.)

1. In combination, with clock mechanism, including an arbor actuated thereby, power take-off devices and time indicating means carried with the arbor, and releasable means supported on and co-operating with said arbor to change the angular relation between the time indicating means and the power take-off devices with respect to the arbor without disturbing the angular relation between the power take-off devices and the time indicating means, and independent releasable means for setting the power take-off devices in predetermined relation with the time indicating means.

1,751,543. MOORING FOR AIRSHIPS. FRANCIS HECTOR CLERGUE, Montreal, Quebec, Canada. Original application filed May 28, 1928, Serial No. 281,066. Divided and this application filed Apr. 4, 1929. Serial No. 352,406. 5 Claims. (Cl. 238—356.)

1. In a device of the class described, a track comprising rail-forming I-beams, supports permanently fixed adjacent to said I-beams, clamps engaging the bases of said beams at one side, and clamps movably mounted on said supports and movable toward and from said bases, adapted to engage them on the opposite side, and locking devices movably mounted on said supports and adjustable relatively thereto to lock said movable clamps in operative positions and to release the same.

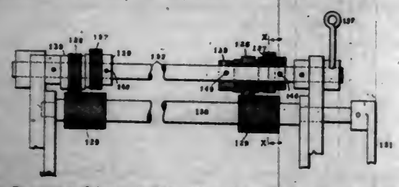


1,751,544. MERCURY SWITCH. PAUL K. CRAMBLET, Milwaukee, Wis., assignor to Time-O-Stat Controls Company, Elkhart, Ind., a Corporation of Maryland. Filed Nov. 24, 1928. Serial No. 321,568. 20 Claims. (Cl. 200—152.)

1. A mercury switch comprising an outer envelope, an inner protective tube of arc resistant material, and means for supporting the tube on the envelope, and including a

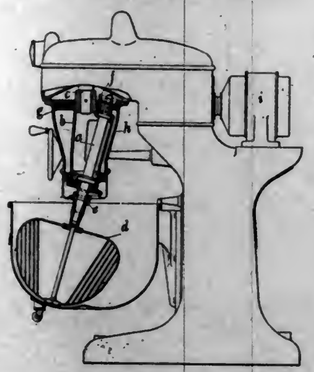
supporting ring of glass interposed between the tube and the envelope and a body of cement covering the ring and adhering thereto and to the tube and envelope.

1,751,545. METHOD OF MAKING BOX TOES FOR SHOES. JOHN J. DALY, Newton, Mass., assignor to North American Chemical Company, Boston, Mass., a Corporation of Massachusetts. Filed July 18, 1928. Serial No. 293,512. 9 Claims. (Cl. 12—146.)



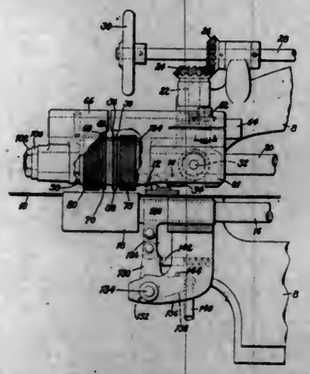
1. The herein described method of making a shoe element such as a box toe blank, filler piece, or the like, consisting of reducing the material to a plastic condition and forming the same into a bar having a cross section corresponding approximately to the shape of the ultimate article, then slicing said bar transversely into successive leaf-like blanks of said shape, and then subjecting the same to a finishing treatment under pressure.

1,751,546. METHOD OF ORNAMENTING SHEET RUBBER. ALFRED A. GLIDDEN and FRANK D. BEAN, Watertown, Mass., assignors, by mesne assignments, to Hood Rubber Company, Inc., Watertown, Mass., a Corporation of Delaware. Filed Oct. 26, 1928. Serial No. 315,306. 3 Claims. (Cl. 41—26.)



1. The method of ornamenting sheet rubber which consists in passing sheet rubber between a pair of calender rolls, one of which is pebbled, then applying powder to the pebbled surface of the sheet, then removing the surplus powder, and subsequently printing a design comprising a plurality of groups of parallel lines, the lines of each group being positioned at different angles to lines of the other groups.

1,751,547. AUTOGRAPHIC REGISTER. LOUIS F. HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario, Canada. Filed Nov. 20, 1923. Serial No. 675,801. 23 Claims. (Cl. 282—21.)



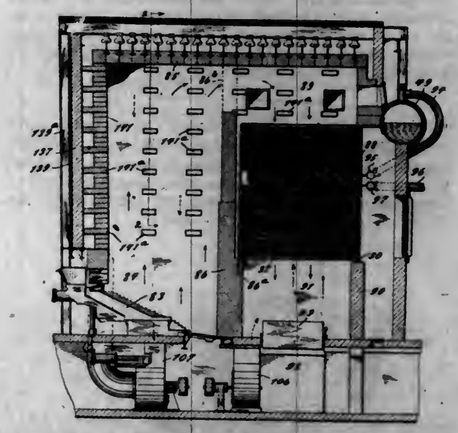
1. In a machine of the class described, in combination, a plurality of means adapted independently to advance a web having apertures and adapted to be rendered ineffective to advance said web by engagement with an aperture, said means being laterally spaced from each other, and means for rendering each of said advancing means operative one alternately with the other.

1,751,548. MACHINE FOR THE MIXING, AERATING, AND LIKE TREATMENT OF VARIOUS MATERIALS. LAURENCE SEYMOUR HARBER and JOHN EDWARD POINTON, Peterborough, England, assignors to Baker Perkins Company Incorporated, New York, N. Y. Filed July 23, 1928, Serial No. 294,780, and in Great Britain Aug. 9, 1927. 1 Claim. (Cl. 74—34.)

The combination with a frame, a fixed casing thereon including a fixed toothed annulus at its upper end and a journal bearing at its lower end, a rotatable pin coaxial with the annulus and carried by the frame, a housing fixed to said pin and rotatable therewith, the lower end of said rotatable housing journaled in the lower bearing of the fixed casing for rotation therein, the upper and lower parts of the rotatable housing formed with spindle-receiving bearings, an angularly disposed spindle journaled in said bearings, the upper end of said spindle above said upper bearing carrying a pinion meshing with said toothed annulus.

1,751,549. MACHINE FOR OPERATING UPON BLANKS OF SHEET MATERIAL. ERNEST HOPE and ALFRED EDWARD RICHARDS, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 4, 1924, Serial No. 735,863, and in Great Britain Sept. 6, 1923. 18 Claims. (Cl. 164—60.)

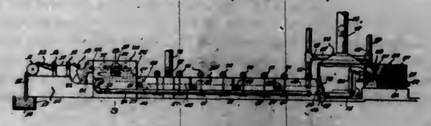
1. In a machine of the class described, a driving shaft carrying a grooving tool, a work support fixed relatively



CARNEGIE LIBRARY OF ATLANTA

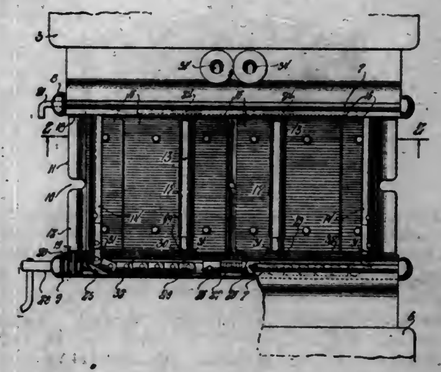
to the axis of said shaft and tool, a work-feeding roll mounted upon the shaft in driving connection therewith, said roll being normally coaxial with the shaft, and compressible means between the roll and the shaft arranged to yield transversely of the shaft with variations in the thickness of the work.

1,751,550. PROCESS OF PREPARING ALUMINO-THERMIC MIXTURE. REED W. HYDE, Summit, N. J. Filed Sept. 29, 1928. Serial No. 309,359. 8 Claims. (Cl. 75—17.)



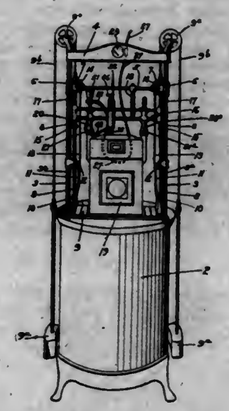
1. The process of preparing alumino-thermic mixtures which consists in sintering metal oxides capable of reduction by aluminum to produce a sinter cake, crushing the sinter and mixing therewith fine particles of aluminum.

1,751,551. BOILER AND SETTING THEREFOR. DAVID S. JACOBUS, Jersey City, N. J., assignor, by mesne assignments, to Fuller Lehigh Company, a Corporation of Delaware. Filed Nov. 3, 1924. Serial No. 747,550. 7 Claims. (Cl. 110—1.)



1. An inclined furnace wall comprising an inner wall and an outer wall, both of said walls being substantially flat, refractory members carried by one of the walls and resting against the other wall and slidable over the surface thereof for maintaining said walls in spaced relation while allowing them to expand relatively to each other in a direction substantially parallel to the planes of the walls.

1,751,552. METHOD OF AND APPARATUS FOR DRYING WOOD PULP AND THE LIKE. RICHARD D. KEHOE, New York, N. Y. Filed Feb. 15, 1928. Serial No. 254,576. 11 Claims. (Cl. 34—12.)

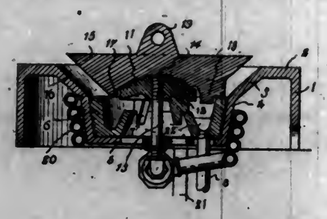


1. A pulp drying apparatus, including a primary heating chamber, heating means therefor, means for directing the pulp through such chamber, a secondary heating chamber including independent heating zones through which air is directed, heating means for the air in each of such zones including heat interchangers through which the air is directed after passing through the pulp, to thereby initially raise the temperature of the air, and means for directing the exhaust from the primary heating chamber through said heat interchangers for heating the latter.

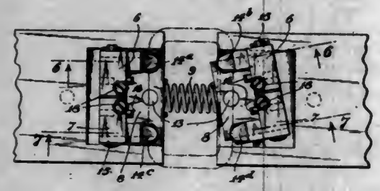
1,751,553. LOOSE-LEAF BINDER. ADOLPH G. LOTTER, Milwaukee, Wis., assignor to Stationers Loose Leaf Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 26, 1928. Serial No. 321,906. 4 Claims. (Cl. 129—1.)

1. A binder of the character described having a pair of binder heads, a telescoping post, a substantially flexible post connecting the heads, and means for actuating the flexible post to move the binder heads toward and away from each other, the telescoping post holding the binder heads in proper relative position.

1,751,554. METER-TESTING APPARATUS. JOHN T. LUCAS, Minneapolis, Minn., assignor to American Meter Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Jan. 12, 1924. Serial No. 685,836. 10 Claims. (Cl. 73—51.)



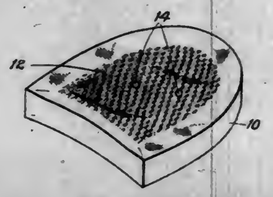
1. Meter testing apparatus comprising a conduit for supplying fluid under pressure to one chamber of a meter, a second conduit having one end adapted to communicate with the interior of another chamber of the meter, means for indicating the presence of fluid pressure at the other ends of said second conduit, and a manually controlled valve operatively positioned between said conduits.



1,751,555. HYDROCARBON BURNER. HARRY L. MAXFIELD and WALLACE E. MIKKELSON, Janesville, Wis. Filed Mar. 8, 1928. Serial No. 260,079. 3 Claims. (Cl. 158—67.)

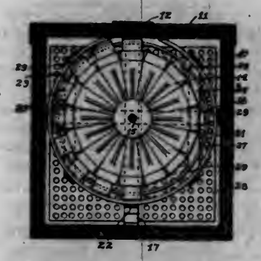
1. A hydrocarbon burner including a hollow base and having the inner wall comprising an upper flared portion

and a lower tapering portion, a vaporizing coil disposed within the space of the base and lying close to the lower tapering portion of the said inner wall, a burner supported within the lower tapered portion of the base, and a spreader disposed above the burner and flared to conform to the flared portion of the base to form therewith a flared flame outlet.



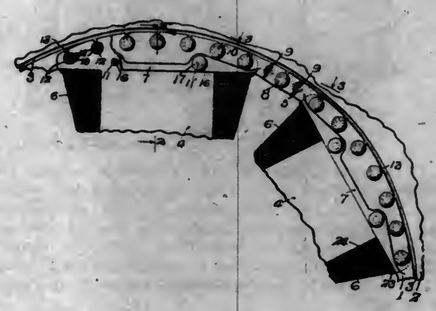
1,751,556. COVER-SEPARATING MEANS. JOSEPH PEYSER, Mount Vernon, N. Y. Filed Apr. 13, 1927. Serial No. 183,443. 20 Claims. (Cl. 113—114.)

1. Separating means, for a stack of blanks, including: a separating member movable toward and away from the stack to engage between adjacent blanks and supporting means for said separating memebr to admit of its yielding, in response to opposition encountered by said member when engaging the stack, in a direction different from its path of movement.



1,751,557. RUBBER TREAD FOR SHOES. CLIFFORD ROBERTS, Winchester, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 2, 1928. Serial No. 289,798. 11 Claims. (Cl. 36—35.)

7. A rubber heel element consisting of fabric woven of paper cord.

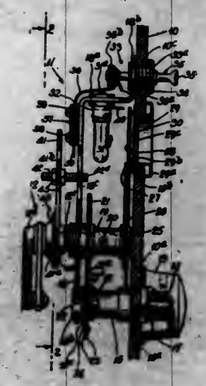


1,751,558. BOTTLE COOLER. JOHN M. SCHILLING, Lima, Ohio. Filed Sept. 22, 1928. Serial No. 307,645. 19 Claims. (Cl. 312—36.)

1. In a bottle cooler, the combination of a casing, rotary bottle carriers, a framework supporting said carriers in substantially vertical planes for rotary movement in said casing, riding tracks around said carriers for holding bottles therein, and guide tracks in planes substantially parallel with the planes of said riding tracks for engaging bottles in said carriers to hold said bottles on said riding tracks, said framework including laterally extending bars supporting said tracks and legs extending below said tracks and below the lowermost one of said supporting bars to rest upon the bottom of said casing and holding said tracks

a substantial distance above the bottom of said casing constituting the lower part of said casing a refuse receptacle below said tracks, said tracks having substantial clearance spaces around them permitting foreign matter to pass freely into said refuse receptacle.

1,751,559. METHOD OF STANDARDIZING THE MANUFACTURE OF DYNAMO-ELECTRIC MACHINES. THEODOR SCHOU, Mansfield, Ohio, assignor to The Ideal Electric & Manufacturing Company, Mansfield, Ohio, a Corporation of Ohio. Filed Mar. 21, 1928. Serial No. 626,452. 14 Claims. (Cl. 172—120.)

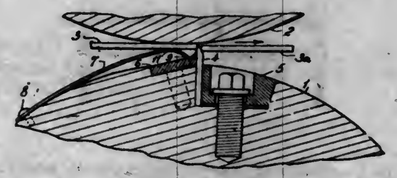


2. The method of constructing a squirrel cage winding for a dynamo electric machine which consists in assembling ring segments in a series corresponding to the pole-pieces of a dynamo electric machine, securing the segments in parts to the opposite sides of the pole-pieces respectively in electrically effective relation to each other, and then driving conducting wedge members between and in electrical contact with adjacent ends of the segments to secure continuous electrical conductivity through the rings.

1,751,560. ATTACHMENT FOR CONNECTING TUNING UNITS TO DIAL CONTROLS. SAM A. SHAPIRO, Bronx, N. Y., assignor, by mesne assignments, to Arthur Dorsey, New York, N. Y. Filed Dec. 20, 1926. Serial No. 155,968. 2 Claims. (Cl. 175—41.5.)

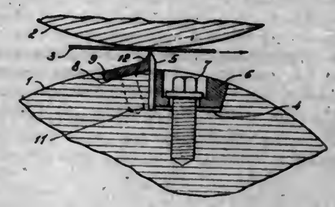
1. In an apparatus of the character described, having an adjusting device comprising a stator and a rotor, means cooperating with the rotor of the adjusting device for adjusting the same, common means to mount the adjusting device and the adjusting means upon a panel, a plate

adjustably fixed with the stator of the adjusting device, a slot in the plate, a slot in the mounting means, and a



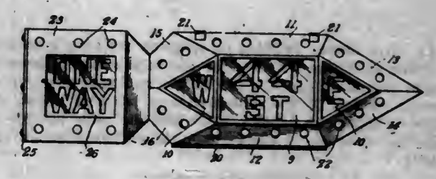
pin adjustably fixed in one of the slots extending into the other slot, whereby the stator of the adjusting device is prevented from rotating with the rotor thereof.

1,751,561. MANURE-SPREADER BODY. ERNEST C. SMITH, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Aug. 25, 1927. Serial No. 215,290. 7 Claims. (Cl. 280—80.)



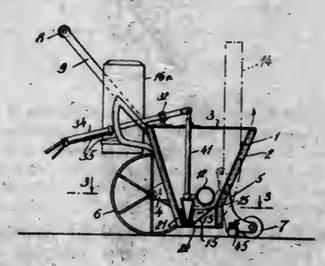
1. In a manure spreader, a rear axle, a pair of longitudinal sills having portions bent down so as to pass beneath said rear axle and disposed throughout the major portions of their lengths with their top surfaces above the lower side of said axle, bearing boxes located between the bent portions of each sill, and a tight fixed bottom supported by said sills with its under surface just clearing the top of said axle.

1,751,562. SHINGLE STRIPPER. DANIEL STINGER, Philadelphia, Pa., assignor to The Barrett Company, a Corporation of New Jersey. Filed Oct. 22, 1925. Serial No. 64,081. 4 Claims. (Cl. 164—66.)



1. In combination a roll, a knife protruding substantially radially from the surface of said roll and a resilient strip-like member secured to the roll at that end of the strip which is the more remote from the knife, and having an intermediate portion which is normally at a greater radial distance from the surface of the roll than is the knife edge.

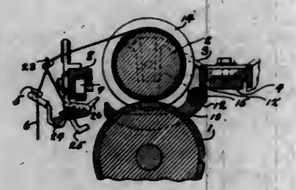
1,751,563. SHINGLE-CUTTING KNIFE. DANIEL STINGER, Philadelphia, Pa., assignor to The Barrett Company, a Corporation of New Jersey. Filed Oct. 22, 1925. Serial No. 64,082. 7 Claims. (Cl. 164—66.)



1. A cutting roll, a knife located in a longitudinal recess in the circumferential surface of said roll and protruding therefrom and a back stop secured to the roll in contact with the protruding portion of the knife.

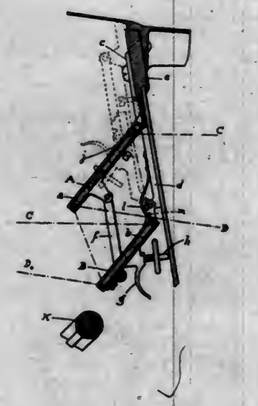
1,751,564. STREET SIGN AND TRAFFIC SIGNAL. EDMUND J. STONE, New York, N. Y. Filed Apr. 12, 1928. Serial No. 269,499. 4 Claims. (Cl. 40—132.)

1. A street intersecting sign comprising a pair of casings extending in the direction of the intersecting streets, panels in the fronts of said casings to show respectively the name of the streets and direction in which the streets extend, said panels being removably engaged, cover plates hinged at the rear of said casings, lamp containers communicating with remote ends of said casing, a series of differently colored lamps in each container to show through the casing panels, and transparent panels in the front walls of said containers bearing legends relating to the streets.



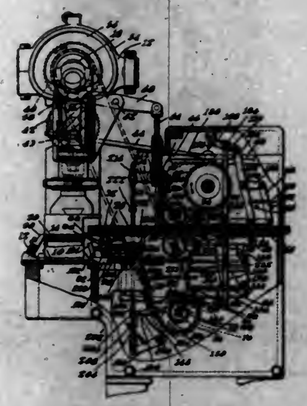
1,751,565. DEVICE FOR SPREADING BITUMEN. CHARLES G. TALBOTT, Stamford, Conn., assignor to The Barrett Company, a Corporation of New Jersey. Filed Nov. 2, 1926. Serial No. 145,747. 5 Claims. (Cl. 91—30.)

1. In a device for spreading bitumen, the combination of a tank having a longitudinal slot in the bottom thereof,



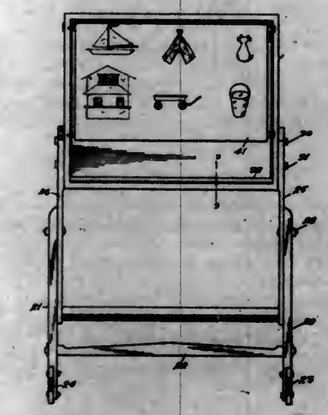
sloping walls positioned in the bottom of said tank defining a plurality of smaller aligned slots and forming valve seats in conjunction with said smaller slots, and a plurality of selectively operable tapered valves adapted to seat in said valve seats for controlling the amount and extent of distribution of bitumen from said tank.

1,751,566. BOBBIN HOLDER. PACIFIC J. THOMAS, Philadelphia, Pa., assignor to Fletcher Works, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1928. Serial No. 326,488. 11 Claims. (Cl. 117—28.)



11. In a thread twisting or spinning machine a bobbin, a frame providing bearings for the bobbin, and a pivoted cradle extending beneath the bobbin and normally out of contact therewith and automatically movable about its pivot to engage the bobbin and raise the same out of its bearings upon the breakage of a thread being led to the bobbin.

1,751,567. NONGLARE FRONT-VIEW MIRROR. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed Mar. 24, 1927. Serial No. 177,991. 8 Claims. (Cl. 88—67.)

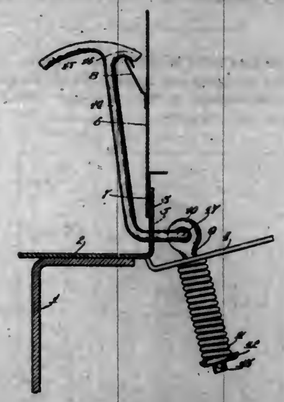


7. A non-glare front vision mirror for vehicles, which comprises two substantially opaque reflecting surfaces mounted in approximate parallelism with each other, one of the said surfaces being of the non-glare type, and having a composition adapted to completely absorb a substantial portion of the light incident thereon.

1,751,568. MACHINE FOR CUTTING SHEET MATERIAL. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 30, 1926. Serial No. 125,987. 26 Claims. (Cl. 164—21.)

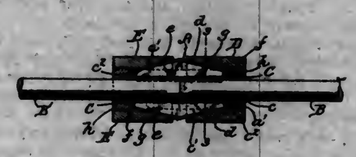
1. In a machine for operating upon sheet material, a die, means for cutting sheet material into sections approximating the size of the die, a member positioned between the die and the cutting means for receiving the sections as they are cut, and means for feeding the material to the cutting means and the sections to the die.

1,751,569. COMBINATION DESK. ROSS WINSHIP, Valparaiso, Ind. Filed Dec. 10, 1925. Serial No. 74,488. 3 Claims. (Cl. 45—91.)



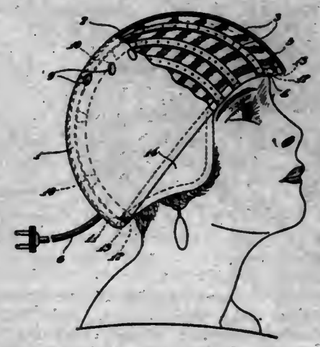
1. In a combination desk of the character described a vertically positioned cabinet having a lid board fitting into the front opening, a base board for the cabinet grooved so as to permit said lid board to set therein, and an L-shaped block secured to the base board of the cabinet with an overhanging portion extending forwardly over a part of the groove whereby the lid may be tilted forwardly and downwardly and then pushed back under the overhanging portion of the block.

1,751,570. TURBINE BLADING. ROBERT C. ALLEN, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 21, 1928, Serial No. 263,452. Renewed July 20, 1929. 6 Claims. (Cl. 253—77.)



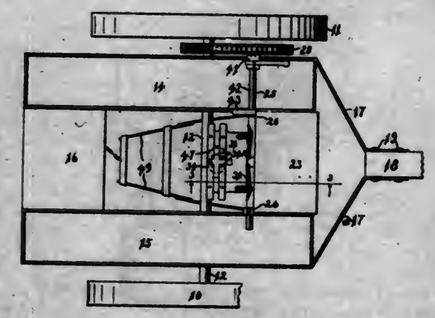
1. In a turbine, the combination of a plurality of blades, each blade having an opening formed therein at a point where the tangent to the deflection curve for a mode of vibration defines approximately the greatest angle with respect to the normal blade radius, and a lashing member passing through the blade openings and fixedly secured to the blades so that its bending resistance opposes deflection of the blades.

1,751,571. HOOD FASTENER. NELS G. ANDERSON, Springfield, Ohio, assignor to International Harvester Company, a Corporation of New Jersey. Filed Oct. 8, 1927. Serial No. 224,843. 6 Claims. (Cl. 292—101.)



1. In a hood door fastener, a support adjacent the edge of the door, an anchor member on the support, said anchor member comprising a spring pulled eyebolt inside the hood, a catch on the door, and a latch member pivotally mounted in the eye of the anchor member and engageable with the catch to hold the door against the support.

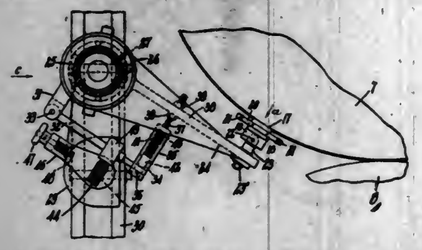
1,751,572. ELECTRICAL CONNECTER. MILES W. BEEMER, Newark, N. J. Filed June 23, 1926. Serial No. 117,902. 2 Claims. (Cl. 173—303.)



1. In an electrical connection, the combination of a threaded sleeve provided with a plurality of longitudinal slots, a plurality of conductors encased by the sleeve, a plurality of current-conducting bars each seated in one of the slots of said sleeve, each of said bars having electrical contact with the proximate ends of said conductors and each bar extending continuously from its contact with one conductor to its contact with the other conductor, and pressure applying nuts screwed on the threaded sleeve and having wedging contact with said current conducting members for applying pressure to the latter for clamping said members into electrical and tight frictional engagement with said conductors.

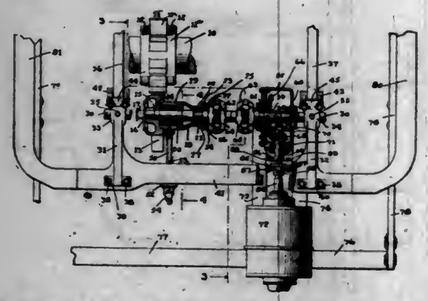
1,751,573. HAIR-DRYING DEVICE. ROBERT BISHINGER, Allison Park, Ross Township, Allegheny County, Pa. Filed Mar. 1, 1928. Serial No. 258,154. 8 Claims. (Cl. 34—26.)

1. A hair drying device comprising an electric frame conforming approximately to the head of the wearer, a heating element secured to the interior of said frame and means for spacing said frame and said element from the head.



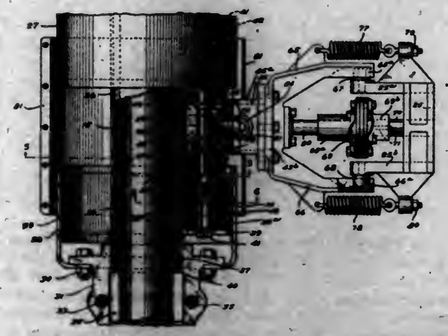
1,751,574. SEED-POTATO CUTTER AND PLANTER. EDWARD O. BRAATEN and OTTO R. HARMER, Northfield, Minn. Filed June 9, 1927. Serial No. 197,563. 2 Claims. (Cl. 146—59.)

1. In a seed potato cutter and planter device mounted on a wheel supported frame having potato carrying means, and a potato cutter housing mounted on said frame; a plurality of fixed cutter blades in said housing and arranged in crossed planes, a rotary multi-winged device rotatable in a plane longitudinally of the normal movement of the planter and mounted on a shaft rotated by suitable power means, said latter device comprising a plurality of radial plate-wings provided each with a central slot opening outwardly at the outer edge of the plate and a cross slot parallel to the said outer edge, four prongs fixed in said plate at the intersection of said slots and projecting upwardly



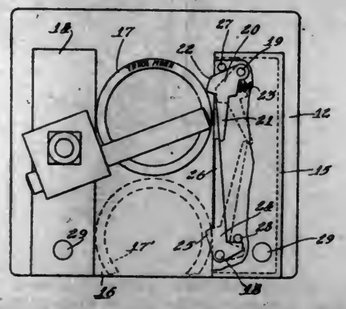
when the plate is rotating in its upward movement, flat elongated cam arms having each an aperture straddling a prong at its inner edge and adjacent the radial slot, said cam arms projecting beyond the sides of the plate and pivoted at said edges, spring means pressing the inner ends of said arms against the plate and the prongs projecting upwardly therethrough, said cutter blades in the housing arranged in the path of said crossed slot to cut a potato held on said prongs in four pieces and each said piece on one of said prongs, and means for removing the potato pieces operative subsequent only to said cutting operation.

1,751,575. GUM-STOCK TRIMMER. JAMES HADDON DAVIDSON and RAYMOND S. WADE, Watertown, Mass., assignors, by mesne assignments, to Hood Rubber Company, Inc., Watertown, Mass., a Corporation of Delaware. Filed Apr. 28, 1927. Serial No. 187,393. 11 Claims. (Cl. 164—36.)



1. A gum stock trimmer having, in combination, a calender roll, a flat cutter blade, its longitudinal cutting edge extending circumferentially of and contacting with the periphery of said calender roll, a holder for said cutter blade, means to adjust said cutter blade about an axis extending radially with relation to said calender roll and transversely of said cutter blade, means to press said cutter blade against the periphery of said calender roll with a yielding pressure, and means to move the cutter blade into and out of contact with the calender roll.

1,751,576. POWER TRANSMISSION. BASSETT M. COFFEE, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Mar. 1, 1922. Serial No. 540,155. 28 Claims. (Cl. 105—113.)

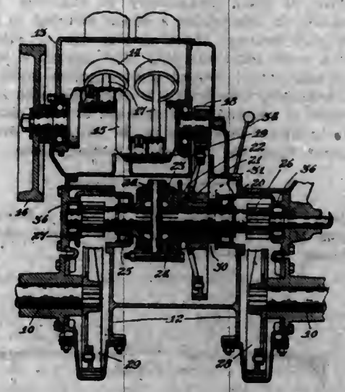


1. In apparatus of the general nature of that herein described, in combination, a car axle, a gear thereon having teeth of sufficient length relative to the pitch diameter to form between adjacent teeth relatively large pockets extending in a radial direction, a gear adapted to be driven from said car axle gear, a generator mounted in substantially fixed relation relative to said car axle, means mounting said second gear to permit it to move toward or away from said car axle gear upon foreign matter lodging therebetween, and means connecting said second-mentioned gear to said generator to drive the latter and adapted to maintain driving connection throughout the relative movement between said two gears.

1,751,577. GENERATOR MOUNTING AND DRIVE. THEODORE S. COLE, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Mar. 26, 1926. Serial No. 97,619. 48 Claims. (Cl. 105—109.)

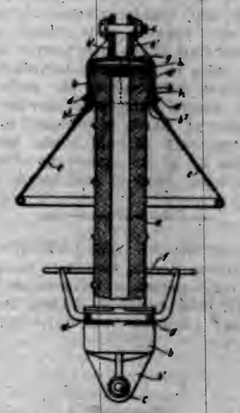
1. In apparatus of the class described, in combination, a car axle, a truck frame supported by said car axle and in which said car axle is rotatably mounted, a generator mounted upon said truck frame, a shaft connected to drive said generator and projecting therefrom toward said car axle, means geared to the end portion of said shaft and having a frictional driving connection with said car axle, and a support for said last means universally suspended from said truck frame.

1,751,578. STAMPING MACHINE. CHRIST DE YOUNG, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Aug. 11, 1928. Serial No. 298,968. 14 Claims. (Cl. 101—4.)



1. The combination with a stamping machine having a punch member and a work holding and feeding table including a work passage-way, of means at one side of the passage-way for holding a piece of work in position to be stamped by the punch member, and means at the same side of the passage-way for releasing said holding means controlled by a second piece of work fed along the table.

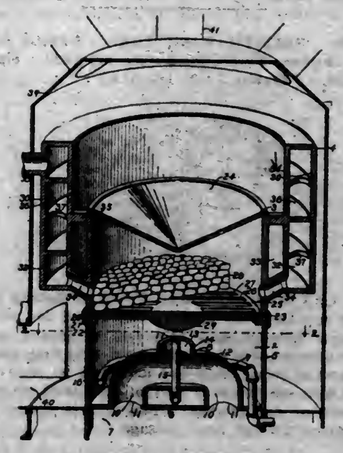
1,751,579. TRANSMISSION MECHANISM FOR TRACTORS. GUSTAF W. ENGSTROM, Riverside, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Original application filed July 28, 1922, Serial No. 578,071. Divided and this application filed June 4, 1925. Serial No. 34,784. 6 Claims. (Cl. 74—99).



1. The combination with an engine having a crank case, of a transmission casing on top of which the crank case is mounted, a crank shaft journaled in the crank case and having a gear fixed thereon, two differential shafts journaled in the transmission casing, differential gearing

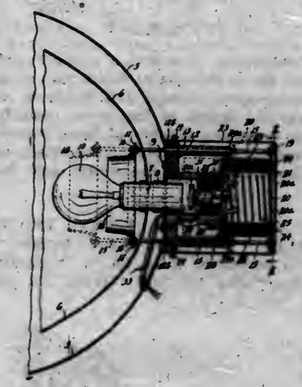
connecting the differential shafts, a driving gear rotatably mounted on one of the differential shafts, a clutch adapted to connect the driving gear and differential gearing,

means for operating the clutch, two spaced stub axles journaled in opposite sides of the transmission casing, a gear on each stub axle, and a gear on each differential shaft in mesh with each gear on the stub axles.



1,751,580. ELECTRIC INSULATOR. HARRY ALEXANDER EWEN, Shenfield, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 1, 1925, Serial No. 19,763, and in Great Britain Apr. 4, 1924. 4 Claims. (Cl. 173—318.)

3. In combination, a cylindrical insulator having enlarged end portions, two-piece caps surrounding the end portions and having thickened clamping rings, clamping means on said caps, shackle means on each cap, protecting means for the insulator, and supports held by the clamping means for supporting said protecting means.



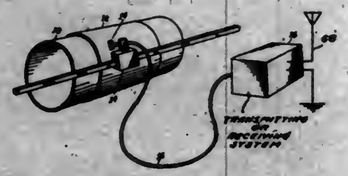
4. In combination, an insulator, removable split end caps fastened by clamping bolts, a weather shield attached to one of said end caps by means of its clamping bolts, and a corona screen attached at the other of said end caps by means of its clamping bolts.

1,751,581. HEATING DEVICE. ARTHUR RAYMOND GOULD, Kansas City, Kans. Filed May 17, 1928. Serial No. 278,378. 8 Claims. (Cl. 126—116.)

1. In a device of the character described, a fire pot, a fuel conductor provided with an outlet, a flame spreader above the outlet, and an air discharge conduit having spaced air inlets and a common air outlet concentric with the fuel outlet, the air outlet being of smaller cross sectional area than the combined areas of the air inlets.

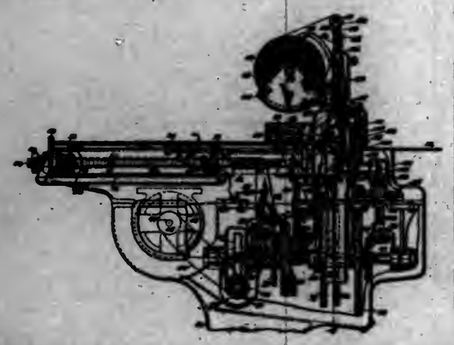
1,751,582. DIMMER DEVICE FOR HEADLIGHTS. STANLEY J. GRASLEWICZ, Minneapolis, Minn. Filed Apr. 11, 1927. Serial No. 182,710. 6 Claims. (Cl. 240—45.)

1. A headlight with a dimming attachment having in combination, a casing, a reflector within said casing, a lamp socket disposed therein, a lamp in said lamp socket, a tubular shield normally disposed substantially at the rear of said lamp and in front of the reflecting surface of said reflector, a pair of small parallel rods carrying said shield and extending through said reflector, a member of magnetic material secured to the rear of said casing, means carried by said member in which said rods are movable, said member having a central hollow sleeve coaxially arranged with said lamp socket and lamp, an electromagnetic coil movable over said sleeve to which said rods are connected, said coil being movable over said sleeve when energized to move said shield to dimming position substantially over said lamp, a locking means for



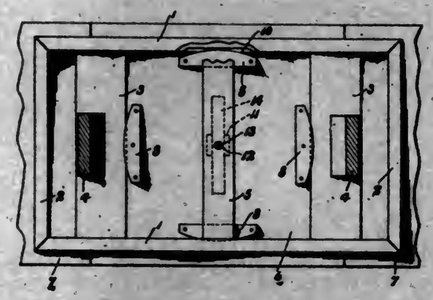
holding said shield in dimming position and an electromagnetic coil within said sleeve adapted to release said locking means and means for moving said shield to normal position.

1,751,583. SELF-THAWING TRAP. HAROLD D. GREGORY, Camden, N. J. Filed July 22, 1927. Serial No. 207,805. 6 Claims. (Cl. 182—11.)



1. A trap of the character described having an inlet opening and an outlet opening and a well for condensate interposed between said openings, of means providing a vapor passage substantially within said well, one end of said passage being open and arranged to receive vapor flowing into said trap by way of said inlet opening, the other end of said passage being open to permit flow of such vapor through said passage.

1,751,584. PICTURE TRANSMISSION. CLARENCE W. HANSELL, Rocky Point, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 13, 1927. Serial No. 212,803. 17 Claims. (Cl. 178—7.)

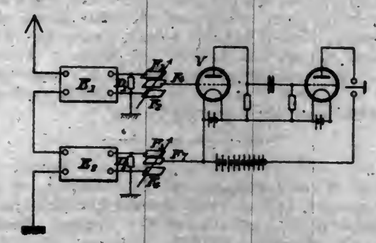


1. In combination, a source of radiant energy, a device located out of the normal direct path of said radiant energy for response thereto, and means to convey said energy from the source to the device comprising a flexible quarts conductor capable of being moved relatively thereto, said conductor having transversely cut ends located in juxtaposition to the source and the device.

1,751,585. MACHINE FOR CUTTING AND WRAPPING MATERIAL. EDWARD C. HEGG, Buffalo, N. Y., assignor to Mojonnier Bros. Co., a Corporation of Illinois. Filed May 10, 1927. Serial No. 190,359. 20 Claims. (Cl. 93—2.)

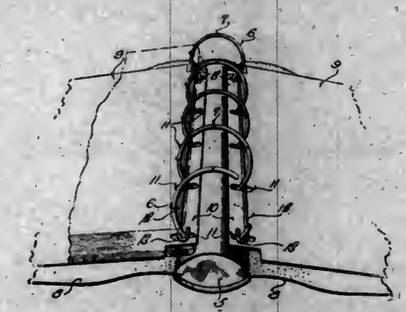
1. A machine of the character described, comprising means for presenting sections of material, means for feeding a wrapper sheet along one side of said section, a plunger arranged on the opposite side of said section and adapted to push the front side of the same against a wrapper sheet, means for folding said wrapper sheet around said section, and means for holding said wrapper sheet in place preparatory to engaging the same by said section, comprising a detent adapted to press one end of said wrapper sheet against one of said folding blades, a rock shaft carrying said detent, a spring for moving said detent toward the respective folding blades, and a retracting arm which is connected with said shaft and which is adapted to be engaged by said plunger during the backward movement of the latter for disengaging the detent from the respective folding blade.

1,751,586. DROP-LEAF TABLE. JOHN KIMP, Grand Rapids, Mich. Filed Feb. 28, 1928. Serial No. 257,568. 2 Claims. (Cl. 45—9.)



1. In a table structure, a rectangular frame having a greater length than width, a table top located over the frame having a length greater than the width and less than the length of the frame, leaves hinged at opposite ends of the top, boards extended between the sides of the frame near opposite ends thereof, said sides of the frame intermediate of the ends thereof having grooves at their inner sides in the same horizontal plane with said boards, blocks connected to the under side of the top having arc shaped outer sides located in the same circle, the center of which is substantially the center of the table top, each of said blocks having an outwardly projected lip at its under side adapted to pass underneath the inner edges of said boards and into said grooves.

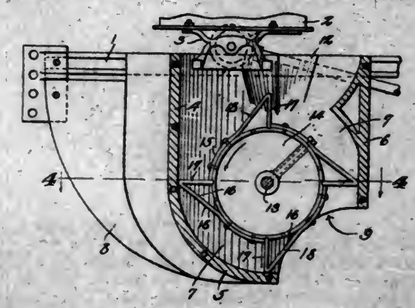
1,751,587. ELECTRICAL HIGH-RESISTANCE UNIT. SIEGMUND LOEWE, Berlin, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 27, 1925, Serial No. 52,885, and in Germany Aug. 30, 1924. 5 Claims. (Cl. 201—75.)



5. A high frequency resistor comprising an evacuated casing, an insulating rod disposed within said casing, an open ended cylinder disposed within said casing and surrounding said rod, a conductor attached to each end of said cylinder and affixed to the end of the rod closest to said cylinder, each of said conductors passing through the end of the casing, said cylinder embodying a vaporizable metal, and said rod surface being provided with a coating of said vaporizable metal.

1,751,588. WIRELESS RECEIVING SET FOR COMPENSATING DISTURBANCES. SIEGMUND LOEWE, Berlin, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed July 27, 1926, Serial No. 125,813, and in Germany Aug. 1, 1925. 8 Claims. (Cl. 250—20.)

1. A wireless receiving system for eliminating disturbances comprising two receiving circuits one of said receiving circuits being tuned to the wave to be received, the other of said receiving circuits being tuned to a wave somewhat different from said former wave, whereby said first circuit will receive said former wave and the disturbances and said second circuit only the disturbances, and connections for the audio outputs of said circuit for balancing capacitively the disturbances received by said first circuit against the disturbances received by said second circuit so as to obtain a combined receiving action of said circuits without said disturbances.

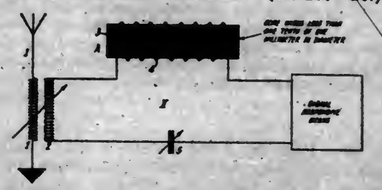


1,751,589. LOOSE-LEAF BINDER. ADOLPH G. LOTTER, Milwaukee, Wis., assignor, by mesne assignments, to Stationers Loose Leaf Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 9, 1928. Serial No. 260,814. 8 Claims. (Cl. 129—4.)

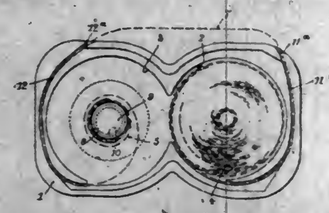
1. In a loose leaf binder including a plurality of spaced concentric rings, a cover member and a plurality of leaves loosely retained by the rings, means disposed between the cover member and the outermost leaves and engaged with the rings, and a member mounted transversely of the rings between said means and the outermost leaves for movement therewith adjacent the rings as the binder is closed to prevent binding of portions of the leaves between the rings and said means.

1,751,590. ATTACHMENT FOR PLANTERS. CLOVIS C. LUTZ, Canton, Miss. Filed Jan. 31, 1927. Serial No. 164,842. 1 Claim. (Cl. 111—84.)

A seed depositing attachment for planters comprising a seed receiving body adapted to be secured beneath the seed container of a planter and comprising parallel side plates joined by narrow forward and rear walls, a rotatable wheel journaled between said plates with its rim closing the space between the plates and having radially extended wings thereon with one surface perpendicular to the rim and forming seed propelling abutments, the forward wall on the body having its lower portion curved on the arc described by the ends of the radially extended wings and contacting therewith, the curved portion of said wall terminating at the under side of the body as a runner-like bottom portion thereof normally resting on the soil when the attachment is in operation and ending there to form a seed outlet, the radial wings wiping the curved portion of said wall to sweep seeds from the end thereof horizontally onto the soil, the upper portions of the side plates being flared to provide an enlarged seed receiving channel immediately above the wheel.



1,751,591. VALVE. GREGORY E. MCCLOSKEY, South Orange, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Mar. 15, 1926. Serial No. 94,631. 2 Claims. (Cl. 251—86.)



1. In combination, a body comprising two chambers having a wall therebetween, an orifice member fixed in said wall and having an aperture with an apex, and a valve member rotatably positioned on the face of said wall, said valve member comprising a varying valve surface bounded by a segment of a spiral adapted to expose varying areas of said aperture when moved relative thereto, said apex and one end of said spiral segment coinciding to close the aperture in one position of the valve member.

1,751,592. OSCILLATORY CIRCUITS. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany. Filed Apr. 10, 1925, Serial No. 22,026, and in Germany Apr. 25, 1924. 4 Claims. (Cl. 250—20.)

1. An oscillatory circuit resonant to a desired signal of a predetermined current strength adapted to be used with a signal responsive means, including a tuning condenser and an inductance device connected therewith, said inductance device having a ferro-nickel core so constructed as to reduce eddy current losses to a low value and being adapted to bring said circuit to a non-resonant condition upon an increase of current strength beyond that of said predetermined strength.

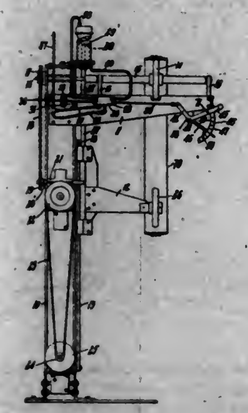
1,751,593. FILM HOLDER. ANDRÉ NOËL MEELE, Paris, France, assignor to Pathé Cinema, Anciens Etablissements Pathé Freres, Paris, France. Filed Feb. 7, 1925, Serial No. 7,714, and in France June 28, 1924. 5 Claims. (Cl. 242—71.)

3. An article of the class described comprising a box having two compartments and openings in the side walls of the compartments, one of the compartments being adapted to receive a roll of film, the film passing through the wall openings into the second compartment, a cap adapted for removable disposition on said socket within the second compartment, means for attaching the end of the film to the exterior of the cap, means on the interior of the cap adapted for engagement with a driving element inserted through the socket, a projection on the top end of the cap positioned axially of the cap, and a cover for the box striking the projection when in closed position.

1,751,594. APPARATUS FOR DETERMINING DEVIATION OF WELL HOLES FROM THE VERTICAL. HARRY J. MORGAN, Walnut Park, Calif., assignor of one-half to Charles P. Morgan, Los Angeles, Calif. Filed June 15, 1929. Serial No. 371,181. 14 Claims. (Cl. 116—68.)

1. An apparatus for determining deviation of well holes from the vertical, comprising sound producing means, means for actuating said means, and means operatively connected to the actuating means to permit operation thereof only when the well hole deviates from the vertical.

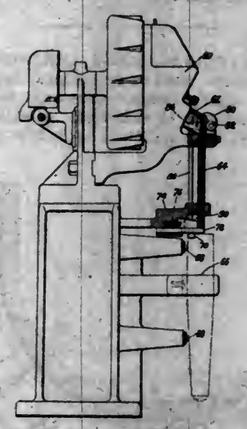
1,751,595. ELASTIC-BAND STRUCTURE. LOUIS NACHMAN and SAMUEL FINKELSTEIN, Philadelphia, Pa. Filed Dec. 8, 1927. Serial No. 238,486. 2 Claims. (Cl. 2—278.)



1. An elastic fabricated band for use in the manufacture of garters, sleeve bands, and the like, comprising a seamless tubular knitted fabric flattened into a two-ply band and transversely pleated along its whole length to give longitudinal extensibility at all portions of said length undere tension and capacity to return to its original pleated length, and a flat elastic band extending through the tubular knitted fabric and between the two flat pleated plies thereof, the length of the elastic band when not extended being approximately of the same length as the independent pleated tubular knitted fabric before being extended, and wherein further, the pleatings of the two plies of the seamless knitted fabric are respectively inclined in opposite directions on the opposite sides of the flat elastic band and supported thereby.

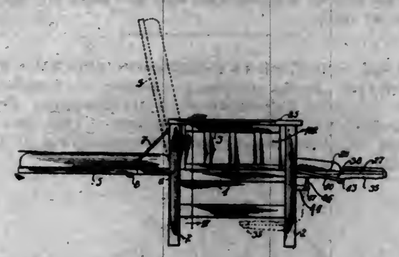
1,751,596. MEANS FOR RETAINING BOBBED HAIR. FRANK O'NEAL, Philadelphia, Pa., assignor, by mesne assignments, to The Hump Hairpin Manufacturing Co., Chicago, Ill., a Corporation of West Virginia. Filed Nov. 23, 1926. Serial No. 150,196. 2 Claims. (Cl. 132—50.)

1. A device for retaining bobbed hair consisting of a plurality of flat arms formed integral, one of said arms being corrugated near its end and the other said arm being straight, the extreme end of the corrugated arm being turned inward and upon the next adjacent surface of the flat arm.



1,751,597. APPARATUS FOR MANIPULATING RUBBER TREADS FOR TIRES. JOSEPH E. PERRAULT, Watertown, and HOWARD G. ELLIS, Waltham, Mass., assignors, by mesne assignments, to Hood Rubber Company, Inc., Watertown, Mass., a Corporation of Delaware. Filed May 17, 1927. Serial No. 192,111. 10 Claims. (Cl. 154—9.)

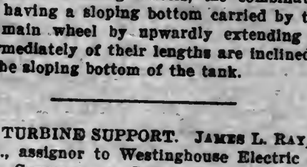
1. A tire tread expander having, in combination, a pair of rotary expander wheels upon which a tire tread may be positioned the width of the rims of said wheels measured longitudinally of their axes being substantially less than the width of the tire tread, and means to move one of said wheels away from and toward the other.



1,751,598. FASTENING-SUPPLYING MECHANISM. ELMER R. POPE, South Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Oct. 25, 1924, Serial No. 745,893. Divided and this application filed May 31, 1928. Serial No. 282,033. 11 Claims. (Cl. 1—49.5.)

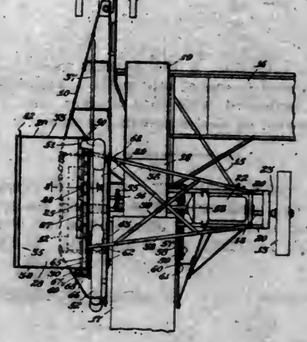
1. A fastening supplying device arranged to feed fastenings to fastening inserting means, said device comprising a raceway, a guideway communicating with the outlet of the raceway and receiving fastenings therefrom, means movable to permit and prevent the passage of fastenings from the guideway, means arranged to control the passage

of fastenings from the raceway to the guideway, and connections between said two means operative to cause the first to prevent the passage of fastenings from the raceway to the guideway when the second is moved into position to permit the passage of fastenings from the guideway.



1,751,599. CONVERTIBLE CHAIR. JOHN K. PRASSAS, Chicago, Ill. Filed Feb. 28, 1927. Serial No. 171,410. 9 Claims. (Cl. 155—171.)

9. A convertible chair including a frame, an extensible foot rest thereon, the said rest comprising two sections pivotally connected together, one of the sections being pivoted to the said chair and being arranged to swing between a horizontal and a downwardly directed vertical position, means arranged to swing the other section from a position normal to the first-mentioned section to a position in horizontal alinement therewith as the first-mentioned section is swung from the vertical to the horizontal positions, the said means comprising a member pivoted at one end to the said chair above the pivotal connection of the first-mentioned section on the chair and at the other end pivoted to the other section below and forwardly of the pivotal connection between the two sections.

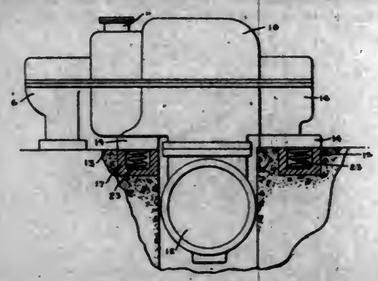


1,751,600. CONVERTIBLE CHAIR. JOHN K. PRASSAS, Chicago, Ill. Original application filed Feb. 28, 1927, Serial No. 171,410. Divided and this application filed Mar. 21, 1928. Serial No. 263,228. 3 Claims. (Cl. 155—163.)

3. A convertible chair comprising a chair frame, a back rest pivoted to said frame, a sprocket wheel, a sprocket chain engaging said wheel and fastened at one end to said back rest, a spring connecting said chain to said frame below the axis of said sprocket to retain said chain always in engagement with said sprocket, a spring pressed detent normally in engagement with said sprocket to prevent rotation thereof, a plurality of connected levers arranged to

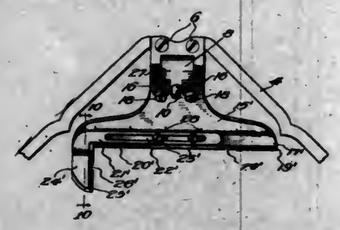
release said detent to allow movement of said back rest, a lever pivoted at one end near said sprocket and connected to said detent and to one of the levers of said plurality of connected levers, and means operably connected with one of said connected levers for actuating said connected levers to control said detent.

1,751,601. GRAIN TANK FOR HARVESTER THRASHERS. CLEMMA R. RANEY, Riverside, and ARNOLD E. W. JOHNSON, Chicago, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed June 21, 1926. Serial No. 117,354. 4 Claims. (Cl. 214—65.)



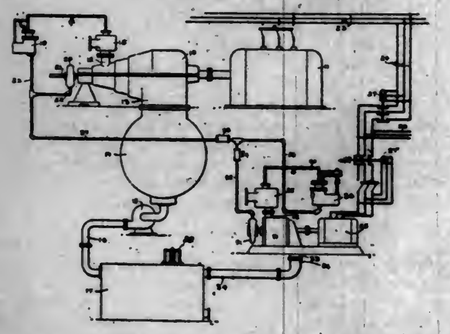
1. In a harvester thrasher having a frame supported on main, grain, and steering wheels, the combination of a grain tank having a sloping bottom carried by the frame above the main wheel by upwardly extending supports which intermediately of their lengths are inclined to form a rest for the sloping bottom of the tank.

1,751,602. TURBINE SUPPORT. JAMES L. RAY, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 23, 1925. Serial No. 77,415. 16 Claims. (Cl. 60—95.)



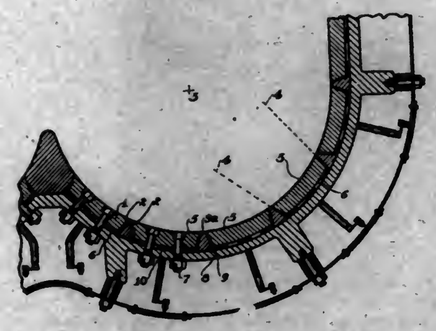
8. In a supporting structure for an elastic fluid turbine, the combination of a foundation, said turbine resting on the foundation, and sliding thereon upon expansion and contraction, means for maintaining the rotational axis of the turbine in the same vertical plane upon expansion, and resilient means interposed between the turbine and the

foundation adapted to carry a portion of the weight of the turbine and reduce friction upon relative movement between the turbine and the foundation, said means being



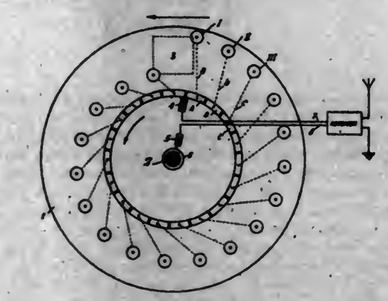
resilient in the direction of support and yieldable in a direction permitting expansion and contraction of the turbine.

1,751,603. CENTERING MEANS FOR BLANK-CUTTING DIES. ERNEST W. SAUERMAN, Chicago, Ill., assignor to Transo Envelope Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 28, 1928. Serial No. 273,471. 8 Claims. (Cl. 164—29.)



1. In combination, a die having walls, a stationary bracket secured to one of said walls, a supporting member pivotally connected with said bracket, and a centering means mounted on said supporting member.

1,751,604. POWER PLANT. HENRY F. SCHMIDT, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1925. Serial No. 9,104. 33 Claims. (Cl. 60—95.)

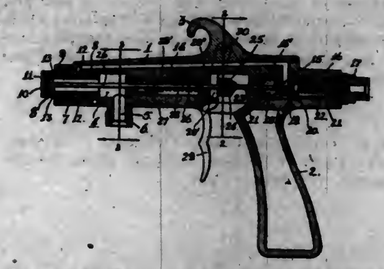


10. In a power-plant installation, the combination of two power-developing units for supplying a variable power demand, motive fluid admission valves for the units, a motor for each admission valve, means for developing a fluid pressure responsive to the speed of one of the power-developing units for actuating the motors, and means associated with the motor of the remaining power-developing unit for compensating for different speed variations in the units, whereby the amount of motive fluid admitted to the two power-developing units is maintained proportionally for various power demands.

1,751,605. HEATING-ELEMENT ARRANGEMENT FOR MIXER BOWLS. EUGENE SCHMIERER, Saginaw, Mich., assignor to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed May 14, 1928. Serial No. 277,725. 4 Claims. (Cl. 219—19.)

3. In a mixing bowl, heating units whose longitudinal edge walls are disposed so that the working face of the unit is wider than its outer back face, spacer bars received in the space between said adjacent edge walls and held in place thereby, fastening bolts received in holes formed through said units, and grooves formed in the outer convex face of said units between said bolt holes for the purposes set forth.

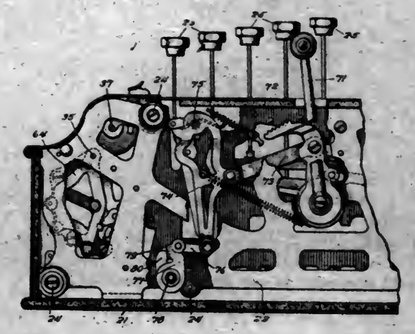
1,751,606. PICTURE-TRANSMISSION SYSTEM. FRITZ SCHRÖTER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed May 25, 1928, Serial No. 280,471, and in Germany June 10, 1927. 2 Claims. (Cl. 178—6.)



1. A system for reproducing images which includes means for receiving signals corresponding to varying picture densities, a disk, a plurality of light sources arranged in spiral formation about said disk and supported thereby, means for rotating said disk in synchronism with a corresponding element at a transmitting station, means associated with said signal receiving means for sequentially flashing said light sources in accordance with said received signals, and means for maintaining a permanent biasing potential upon all of said light sources for the purpose of maintaining an auxiliary discharge and eliminating the effects of lag in the periodic flashing of said light sources.

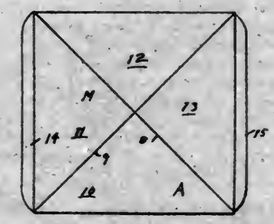
1,751,607. METHOD OF CONSTRUCTING FOUNDATIONS. ROBERT L. SMITH, Beaumont, Tex. Filed June 3, 1926. Serial No. 113,565. 3 Claims. (Cl. 61—57.)

1. The method of forming a foundation consisting of drilling a bore into the earth and lowering a single outside tubular piling into said bore, then forming a plurality of cavities one above the other in the earth adjacent the lower end of said piling then lowering an inside tubular piling into the bore and filling said cavities and the space between said pilings with concretious material which forms a support for the piling when the material hardens.



1,751,608. PAINT AND LACQUER SPRAY GUN. FRANK A. TITTSWORTH and CHARLES S. RENWICK, Richmond, Calif., assignors to Hopkins Spray Equipment Company, San Francisco, Calif., a Corporation of Nevada. Filed Feb. 13, 1926. Serial No. 88,022. 13 Claims. (Cl. 91—45.)

1. In a spray-gun, a unitary spray-head comprising a nozzle having a through bore and a discharge orifice solely for the material to be sprayed, said nozzle having in its wall a pair of oppositely disposed longitudinally directed air ducts, the forward portions of said ducts converging on lines inclined to and intersecting the plane of the nozzle orifice whereby the material to be sprayed and air are first brought into contact at the point of intersection of the air ducts with the material stream.

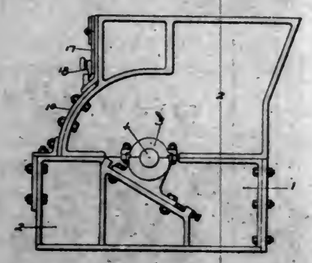


5. In a spray gun having a body including a barrel provided with connections and passages for the material to be sprayed and for the air, respectively, a control mechanism for said material and air comprising a material-discharge control plunger disposed longitudinally within the barrel; an air-inlet control plunger disposed longitudinally within the barrel; and aligned with the material-discharge control plunger; a trigger member fitted in the body of the gun; and means, associated with the adjacent ends of the two plungers, adapted to be successively engaged by the trigger, to move said plungers in timely succession, consisting of a cup carried by the air control plunger, and a head on the material control plunger housed within said cup and longitudinally slidable therein.

1,751,609. CALCULATING MACHINE. JOSEPH A. V. TURCK, Wilmette, Ill., assignor to Felt & Tarrant Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 8, 1923. Serial No. 667,277. 12 Claims. (Cl. 235—82.)

1. In a calculating machine, in combination: ordinal keys; registering wheels; key-driven actuating devices for said registering wheels, including ordinal column actuators; cancelling mechanism; and ordinal locking dogs interposed between said column actuators individually and said cancelling mechanism and rendered operative to block movement of the cancelling mechanism upon partial depression of a corresponding ordinal key for any distance insufficient to register the numerical value of the key on the corresponding registering wheel.

1,751,610. LETTER ENVELOPE SHEET. MIRKO S. YERKOVICH, San Francisco, Calif. Filed Dec. 14, 1927. Serial No. 239,867. 1 Claim. (Cl. 229—92.7.)

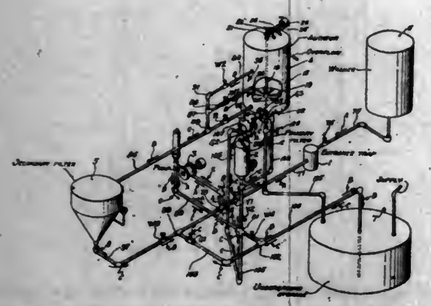


A letter sheet having gummed flaps along two opposite sides, with diagonal folding lines intersecting at the center of said sheet impressed therein whereby the letter sheet may be folded on one of said diagonal lines and then folded on the other and sealed by securing one of the gummed flaps to the other portions of the sheet.

1,751,611. PULVERIZING MACHINE. WALTER J. ARMSTRONG, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 2, 1926, Serial No. 139,155. Renewed June 12, 1929. 14 Claims. (Cl. 83—11.)

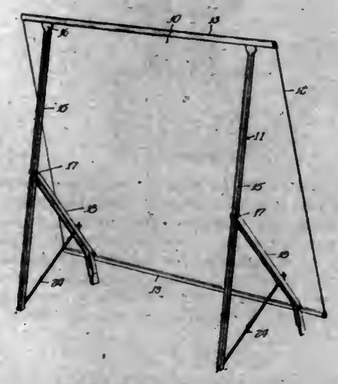
1. In a machine of the class described, the combination with a casing, of a pulverizing rotor within the casing, a

feed opening in the casing, an abutment slightly in advance of said feed opening and adapted to intercept mate-



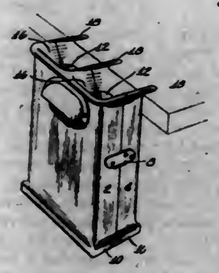
rial projected tangentially from said rotor, and a shelf in position to receive material deflected from the surface of said abutment as and for the purpose set forth.

1,751,612. PROCESS FOR THE MANUFACTURE OF ABSORBENT CARBONACEOUS MATERIAL. OSCAR L. BARNEBEY, Detroit, Mich., and MERRITT B. CHENEY, Briggsdale, Ohio; Josephine B. Cheney, administratrix of said Merritt B. Cheney, deceased, assignor to said Barnebey. Filed May 19, 1921. Serial No. 470,939. 20 Claims. (Cl. 252—3.)



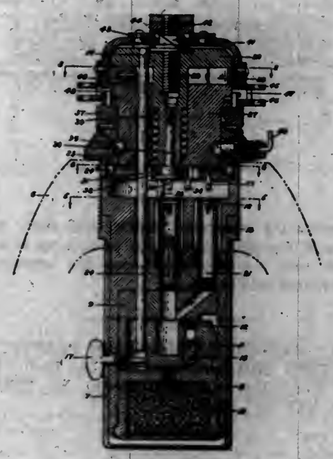
1. The improvement in the art of producing adsorbent carbon consisting in treating carbonaceous material containing between 10% and 60% of its carbon content by weight of tarry matter with an oxygenated gas at reacting temperatures below 900° C.

1,751,613. APPARATUS FOR SALVAGING USED CLEANERS' GASOLINE. WALTER S. BAYLIS, Los Angeles, Calif., assignor, by direct and mesne assignments, to Filtrol Company of California, a Corporation of California. Filed Dec. 21, 1925. Serial No. 76,650. 4 Claims. (Cl. 196—15.)



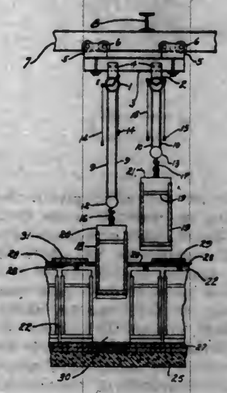
1. An apparatus for refining cleaners' solvent which comprises: a pump; a pump suction line connected to the suction side of said pump; a primary filter; a primary filter intake line connected to the pressure side of said pump and to the intake end of said primary filter; an agitator; an agitator intake line connected to the exhaust end of said primary filter and said agitator; a secondary filter; an agitator drain line connected to the intake side of said secondary filter and to said agitator; a secondary filter exhaust line connected to the exhaust end of said secondary filter and communicating with the suction side of said pump; a storage line in commun' ation with the pressure side of said pump; an intake backwash line extending so as to communicate with the pressure side of said pump and the exhaust side of said primary filter; and an exhaust backwash line extending so as to communicate with the intake end of said primary filter and said agitator.

1,751,614. ADVERTISING DISPLAY STAND. EDWIN A. BORN, Chicago, Ill., assignor to American Colortype Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1928. Serial No. 298,988. 4 Claims. (Cl. 40—125.)



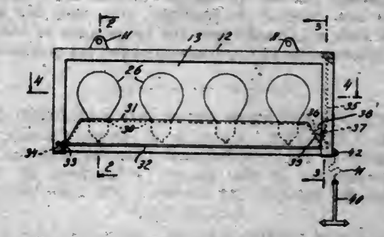
1. In a device of the character described, a stand comprising a bar, a second bar pivoted at its end to an intermediate portion of said first bar, one end of said first bar and the free end of said second bar having a flexible poster therebetween to be tensioned, and means between the free end of said second bar and the other end of said first bar for preventing angular movement of said bars.

1,751,615. COIN HANDLER. WILLIAM C. BOWER, Los Angeles, Calif. Filed Jan. 25, 1928. Serial No. 249,460. 6 Claims. (Cl. 226—14.)



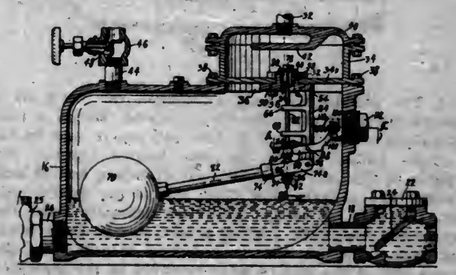
8. In a coin handler, a set of sections provided with mating grooves having flared portions at one end to facilitate the introduction of coins in said grooves, and means associated with said sections for insuring that not less than the required number of coins be stacked in said grooves.

1,751,616. COMBINATION FUSE. HAROLD M. BRAYTON, Dover, N. J., assignor to Secretary of War of the United States of America. Filed Mar. 2, 1925. Serial No. 12,784. 30 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)



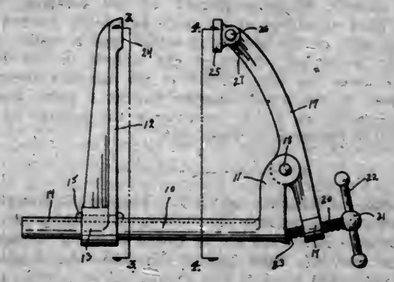
30. A fuse for bombs, including a body, a vane assembly forming a cap for the body and removable during flight, a transverse bolt slidably mounted in the body and containing an element of a firing mechanism, and means secured to the inside of the cap normally holding the bolt in unarmed position.

1,751,617. ICE-HARVESTING DEVICE. GEORGE B. BRIGHT, Detroit, Mich. Filed July 15, 1929. Serial No. 378,491. 8 Claims. (Cl. 62—108.)



1. In an ice freezing apparatus comprising spaced freezing portions, the combination of freezing units in each of said freezing portions, and means for supporting one of said freezing units over said freezing portions, said means being further adapted to remove another of said freezing units from one of said spaced freezing portions, said means being further supported as a movable unit above said spaced freezing portions of the ice freezing apparatus.

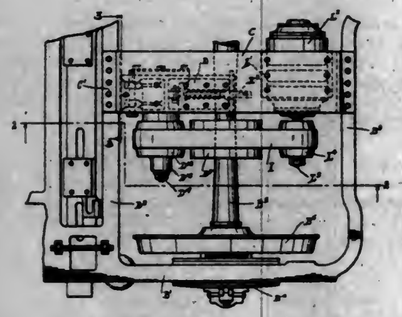
1,751,618. FIRE-EXTINGUISHER SUPPORT. WILHELM B. BRONANDER, Montclair, N. J. Filed Mar. 31, 1928. Serial No. 266,161. 20 Claims. (Cl. 169—26.)



1. A support for grenade fire extinguishers comprising a cabinet, a shelf therein for releasably supporting a plurality of grenades, and movable to release the grenades from said cabinet and means including heat controlled means for releasably supporting said shelf in grenade supporting position.

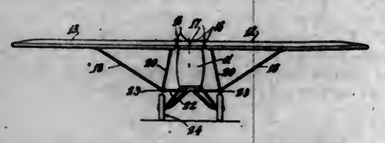
1,751,619. VACUUM FLUID EXTRACTOR. LYLE W. BROWNE, Marshalltown, Iowa, assignor to The Fisher Governor Company, Inc., Marshalltown, Iowa. Filed May 21, 1927. Serial No. 193,312. 7 Claims. (Cl. 137—103.)

1. In a device of the class described, a casing having in its lower part inlet and outlet passages, a pressure chest on said casing and separated therefrom by a partition member, an opening through said partition member, a tubular flanged member extending through said partition having the flange thereof bolted to said partition member, said tubular flanged member having a bracket projected into the casing and having a valve seat in the pressure chest, a valve for cooperating with said seat having a valve stem slidably supported by the bracket, and a float having an arm pivoted to said bracket and operatively connected to said valve stem.



1,751,620. CLAMP. ALBERT CLARKE, Des Moines, Iowa. Filed Apr. 23, 1929. Serial No. 357,407. 1 Claim. (Cl. 144—308.)

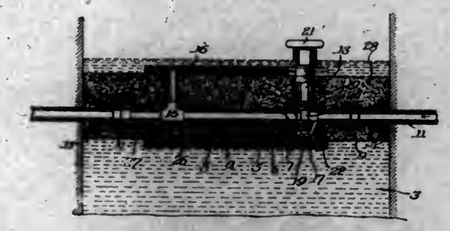
A clamping device comprising an elongated bar formed with a standard, a clamping arm slidably mounted on said



bar, a clamping arm pivoted between its ends on said standard, and a screw device threaded through one end of said pivoted arm and adapted for engagement with the adjacent end of the bar for forcing the other end of said arm toward the coacting arm, said bar being formed with an arcuate face for engagement of the end of the screw device at various positions of the pivoted arm.

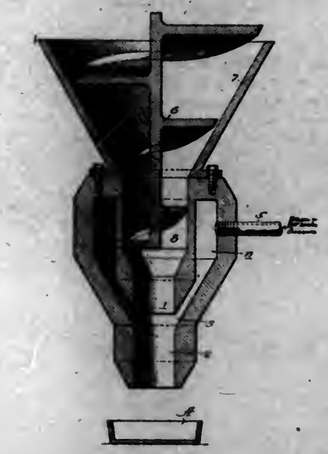
1,751,621. GENERATOR DRIVE FOR RAILROAD CARS AND THE LIKE. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 29, 1928. Serial No. 309,168. 11 Claims. (Cl. 105—102.)

1. The combination with a railroad car truck of a generator drive frame removably mounted thereon, a pair of pulleys carried by and in fixed relation to said frame, a drive pulley on the car axle located between the pulleys of the pair, an endless belt extending around said pulleys and engaging the upper side of the driving pulley, the pair of pulleys projecting laterally from the frame and supported thereon at one side of their working faces only, an electric generator mounted on the frame, one of the pulleys being mounted on the generator shaft.



1,751,622. LATERALLY-STABLE AIR VEHICLE. DAVID R. DAVIS, Los Angeles, Calif. Filed Feb. 18, 1928. Serial No. 255,289. 2 Claims. (Cl. 244—29.)

1. A laterally stable air vehicle comprising a fuselage, airfoils hingedly jointed to the fuselage, each hinge joint extending at an angle outwardly toward the leading edge of the associated airfoil, and a means operable by movement of one of the airfoils in one direction to move the other airfoil in the opposite direction, the lines of the hinges intersecting at a point located approximately on a line connecting the centers of lift of the airfoils when in level flight.

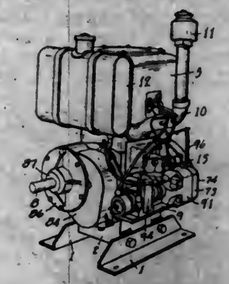


1,751,623. COOLING DEVICE. FRENCH E. DENNISON, Beloit, Wis., assignor to National Refrigeration Corporation, Beloit, Wis., a Corporation of Delaware. Filed Dec. 17, 1926. Serial No. 155,433. 7 Claims. (Cl. 257—201.)

5. The combination with a compartment adapted to contain a liquid to be cooled, of a refrigerant line extending through said liquid, a double wall cylinder within the compartment and surrounding said line, the two walls of said cylinder forming a chamber therebe-

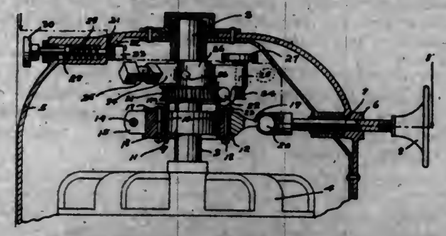
tween, means for circulating refrigerant from said line through said chamber, means for by-passing said refrigerant past said chamber and means for insulating said last means from said liquid.

1,751,624. METHOD OF CHANGING PLASTIC MATERIAL INTO MOLDS. STEPHEN DU BAUL, Jackson, Ohio. Filed May 6, 1926. Serial No. 107,056. 9 Claims. (Cl. 25—155.)



8. The method of delivering plastic material, which consists in feeding the material in the form of a column, from a forming nozzle, past a pressure space, and into a discharge barrel, causing the column to close the nozzle and the barrel against the escape of pressure medium from the pressure space through said nozzle and barrel, and accumulating the fluid medium under progressively increasing pressure around the column of material and thereby constructing the column transversely, and ultimately severing it as it passes said space, the duration of feed prior to severance of the column being regulated by the rate of accumulation of pressure medium at the space.

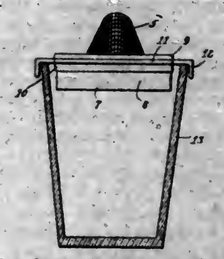
1,751,625. INTERNAL-COMBUSTION ENGINE. HENRY J. FISHER, Lansing, Mich., assignor to Novo Engine Company, Lansing, Mich. Filed Mar. 25, 1926. Serial No. 97,248. 6 Claims. (Cl. 123—195.)



1. In an internal combustion engine, the combination of a main frame comprising a central cuboid block embracing within its surfaces the engine cylinders and

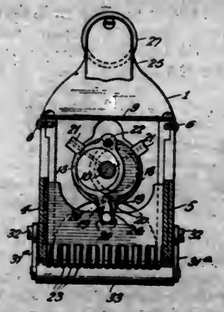
jackets, the crank case or recess, intake and exhaust passages and ports, the valves and valve guides, and also the cam shaft recess in parallel relation to the crank shaft recess, said recesses with bearing apertures at both their ends sufficiently large and identical in form to permit the inversion of the shafts end for end, an invertible crank shaft with pinions at both ends with identical detachable end bearing boxes, an invertible cam shaft with gear meshing with a crank shaft pinion supported by identical bearings at both ends, a cam shaft

and magneto gear train, a separate independent detachable housing unit for such train, a magneto and a detachable bracket for the magneto carried by the said gear train housing, power take-off means at the opposite end of the said crank shaft comprising a train of gears embracing an idler, a detachable power gear train housing including an idler, a removable cover for the said housing, and a power shaft journaled in said cover whereby the structure and gears are invertible and usable at either side of the main frame block, coacting as specified.



1,751,626. VIBRATOR. SAMUEL E. FOUTS, San Francisco, Calif. Filed May 28, 1928. Serial No. 281,106. 2 Claims. (Cl. 128—52.)

1. In a vibrator, a rotatable shaft, a main eccentric on said shaft, an auxiliary eccentric mounted upon and encircling the main eccentric, a vibrating part, connections between the auxiliary eccentric and said part for vibrating the latter as the shaft is rotated, a member secured to said shaft and rotating therewith, a second shaft journaled in said member, a worm rigid with said second shaft, a worm wheel meshing with said worm, a second worm rigidly connected with said worm wheel, a second worm wheel meshing with said second worm and rigidly connected with the auxiliary eccentric, and means operable at will for causing the said second shaft to rotate on its axis as it is carried about in its orbit, whereby the auxiliary eccentric is adjusted about the main eccentric, for the purpose specified.



1,751,627. FRUIT-JUICE EXTRACTOR AND STRAINER. CLARENCE S. GLENNY, Rockford, Ill., assignor to The Washburn Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 12, 1928. Serial No. 261,088. 3 Claims. (Cl. 146—3.)

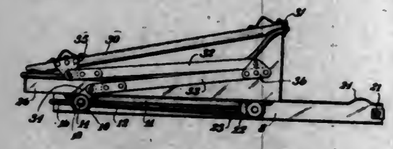
3. A utensil of the character described, comprising a substantially quadrilateral pyramidal-shaped body of foraminate material arranged to serve in a reaming or squeezing action to cut juice sacs in fruit for the extrac-

tion of juice therefrom, the said material serving at the same time to strain the juice to separate the pulp therefrom.

1,751,628. MEAT TENDERER. EZEKIEL GUGGENHEIM and HERBERT W. SPELLMAN, Meriden, Conn.; said Spellman assignor to said Guggenheim. Filed Mar. 11, 1927. Serial No. 174,660. 7 Claims. (Cl. 17—25.)

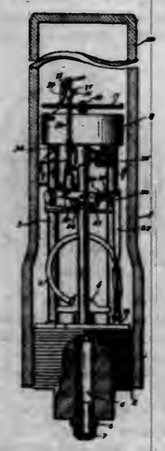
2. A meat tenderer comprising a frame, a plurality of cutters slidable in said frame, each cutter having on its lower edge a plurality of cutting blades, a shaft carried by said frame, means mounted on said frame for rotating the shaft, a plurality of eccentric cams secured on said shaft, eccentric straps surrounding said cams and means for releasably attaching said cutters to said straps.

1,751,629. THEFT-PREVENTING DEVICE. JAMES HARRINGTON, Chicago, Ill., assignor to Pines Winterfront Company, Chicago, Ill., a Corporation of Delaware. Filed May 21, 1927. Serial No. 193,087. 8 Claims. (Cl. 70—90.)



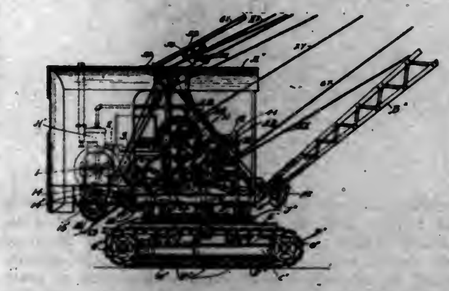
1. In a theft preventing device, the combination of a substantially cylindrical member having a threaded aperture and a noncircular end, with a casing member having a bore to receive said cylindrical member, said casing member having a second transverse bore intersecting said first-mentioned bore and said cylindrical member having an annular groove and a lock barrel carried in said second bore having a rotatable locking bolt, said locking bolt being adapted to rotate into said annular groove, and said bolt having a groove adapted to permit passage of said cylindrical member when in unlocked position.

1,751,630. ANODE AND METHOD OF MAKING SAME. WILLIAM J. HARSHAW, Shaker Heights, PAUL M. SAVAGE, Elyria, and FRED K. BEZZENBERGER, Cleveland Heights, Ohio, assignors, by mesne assignments, to The International Nickel Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 28, 1927. Serial No. 236,123. 8 Claims. (Cl. 204—4.)



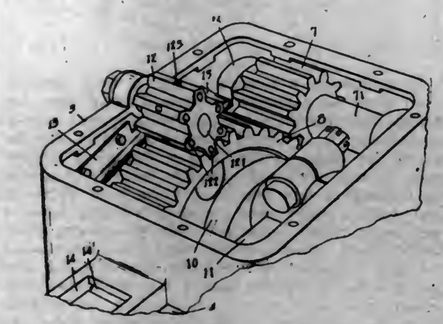
6. A method of making anodes, which comprises heating nickel containing nickel-nickel oxide eutectic to a workable plasticity, and rolling while at such workable temperature.

1,751,631. AIRCRAFT. ELWOOD H. HERRIG, Great Neck, N. Y., assignor to Chance M. Vought, Grenwolde, Great Neck, N. Y. Filed June 23, 1928. Serial No. 287,860. 15 Claims. (Cl. 155—5.)



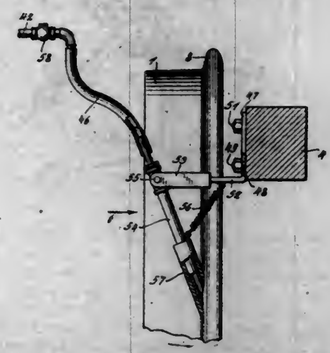
1. In an aeroplane the combination of a body frame and a movable seat mount structure carried thereby including a pair of guideways and a seat frame having frame members spaced longitudinally of the guideways and supported and guided by said guideways for rectilinear movement, with means whereby the seat frame pivots as a unit about certain of the longitudinally spaced frame members as an axis with the other spaced frame members disengaged from the guides.

1,751,632. DEEP-WELL PRESSURE RECORDER. JOHN N. HICKS, Los Angeles, Calif. Filed June 29, 1927. Serial No. 202,220. 9 Claims. (Cl. 234—19.)



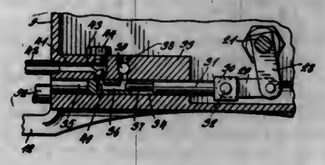
1. In a recording pressure gage for deep wells, having a vertically elongated fluid tight casing, the combination of a frame within the casing, a motor mounted in one end of the casing and having a substantially vertical spindle driven by the mechanism of the motor, a dial carried by the spindle for carrying an indicating chart, a pressure-actuated member within the casing having an opening for admitting the fluid in the well, marking means associated with the dial for marking the chart carried on the dial, and means connecting the marking means and the pressure actuated member.

1,751,633. LOCOMOTIVE CRANE. ALPHEUS E. HOLCOMB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Feb. 2, 1922. Serial No. 533,633. 21 Claims. (Cl. 214—132.)



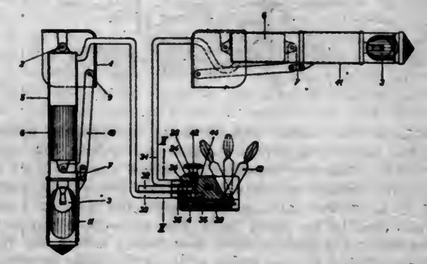
1. In a crane of the class described, the combination of a body, a boom mounted thereon and means for raising and lowering said boom, hoist drum mechanism comprising cable operating and hoisting drums mounted upon the body turntable, adapted to actuate interchangeable cable means to wind on and off said drums and to be connected with the boom for handling different classes of work, a motor, variable speed gearing connecting the motor and the drum mechanism, means to render either or both drums operative at will, and control means for the variable speed mechanism to vary the speed of driving of the drums to accord with the particular kind of cable means being handled by said boom and cable means.

1,751,634. POWER-DRIVEN PUMP. HERBERT G. HOLMES, Lansing, Mich., assignor to Novo Engine Company, Lansing, Mich. Filed Mar. 3, 1927. Serial No. 172,427. 5 Claims. (Cl. 184—11.)



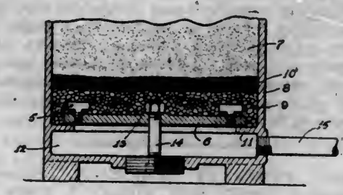
1. In a gear driven pump, the combination of a piston pump with cross head on cross head ways, a gear housing with oil reservoir at the bottom, a driving gear, a main driven gear dipping into the oil space, a crank shaft to which said main gear is connected, a cross head with guides with cross head oil reservoir at the top and pitman connecting the crank to said cross head, oil troughs at each side of the gear housing with elevated central part and passages delivering to the bearing surfaces, and an oiling pinion meshing with the top of said main gear said pinion being provided with longitudinal holes through its teeth with central radial oil receiving apertures whereby the oil carried up by the main gear will be discharged forcibly and laterally to the troughs to flood oil the various bearings, as specified.

1,751,635. FLANGE LUBRICATOR. EMERY C. HOWERTON and ANDREW BERGLIN, Denver, Colo., assignors of one-third to George E. Callahan, Denver, Colo. Filed Sept. 26, 1927. Serial No. 221,922. 2 Claims. (Cl. 184—3.)



1. In a device for lubricating the flanges of car wheels having a lubricant container, a plunger mechanism for transferring the lubricant and means operated by a moving part of the car for operating the plunger when the car moves, an applicator comprising, in combination a bracket having angularly related arms, one of which has a hole for the reception of a bolt by means of which it is secured to a stationary part of a car, said arm having also a transversely extending slot for the reception of a clamping bolt, whereby the position of the bracket may be adjusted about the center of the other bolt, a short section of pipe, means for pivotally securing the pipe to the other arm of the bracket, a spring extending between the bracket and the pipe and tensioned to exert a force tending to rotate the pipe about its pivot and a nonmetallic tube telescopically connected with one end of said pipe.

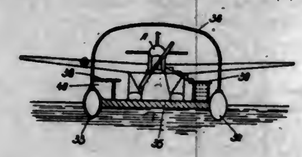
1,751,636. PUMP FOR FLANGE LUBRICATORS. EMERY C. HOWERTON and ANDREW BERGLIN, Denver, Colo., assignors of one-third to George C. Callahan, Denver, Colo. Original application filed Sept. 26, 1927, Serial No. 221,922. Divided and this application filed Apr. 7, 1928. Serial No. 268,200. 2 Claims. (Cl. 184—27.)



1. A lubricant pump for pressure lubrication, comprising, in combination, a casing adapted to contain oil, a cylinder block formed integral with the bottom and one end of the casing, said block having a cylindrical opening extending the entire length of the block, said block having also a second opening parallel with and spaced from the first mentioned opening, said second opening extending only partly through the block, the second opening lying above the first mentioned opening, said block having a passage connecting the inner end of the second opening with the first mentioned opening, a check valve in said passage, a plug located in the outer end of the opening and extending inwardly beyond the passage containing the check valve, the inner end of said plug having an axial opening and a lateral opening connecting the opening in the plug with the passage containing the check valve, a piston located in the inner end of the first mentioned opening, the end of the piston having a plunger of smaller diameter which extends into the opening in the plug, said plug and block having a passage communicating with the interior of the casing, a shaft extending transversely of the casing and journalled in the sides of the casing, a crank arm carried by the shaft, and a connecting rod for connecting the plunger with the crank whereby the plunger will be reciprocated when the shaft is oscillated.

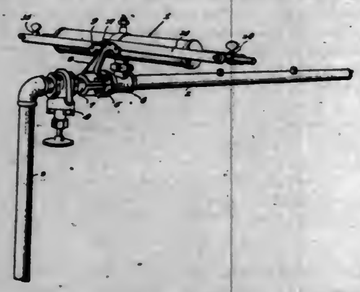
1,751,637. AUTOMOBILE DIRECTION INDICATOR. BRUNO JABLONSKY, Berlin, Germany. Filed Sept. 15, 1927. Serial No. 219,765. 1 Claim. (Cl. 116—39.)

In a direction indicator for motor vehicle having an induction pipe, the combination of a suction operated member, operating the indicator with a control device comprising a cylinder having three ports therein, one of them open to the atmosphere and pipes connecting the other two ports of said cylinder with the said member and induction pipe of the motor vehicle engine, a control valve fitting within and operable in said cylinder and having passages therein adapted to properly register with the three ports in such a manner as to inter-communicate the port connected to the said member to the port connected to the induction pipe and to the port open to the atmosphere, means for operating said control valve, an auxiliary air passage connecting the port open to the atmosphere with a second outlet to the atmosphere, and a regulating valve in said auxiliary air passage having a triangular opening for varying the amount of extra air drawn into induction pipe by said motor vehicle.



1,751,638. STRAINER NOZZLE. OSCAR W. JOHNSON, Rockford, Ill., assignor to Ward-Love Pump Corporation, Rockford, Ill., a Corporation of Illinois. Filed Sept. 28, 1927. Serial No. 222,554. 7 Claims. (Cl. 210—145.)

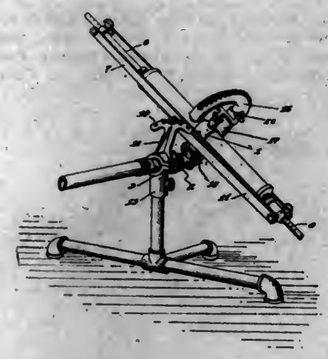
1. In a water softener having a distributer plate beneath a bed of water softening material provided with a plurality of openings in substantially uniformly spaced relation, a strainer nozzle for each of said openings com-



prising a hollow vertical trunk portion mounted in the opening and having one or more hollow branches extending laterally therefrom, the said branches being provided with downwardly directed, outwardly flared, openings therein laterally offset from the trunk portion substantially as and for the purpose described, these nozzles being adapted to be mounted in a series in spaced relation on the bottom, or the equivalent, of a water softener beneath the bed of water softening material and to serve primarily as outlet for the incoming hard water but being arranged to have the direction of flow reversed therethrough.

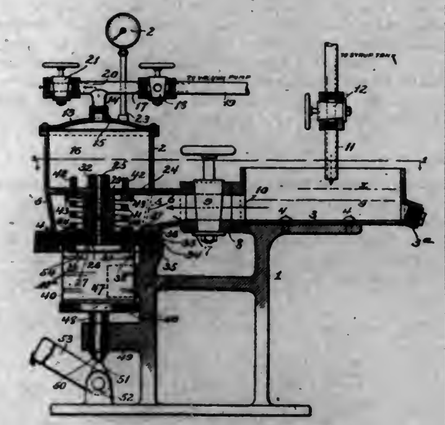
1,751,639. DOCK FOR FLYING MACHINES. HUGO JUNKERS, Dessau, Germany. Filed Nov. 16, 1927, Serial No. 233,709, and in Germany July 18, 1927. 1 Claim. (Cl. 114—45.)

Means for raising and lowering hydroplanes relative to the water comprising a pontoon-like float the width of which does not considerably exceed the width of the floatation means of a hydroplane, said floats being adapted to be moved into position below the floating hydroplane and to be lifted with the hydroplane supported thereon and a roof on said float which covers the fuselage while leaving the wings of the hydroplane uncovered.



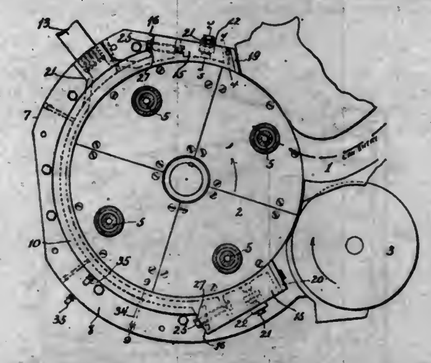
1,751,640. IRRIGATING DEVICE. FREDERICK L. LINDHORST, Detroit, Mich., assignor to White Showers Inc., Detroit, Mich., a Corporation of Michigan. Filed May 15, 1926. Serial No. 109,233. 9 Claims. (Cl. 299—66.)

1. In a liquid distributing system, the combination with a fluid pressure oscillating motor of the type having a stationary element and oscillatable unit, and a spray conduit rigidly secured to said oscillatable unit and movable in unison therewith, of means pivotally and adjustably connecting said stationary element with said oscillatable unit, said adjustable connection between said stationary element and oscillatable unit permitting the position of the central point of the path of oscillation of the motor to be varied.



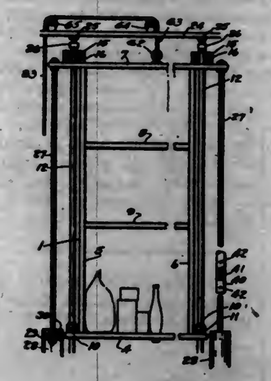
1,751,641. AUTOMATIC SPRINKLER. FREDERICK L. LINDHORST, Detroit, Mich., assignor to White Showers Inc., Detroit, Mich., a Corporation of Michigan. Filed Aug. 7, 1926. Serial No. 127,770. 9 Claims. (Cl. 299—18.)

1. In a liquid distributing system, the combination of an arcuate spray member, means for oscillating the same transversely of the axis of said member, a series of nozzles positioned longitudinally of said member and along



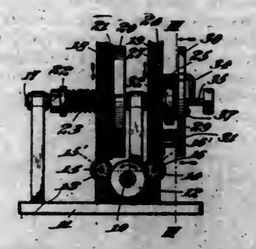
the periphery thereof, and a tubular perforated member secured to each nozzle and extending a substantial distance within the arcuate spray member.

1,751,642. ART OF CANNING. ADOLPH K. MALMQUIST, South Bellingham, Wash. Filed Aug. 2, 1927. Serial No. 210,127. 9 Claims. (Cl. 226—116.)



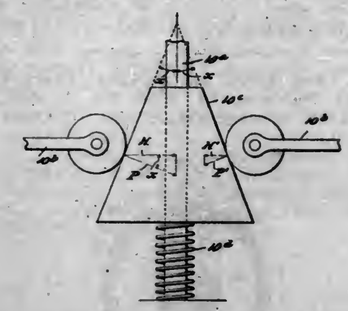
9. In apparatus for filling cans with liquid, a container having a lower liquid chamber, an upper suction chamber, a constantly open means of communication between the suction chamber and the space below the container, a valve normally closing the bottom of the container around said communication means, means for disposing an open-top can against the bottom of said valve, and means whereby the suction chamber may be subjected to suction whereby to exhaust air from the can and open the valve to permit flow of liquid into the can.

1,751,643. VACUUM SEALING CHAMBER. ADOLPH K. MALMQUIST, South Bellingham, Wash. Filed Nov. 12, 1928. Serial No. 318,877. 9 Claims. (Cl. 113—82.)



1. In a vacuum sealing mechanism for canning machinery, the combination of a rotary can carrier, a casing having an arcuate vertical wall partly encircling the carrier and extending the full height therefrom, and sealing shoes mounted in the ends of the casing to bear upon the carrier.

1,751,644. AUTOMATIC LOCKING ELEVATOR. ALEXANDER W. MCKENZIE, Seattle, Wash. Filed July 3, 1928. Serial No. 290,208. 7 Claims. (Cl. 187—5.)

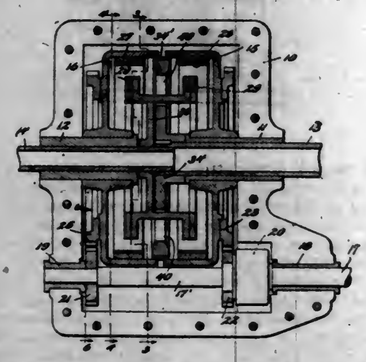


5. In a device of the class described, a carrier having a plurality of compartments, parallel rods between which the said carrier is slidably mounted, suitable rollers on the said carrier engaging the said parallel rods, suitable locking dogs cooperating with the said rollers positioned to prevent the carrier moving in one direction except when the dogs are released, means for releasing the dogs, suitable holding means for the said carrier adaptable to engage and hold each compartment thereof, air compression chambers adaptable to cooperate with the said carrier, suitable pistons and piston rods connecting the said carrier to the said compression chambers, relief valves in the said compression chambers to permit the shelves to move in one direction, adjustable means connecting the said chambers to equalize the pressure therein, an adjustable relief valve in the said connecting means adaptable to regulate the escapement from the said chambers, suitable individual bases at one end of the said compression chambers in which the parallel rods on the respective sides of the carrier are mounted and a counterweight suitably connected to the said carrier.

1,751,645. SERVO MECHANISM. HENRY W. NIEMAN, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed Jan. 28, 1925, Serial No. 5,827. Renewed Dec. 26, 1929. 22 Claims. (Cl. 192—51.)

1. A motion transmitting device comprising a power shaft, a drive shaft, a pair of drum members revolubly mounted on the drive shaft and geared to the power shaft so as to rotate in opposite directions, a friction drive connection between each of said drums and the drive shaft, a tensioning device for each of the friction drives adapted to normally maintain the load on the contiguous faces of both friction drives in equilibrium and thereby maintain the drive shaft stationary, and an operator member engaging one of the tensioning devices so that a torque applied to move the operator member effects a corresponding movement of the drive shaft.

1,751,646. MECHANICAL MOVEMENT. HENRY W. NIEMAN, Bethlehem, Pa. Filed Jan. 7, 1926. Serial No. 79,787. 19 Claims. (Cl. 74—14.)



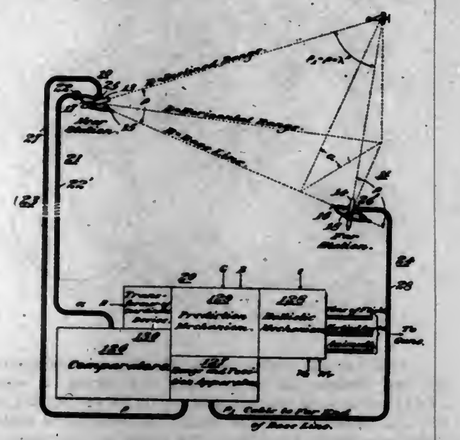
1. In a mechanical movement, in combination, a plurality of force applying elements arranged to move relatively to each other in different directions under the influence of impressed forces, and means for holding said elements against relative movement except under predetermined conditions, when such movement is permitted, said means including a movable member which all of said elements engage, and a guide for said member which effects a reactive force thereon to hold the same stationary when one of said elements is active, movement of said member by said elements being effected only when at least two of said elements act concurrently to jointly produce a force which unbalances any existing reactive force, whereupon said movable member will move to permit relative movement of all of the active force applying elements.

1,751,647. SERVO MECHANISM. HENRY W. NIEMAN, Bethlehem, Pa. Filed Jan. 8, 1926. Serial No. 79,956. 42 Claims. (Cl. 192—35.)

1. A servo mechanism comprising in combination, a rotatable work shaft, two rotatable members having fric-

tion surfaces concentric with the axis of said work shaft, power means for rotating said members in opposite directions, a friction band associated with each rotatable member and having one end operatively connected to the work shaft, and a rotatable control shaft coaxial with the work shaft, a cross arm rigidly mounted on said control shaft and having two spaced parallel ring members secured thereto, said ring members being concentrically arranged with respect to the control shaft, work shaft and friction surfaces, and means connecting the free end of each band to one of the ring members.

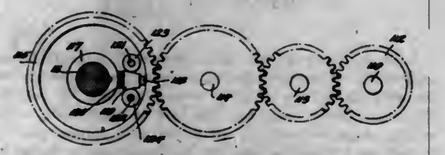
40. Mechanism for manipulating a body in accordance with the movements of a control element, comprising in combination with such body, a work member, a control element, a drum having a cylindrical face, a wrapping friction band connecting the control element and work member adapted to frictionally engage said cylindrical face, a power shaft operatively connected to said drum to rotate the same, and means to substantially prevent reversal of said power shaft by forces exerted by said body.



1,751,648. SERVO MECHANISM. HENRY WILLIAM NIEMAN, Bethlehem, Pa. Filed Jan. 22, 1926, Serial No. 83,095. Renewed May 29, 1929. 13 Claims. (Cl. 192—35.)

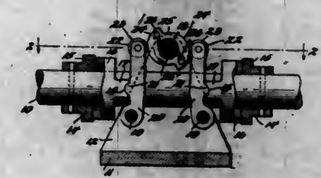
13. In a sensitive control device, in combination, a member having a cylindrical friction face, a wrapping friction member in constant contact with said friction face, said members being relatively rotatable, and the wrapping friction member having a control end and a power delivery end, and means for neutralizing the drag reactions which normally develop between the friction face and the wrapping friction member, to prevent the wrapping friction member from gripping the friction face in the absence of an applied control force.

1,751,649. FIRE-CONTROL MECHANISM. HENRY W. NIEMAN, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed June 22, 1926. Serial No. 117,735. 34 Claims. (Cl. 235—61.5.)



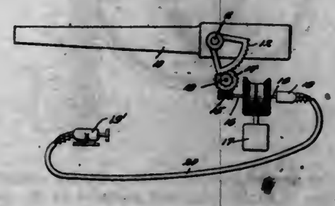
1. In a fire control system, the combination of mechanism to receive instantaneous position determining factors of a moving aerial target, and from such factors and characteristics thereof mechanically and simultaneously to calculate factors determining a future target position, and means for transmitting the future position determining factors from said mechanism.

6. In a fire control apparatus, the combination with first and second telescopes having aligned primary axes, said telescopes being adapted to be trained on a movable aerial target, of a mechanical system for automatically and continuously finding the difference between the secondary angles of the telescopes including mechanically actuated receivers, means for transmitting the secondary angles from the telescopes to the receivers, and means for subtracting the secondary angle of the first telescope from the secondary angle of the second telescope.



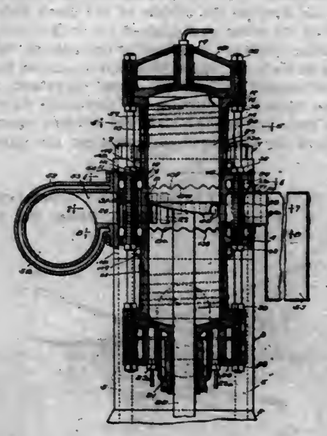
31. In ballistic mechanism for a fire control system, the combination of a cam for correcting for tenuity of the atmosphere, said cam being movable axially in accordance with a function of the time of flight and angularly in accordance with the vertical angle, a pivotally mounted follower cooperating with the cam, an angularly-movable correction element, and manually controlled reversible variable ratio motion transmitting means between the follower and said element.

1,751,650. POWER-TRANSMISSION MECHANISM. HENRY W. NIEMAN, Bethlehem, Pa. Filed June 1, 1927. Serial No. 195,811. 9 Claims. (Cl. 74—36.)



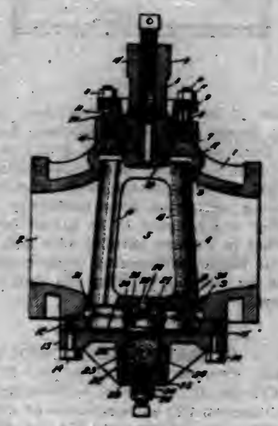
1. The combination with driving and driven members, of means connecting the same whereby the driven member may be driven in either direction by the driving member without occurrence of relative motion or back lash upon the reversal of direction of movement, said means comprising two rigid connecting elements each of which has a portion operatively connected to one of said members, and a device associated with the other of said members and comprising a movable part, a base part rigid with said member, upon which the movable part is mounted and relatively to which it moves, and means urging said movable part to move in one direction, said movable part being engaged by other portions of said connecting elements respectively, the movable part comprising a non-yielding abutment for transmitting driving force between the member on which it is mounted and either of said elements when the driving member is active and being adapted to move said elements in opposite directions to take up play when the driving member is inactive.

1,751,651. THRUST BEARING. HENRY W. NIEMAN, Bethlehem, Pa. Filed June 1, 1927. Serial No. 195,812. 4 Claims. (Cl. 308—163.)



1. A thrust bearing for a shaft or the like subjected to changing direction of thrust, which prevents axial movement of the shaft in either direction at all times including, in combination with a shaft having oppositely facing thrust surfaces and spaced thrust members having thrust surfaces in contact with the thrust surfaces of the shaft, of a base, and mechanism mounted on the base for maintaining the thrust surfaces of the shaft and thrust members, respectively, in constant engagement, said mechanism including a member movably mounted on the base and having opposed surfaces which bear respectively upon the thrust members, and means urging said member in a direction to cause its opposed surfaces to act simultaneously upon said thrust members respectively, to take up lost motion due to wear when the shaft is for the time being transmitting no substantial thrust, which member also constitutes a non-yielding abutment for that thrust member which is active when the shaft is transmitting a substantial thrust.

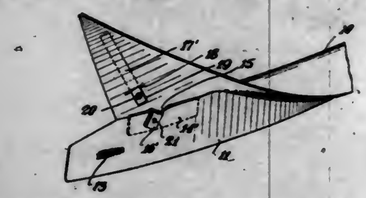
1,751,652. SYNCHRONOUS AMPLIFYING CONTROL MECHANISM. HENRY W. NIEMAN, Bethlehem, Pa. Original application filed Jan. 8, 1926, Serial No. 79,956. Divided and this application filed July 20, 1929. Serial No. 379,815. 10 Claims. (Cl. 192—35.)



1. The combination with a control motor of the class described, having an indicating member movable under the influence of relatively weak forces to indicate change of condition in or position of a body, substance or instrumentality, and which member is itself capable of exerting an appreciable force only when displaced from its theoretically correct position and is tending to move toward the same, of a work member, a power driven member, and a mechanical connection between the indicating member and the work member having a portion adapted to take power from the power driven member by frictional engagement therewith upon movement of the indicating member of the control motor, whereby movement of the work member is effected by power, the indicating member and work member having corresponding syntactic positions throughout their ranges of movement.

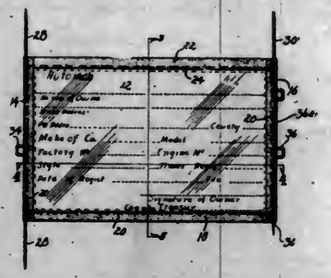
1,751,653. ENGINE CONSTRUCTION. ERNEST NIBBS, New London, Conn., assignor to Electric Boat Company, Groton, Conn., a Corporation of New Jersey. Filed Feb. 3, 1928. Serial No. 251,498. 12 Claims. (Cl. 123—61.)

6. In an internal combustion engine, a bed plate, supporting frames seating on the bed plate, a cylinder block seating on the frames and including cylinder sections, liners at opposite faces of the block and in register with the cylinder sections, said liners being flanged at their outer ends, heads for the liners, bolt rods passing through the block and through the liner flanges and heads, nuts screwed onto the bolt rods and cooperating therewith for removably and adjustably securing the block and the liners and the heads thereof in assembled relation, tie rod bolts anchored in the bed plate and passing through said frames and the block, and nuts screwed upon said tie rod bolts and cooperating therewith for removably securing the bed plate and the frames and the block in assembled relation.



1,751,654. VALVE. SVEN JOHAN NORDSTROM, Oakland, and JOYE C. HAUN, Berkeley, Calif., assignors to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed June 15, 1927. Serial No. 198,891. 6 Claims. (Cl. 251—112.)

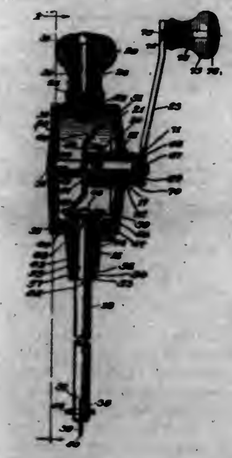
1. A valve comprising, a casing having a passageway therethrough and a tapered valve seat formed transversely



of the passageway, a cover having a central opening secured to the casing for closing the larger end of the valve seat, a gasket interposed between the casing and the cover, a tapered plug seated in the valve seat and having a hole adapted to register with the passageway, a bearing pressing at one end against the middle of the inner face of the gasket and at its other end against the larger end of the plug, a housing slidingly received in the hole in the cover and bearing at its inner end against the center of the outer face of the gasket, powdered mica contained in the housing, and means for putting the powdered mica under pressure to force the inner end of the housing against the gasket to hold the plug resiliently against the valve seat.

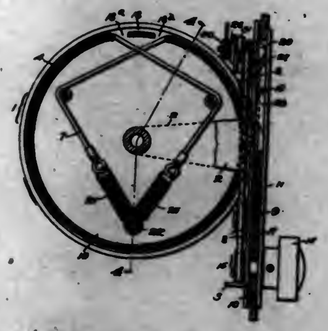
1,751,655. COLLAR STIFFENER. JOHN OPPERMANN, New York, N. Y. Filed Apr. 22, 1929. Serial No. 357,020. 2 Claims. (Cl. 2—132.)

1. A stiffener for the wings of turn-down soft and semi-soft collars comprising stiffener members inserted into the inner lining of the collar wings through slots therein, heads on said members projecting from the lining, and plates within the lining of the collar band, sockets formed with said plates having lower turned down mouths adapted to be engaged by the heads of said stiffening members, and a means for locking both members in their engaged positions.



1,751,656. CARD HOLDER AND THE LIKE. SIDNEY ORANSKY, Des Moines, Iowa. Filed July 2, 1928. Serial No. 289,804. 3 Claims. (Cl. 40—10.)

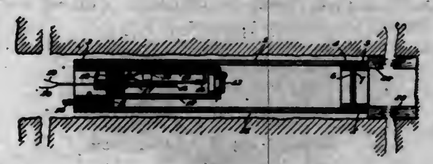
1. A holder of the character described, comprising a normally flat pocket open at one side and formed with a transparent front wall and provided with retaining means on opposite ends, attaching means comprising wires arranged in said retaining means, each wire having oppositely extending sharpened ends projecting beyond said pocket member and adapted to be seated in a fabric to hold the pocket in a plane parallel with and close to the surface of the fabric, said pocket being capable of being bent between its margins to bring the ends of the wires closer together.



1,751,657. OPERATING MECHANISM FOR VALVE GRINDERS. EDWARD H. PETERSON and NORRIS F. MCNAUGHT, Chicago, Ill., assignors to Duro Metal Products Company, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1929. Serial No. 360,652. 4 Claims. (Cl. 74—50.)

1. In a valve grinder, the combination of a supporting casing with a shaft rotatably mounted in said casing, a second shaft rotatably mounted in said casing and having means for engaging the valve, a pinion on said second shaft having peripheral teeth diverging toward the first shaft and inclined at substantially forty-five degrees to the axis of the second shaft, and a centrally located mem-

ber on the first shaft having gear sectors adapted alternately to engage said pinion to rotate the latter in opposite directions, the teeth of said gear sectors being disposed at right angles to said pinion teeth and engaging with the inner surfaces of the pinion teeth when in mesh therewith.



1,751,658. DIAL MECHANISM. WILLIAM A. READY, Brookline, Mass. Filed May 29, 1928. Serial No. 281,561. 11 Claims. (Cl. 116—124.4.)

1. A dial mechanism for radio receivers comprising, in combination, a drum type dial adapted to be secured to an instrument shaft, panel means in front of said drum type dial parallel with the axis thereof, a knob exposed at the front of said panel means and having its axis at right angles to the axis of the drum type dial, driving connections between the knob and the drum type dial including pulleys secured to the dial and to the knob and connected by a flexible connecting element whereby when said knob is turned said drum type dial will be rotated and an opening in said panel means through which markings on the drum type dial are visible.

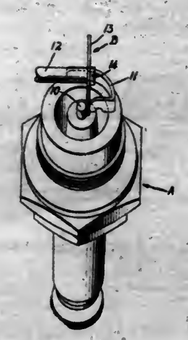
1,751,659. BLASTING APPARATUS. GEORGE S. RICE, Washington, D. C. Filed Sept. 28, 1927. Serial No. 222,518. 6 Claims. (Cl. 102—6.)

1. A blasting apparatus comprising a closed cartridge shell openable under elevated internal pressure and containing a body of compressed fluid gasifiable under normal temperature and pressure, means within said shell containing separated chemicals adapted upon being brought into

contact with each other to non-explosively generate additional gas to add expansive force to that of said fluid to open the shell, and means for causing said chemicals to be brought into contact with each other.

1,751,660. GREASE GUN. JOHN NELSON SAXTON, Bucyrus, Ohio, assignor to The Grease-Rite Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 17, 1928. Serial No. 247,429. 21 Claims. (Cl. 221—47.4.)

18. In a high pressure grease gun, a low pressure cylinder, a piston for said cylinder, a nozzle, a hollow extensible and contractible connection between said piston and nozzle, a high pressure cylinder within said low pressure cylinder, a piston for said last-named cylinder and adapted to be forced into the same for discharging grease therefrom, and means for positively forcing lubricant into said high pressure cylinder during the return stroke of said last-named piston.

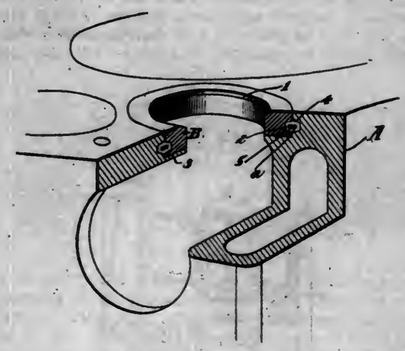


1,751,661. ATTACHMENT OF BRAKE LEVERS TO CONNECTING RODS. FREDERIC SCHAFER, Pittsburgh, Pa. Filed July 14, 1925. Serial No. 43,523. 1 Claim. (Cl. 287—97.)

In a brake rigging for a railway car truck, the combination of a connecting rod having a rigid end formed of two laterally-spaced vertically-disposed walls provided on their adjacent faces with inwardly turned horizontal and vertical flanges forming a plurality of separate pin-receiving pockets open at the bottom of the rod, and a brake lever having an end arranged between said walls and provided with lateral projections lying in a pair of said pockets and engaged by the flanges forming the pockets in which the projections lie, said vertically-disposed walls overhanging the ends of said projections and confining the projections between them.

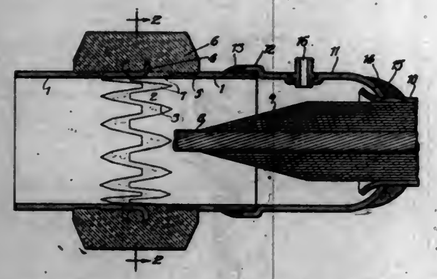
1,751,662. METHOD OF MANUFACTURING SPARK PLUGS. ALFRED B. SCHUPP, Richmond Hill, N. Y., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed July 21, 1928. Serial No. 294,445. 3 Claims. (Cl. 29—155.5.)

1. In the manufacture of spark plugs, the method of forming a gap of uniform width between the electrode terminals which consists in originally forming the gap of less width than that desired, providing a rotary grinding



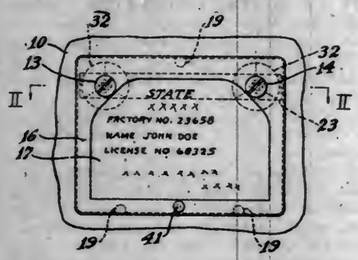
element equal in thickness to the final width of gap desired, and operating said element between the electrodes to cut the gap to the desired width.

1,751,663. PROCESS OF SEPARATING THE CONSTITUENTS OF MINERAL SILICATES. SHERMAN W. SCOFIELD and JOHN B. LA RUE, Cleveland, Ohio; said La Rue assignor to said Scofield. Original application filed May 17, 1922, Serial No. 561,704. Divided and this application filed Feb. 7, 1924. Serial No. 691,217. 2 Claims. (Cl. 23—33.)



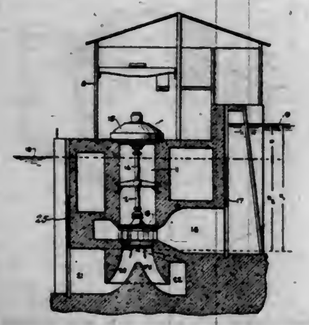
1. In a process of separating the constituents of mineral silicates, the steps which consist, in removing the water soluble potassium value by means of caustic potash digestion and carbonation; and then separating the soluble potassium carbonates into two fractions by evaporating the solution in steps, obtaining each time a saturated solution from which crystalline potassium carbonate and bi carbonate are obtained, until the sodium content is removed, and then concentrating the remainder of the water soluble potassium value to a substantially ten (10) per cent carbonate solution and causticizing.

1,751,664. VALVE SEAT. FREDERICK E. SMITH, Santa Paula, Calif. Filed Nov. 20, 1928. Serial No. 320,573. 3 Claims. (Cl. 123—188.)



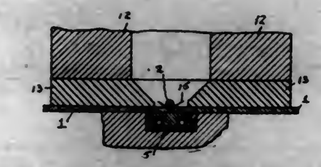
1. As a new article of manufacture, a valve seat comprising an annulus formed with a peripheral groove, and an expansible ring within said groove and adapted to project beyond the periphery of said annulus.

1,751,665. INSULATING JOINT. SEVERN D. SPRONG, Brooklyn, N. Y., assignor to Engineering Products Corporation, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 13, 1928. Serial No. 261,241. 2 Claims. (Cl. 173—268.)



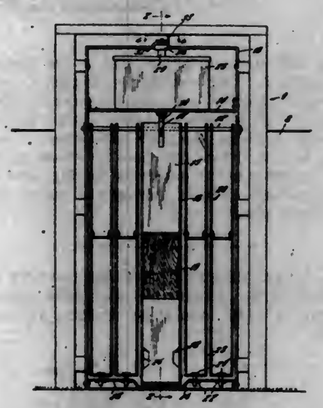
1. An insulating joint for the sheath of an electric cable comprising metal sections with teeth on one section entering notches on the other, the sections being out of contact with each other and being connected by insulating material.

1,751,666. LICENSE-CARD HOLDER. MURRELL A. SUAREZ, Birmingham, Ala. Filed June 6, 1928. Serial No. 283,393. 11 Claims. (Cl. 40—22.)



1. In a device of the character described, a frame, a card in the frame, a panel member, means for attaching and detaching the frame member to and from the panel, and means operable by detachment of the frame member for mutilating the card.

1,751,667. HYDRAULIC APPARATUS. HARVEY BIRCHARD TAYLOR, Philadelphia, Pa., assignor, by mesne assignments, to I. P. Morris Corporation, a Corporation of Delaware. Original application filed Dec. 4, 1919, Serial No. 342,383. Divided and this application filed Feb. 1, 1928. Serial No. 251,156. 19 Claims. (Cl. 253—117.)

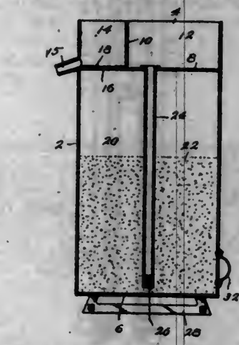


1. The combination with a turbine of a downward flow draft tube and a water sealed vacuum chamber into which the draft tube discharges.

1,751,668. ARC WELDING. MAURICE R. TAYLOR, East Cleveland, Ohio, assignor to The Lincoln Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 18, 1927. Serial No. 184,450. 7 Claims. (Cl. 219—14.)

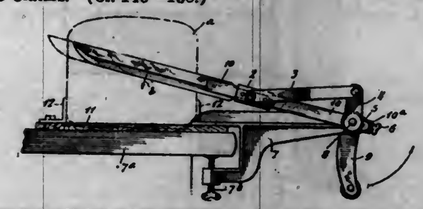
1. In metal working by electricity, the steps which consist in establishing an arc between a suitable electrode and a work surface provided with a thin layer of a continuous non-granular carbonaceous material active as a secondary electrode, and relatively moving such work and electrode along the line thereof.

1,751,669. STOCK GATE. WILLIAM P. THATCH, Madison, Nebr. Filed Oct. 27, 1928. Serial No. 315,493. 4 Claims. (Cl. 119—157.)



1. In a gate structure of the class described, a frame, a horizontal gate rod on the frame, a plurality of gate sections suspended from said rod, and means whereby said gate sections may be operated separately or together.

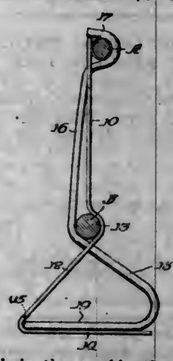
1,751,670. PROCESS OF CATALYTICALLY REDUCING ANTHRAQUINONE COMPOUNDS AND NEW HYDROGENIZED PRODUCTS DERIVED THEREFROM. JULIUS VON BRAUN and OTTO BAYER, Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1926, Serial No. 91,227, and in Germany Mar. 3, 1925. 8 Claims. (Cl. 260—57.)



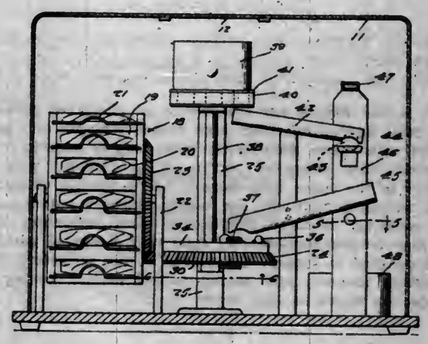
1. In the process of catalytically reducing anthraquinone compounds the step comprising acting with gaseous hydrogen under pressure upon anthraquinone compounds in the presence of a base metal hydrogenation catalyst.

1,751,671. WATER SOFTENER. GLENN E. WEBB, Kansas City, Mo. Filed Dec. 15, 1928. Serial No. 326,221. 1 Claim. (Cl. 210—24.)

A water softening apparatus consisting of a container open at its upper end and closed at its lower end, a horizontal partition extending across the upper portion of the container for dividing the latter into a shallow upper chamber and a large lower chamber, which latter is adapted to hold filtering material, a vertical partition extending upwardly from said horizontal partition and dividing the shallow chamber into an inlet chamber and an outlet chamber which latter communicates with the large chamber through an opening in the horizontal partition, a screen extending across said opening, a pipe leading downwardly from the inlet chamber to within a short distance of the bottom of the large chamber, and a spout leading from the outlet chamber.

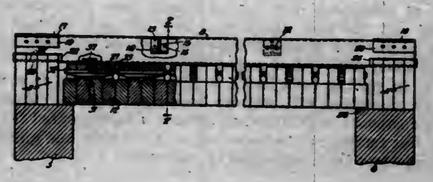


1,751,672. SLICING MACHINE. SVEN ADOLF WESTDAHL, Sellersville, Pa. Filed Dec. 14, 1927. Serial No. 239,828. 8 Claims. (Cl. 146—138.)



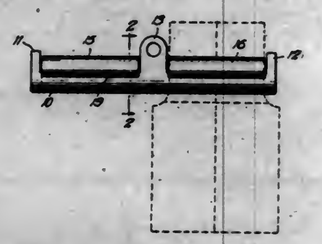
1. In a slicing machine, the combination of a support, a cutting knife, means movably connected with said support for reciprocating said knife, and means effective upon said reciprocating means at its point of connection with said support whereby a cutting pressure is developed in the cutting edge of said knife coincidentally with the reciprocation thereof.

1,751,673. BAR CHAIR. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed May 17, 1928. Serial No. 278,455. 10 Claims. (Cl. 94—8.)



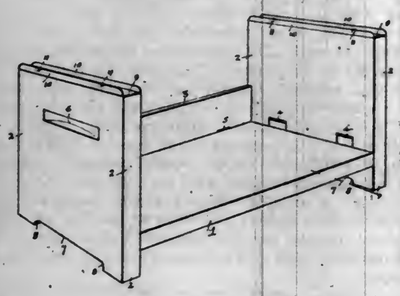
1. In a bar chair the combination of a primary support member having a horizontally disposed base for contact with the soil and an inclined element for contact with a bar, and a secondary support member having a bar engaging hook at its upper end and having its lower end shaped to interlock with the base and to support the free end thereof and being complementary to the said inclined element in the matter of support for said bar.

1,751,674. VENDING MACHINE. JOHN HUGO WOLTERS, Lewisville, Tex. Filed Dec. 12, 1927. Serial No. 239,475. 4 Claims. (Cl. 194—75.)



2. In a vending machine of the class described, the combination of a casing, a coin receiving chute extending into the casing and having a discharge end terminating within the casing, a closure for the discharge opening in the chute, a member rotatably supported in the casing, a ball retaining cup, means operatively associating said ball retaining cup with said member for discharging the balls one by one from the cup, a pan pivotally mounted on the chute and adapted to receive the discharge ball from the cup, means operatively associating said pan with the closure, a movable segment resting upon said member, said member and said segment being provided with pockets adapted to register with one another, manually controlled means adapted to engage with the coin chute for moving the closure to an open position, whereby said pan will be moved about its pivotal connection so that the ball may be delivered from the pan into the pocket of the segment and said member, when said pockets are in registry with each other.

1,751,675. REMOVABLE FURNACE ROOF. LYLE STOCKTON ABBOTT, Chicago, Ill. Filed Mar. 17, 1927. Serial No. 176,090. 11 Claims. (Cl. 110—99.)



1. A removable furnace roof construction comprising supporting beams having slots running lengthwise on the under face thereof, inwardly extending flanges on opposite sides of said slots, a plurality of hanger bars having head portions slidably supported in said slots by said flanges, refractory tile members carried by each hanger bar, and means at the opposite ends of each of said beams for supporting them on the vertical walls of the furnace said beams having flat supporting surfaces on the top thereof over said supporting means whereby a plurality of beams may be stacked upon each other with the tile thereon.

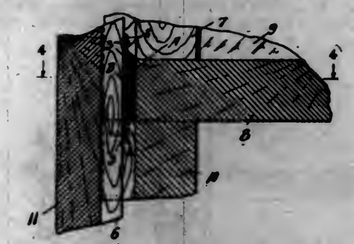
1,751,676. COMPOSITE TILE-HANGER BAR. LYLE STOCKTON ABBOTT, Chicago, Ill. Filed Apr. 4, 1927. Serial No. 180,912. 13 Claims. (Cl. 110—99.)

1. A tile hanger bar comprising an elongated portion of metal having relatively high tensile strength and provided with means whereby the same may be secured to a support, said elongated portion being provided with a recess in the upper face thereof, and a portion of material having a relatively low tensile strength but capable of resisting chemical combination with refractory tile at high temperatures resting upon said elongated portion and adapted to support the weight of the refractory tile members thereon, said second named portion having a projection fitting in said recess.

1,751,677. FOLDING BOOKRACK. NOAH S. AMSTUTZ, Valparaiso, Ind. Filed Mar. 26, 1925. Serial No. 18,527. 6 Claims. (Cl. 312—108.)

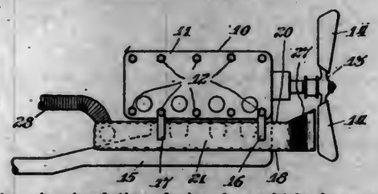
3. In folding book racks, a unitary structure comprising a support, a back hinged to the support above its under face and projecting above and below the hinges and ends hinged above their lower edges to the support, all so assembled that the back folds first onto the support and the ends thereafter onto the back so that all the parts when folded lie approximately on parallel planes and when unfolded at angles to each other.

6. In folding book racks, a base serving also as a top when assembled with unitary book rack sections, comprising a support, ends attached thereto, a back secured thereon, feet formed on the lower edges of the ends, and guiding channels on the upper edges of the ends.



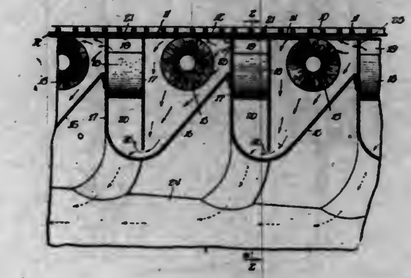
1,751,678. ROTARY CORE-DRILL ATTACHMENT. ARTHUR L. ARMENTROUT and ELWIN B. HALL, Los Angeles, Calif. Filed Feb. 25, 1926. Serial No. 90,591. 7 Claims. (Cl. 234—1.)

1. In an attachment for core drills including a ring mounted to rotate about a vertical axis, a wheel mounted in the ring to rotate about a horizontal axis, and means for continuously rotating the wheel in one direction and at a predetermined speed in which it maintains the vertical plane of rotation, a member below the wheel and capable of being marked, and liquid containing pockets in the wheel from which the liquid is discharged



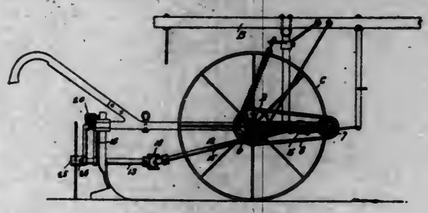
when the wheel attains the predetermined speed to mark the member and thus record the plane of rotation of the wheel.

1,751,679. SASH PLUG. ELMER D. BARRINGER, Cleveland, Ohio. Filed Nov. 5, 1928. Serial No. 317,351. 1 Claim. (Cl. 20—69.)



As a new article of manufacture, a sash plug comprising a packing member, and a plate member consisting of a strip of metal having its end portions bent on an incline from the body of the strip, and thence extended parallel to the body of the strip and refolded upon themselves to provide attaching means for the plug, the said refolded portions being extended to provide arms spaced from and underlying the body of the plate member, between which arms and said body of the plate member the packing member is received and clamped, said arms being formed with engaging flanges to directly engage and assist in firmly holding in place the packing member.

1,751,680. AIR-CIRCULATING DEVICE FOR VEHICLES, HEATERS, AND THE LIKE. SIDNEY J. V. BOVEY, Chicago, Ill., assignor, by mesne assignments, to Metalcraft Heater Corporation, Grand Rapids, Mich., a Corporation of Michigan. Filed Sept. 13, 1926. Serial No. 134,984. 9 Claims. (Cl. 98—2.)

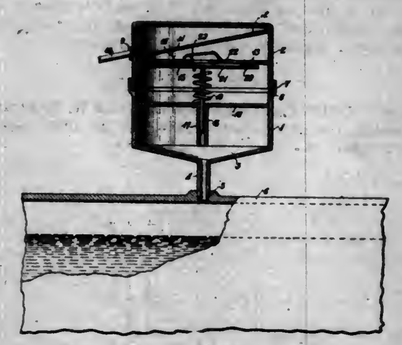


1. An air circulating device for vehicle heaters and the like comprising an open ended conduit having a relatively large mouth lying parallel and co-extensive with the blades of the fan as they assume a horizontal position.

1,751,681. CLEANING DRIER. STEPHEN CHASE, 4th, Chicago, and BENJAMIN S. PFEIFFER, Winnetka, Ill., assignors, by direct and mesne assignments, to Chase Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1925. Serial No. 12,517. 8 Claims. (Cl. 34—12.)

1. In an apparatus for drying fabrics, in combination, means for feeding a fabric progressively, a housing arranged to confine air in contact with the lower surface of the fabric, a movable brush operating inside the housing to brush the fabric, the housing having a bottom wall sloping away from the bush, and means for circulating air through said housing and down its sloping wall.

1,751,682. CULTIVATOR ATTACHMENT. JOHN T. CLARK, Lake City, Ark. Filed June 8, 1927. Serial No. 197,461. 1 Claim. (Cl. 97—15.)



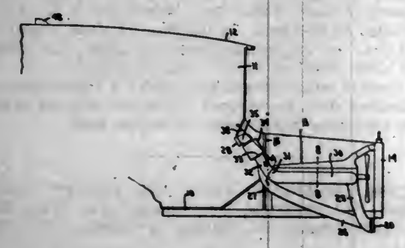
The combination with a cultivator including a wheeled frame and cultivator plows secured to the frame on each side of the longitudinal center thereof, of an attachment therefor including a supplemental frame, means securing the supplemental frame to the cultivator frame, a centrally disposed bearing carried by the supplemental frame and arranged at the longitudinal center of the cultivator frame, spaced bearings carried by the supplemental frame arranged transversely of the cultivator frame, a drive shaft arranged in said pair of bearings, means for operating the drive shaft from the cultivator, an operating shaft mounted in the central bearing, means operatively connecting the shafts together, the operating shaft having incorporated in the length thereof universal joints, a pulling wheel secured to the rear end of the operating shaft, supporting heads arranged above the cultivator plows having transversely extending slots therein, a U-shaped supporting arm rockably mounted upon the operating shaft and normally extending above the same, and a control lever pivotally mounted on the upper end of said U-shaped arm having a depending finger for engaging in a selected slot of either one of said heads.

1,751,683. PRIMARY DISAZO DYE DERIVED FROM DIAMINO CARBAZOLES AND ARYLIDES OF UNSULPHONATED HYDROXY CARBOXYLIC ACID. HEINRICH CLINGESTEIN, Cologne-on-the-Rhine, Germany, and HARRY W. GRIMMEL, New York, N. Y., assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 21, 1927, Serial No. 177,208, and in Germany Mar. 24, 1926. 12 Claims. (Cl. 260—76.)

1. Process which comprises coupling a tetrazotized unsulphonated diamino-carbazole compound with an arylide of an unsulphonated hydroxy carboxylic acid.

1,751,684. COMBINED VENT AND SAFETY VALVE. VICTOR P. DIEDERICH, Hot Springs, Ark. Filed June 18, 1928. Serial No. 286,326. 4 Claims. (Cl. 277—42.)

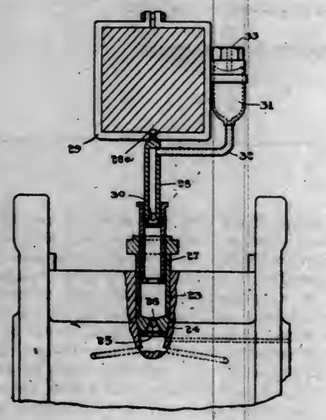
1. A device of the character described comprising a sectional body having a chamber therein, said body having an inlet and an outlet way formed in the same in relative spaced relation, a ported wall in said chamber between said ways, a spring-pressed disk valve normally closing the port of said wall, said valve having a port in the same, a spring-pressed second valve carried by said first valve and normally closing the port therein, said second valve being movable in a direction opposite to the path of movement of the first valve, and a baffle disposed across the chamber within the body portion between said ported wall and the outlet way of the body.



1,751,685. ISOLATION OF BENZYL CELLULOSE. EDUARD DÖRR, Elberfeld, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Original application filed Sept. 20, 1926, Serial No. 136,723, and in Germany Aug. 17, 1925. Divided and this application filed Aug. 13, 1927. Serial No. 212,833. 2 Claims. (Cl. 260—152.)

1. The improvement in the isolation of benzyl cellulose from crude reaction products containing the same, which comprises admixing said crude reaction products with common salt, extracting the resulting mixture with benzine, and removing the residual salt by means of washing with water.

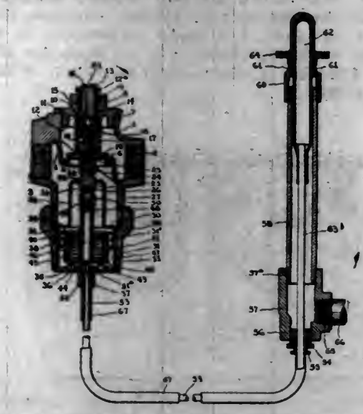
1,751,686. VENTILATING APPARATUS FOR AUTOMOBILES. FREDERICK C. DUREK, Defiance, Ohio. Filed Sept. 25, 1925. Serial No. 58,516. 1 Claim. (Cl. 98—2.)



The combination with an inclosed motor vehicle, of a casing mounted at the front end of the vehicle and having

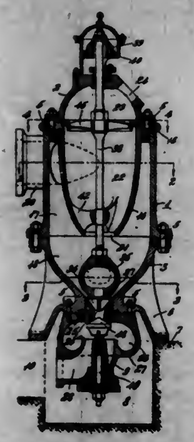
an opening in its front side, a heating chamber surrounding the vehicle engine exhaust, a pair of conduits connected to such casing, one of said conduits leading to said

chamber and the other directly to the vehicle interior, means for conducting heated air from said chamber to the vehicle interior, and means for selectively controlling the flow of either heated or cool air to such interior.



1,751,687. LUBRICATING DEVICE. JOHN W. T. ELLIOT, Allandale, Ontario, Canada. Filed Dec. 22, 1927. Serial No. 241,964. 7 Claims. (Cl. 308—79.)

1. The combination with a locomotive frame and a journal box mounted to slide vertically in suitable guides carried by the frame of a telescopic lubricator comprising a plurality of tubes slidably mounted one within the other, one of said tubes being provided with an apertured outlet and another of the tubes being provided with a valve which, when closed, forms a piston, the first mentioned tube being fixed to said bearing and the second mentioned tube being fixed to the frame, the arrangement being such that the second mentioned tube which functions as a piston is moved downwardly on the power stroke by the weight of the frame.

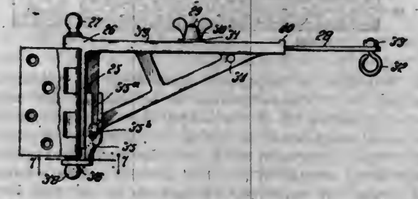


1,751,688. BURNER-CONTROL MEANS. LEWIS W. EGGLESTON, Clarence Township, Erie County, N. Y., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 21, 1927. Serial No. 170,051. 14 Claims. (Cl. 158—117.1.)

10. In a device of the character described, a valve casing having an inlet and an outlet, a partition in said casing having a passage therethrough, a valve to close said passage, a hollow open extension on said casing in axial alignment with said passage, a sleeve carried by said extension, a cup-shaped container opening into and sealing said casing and carried by said sleeve, a resilient longitudinally expansible-contractible member within said container and having a head adjacent the base of said con-

tainer, means to seal the open end of said resilient member to the side wall of said container, plunger means carried by said head and operatively engaging said valve, a pilot burner tube having a burner aperture, a heat responsive medium within said tube, and means to transmit the expansive force of said medium to said head.

1,751,689. SAND SEPARATOR. KARL A. ENZ, Cleveland, Ohio, and DANIEL J. MCCORMACK, York, Pa. Filed Nov. 24, 1924. Serial No. 751,014. 7 Claims. (Cl. 210—51.)



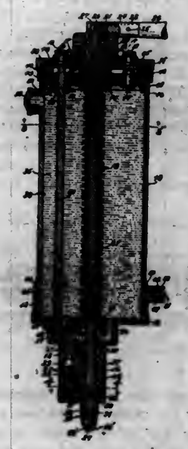
1. A sand separator, comprising a casing having an inlet opening for the introduction of a physical mixture of sand and water under pressure, means within said casing for co-operating with the flow of said mixture for effecting separation of said substances, and means controlled by the flow of one separated substance for controlling the discharge of the other separated substance.

1,751,690. WATERPROOF FIRE-RESISTANAT PLASTIC COMPOSITION. CHARLES R. FABEN, St. Louis, Mo., assignor to The American Tar Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 7, 1922. Serial No. 580,387. 8 Claims. (Cl. 106—31.)

1. The herein described process of producing a waterproof, fire resistant plastic composition, which consists in mixing 500 parts by weight of dry clay with 333 parts by weight of powdered pitch and 100 parts by weight of asbestos fibers, and adding to the mixture 600 parts by weight of water which is worked into the mixture to form a paste containing an emulsion of clay and water, next adding to the mixture 150 parts by weight of coal tar and allowing the water to evaporate from the mixture; substantially as specified.

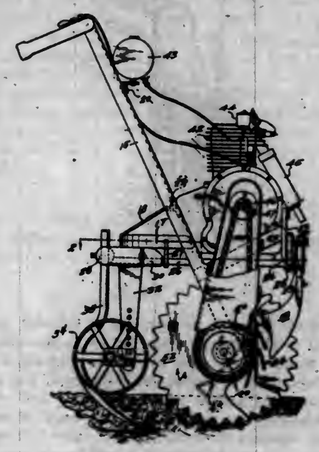
1,751,691. BRACKET. OTTO S. FLATH, Chicago, Ill. Filed June 27, 1927. Serial No. 201,594. 2 Claims. (Cl. 248—1.)

1. A bracket of the character described comprising, in combination with a door-hinge provided with a removable hinge-pin, a triangular member, the base whereof is adapted to bear against the butt-end of the hinge, while the upper horizontally disposed side of said member is extended beyond said base to lap the upper end of the butt-end of the hinge, said extension being provided with an oblong aperture to receive the head of the hinge-pin, with the base of the extension having a lip disposed forwardly into said aperture to engage beneath the head of the hinge-pin.



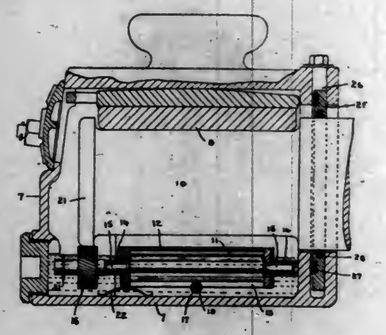
1,751,692. ICE SKATE. GEORG FRÜHBEIS, Berlin-Friedenau, Germany. Filed Apr. 11, 1928, Serial No. 269,228, and in Germany Dec. 18, 1925. 6 Claims. (Cl. 208—167.)

1. An ice skate, comprising, in combination, a front blade part having a sole plate, a flat spring fastened to said sole plate and extending underneath the sole of a boot, a rear blade part with bars fastened thereto adapted to guide said rear blade part on said front blade part, a firm connection between the front end of said guiding bars and the rear end of said flat spring adapted to allow free movement of the toe joint of a foot in the plane of the said front and rear blade, substantially as set forth.



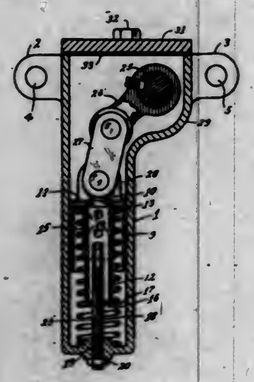
1,751,693. LUBRICATOR. WILLIAM M. GENTLE, Los Angeles, Calif. Filed Nov. 10, 1928. Serial No. 318,501. 10 Claims. (Cl. 221—47.3.)

1. A lubricator for discharging lubricant into oil cups and bearings including a container, a nozzle connected to said container, a valve head for opening and closing a passage to said nozzle, a plunger on said head that is normally extended through a passage through said nozzle, yielding means for normally holding said valve head in a closed position so that the end of the plunger is flush with the



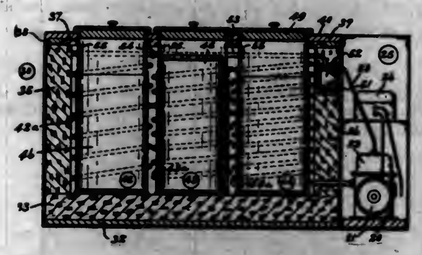
end of said nozzle, and manually operable means for moving said head to open position and to remove said plunger from said nozzle.

1,751,694. SOIL-TILLING DEVICE. HAROLD H. GLASIER, Los Angeles, Calif. Filed Oct. 3, 1927. Serial No. 223,642. 12 Claims. (Cl. 97—48.)



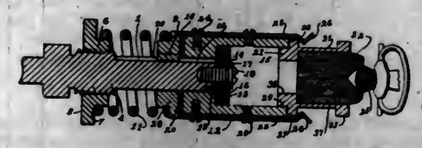
1. A soil tilling implement comprising a frame, a traction and ground breaking wheel journalled at the forward end thereof adapted to cut into and penetrate the ground to effect tillage, motor means for rotating said wheel and a ground working tool at the rear of said wheel arranged to engage the soil and create a drag upon said implement.

1,751,695. LUBRICATION OF AXLES AND THE LIKE. PERCIVAL GEORGE GRAHAM, Enfield, near Sydney, New South Wales, Australia. Filed May 19, 1925, Serial No. 31,442, and in Australia Jan. 25, 1925. 1 Claim. (Cl. 308—85.)



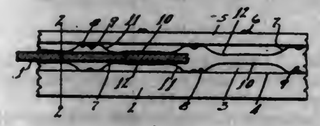
In axle boxes and the like for lubricating journals, a cylindrical casing, a rotor journalled in said casing, a friction wheel carried by the rotor, a removable pin securing the casing in the axle box and pivotally mounting the casing medially of the box, and a pin at the terminal of the rotor adapted for use in facilitating withdrawal of the rotor.

1,751,696. HYDRLAULIC SHOCK DIFFUSER. LEON S. HETH, East Grand Rapids, Mich. Filed May 4, 1928. Serial No. 275,011. 3 Claims. (Cl. 267—8.)



2. A shock absorber comprising a cylinder adapted to be secured to the chassis frame of an automobile, a piston slidably mounted in said cylinder, connections on said piston adapted to be secured to the axle of the automobile for moving said piston when said axle and chassis are moved relatively to each other, the head of said piston having an opening therethrough, a tube having perforations in the side walls thereof, a resilient sleeve surrounding said tube for yieldingly closing said perforations, means for sealing one end of said tube around said piston head opening, the other end of said tube having a relatively small opening therethrough, a plunger rod mounted on said cylinder to extend through said tube opening and have axial movement therethrough when said piston is moved in said casing, said plunger rod having a variable cross sectional area for providing a variable sized restricted passageway for the purpose set forth.

1,751,697. REFRIGERATING APPARATUS. HARRY B. HULL, Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed Nov. 6, 1924. Serial No. 748,258. 2 Claims. (Cl. 257—208.)



1. Refrigerating apparatus comprising in combination a plurality of compartments to be cooled, and means for refrigerating all of the compartments to substantially the same temperature including an individual refrigerating element associated with each compartment, said elements being connected in series to form a single conduit, and means for supplying refrigerant to one end of the conduit, the refrigerating surface of the elements being increased along the series in the direction of flow of refrigerant from said supply means.

1,751,698. WATCH-WINDING MECHANISM. HOWARD W. JELLIFFE, Cleveland, Ohio. Filed May 22, 1926. Serial No. 111,055. 8 Claims. (Cl. 81—7.5.)

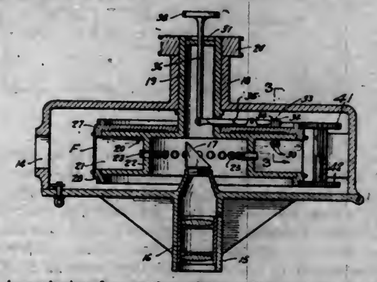
1. In a watch winding mechanism, the combination of an axially immovable drive shaft, friction clutch elements mounted on said shaft and movable axially thereon, the driving element being keyed to the shaft and the driven element being loose thereon but held by said shaft against movement away from the keyed element beyond certain limits, a shouldered nut threaded on said shaft adjacent the driving element of the clutch, a pressure spring element mounted between the shoulder and the keyed element for normally holding the clutch in engagement, the said driven element having an annular portion projecting beyond the limits of the shaft, a winding element for detachably engaging said projecting portion, and having means for receiving yieldably thereagainst the stem of a watch to be wound, and power means for rotating said drive shaft.

1,751,699. ANTIRATTLER FOR WINDOWS. HANS GOTTFRED JORGENSEN, Erie, Pa. Filed Dec. 19, 1923. Serial No. 681,495. 2 Claims. (Cl. 292—76.)

1. In an anti-rattler for windows, the combination of a frame having a groove therein with opposing walls; a glass member mounted in the groove; and a spring at each side of the glass member exerting yielding pressure against the member, each of said springs comprising a spring loop operating against the member and leaving its entire length superimposed by the member, said loop being rigidly secured at its ends to a wall of the groove and yielding intermediate said ends.

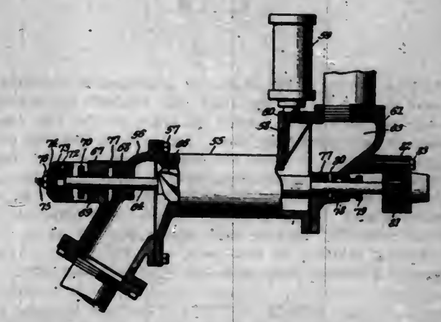
CARNEGIE LIBRARY OF ATLANTA

1,751,700. TONGUE EXTENSION. EMIL E. KOCH, Stanton, Nebr. Filed Feb. 5, 1929. Serial No. 337,646. 1 Claim. (Cl. 278—121.)



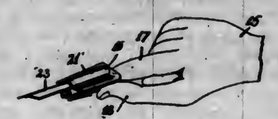
In combination with a tongue, a U-shaped extension member including a pair of co-extensive spaced parallel leg plates connected by a bight plate at their forward ends, the other ends of the plate extending a distance over and under the forward end of the tongue, bolts securing the extension in place, a neck yoke pin formed on a casting, said casting including a pair of transverse elongated loop members for receiving the co-extensive parallel plates so that the casting may slide thereon, said coextensive parallel plates having registering openings, and a stop pin for insertion therein to limit the movement of the casting rearwardly.

1,751,701. HEALTH SUSPENDER SHIRT. HERBERT W. LAIRD, Tampa, Fla. Filed Apr. 27, 1928. Serial No. 273,411. 1 Claim. (Cl. 2—117.)



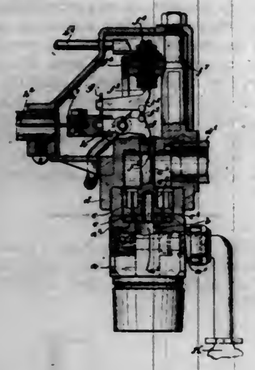
A shirt having on each side a strap secured near one end to the arm hole seam at the side seam inside the shirt, the strap being provided with two button holes at different distances from the arm hole and the shirt being provided on each side with two holes through which the free end of the strap may be drawn, at the side seam at different distances from the arm hole.

1,751,702. CONTINUOUS PROJECTOR. RALPH M. LIKE, Los Angeles, Calif., assignor to Frank E. Carter, Brawley, Calif. Filed Nov. 9, 1926. Serial No. 147,225. 6 Claims. (Cl. 88—16.8.)



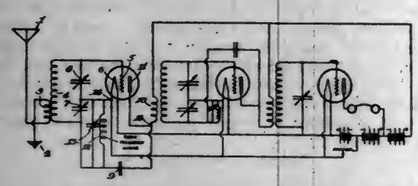
1. A projector for motion picture film comprising a light means having an aperture for projecting a light beam, an arcuate film carrier mounted to travel in a continuous cycle past the beam from said light means, said carrier having radial cells for the passage of a beam of light therethrough and means to peripherally hold a film with frames thereof across said cells and to travel with the film thereover, one frame of a film being disposed across a cell whereby to project an image therefrom inwardly through a cell, image receiving means at the center of the arc of said carrier to receive images projected through said film, said aperture being of such dimensions as to at all times project light through a plurality of adjacent cells whereby to maintain the projected image in stationary position while the cell is traveling and to replace in complementary registration the image from the succeeding frame where it is moving into the field of said beam of light and while the preceding image is being withdrawn.

1,751,703. PUMP. DANIEL D. LONG, Boise, Idaho, by decree of distribution to Martha Long, Boise, Idaho. Filed Nov. 3, 1927. Serial No. 230,777. 1 Claim. (Cl. 103—128.)



A pump of the class described comprising a casing having a main body, an inlet head connected to one end of the body, the opposite end of said body terminating in an upwardly projecting portion; an outlet head connected to said portion, means associated with said projecting portion for preventing pounding or hammering of the liquid as it passes through the casing, a pair of interengaging screw impellers axially mounted in said casing, the shafts of said impellers extending through said inlet and outlet heads, means for lubricating said shafts by the fluid passing through the casing, and means for maintaining said impellers in proper operative position relative to each other.

1,751,704. FINGER PENHOLDER. FRANCIS H. MACDONALD, Edgemere, N. Y. Filed May 24, 1928. Serial No. 280,137. 1 Claim. (Cl. 120—100.)

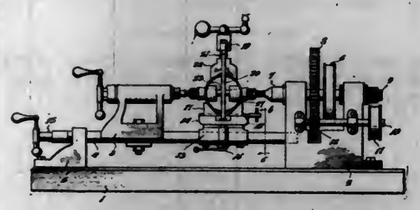


In a finger pen holder, a finger member arranged for engaging one's finger, and having a flat top, a base pivotally mounted on the said flat top, means for holding a pen nib, secured on the base, the said flat top being formed with a plurality of apertures on the arc of a circle scribed from the base pivotal point, and pins engaged thru the base and into certain of the apertures for holding the base at fixed angular positions for holding the pen nib at angular positions relative to the length of the finger member.

1,751,705. RELEASE DEVICE FOR FLUIDS UNDER PRESSURE. DANIEL MAPES, Mamaroneck, N. Y., assignor to Walter Kidde & Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 24, 1927. Serial No. 178,118. 4 Claims. (Cl. 169—26.)

1. In a device of the character described, a container, a seal secured to the container and adapted to rupture under influence of a normal pressure within the container, a seal supporting means mounted to prevent the rupture of the seal under the normal pressure, said supporting means being apertured so as to leave a portion of said seal unsupported whereby it will be ruptured by a predetermined excess pressure within said container, means releasably holding said seal-supporting means in supporting relation to said seal, and an outlet in the supporting means communicating with the aperture.

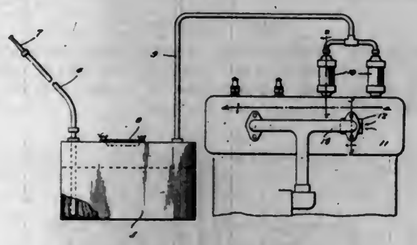
1,751,706. RADIO RECEIVING APPARATUS. BYRON B. MINNIUM, Chicago, Ill., assignor, by mesne assignments, to Story & Clark Radio Corp., Chicago, Ill., a Corporation of Delaware. Filed May 6, 1926. Serial No. 107,015. 8 Claims. (Cl. 250—20.)



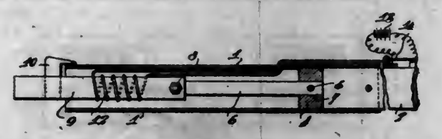
1. A radio receiving apparatus comprising a vacuum tube having a filament and a grid and a plate, elements forming in effect a Wheatstone bridge arrangement with substantially pure capacity only forming each arm of said bridge, the secondary of a repeating coil being connected between opposite junctions of said bridge, one such capacity being formed by the grid to plate capacity of said tube, to thereby suppress oscillation of the tube, and instrumentalities forming an unbroken metallic path through the secondary with inductance therein between the grid and the filament of said vacuum tube, said inductance permitting the passage of direct current charges but preventing the passage of radio signals.

1,751,707. GARTER BUTTON. CHARLES A. NASH, Portland, Oreg. Filed Apr. 28, 1928. Serial No. 273,719. 5 Claims. (Cl. 24—243.

1. A garter clasp comprising a shell body having a bore having a passage formed therethrough said passage being of materially less diameter at one end of the shell than at the other, the different diameters of the passage setting up a shoulder within the shell having a shallow recess formed therein, a plug body having a portion of relatively large diameter and a portion of smaller diameter and designed to extend into said passage, the larger portion having a shoulder for coaction with the wall of the recess for clamping the edge of a stocking or the like between the shell and plug, a button formed upon the inner end of said plug, and means carried by the plug and shell for the attachment thereto of a holding strap, said plug at its forward end being of a diameter to bind slightly in the smaller diameter of said bore of the shell.

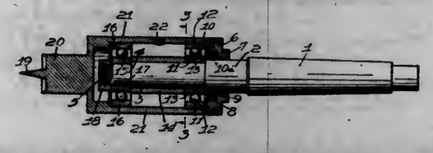


1,751,708. PISTON-BOSS REAMER. WALTER A. NELLER, Alexandria, Minn. Filed Aug. 12, 1927. Serial No. 212,592. 3 Claims. (Cl. 77—3.)



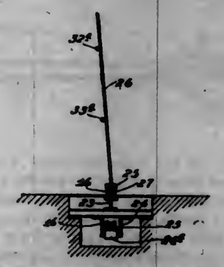
1. A machine of the character specified, comprising head and tail stocks, a work holder and a centering device for the work adapted to be supported between the head and tail stock centers for positioning the work during the adjustment of the holder to grip the same.

1,751,709. MOTOR OPERATING ATTACHMENT FOR LIQUID SPRAYERS. FRANTZ F. NIELSEN, REA H. NIELSEN, and JAMES R. NIELSEN, Afton, Wyo. Filed July 7, 1927. Serial No. 204,047. 5 Claims. (Cl. 123—198.)



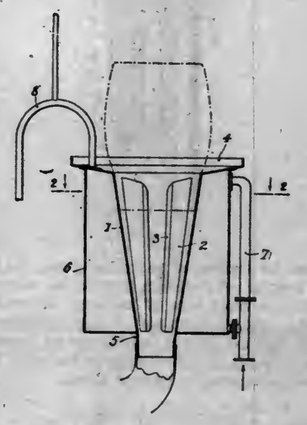
1. An air compressing attachment for gas engines comprising a tank, a check valve arranged in the spark plug opening of the engine, a feed pipe connecting said tank with the check valve and means for isolating the cylinder of the engine having the check valve attached thereto from the fuel feed line of the engine, said means comprising a plate positioned in the fuel feed line forming a closure therefor and adapted to provide atmospheric communication for the isolated cylinder.

1,751,710. MAGNETIC TESTING DEVICE. FRED H. OHLAND, Gibbon, Minn. Filed June 17, 1926. Serial No. 116,667. 2 Claims. (Cl. 175—183.)



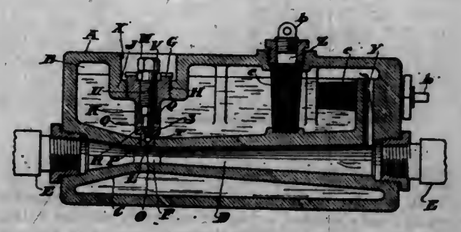
1. A device of the class described comprising a tubular supporting member of non-magnetic material, a cross wall secured in one end of the tubular member, a spring having one end secured in the cross wall and having its free end projected axially part way toward the other end of the tubular member, and a magnet secured to the free end of the spring to be suspended freely in and project from the said other tube end, said cross wall being spaced inwardly of the tubular member end in which it is mounted to form an end socket, a handle of heat non-conductive material secured in and projecting from the end socket, graduations on the other tubular member end, and an indicator pointer carried by the magnet and associated with the graduations for the purposes specified.

1,751,711. REVOLVING LATHE CENTER. HAROLD RAY ONG, Champaign, Ill. Filed May 27, 1927. Serial No. 194,774. 1 Claim. (Cl. 82—33.)



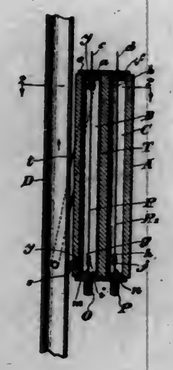
A lathe center construction comprising a stationary spindle having a pair of reduced portions and a threaded end, ball bearings mounted upon each of the reduced portions, a sleeve disposed upon the spindle between said bearings and in engagement therewith, a nut disposed upon the threaded portion and bearing against one of said ball bearings for securing the ball bearings to the spindle, a lathe center mounted for rotation about the ball bearings and having a threaded opening disposed concentrically with respect to the stationary spindle, a closure plug having a recess and being threaded for engaging the threaded portion of the lathe center, oil retaining means disposed within said recess and arranged to bear against a portion of the spindle, and a rigid washer disposed between one of said ball bearings and the closure plug and being arranged to bear against the oil retaining means for retaining the latter.

1,751,712. GLASS-HANDLING APPARATUS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed June 25, 1928. Serial No. 288,123. 6 Claims. (Cl. 198—162.)



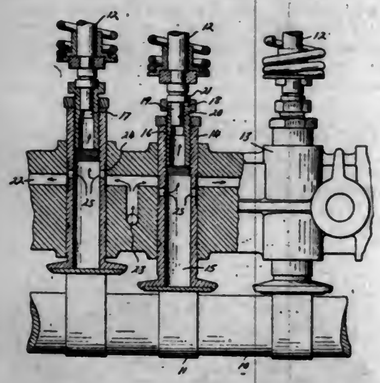
1. In apparatus for handling sheets of glass, an endless carrier having a horizontal flight provided with means for supporting the lower edges of a series of upright glass sheets, an endless supporting cable having a horizontal flight extending longitudinally of the line of travel of the sheets above the lower edge thereof and engaging the faces of the sheets, and means for driving the carrier and the cable.

1,751,713. APPARATUS FOR MELTING FATTY SUBSTANCES. GEORGES PELLERIN, Malaunay, France. Filed Apr. 5, 1927, Serial No. 181,251, and in France Apr. 22, 1926. 4 Claims. (Cl. 257—210.)



2. In an apparatus for melting fatty substances, the combination of a vessel which is placed vertically and is open at the top and bottom, hollow radial, substantially vertical ribs provided in this vessel, the said ribs each being provided with a sharp edge, and a jacket which surrounds the said vessel and forms with the latter an annular chamber for the circulation of a hot fluid, the said chamber being in communication with the interior of the said hollow ribs.

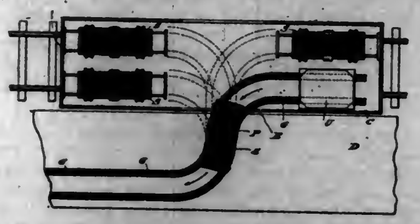
1,751,714. AIR-LINE OILER. ARTHUR E. PETERS, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 16, 1927. Serial No. 199,312. 4 Claims. (Cl. 184—55.)



1. An air line oiler comprising a casing having an annular wall therethrough dividing the casing into a reservoir for oil and a passageway for pressure fluid, said passageway having a restricted throat portion and being tapered outwardly toward its ends, said casing having an oil passage connecting the restricted throat portion with the reservoir and an air passage affording communication between the reservoir and an enlarged portion of the passageway, and means in the oil passage for controlling the volume of oil delivered from the reservoir into the passageway.

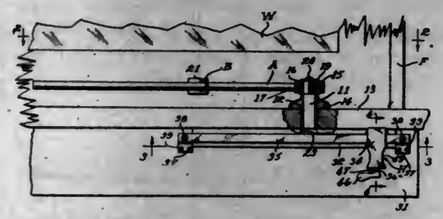
1,751,715. THERMAL-CONDUCTIVITY GAS-ANALYSIS APPARATUS. JACOB C. PETERS, Jr., Philadelphia, Pa. Filed Feb. 27, 1926, Serial No. 91,031. Renewed Feb. 4, 1930. 1 Claim. (Cl. 73—51.)

Apparatus for testing or analyzing gases comprising an elongated tubular chamber, a resistance conductor disposed therein, a liner tube of material inactive with respect to the gaseous contents of said chamber forming the interior surface thereof, and material interposed between said chamber and liner tube to maintain high, definite, thermal conductivity between them.



1,751,716. CUSHIONED VALVE TAPPET. WILLIAM F. PORTH, Detroit, Mich. Filed Apr. 26, 1926. Serial No. 104,863. 8 Claims. (Cl. 123—90.)

3. In a valve operating mechanism, a tappet including a tubular body member, a tubular adjusting member within said body member, a plunger slidably mounted in the said tubular adjusting member and abuttingly engageable therewith, and fluid pressure means yieldably resisting abutting engagement of the said plunger with the said adjusting member.

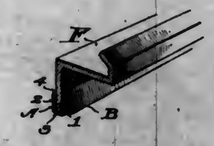


1,751,717. CAR LOADING AND UNLOADING METHOD. ROBERT T. ROMINE, Mount Clemens, Mich. Filed Aug. 10, 1926. Serial No. 128,397. 7 Claims. (Cl. 214—152.)

1. The hereindescribed method of unloading heavy bundles or packs, such as metal, from a freight car, consisting in bodily lifting the bundle above the car floor, laying conveyor rolls on the car floor to extend from the car doorway to a point beneath the bundle while raised, lowering the

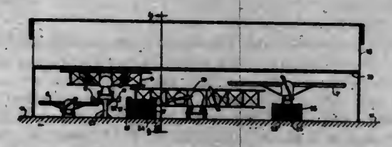
bundle onto a platform resting on said rolls, propelling the platform to the car doorway on said rolls, and lifting the bundle as a unit from said platform.

1,751,718. REGULATOR FOR WINDOWS AND DOORS. ERIC SODERGREN, Sierra Madre, Calif. Filed July 26, 1927. Serial No. 208,623. 6 Claims. (Cl. 268—118.)



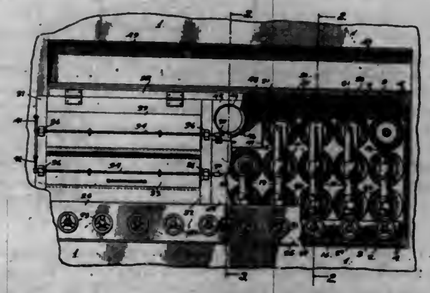
1. A regulating device of the character described comprising a shaft adapted to be vertically mounted for rotation about a fixed axis in the stool of a casement window frame, an arm fixed to the shaft for rotation thereby, a bracket adapted to be secured to a casement window in the frame and with which the arm is slidably associated so that rotation of the shaft in one direction or the other will effect movement of the window to an open or closed position, and means operatively associated with the shaft for actuating the latter, said means comprising a guide bar adapted to be supported in horizontal fixed position upon the stool of the window frame, a holding element comprising a body slidably mounted on the bar, a shoe in the body normally urged into engagement with the bar to set up frictional resistance against movement of the body along the bar, a sleeve constituting an arm, secured to the shaft, and a rod pivotally secured to the body and extensibly associated with the sleeve.

1,751,719. NOZZLE. WILLIAM C. UHRI, Jr., Clayton, Mo., assignor to Central Engineering and Sales Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 18, 1925. Serial No. 24,115. 6 Claims. (Cl. 299—140.)



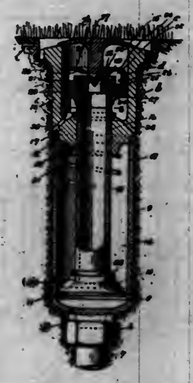
1. In a device of the class described, a tube of substantial length expanding in internal diameter throughout its length from its inner to its outer end, means for directing a comparatively small diameter cylindrical stream of motive fluid into said tube and spaced from the inner walls of said tube near its entrance, and means for admitting liquid to said tube and surrounding said stream of motive fluid.

1,751,720. WEATHER STRIP FOR CASEMENT SASHES. HERBERT E. WHITE, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Apr. 13, 1927. Serial No. 183,521. 1 Claim. (Cl. 20—69.)



A metallic weather-strip construction for steel frame casements and the like comprising a clip portion of channel formation and having both walls thereof substantially the same height, and one of the walls thereof being deflected inwardly at an angle along its edge to provide a gripping lip for biting engagement with an outside face of the frame, and a resilient weather-flange connected with the inside wall of the channel.

1,751,721. HANGAR EQUIPMENT. CARL BELLMANN, New York, N. Y. Filed Sept. 1, 1927. Serial No. 216,794. 15 Claims. (Cl. 189—1.5.)

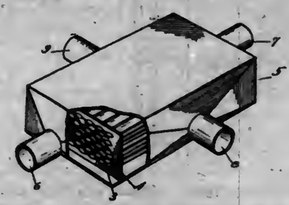


1. In a hangar, an aircraft supporting floor, partitioned into a series of sections of a width not less than the span from tip to tip of the wings of an aircraft to be housed therein, and of a length equal to the overall length of said aircraft, the partitions separating said floor sections from each other comprising an elevated runway, of a width not less than the width of the running gear of an aircraft to be travelably supported thereon, of a length substantially that of the supported aircraft, and of a height, from the surface of said floor sections not less than the distance between the highest and lowest points of the wings of the aircraft being supported on the adjacent floor sections and elevated runways.

1,751,722. BURNER. FREDERICK S. BITGOOD, San Francisco, Calif. Filed May 25, 1927. Serial No. 194,085. 12 Claims. (Cl. 158—1.)

1. A burner for furnaces comprising a burner setting; a plurality of burner holders independently mounted and separately removable from the setting, said holders having matching recessed portions to provide air passages therebetween; burner nozzles mounted upon each holder; a fuel manifold; and valve controlled means connecting the manifold and each holder for supplying fuel through the holders to the burner nozzles whereby any holder may be removed independently of the remaining holders and burner nozzles.

1,751,723. DISAPPEARING LAWN SPRINKLER. CHARLES A. BORGESON, San Francisco, Calif. Filed Dec. 28, 1925. Serial No. 78,026. 2 Claims. (Cl. 299—61.)

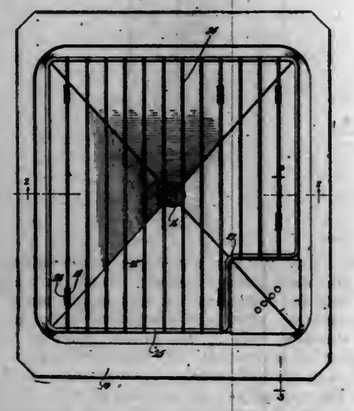


1. In a lawn sprnkler, a casing, a nozzle slidably mounted in said casing, water actuated means for raising said nozzle into operative position, and spring means adapted to be tensioned after said nozzle has moved a predetermined distance, said spring means acting in the initial movement of said nozzle into inoperative position.

2. A lawn sprinkler comprising a casing having a recess in the top thereof and a dome-shaped rim, a nozzle slidably mounted in said casing and being receivable in said recess when in inoperative position, a dome-shaped cover secured to said nozzle for closing said recess when seated on the rim, said cover being dome-shaped and having its periphery rounded so as to merge into the rim when seated and prevent the cover from being manually grasped and moved, and water actuated means for raising said nozzle.

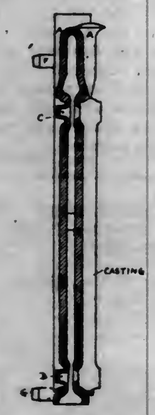
1,751,724. MANUFACTURE OF A SOLID RESIN FROM THE SEMIFLUID RESINOUS MATTER EXTRACTED FROM CRUDE GUTTA-PERCHA AND/OR BALATA. ALFRED BREWERTON CRAVEN, Selby, England. Filed July 23, 1927, Serial No. 208,068, and in Great Britain Jan. 1, 1927. 2 Claims. (Cl. 134—26.)

1. The process of manufacturing a solid resin from a sticky semi-fluid resin extracted from gutta percha and from balata, consisting of the steps of mixing one per cent of resinate of manganese with said semi-fluid resin, heating and agitating said mixture and passing a current of air therethrough while agitated.



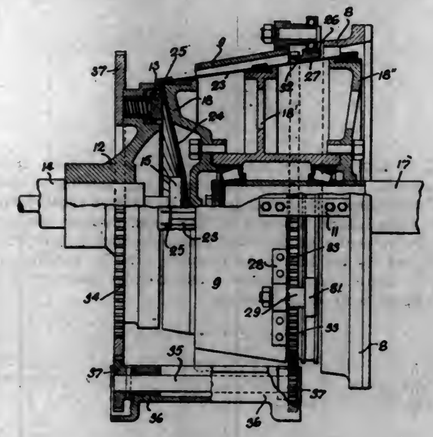
1,751,725. HEAT EXCHANGER. WALTER M. CROSS, Kansas City, Mo. Filed Jan. 7, 1926. Serial No. 79,772. 3 Claims. (Cl. 257—241.)

1. A heat exchanger comprising a plurality of sets of corrugated sheets, each set consisting of two sheets ar-



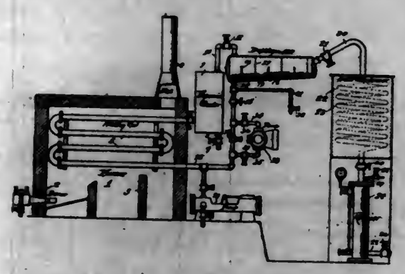
ranged to form tubular openings therebetween and having undulated external surfaces, and undulated separating elements extending uninterruptedly across the exterior of each sheet in close proximity to the ends thereof, the separating elements of adjacent sets of sheets contacting throughout substantially their entire lengths to form continuous undulated passageways between the sets of sheets, said separating elements forming side walls for the passageways throughout the length of the latter.

1,751,726. BROILER. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Sept. 26, 1927. Serial No. 222,033. 12 Claims. (Cl. 53—5.)



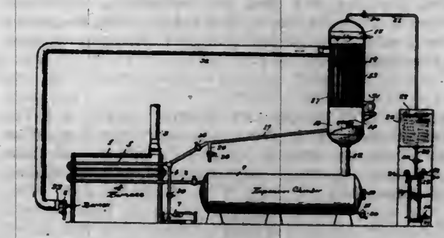
1. In a broiler, a tray, a drip pan resting upon the tray and having openings therethrough, and a grid above the pan and having projections through the openings of the pan for supporting it from the tray.

1,751,727. CAST-IRON MOLD. JOSEPH L. DOSTAL, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Sept. 12, 1927, Serial No. 218,884. Renewed Aug. 1, 1929. 2 Claims. (Cl. 22—183.)



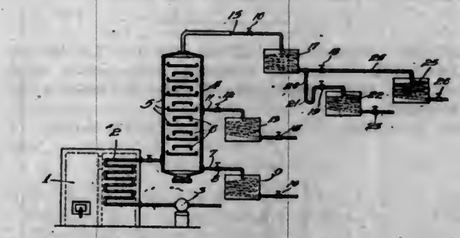
1. In a double faced hollow radiator mold with the parting line substantially in the vertical plane, a perforated core support whereby the gases generated within the cores are vented to the interior of the hollow mold.

1,751,728. BASKET MACHINE. COLON J. DUDLEY, Hamburg, N. Y., assignor to The Straight-Side Basket Corporation, Benton Harbor, Mich., a Corporation of Michigan. Filed Feb. 23, 1927. Serial No. 170,175. 20 Claims. (Cl. 147—47.)



1. In a machine for making a basket or similar receptacle, the combination of a reciprocating and rotary basket form for engaging the inside of the receptacle, a stationary mold into which the form is movable, the form having a gradual straight taper from its top to its bottom, whereby the basket is tapered accordingly, rotary means for pressing the bottom of the basket against the end of the form, a ring gear rotatably mounted in the mold, having its inner periphery adapted to grip the outer surface of the basket, means whereby said ring gear is rotated by the operation of said rotary means, means for feeding outside top and bottom hoops to the basket, and stapling mechanism for driving staples through the hoops and the side walls of the basket.

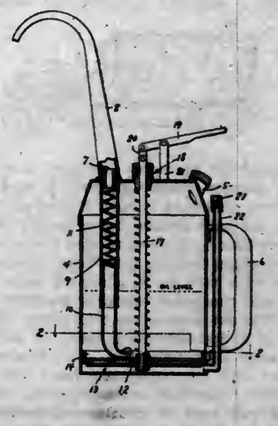
1,751,729. APPARATUS FOR TREATING HYDROCARBONS. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Sept. 1, 1920, Serial No. 407,408. Renewed Nov. 21, 1927. 1 Claim. (Cl. 196—99.)



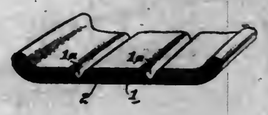
An apparatus of the character described, comprising a furnace, a coil therein, means for feeding oil to the coil, an expansion chamber disposed exteriorly of the furnace and in communication with the coil, a horizontally disposed dephlegmator communicating with said expansion chamber, a vapor discharge from the dephlegmator, and means for returning reflux condensate from said dephlegmator to the heating coil, said dephlegmator having an inclined wall and provided with a plurality of baffles, the reflux discharge being near one end of the dephlegmator.

1,751,730. APPARATUS FOR CRACKING OIL. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 11, 1921, Serial No. 444,234. Renewed Feb. 21, 1929. 2 Claims. (Cl. 196—139.)

2. In an apparatus for cracking oil, the combination with a heating coil mounted in a furnace, a reaction zone communicating therewith where substantial vaporization takes place, a dephlegmator communicating with the vapor space of said reaction zone, a closed air chamber within the interior of said dephlegmator, means communicating with said closed chamber in the dephlegmator for forcing cool air thereto, and means for removing said air after passage through the closed air chamber which has been heated by the dephlegmator, and means for delivering said heated air to the furnace.



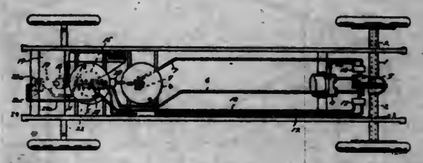
1,751,731. PROCESS OF TREATING HYDROCARBON OIL. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Oct. 22, 1923, Serial No. 669,929. Renewed Jan. 12, 1929. 4 Claims. (Cl. 196—94.)



3. A process of treating petroleum oils of an emulsified character, consisting in heating the oil to a cracking temperature under superatmospheric pressure, passing the vapors evolved from the oil to a zone of dephlegmation, passing the uncondensed oily and watery vapors therefrom through a primary condenser maintained under superatmospheric pressure, and at a temperature below the boiling point of water at that pressure, passing the condensate through a cooling zone, withdrawing the uncondensable gases and uncondensed vapors from the primary condenser and subjecting them to further cooling.

1,751,732. LUBRICANT-DISPENSING CAN. HAROLD A. FRANCHERE and AUGUSTUS E. JEPP, Lake Crystal, Minn., assignors of seventy per cent to S. L. Sherwin, F. W. Franchere, B. R. Thomas, and C. A. Johnson, Lake Crystal, Minn., and thirty per cent to said Harold A. Franchere. Filed Dec. 22, 1928. Serial No. 327,920. 8 Claims. (Cl. 221—51.)

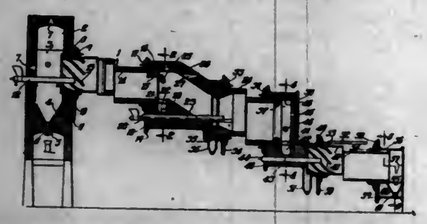
1. In a fluid dispensing device of the class described, a fluid container, a piston mounted for reciprocation within said container, a discharge nozzle, and a delivery conduit within the container communicating with the discharge nozzle and in constant contact with the piston head, a valved air inlet, connected with the container adjacent the bottom thereof.



1,751,733. WINDOW GUIDE. RICHARD T. GRIFFITHS, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed July 28, 1926, Serial No. 124,263. Divided and this application filed Feb. 8, 1927. Serial No. 166,757. 2 Claims. (Cl. 296—44.5.)

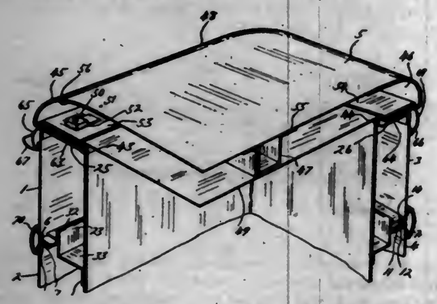
1. A flexible window guide comprising a substantially flat strip of rubber enveloped in fabric and having one face plane and the opposite face provided with a pair of parallel channels equidistant from the margins, the fabric extending down into said channels into engagement with the fabric on the opposite face to provide flexible fabric hinges, the strip being adapted to be readily folded into channel form about the flexible fabric hinges without stress on the rubber or unfolded and laid flat without stress on the rubber as desired.

1,751,734. STEAM MOTOR VEHICLE. JOHN A. HARRIS, Detroit, Mich. Filed Feb. 11, 1927. Serial No. 167,889. 2 Claims. (Cl. 180—67.)



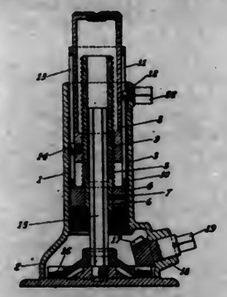
1. In a vehicle power plant, a steam boiler, a heater disposed in the upper portion of said boiler, means for discharging feed water upon said heater, a second heater spaced below the first mentioned heater, and means for automatically maintaining the water level in said boiler below the lowermost heater.

1,751,735. SHADE-OPERATING MEANS. JOSEPH H. HICINBOTHEM, Fort Thomas, Ky. Filed Mar. 30, 1926. Serial No. 98,480. 3 Claims. (Cl. 156—28.)



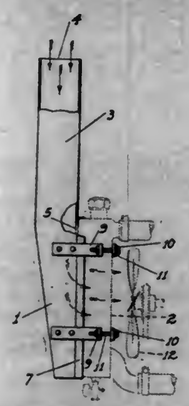
1. In means of the character described, a vacuum tank, a cylinder, a plunger slidably mounted in said cylinder, a wire operatively connected to each side of said plunger, a control valve for said plunger comprising a plate having its outer edges bent to form channeled retaining members and having openings therein, tubes connecting each end of said cylinder with said valve, a second plate adapted to slide within said channeled retaining members and having air openings therein adapted to alternately register with openings in said first-mentioned plate, a hollow-member secured to said sliding-plate, a cork inserted in said hollow-member and frictionally engaging said channeled plate, a hollow connection extending from said vacuum tank through said cork to form communication wtih opposite sides of the cylinder and means for moving said hollow member.

1,751,736. APPARATUS FOR REDUCING OXIDES OF METALS. JOHN W. HORNSEY, Oakes-in-Norton, by Sheffield, England, assignor to Granular Iron Company, a Corporation of Michigan. Filed Sept. 8, 1926. Serial No. 134,287. 11 Claims. (Cl. 263—32.)



8. An apparatus of the character described comprising cylinders through which the charge is fed in succession and treated, gas sealing means between the ends of the cylinders and dust collecting means at the bottom of said gas sealing means.

1,751,737. VEHICLE BODY CONSTRUCTION. WILLIAM J. HOSKYNS, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 26, 1926. Serial No. 125,040. 7 Claims. (Cl. 296—28.)

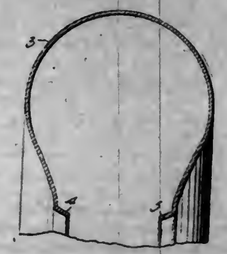


1. A wall structure for vehicle bodies comprising two sheet metal panels having inturned flanges at their adjacent edges, tongues projecting from the flange of the upper panel and bent around the adjacent edge of the flange of the lower panel to a point adjacent to said lower panel, tongues projecting from the flange of the lower panel and bent around the adjacent edge of the flange of the upper panel to a point adjacent to said upper panel, a strip of molding upon the outer side of said panels concealing the joint therebetween, a reinforcing strip upon the inner side of said panels, and a connection between said strips including a part extending between the flanges aforesaid.

1,751,738. MULTIPLE-LIFT SCREW JACK. ION VON KEET HOTT, Dayton, Ohio, assignor to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 13, 1926. Serial No. 94,396. 18 Claims. (Cl. 254—102.)

1. In a lifting jack, a hollow standard having internal screw threads, a member rotatably mounted in said standard and having threads engaging the threads of said standard, a screw mounted in said standard, connected with said member for axial movement therewith and having external screw threads, a lifting element having threaded engagement with said screw, and means for rotating said threaded member and said screw.

1,751,739. DUST-ELIMINATING AIR DUCT FOR RADIATORS. JOHAN S. JACOBSEN, Lodi, Calif. Filed Mar. 22, 1927. Serial No. 177,255. 3 Claims. (Cl. 257—132.)

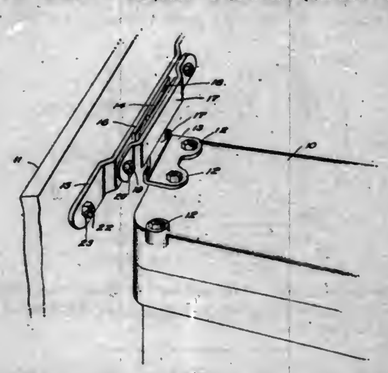


1. An airduct attachment for a gas-engine radiator, comprising a casing to abut against and cover the front of the radiator and having an opening to register with the air passage of the radiator; and another opening freely open to the atmosphere in a plane above that of the radiator, means on the casing for positively locating the same relative to the radiator, and means for clamping the casing against the radiator.

1,751,740. PROCESS OF SEPARATELY RECOVERING SOLUBLE SUBSTANCES IN A COARSE GRANULAR CONDITION. FINN JEREMIASSEN, Oslo, Norway, assignor to A/S Krystal, Oslo, Norway. Filed Dec. 24, 1925, Serial No. 77,579, and in Norway Jan. 12, 1925. 2 Claims. (Cl. 23—44.)

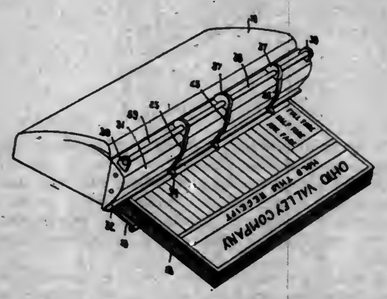
1. A process of separately recovering soluble substances in a coarse granular form from solid mixtures of substances which comprises forcing a solvent through a body of subdivided solid mixture, supersaturating the resulting solution by evaporating solvent therefrom, passing the supersaturated solution into and through a collection of granules of the kind of substance to be separately recovered, passing the solution away from said collection of granules of substance, and effecting undersaturation of the solution by introducing into the liquid condensed solvent vapors, said vapors being condensed under such conditions as to give off latent heat to the solution, and passing the resulting under-saturated solution into and through a body of subdivided solid mixture from which the substance is separately recovered.

1,751,741. INTERNAL SPRING-METAL REENFORCING MEMBER. VICTOR KARBOWSKI, Chicago, Ill., assignor to Felix S. Feldheim, Evanston, Ill. Filed Sept. 7, 1926. Serial No. 134,052. 1 Claim. (Cl. 152—8.)



A reenforcing member for tires consisting of a single piece of spring sheet metal of uniform thickness bent to form a split annulus having a substantially cylindrical cross section, the edges being normally inclined toward one another and being provided with flanges, said flanges being adapted to be brought into a transverse alignment by external pressure on the walls of the reenforcing member.

1,751,742. SHOE AND INSOLE. PAUL F. W. C. KRIPPENDORF, Lynn, Mass., assignor to Fits-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Jan. 23, 1926. Serial No. 83,376. 16 Claims. (Cl. 36—71.)

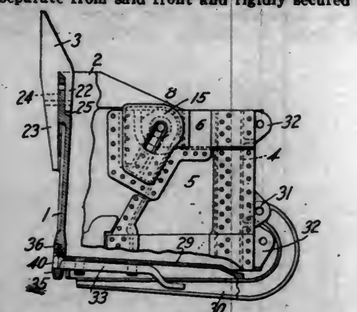


1. A shoe having an insole the forepart of which has a flat area extending from a line at the rear of the ball line of the foot and diminishing in width transversely of the shoe to a point between the great toe and the second toe, the surface of the insole outside of and forward of said area extending upwardly and outwardly to afford a bearing surface for the outer portion of the toes.

1,751,743. ENGINE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Dec. 4, 1926. Serial No. 152,689. 2 Claims. (Cl. 180—64.)

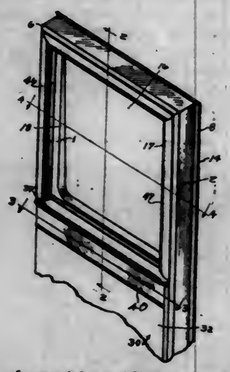
1. In combination with the engine and dash of a motor vehicle, means for damping relative movement therebetween comprising, a member having a friction material attached thereto secured to the front face of said dash, a metal strip having a friction material attached thereto resiliently supported by said member in spaced relation thereto, and an L-shaped member secured to the upper face of said engine with its upwardly extending portion extending between said friction materials to be frictionally engaged thereby.

1,751,744. TICKET HOLDER. MURDOCK MACDONALD, Cleveland, Ohio. Filed Feb. 10, 1927. Serial No. 167,146. 4 Claims. (Cl. 206—40.5.)



1. In a ticket holder, the combination of a box-like casing open at one side, pad-holding means hinged to one edge of such open side, means adapted to maintain said pad-holding means pressed toward the other edge of such open side, and a metallic plate secured to and embracing said casing contiguous to said last-named casing edge, said plate being formed of monel metal and being bent outwardly to provide a cutting edge adjacent said pad-holding means.

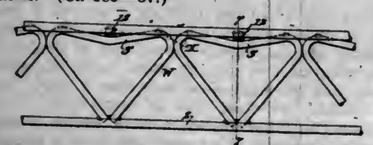
1,751,745. EXCAVATING DIPPER. WALTER H. MILEY, Marion, Ohio, assignor to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Original application filed Feb. 21, 1927, Serial No. 169,786. Divided and this application filed Sept. 7, 1927. Serial No. 218,061. 4 Claims. (Cl. 37—141.)



3. In an excavating dipper, a front having a smooth inner surface provided at its upper edge with a transverse recess, dipper teeth secured to said front and each having a part extending into said recess and of a thickness sub-

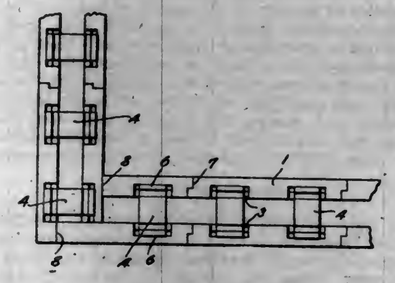
stantially equal to the depth of said recess, and fillers formed separate from said front and rigidly secured there-

to between adjacent teeth and having their inner surfaces substantially in the plane of the inner surface of said teeth and said front.



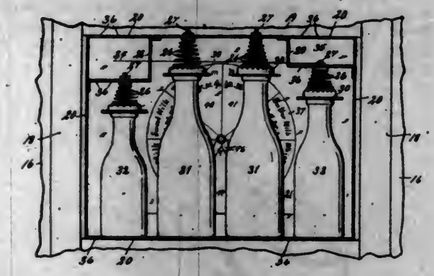
1,751,746. DOOR CONSTRUCTION. CHARLES MORGANA, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 3, 1927. Serial No. 158,750. 13 Claims. (Cl. 296—44.)

2. A strip of garnish molding comprising a channel-shaped member having portions cut away at its opposite ends for receiving portions of pillars and the like, one of the flanges of the channel being provided at its opposite ends with inwardly extending open return-bent portions for receiving the side edges of a panel of trimming material.



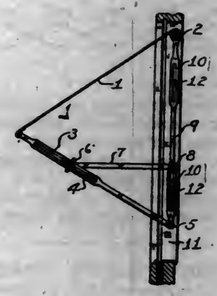
3. A molding strip for doors and the like comprising a substantially flat attaching portion, transversely curved portions extending longitudinally of said attaching portion and adapted to hold a wind cord and the like, and a retainer flange for a panel of trimming material projecting from one of said transversely extending portions.

1,751,747. TRUSSED STRUCTURE. FREDELLIA H. MOYER, Pittsburgh, Pa., and CARL A. FRAHM, Massillon, Ohio, assignors, by mesne assignments, to The Berger Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed May 21, 1926. Serial No. 110,717. 8 Claims. (Cl. 189—37.)



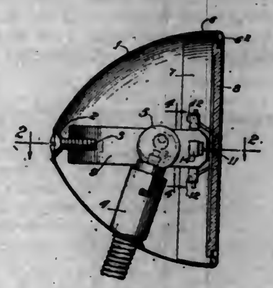
1. In a trussed structure comprising metal bars arranged as spaced flanges and a web connecting the same, a plurality of bars forming the web, each of said bars being bent to the outline of a closed geometric figure and arranged with the ends of the bar adjacent each other and adjacent one of said flanges, and means securing the said adjacent ends to each other and to the adjacent flange.

1,751,748. BUILDING BLOCK. JOHN NASH, Tacoma, Wash. Filed May 31, 1928. Serial No. 282,032. 1 Claim. (Cl. 72—102.)



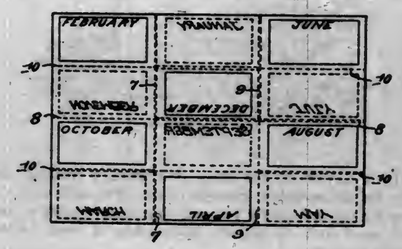
A wall made up of horizontal courses, each course comprising blocks disposed end to end, each block being provided in its upper and lower horizontal edges with seats, and with flanges extended across the seats and of less height than the seats, all of the seats being spaced from the ends of the blocks, the seats in the lower edge of the blocks of one course being in registration with the seats in the upper edge of the blocks of the course next below to form openings lying partly in one course and partly in the course next therebelow, and ties having reduced necks defining transverse heads and shoulders located inwardly of the heads, the necks being received in the openings, the heads being received in the seats of the blocks of adjoining horizontal courses, and the shoulders engaging the inner surfaces of the flanges of adjoining courses, the seats, the flanges, the heads, and the shoulders being rectangular to afford a positive interlock, the ties being of less vertical height than the blocks.

1,751,749. SANITARY MILK CABINET. THOMAS B. NETTLE and JOHN W. KLEIN, Huntington Park, Calif. Filed Aug. 12, 1927. Serial No. 212,380. 1 Claim. (Cl. 232—41.)



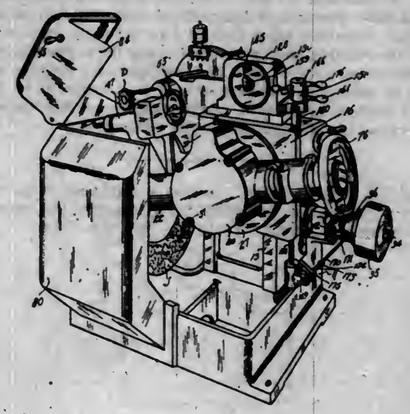
In a cabinet for holding milk bottles and sealing their open ends, the combination of a frame having a chamber therein, a plurality of springs arranged vertically, centrally and in alignment in said chamber, caps secured to the lower ends of said springs, means for supporting said springs so that said caps are supported at various elevations so they can be placed on milk bottles of various lengths, said springs arranged so they are under tension when said caps are seated on the bottles so as to hold the bottles in place and seal their open ends.

1,751,750. AUTO AWNING. GILBERT L. NEWKIRK, East St. Louis, Ill. Filed Nov. 24, 1926. Serial No. 150,492. 1 Claim. (Cl. 156—44.)



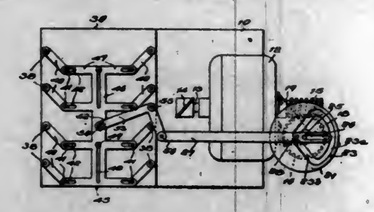
An awning bracket of the class described, comprising a holding member vertically adjustable by means of longitudinal slots in each end adapted to be slidably movable on screws screwed into a window casing, a slotted arm pivotally attached at one end to the lower end of said holding member and adapted to be attached at its opposite end to an awning, a second arm pivotally attached to said holding member intermediate of the ends of said holding member, a locking member slidable in a slot in said first mentioned arm and means for locking said first and said second mentioned arms in various adjusted positions.

1,751,751. SIDE LAMP FOR AUTOMOBILES. HOWARD H. ORTJEN, Chicago, Ill., assignor to Chicago Electric Manufacturing Co., a Corporation of Illinois. Filed July 13, 1928. Serial No. 292,353. 4 Claims. (Cl. 240—41.)



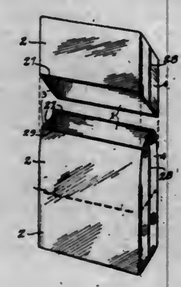
1. In a lamp of the class described, a forwardly open body, a lens ring having its peripheral portion abutting endwise against the mouth end of the body, a tubular liner secured to the inner face of the peripheral lens ring portion and having two circumferentially spaced and inwardly directed fingers, a forwardly open fork having its arms respectively interlocked with the said fingers, and a screw connecting the rear end of the body with the bight of the fork, each arm of the fork having a stiffening finger normally disposed adjacent to and behind one of the fingers on the liner to prevent a flexing of the liner finger by the rearward pull of the yoke when the screw is tightened.

1,751,752. METHOD OF MAKING CALENDARS. AUGUST F. OSTERLIND, St. Paul, Minn.; Frank H. Osterlind and John A. Jacobson administrators of said August F. Osterlind, deceased. Filed July 28, 1927, Serial No. 209,010. Renewed Sept. 12, 1929. 3 Claims. (Cl. 270—1.)



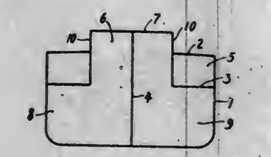
1. The method of making calendars which consists in printing upon an integral sheet a plurality of units arranged in two groups, the units of one group being disposed in spaced relation to each other and the units of the other group being printed on the reverse side of the sheet and in registry with the spaces between units of the first group, subsequently folding the sheet successively and alternately along vertical and horizontal lines to form a pad having a superficial area approximately equal to the size of one unit and in which the units are disposed in proper sequence and then separating at least some of the edges of the units to form the leaves of a pad.

1,751,753. GEAR-GRINDING MACHINE. ALBERT J. OTT and CONRAD L. OTT, Detroit, Mich., assignors to American Grinder Company, Detroit, Mich., a Corporation of Michigan. Filed July 27, 1925. Serial No. 46,385. 20 Claims. (Cl. 51—52.)



1. In a gear grinding machine, a reciprocating carriage, an oscillating work spindle thereon adapted to carry the gear to be ground, a grinding wheel below said work spindle having a plane face, a wheel spindle extending perpendicularly to said face, and means for adjustably mounting said wheel spindle on said base, whereby the plane of said face is inclined alternatively in opposite directions corresponding to the pressure angle of said gear.

1,751,754. ELECTRIC HEATER. ELLSWORTH B. OVERSHINER, Chicago, Ill., assignor of one-half to Florence M. Jackson, Chicago, Ill. Filed Jan. 24, 1929. Serial No. 334,639. 10 Claims. (Cl. 219—39.)



1. In a device of the class described, a heating unit, means for projecting a current of air over said unit, and means for intermittently interrupting said current so as to permit said unit to acquire increments of heat between successive blasts.

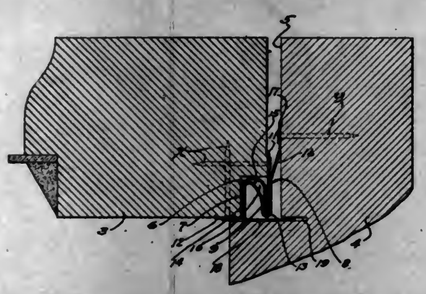
1,751,755. COLLAPSIBLE AND REDUCING BOX. GEORGE W. PARIS, Rochester, N. Y., assignor to Karle Lithographic Company, Rochester, N. Y. Filed July 3, 1928. Serial No. 290,157. 2 Claims. (Cl. 229—6.)

1. A container formed in separable sections defined by score lines arranged peripherally of said container, a face of said container being divided longitudinally by a score line intersecting said peripheral scole lines whereby one section when torn off, can be telescoped over another section by depressing the part of said face embraced in said other section along said longitudinal score line thereby narrowing the width of said other section.

1,751,756. TANK SHIP. REGINALD PAULSEN, Oslo, Norway. Filed Jan. 20, 1928, Serial No. 248,187, and in Norway Feb. 3, 1927. 2 Claims. (Cl. 114—74.)

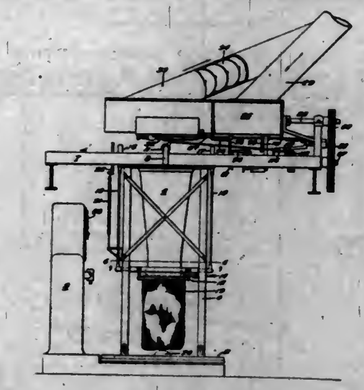
1. A tank ship comprising a shell, a main deck, a second deck, an expansion trunk extending from the second deck up through and to a point above the main deck and having walls extending longitudinally of the vessel and spaced from the sides thereof and a longitudinal midship partition extending from the bottom of the shell or keel to the top or deck of the expansion trunk, said expansion trunk communicating with main tank spaces below the second deck and at opposite sides of the ship.

1,751,757. HEAT EXCHANGER. WALTER BENSON PHILLIPS, Liberty, Mo., assignor to Walter M. Cross, Kansas City, Mo. Filed Jan. 14, 1928. Serial No. 246,766. 2 Claims. (Cl. 257—263.)



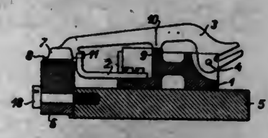
1. A heat exchanger comprising sets of corrugated sheets positioned to form separate tubular passageways between the individual sheets, said sets arranged to have the surface corrugations conform with the corrugations of adjoining sets of sheets, and separate spacer elements conforming with the corrugations of the sets of sheets for holding the sets of sheets in spaced apart relation.

1,751,758. METHOD OF MAKING TURBINE BLADES. JAMES L. RAY, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 1, 1928. Serial No. 296,853. 7 Claims. (Cl. 29—156.8.)



1. The method of forming a blade which comprises forming a hole extending from the tip toward the base of the blade forming portion of a blade blank, filling the hole with a yieldable mass, reducing the blank to the form of a blade, and removing the filling from the hole.

1,751,759. SELF-ADJUSTING INTERLOCKING WEATHERSTRIP DEVICE. FRANK REESE, Minneapolis, Minn., assignor to Reese Metal Weather Strip Co., Minneapolis, Minn., a Corporation of Minnesota. Filed May 16, 1929. Serial No. 363,475. 12 Claims. (Cl. 20—69.)



1. A weather strip device for a pair of members, one of which is relatively stationary and the other of which is relatively swingable, said weather strip comprising a pair of self-adjusting interlocking elements applicable one to each of said members, one of said elements having a primary U-shaped fold and a secondary U-shaped fold which are laterally spaced and reversely extended, the outer side of the secondary fold having a laterally projecting flange that has sliding contact with a part on the respective member, the other of said elements being in the form of a tongue arranged to be pressed into the primary fold of the other element with a wiping contact.

1,751,760. WEIGHING MACHINE. WILLIAM H. REES, Berkeley, Calif. Filed Jan. 3, 1923. Serial No. 610,456. 18 Claims. (Cl. 249—64.)

1. A weighing and loading machine comprising a receptacle, means for feeding material to said receptacle, means for weighing the material in said receptacle, and mechanism including control means spaced from the weighing means and responsive to the weight of the material in the receptacle for interrupting all but a dribble flow of material when less than the predetermined load has been fed into said receptacle, and for interrupting the dribble when substantially the predetermined load is in said receptacle.

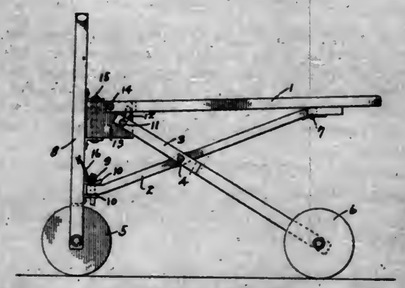
1,751,761. TYPE HEAD FOR TYPEWRITERS AND THE LIKE. ALBERT RODRIAN, Potsdam, Germany. Filed Dec. 16, 1927, Serial No. 240,531, and in Germany Mar. 24, 1927. 3 Claims. (Cl. 33—18.3.)

3. In apparatus for adjusting type-heads on type-levers, a carrier equipped at one end with positioning means adapted to be engaged by the type-lever and at the other end with a seat upon which the type-head may be adjusted to position; the carrier being further provided adjacent such seat, and beyond such seat and on the side thereof opposite the said type-lever positioning means, with a type-head positioning device, such type-head positioning device being adapted to cooperate with a type-head equipped with a complementary part and by such cooperation to effect accurate placement of the type-head on such seat.

1,751,762. ROPE FASTENER. ARTHUR SCHOENBERGER, Pittsburgh, Pa. Filed July 30, 1929. Serial No. 382,107. 4 Claims. (Cl. 24—130.)

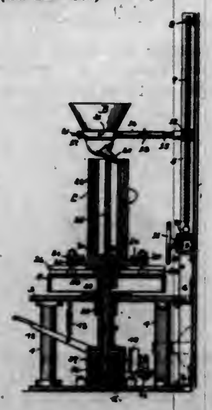
1. Fastening structure comprising a hook, a gripping member of flattened tubular form adapted to receive a doubled portion of a rope, and having a V notch in one edge thereof and also having a perforation for the reception of the hook.

1,751,763. IMITATION BRAIDED BUTTON. SAMUEL SCHLOSBERG, New York, N. Y. Filed Nov. 14, 1928. Serial No. 319,347. 1 Claim. (Cl. 24—113.)



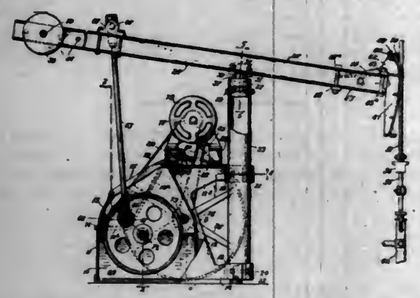
An imitation braided button comprising a shell, a one-piece leather covering for said shell and of considerable thickness, a closing disk for said shell, a covering for said closing disk, a loop passing through said closing disk, the ends of said loop being provided with heads of greater width than the midportion, said heads being arranged at the inner side of said closing disk to retain said loop and said shell covering having embossed therein, a design.

1,751,764. CLEANING COMPOSITION. JOSEPH SENDELBACK and ROY V. PALMER, McAlester, Okla. Filed Dec. 13, 1927. Serial No. 239,814. 1 Claim. (Cl. 87—5.)



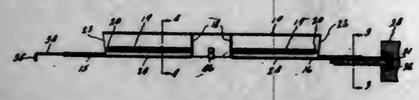
A cleaning composition consisting of substantially eight ounces of caustic potash dissolved in one gallon of alcohol and containing substantially two ounces of oil of eucalyptus, said solution carrying in suspension substantially five ounces of powdered alum.

1,751,765. COLLAPSIBLE KIDDY CAR. THOMAS G. SHANNON, San Francisco, Calif., assignor of one-half to Frank T. Marquis, San Francisco, Calif. Filed Oct. 15, 1927. Serial No. 226,430. 2 Claims. (Cl. 208—165.)



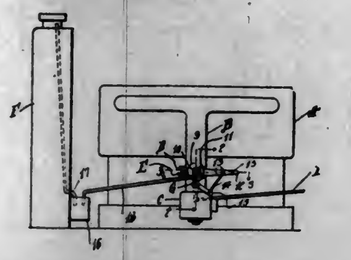
1. A kiddy car comprising a seat, a supporting member pivoted to the front of the seat and having an arcuate slot, a steering post pivoted to said member, a wheel secured to the bottom of the post, a leg having one end slidable in the slot and carrying a wheel at the other end, and a second leg pivoted to the back of the seat and to said first leg, said second leg being removably secured to said post.

1,751,766. CASTING MACHINE. JOHN W. SMITH, Cleveland, Ohio. Filed Dec. 3, 1928. Serial No. 323,407. 16 Claims. (Cl. 22—65.)



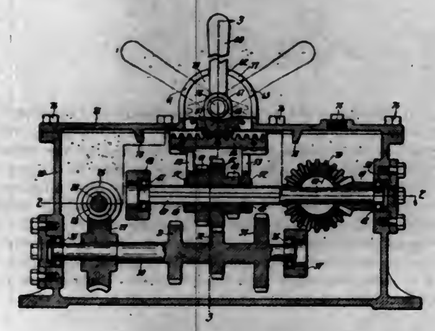
1. In a centrifugal casting machine, a rotatable support for a mold, a receptacle for delivering molten metal to the mold, and means for supporting said receptacle adjustably in different delivery positions opposite the mouth of the mold.

1,751,767. PUMPING APPARATUS. JOHN B. SPERRY, Aurora, Ill., assignor to The American Well Works, Aurora, Ill., a Corporation of Illinois. Filed June 15, 1925. Serial No. 37,031. 20 Claims. (Cl. 74—14.)



1. A power head of the type described, comprising a housing, driving gears mounted therein, a lower bracket projecting laterally from said housing, an upper bracket projecting from said housing over said lower bracket, and vertically alined semi-circular clamping members carried by said brackets adapted to receive and support a tubular standard.

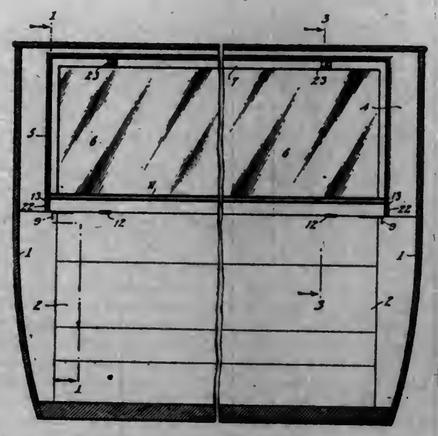
1,751,768. VENTILATOR. HARVE R. STUART, Springfield, Ohio. Filed Mar. 1, 1928. Serial No. 258,382. 13 Claims. (Cl. 98—2.)



1. A ventilator adapted for use in a vehicle window opening having opposite glass receiving side channels and a vertically adjustable window glass therein, comprising ventilating means formed of telescoping sections, and an associated elongated part, which provides an open ended tubular passage in communication with the interior of the vehicle, spring means urging said sections to extended positions, and means adapted to be inserted in said side channels for mounting said ventilating means outside the window glass to provide for vertical adjustment of the window glass along the inner side of the ventilating means.

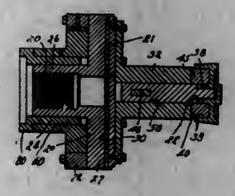
1,751,769. AIR AND VAPOR SUPPLY DEVICE FOR INTAKE MANIFOLDS. GEORGE W. STULTZ, Huntington, W. Va. Filed Nov. 17, 1927. Serial No. 233,883. 1 Claim. (Cl. 123—25.)

An air and vapor supply device for intake manifolds, comprising a hollow gasket adapted for insertion in an intake manifold and having openings to aline with the interior of the manifold, a chamber communicating with the hollow gasket and having a wall provided with a plurality of openings communicating with the chamber, a tubular member secured in one of said openings and adapted to convey vapor to said chamber and gasket, and a valve member pivotally mounted on said wall and including a plate having a slotted opening receiving said tubular member and adapted to aline with the other openings in the plate in certain positions thereof.



1,751,770. TRANSMISSION MECHANISM. FREDERICK A. SWEET, Salt Lake City, Utah. Filed May 2, 1928. Serial No. 274,516. 10 Claims. (Cl. 74—58.)

1. In a transmission mechanism, a group of gears rotatably mounted in axial alignment with and spaced apart from each other, a gear cluster movable axially along said group, a carriage in which said cluster is rotatably mounted, said carriage including two mutually reversed complementary parts having journals therein, and means for moving said carriage back and forth.



1,751,771. AUTOMOBILE BODY. GEORGE TASMAN, New York, N. Y., assignor to Locke & Co., New York, N. Y., a Corporation of New York. Filed Sept. 2, 1926, Serial No. 133,248. Renewed Feb. 8, 1929. 8 Claims. (Cl. 296—48.)

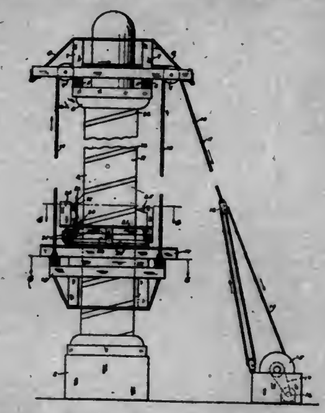
1. A car body having a hollow transverse partition inclined rearwardly from its lower to its upper end, perpendicular uprights extending upwardly from the partition, a window guide frame pivotally connected to the partition at a point adjacent to the top of the partition and adapted

to be swung from a position in alinement with the hollow partition and to a perpendicular position between the uprights, and a sliding sash movable in said guide frame.

1,751,772. DEVICE FOR FORMING ELLIPTICAL PARTS. BERTRAM C. TRAVIS, Los Angeles, Calif., assignor of one-half to Pacific Copper and Brass Works, Incorporated, Los Angeles, Calif., a Corporation of California. Filed Apr. 6, 1927. Serial No. 181,373. 14 Claims. (Cl. 82—19.)

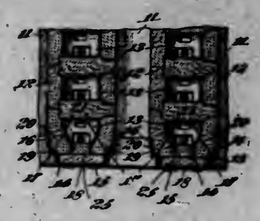
1. A device of the character described including a drive member to be rotated, a head mounted on the drive member to be movable diametrically thereof, a stationary eccentric, and a part rotatably mounted on the eccentric and having a sliding connection with the head, the drive member being rotatable in the eccentric.

7. A lathe attachment including a drive member to be mounted on the spindle of a lathe, a head mounted on the drive member to be movable diametrically thereof, an eccentric, means connecting the eccentric and lathe so that the eccentric is stationary, and a part carried by the eccentric and having a sliding engagement with the head, said means including a part fixed to the lathe and having a plurality of notches and a latch carried by the eccentric operable to engage one of the notches.



1,751,773. TOY FIGURE. BAB BELL TROSPER, near Monroe City, Mo. Filed Apr. 12, 1928. Serial No. 269,543. 8 Claims. (Cl. 46—40.)

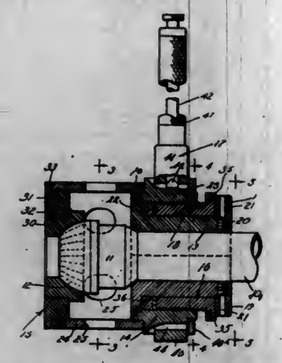
1. A toy figure of the character described comprising a jaw manually operable to form an open mouth, and a body having walls forming an interior chamber adapted to receive its contents through the mouth, and provided



with a check valve having self-closing flaps opening inward and preventing discharge of the contents through the mouth.

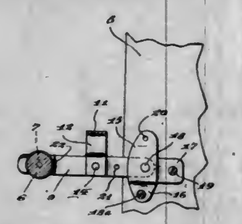
1,751,774. MOVABLE CAMERA SUPPORT. WILLIAM L. TRULLINGER, Astoria, Oreg. Filed May 24, 1927. Serial No. 193,936. 3 Claims. (Cl. 88—24.)

2. A movable camera support comprising a frame for encircling a column having a spiral picture thereon, a turn-table carried by said frame, a camera mounted upon said frame, a pointer carried by said turn-table, the end of said pointer registering with the marginal edge of the picture for centering the camera with respect to the picture on the column, and means for moving said frame spirally for causing the camera to follow the spiral picture.



1,751,775. COKE-OVEN HEATING FLUE. CHARLES E. UNDERWOOD and JAMES A. BEATTY, Bethlehem, Pa., assignors to Bethlehem Steel Company. Filed Apr. 27, 1926. Serial No. 104,894. 4 Claims. (Cl. 202—248.)

1. In a coke oven heating flue, side walls and end bricks therebetween, the outer faces of the center bricks being

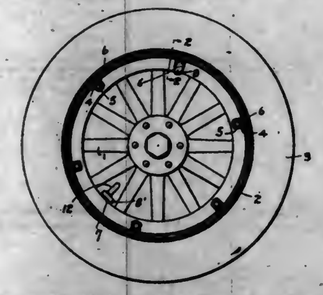


substantially flush with the ends of the side walls, filler bricks disposed outwardly of the center bricks and masking the joints between the side walls and center bricks, and flash plates embracing the filler bricks and the terminal portions of the side walls.

1,751,776. TUBE-FACING TOOL. WILLEM VAN EE, Long Beach, and ALEXANDER HENDREN WATSON, Redondo Beach, Calif. Filed Sept. 29, 1927. Serial No. 222,780. 7 Claims. (Cl. 82—4.)

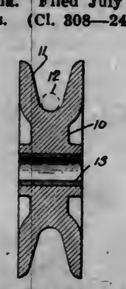
1. A device for dressing the end of a tube including a split bushing to be applied to the tube and having a shoulder, a feed member rotatably carried on the bushing opposite the shoulder, a body threaded to the feed member, a cutter head carried by the body, and means for rotating the body.

1,751,777. APPAREL APPARATUS. MORRIS VICTORSOHN, Brooklyn, N. Y. Filed Feb. 25, 1929. Serial No. 342,572. 2 Claims. (Cl. 312—185.)



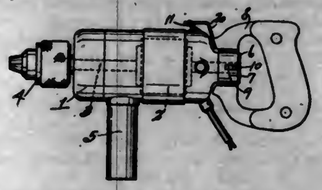
2. A device of the character described adapted to be secured to the sides of a container, a pair of arms pivotally borne by said container, a hanger carried by the upper ends of said arms and a supplemental hanger connecting the intermediate portions of said arms and positioned laterally of the vertical plane of said first-named hanger in all positions of said hanger.

1,751,778. METHOD FOR MAKING ZINC FROM OXYGEN COMPOUNDS OF ZINC OR SUBSTANCES CONTAINING OXYGEN COMPOUNDS OF ZINC. CONWAY FREIHERR VON GIESEWALD and HANS NEUMARK, Frankfort-on-the-Main, Germany. Filed Oct. 12, 1928, Serial No. 312,205, and in Germany Oct. 13, 1927. 7 Claims. (Cl. 75—28.)



1. A method for making zinc from oxygen compounds of zinc or substances containing oxygen compounds of zinc which consists in heating to moderate temperatures and at reduced pressure mixtures of the zinc containing raw materials with reducing metals and distilling off the zinc produced.

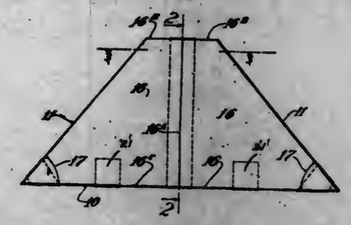
1,751,779. WHEEL-RIM LOCK. BOYD V. VON SENDEN, San Francisco, Calif., assignor of one-third to Theodore Hardee and one-third to Guy N. Bjorge. Filed Jan. 10, 1927. Serial No. 160,048. 2 Claims. (Cl. 70—122.)



1. A key operated lock formed to slip over the outer end of a bolt, a nut on said bolt inward of the lock, said lock provided with means engaging the threaded bolt against withdrawal of the lock, said means comprising a spring latch adapted to snap into engagement with a groove in said bolt upon the lock being axially slid over the same, and a circular flange on said lock arranged to freely embrace said nut.

1,751,780. BEARING MATERIAL FOR CURRENT-TRAVERSED BEARINGS. JOSEPH A. WEIGEL, Union City, N. J., assignor, by mesne assignments, to P. R. Mallory & Co., Incorporated, Indianapolis, Ind., a Corporation of Indiana. Filed July 9, 1927. Serial No. 204,476. 2 Claims. (Cl. 308—240.)

1. A bearing for devices adapted to be traversed by electrical currents without pitting; comprising a sleeve member adapted to fit over a journal member through which an electric current may pass; said sleeve member having a body of metallic tungsten impregnated with a relatively light, low melting-point metal and a relatively small amount of a hardening agent whereby to impart hardness and self-lubricating characteristic to the sleeve member, the tungsten being taken in an amount not greater than eight parts by weight for a whole of ten parts.

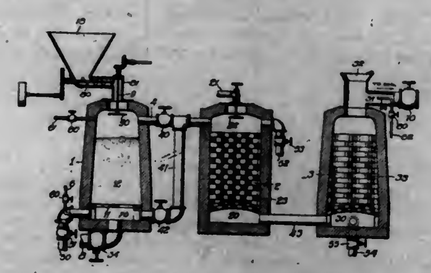


1,751,781. MOTOR-DRIVEN-TOOLS SWITCH. THEOBALD C. WEISS, South Bend, Ind., assignor to Electric Sprayit Company, South Bend, Ind. Filed Apr. 20, 1929. Serial No. 356,867. 8 Claims. (Cl. 200—157.)

1. In a motor driven tool, a casing, a motor, means for actuating said motor, control means for said motor

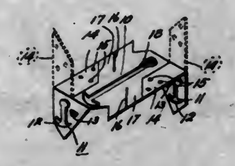
actuating means, and a pressure handle for manually applying force to said tool, said handle having a sliding relation with respect to said casing whereby to actuate said control means to start and stop the motor.

1,751,782. CARTON FOR SECTORAL CANOPIES. GEORGE MCLEAN WELLS, Macomb, Ill., assignor to American Steel Products Co., Macomb, Ill., a Corporation of Illinois. Filed Mar. 29, 1929. Serial No. 350,858. 4 Claims. (Cl. 229—22.)



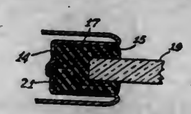
1. A foldable carton sheet comprising a laterally symmetrical central portion having upwardly converging side edges and having parallel top and bottom edges, four rectangular wing portions of equal width respectively extending outwardly from the four edges of the said central portion and each of the same length as the edge from which it extends, and four flap portions respectively extending from the free edges of the wing portions and each having its inner edge of the same length as the wing portion from which it extends; each of the two flap portions connected by wings to the converging edges of the central carton portion corresponding in size and shape to one lateral half of the said central portion.

1,751,783. PROCESS FOR THE ELIMINATION OF SILICON IN FERROPHOSPHORUS. HAROLD E. WHITE, Anniston, Ala., assignor to Federal Phosphorous Company, Birmingham, Ala., a Corporation of Alabama. Filed Sept. 4, 1925, Serial No. 54,547. Renewed Jan. 11, 1930. 3 Claims. (Cl. 23—204.)



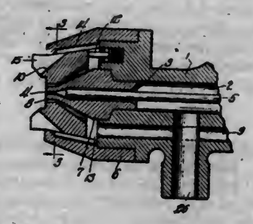
3. A smelting process for the elimination of silicon in ferro-phosphorus, which consists in charging an electric smelting furnace with phosphatic and siliceous materials, and adding high silicon ferro-phosphorus as a reducing agent in amount equal to substantially 90% of the calculated quantity required to reduce the charge.

1,751,784. APPARATUS FOR THE MANUFACTURE OF ILLUMINATING GAS. DANIEL J. YOUNG, Tacoma, Wash., assignor to Young-Whitwell Gas Process Co., Tacoma, Wash., a Corporation of Washington. Original application filed June 14, 1921, Serial No. 477,865. Divided and this application filed Aug. 20, 1923. Serial No. 658,893. 28 Claims. (Cl. 48—80.)



15. A carbureted water gas set comprising a single generator, a single carburetor, and a single superheater, and pipe connections between the individual shells of the set including a connection between the generator and carburetor, means for supplying steam to the set, and combustible gas offtakes from the set leading directly from the superheater and generator, the gas offtake from the generator being separate from and independent of the connection between the generator and carburetor, thereby allowing a free and unobstructed passage between said generator and carburetor.

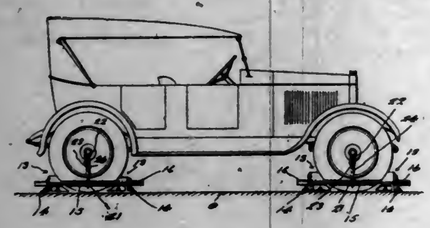
1,751,785. SCREED HOLDER. SAMUEL C. AWBREY, Kansas City, Mo., assignor to Ethel Awbrey, Kansas City, Mo. Filed Oct. 5, 1928. Serial No. 310,654. 4 Claims. (Cl. 72—101.)



1. A screed holder comprising a body portion adapted to rest on the surface of a concrete slab, downwardly extending flanges for insertion in the concrete, and screed engaging members contiguous with said flanges respectively and normally positioned in the plane of the body portion and adapted to be bent to the plane of said downwardly extending flanges, to receive a screed therebetween, and tongues extending from within said body portion to opposite sides thereof.

1,751,786. WINDOW CUSHION. FRANK A. BEST, Ford, Ontario, Canada, assignor to Backstay Welt Company, Union City, Ind., a Corporation of Indiana. Filed Feb. 25, 1929. Serial No. 342,650. 3 Claims. (Cl. 20—56.4.)

1. In combination, a glass panel, a channel receiving an edge of said panel, and a cushion for the panel including a strip of resilient material having a base, leg portions projecting from the base and flanges inturned from said leg portions, the inturned flanges resting against the base of the channel, and the base of the strip being pressed inwardly between the leg portions thereof and constituting a channel-shaped seat for the glass panel.



1,751,787. FLAT SPRAYING APPLIANCE. HARRY D. BINKS, Oak Park, Ill., assignor, by mesne assignments, to Binks Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 10, 1924. Serial No. 748,876. 5 Claims. (Cl. 91—45.)

1. In a flat-spray producing appliance, means for projecting a forwardly directed stream of liquid, and an air-

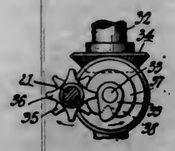
port member mounted for rotational adjustment about the axis of the said stream and having at the radially outer edge of its forward end a pair of diametrically opposite notches having flat sides parallel to the axis of the stream, the said flat sides of each notch alining respectively with those of the opposite notch.

1,751,788. FREIGHT-CAR SHIPPING APPLIANCE. GEORGE BOROWKA, Grand Rapids, Mich. Filed Feb. 8, 1929. Serial No. 338,460. 4 Claims. (Cl. 105—368.)

1. In a structure of the class described, a wheel clamping and retaining device comprising a pair of complemental chocks each provided with a toothed rack bar extending through an opening in the complemental chock, individual pivotally mounted retaining latches on said chocks cooperable with the rack bars, guides for said latches, and lifting and retaining elements for the latches.

1,751,789. WELL TOOL. ALVIS F. BROWN, Whittier, Calif., assignor to Baash-Ross Tool Company, Incorporated, Los Angeles, Calif., a Corporation of California. Filed Dec. 17, 1927. Serial No. 240,744. 10 Claims. (Cl. 294—96.)

1. A well tool of the character described including, a body, means carried by the body operable to engage a casing, a tail piece for causing operation of said means, and a control normally preventing said means from being operated and operable by upward movement of the body relative to the tail piece to release said means for operation.



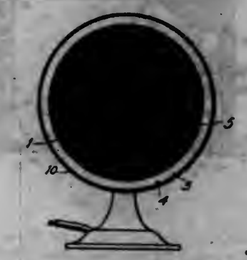
1,751,790. JAR-DOWN SPEAR. ALVIS F. BROWN, Whittier, Calif., assignor to Baash-Ross Tool Company, Incorporated, Los Angeles, Calif., a Corporation of California. Filed Dec. 17, 1927. Serial No. 240,745. 10 Claims. (Cl. 294—96.)

1. A tool for operation in a well casing including, a body, means carried by the body for engaging the casing, a tail piece, a stem movable relative to the body to actuate said means, the stem carrying the tail piece and being op-

eratively connected with said means, and a latch releasably holding the stem against operation relative to the body.

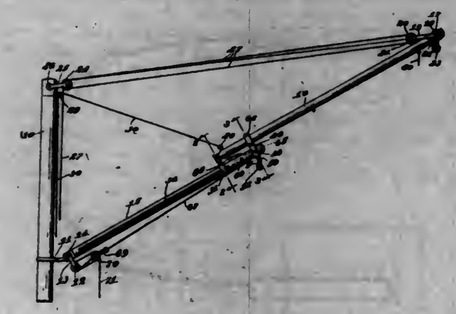
1,751,791. INTERMITTENT GEARING. COLONEL H. BROWN, Wellston, Ohio. Filed May 27, 1927. Serial No. 194,701. 1 Claim. (Cl. 74—41.)

In a Geneva wheel mechanism, shafts and mechanism for connecting the shafts, said mechanism comprising like star wheels on one shaft, the star wheels having their sides in engagement, and having arcuate recesses in their edges, the recesses defining fingers in the star wheels, and a disc and an arm on the other shaft, the disc and the arm having their sides in engagement, the disc being in the form of a circle throughout the major portion of its periphery and being shaped to fit closely in the recesses of one of the star wheels, the disc having a notch in its edge for the reception of the fingers of said star wheel, one at a time, the fingers of the other star wheel overlying the disc, one at a time, and the arm cooperating with the fingers of the said other star wheel.



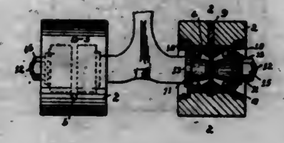
1,751,792. BRACELET. EDWIN G. CARLSON, Riverside, R. I., assignor to Speidel Chain Co., Providence, R. I. Filed May 24, 1929. Serial No. 365,696. 3 Claims. (Cl. 59—80.)

2. A bracelet comprising a link band formed of doubled link plates each having a closed side, an open side and



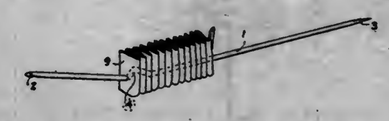
normally open ends, the closed side of each link facing and closing the open side of the adjacent link, and pintle pins fitted in the closed sides of the links and projecting beyond the ends of the link plates, the doubled links having at their open sides wings folded to form knuckles receiving the ends of the pins and additional closure flaps for the knuckles, the closed knuckles of each link projecting beyond the open side of the link and overhanging the closed side of an adjacent link.

1,751,793. FAN PROTECTOR. EMMA K. COOK, St. Louis, Mo. Filed Sept. 21, 1928. Serial No. 307,464. 1 Claim. (Cl. 230—275.)



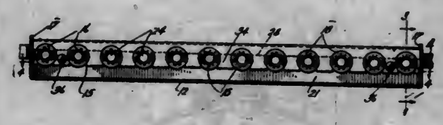
A detachable fan protector of the class described, comprising a hollow cylinder made of fine mesh wire cloth, cut to shape and joined together by woven cloth tape, stitched through and through along the marginal edges of the wire cloth and the woven cloth tape, thereby to form a hollow cylinder closed at one end and open at the other end, a wire cloth disc bound about its marginal edges by fabric tape stitched through and through said tape and said wire cloth disc, said disc having a circular opening in its center, the periphery of which is concentric with the periphery of said disc, the marginal edges of said disc being bound with tape, fasteners spaced apart about the rim of said hollow cylinder and about the periphery of said disc, said fasteners on said disc being adapted to engage said fasteners on said hollow cylinder, thereby to detachably join said disc to said hollow cylinder.

1,751,794. EXTENSION BOOM FOR DERRICKS. ALBERT C. CRANDALL, Braintree, Mass. Filed Feb. 7, 1929. Serial No. 338,101. 4 Claims. (Cl. 212—55.)



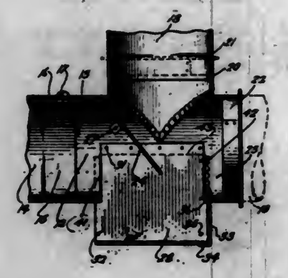
1. In a hoisting derrick, including a mast, an extensible boom comprising two main parts, the lower part being rotatably and vertically movable about said mast and provided with longitudinally disposed splines attached to either side thereof, a shackle fixed to the outer end of said boom and adapted to slidably encircle the extension boom located above it, said shackle adapted to be removed from said extension boom, a rear shackle member adapted to be attached to the rear end of said extension boom and pivotally attached thereto, said rear shackle being slidably mounted on said first boom and adapted to cooperate with said splines therein, means for swivelling said extension boom on said first boom and means for sliding said extension boom on said first boom, substantially as shown and described.

1,751,795. BALL-BEARING ROLLER. ARTHUR E. DEKOME, Cleveland, Ohio. Filed Apr. 24, 1929. Serial No. 357,724. 4 Claims. (Cl. 308—187.)



1. A ball bearing roller, including a cylindrical bushing having reversely-inclined ball-bearing seats extending outwardly on straight lines for a substantial distance from the central zone thereof and provided with inturned oil baffling flanges and oil collecting pockets annularly at each outer end thereof.

1,751,796. CROCHET NEEDLE. CHARLOTTE I. DENNER, Santa Rosa, Calif. Filed May 21, 1928. Serial No. 279,507. 3 Claims. (Cl. 66—118.)

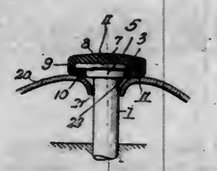


1. A crochet needle comprising a shank having a hook at one end and a needle point at the other, a portion of the shank being zig zag in shape and of the same shape in cross section as the remainder of the needle for permitting cloth to be readily fed from the pointed end to the hooked end of the needle.

1,751,797. HEATING ELEMENT FOR ELECTRIC STOVES. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Nov. 18, 1926. Serial No. 149,026. 2 Claims. (Cl. 219—37.)

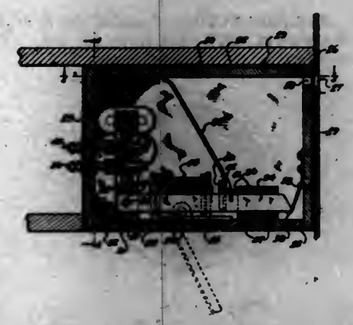
1. An electric heating unit, comprising a heating element, heating element retaining members, and insulators passing through said heating element retaining members, said heating element retaining members being composed of substantially duplicated parts adapted to embrace said insulators from opposite sides and overlapping in said embrace to retain said insulators in place.

1,751,798. FLUE CONSTRUCTION. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Aug. 4, 1928. Serial No. 297,460. 7 Claims. (Cl. 126—307.)



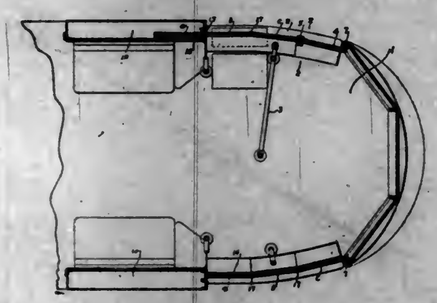
1. A flue construction, comprising a flue pipe having an inlet and a plurality of outlets individually connectible to a chimney, and means associated with said flue pipe for diverting back draft of each said outlet from said inlet.

1,751,799. WEATHERPROOF NAIL. GEORGE E. DICKSON, Chicago, Ill. Filed Oct. 2, 1925. Serial No. 60,009. 3 Claims. (Cl. 85—28.)



2. A weatherproof nail embodying therein a shank and a head, and a cap member of relatively soft metal enclosing said head, said cap member having a top wall, a peripheral wall and a skirt including inner and outer bevelled surfaces which meet to define an annular edge coaxial with said shank and of a diameter less than that of said head, said skirt portion being the thickest in the plane of said edge so that upon meeting that member into which the nail is driven it is deformed and compressed inwardly to conform to that portion of said member with which it engages.

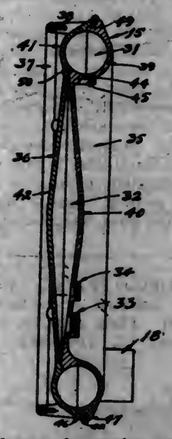
1,751,800. WEATHERPROOF NAIL. GEORGE E. DICKSON, Chicago, Ill. Filed July 15, 1926. Serial No. 122,521. 4 Claims. (Cl. 85—28.)



4. A weatherproof nail embodying therein a shank and a head with an annular shoulder on the underside of the head and a cap member of relatively soft metal enclosing and in direct engagement with said head and the periphery of said shoulder and terminating substantially flush with the bottom radial surface of said shoulder.

1,751,801. ELECTRICALLY-CONTROLLED RECEPTACLE CLOSURE. MAURICE J. DU FRAU, Milwaukee, Wis. Filed July 11, 1924. Serial No. 725,532. 9 Claims. (Cl. 70—50.)

1. In a receptacle, the combination with a casing, of a pivotally mounted gravity-opened closure for said casing, a locking member mounted on the closure and movable into engagement with a part on the casing to lock the closure, an electromagnet mounted on the closure and cooperating with an armature to retract said locking member out of locking position, a retaining member normally engageable with said locking member to prevent movement out of locking position, means including an electromagnet for releasing said retaining member to permit electromagnetic retraction of said locking member and subsequent fall of said closure, and conductors for said electromagnets extending through the walls of said casing.

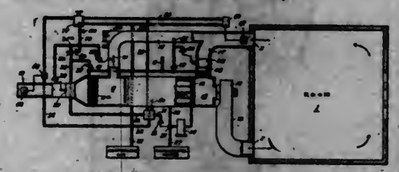


1,751,802. CONVERTIBLE SIDE-DOOR OPENING FOR RAILWAY CARS. CHARLES J. ELLIS, Cincinnati, Ohio, assignor to The Cincinnati Car Corporation, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 1, 1929. Serial No. 336,814. 11 Claims. (Cl. 105—343.)

1. In a railway car having a doorway, a panel adapted to be placed in said doorway to restrict it, and means for removably attaching said panel to the car to restrict said doorway.

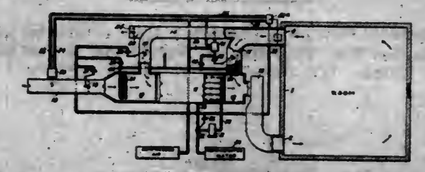
2. In a railway car having a door receiving pocket and a full doorway, a panel in said doorway to restrict said full doorway to a normal doorway, and a door adapted to close either of said doorways.

1,751,803. MOLD FOR CURING HOLLOW MOLDED ARTICLES. THOMAS L. FAWICK, Racine Wis. Filed Oct. 3, 1927. Serial No. 223,529. 6 Claims. (Cl. 18—35.)



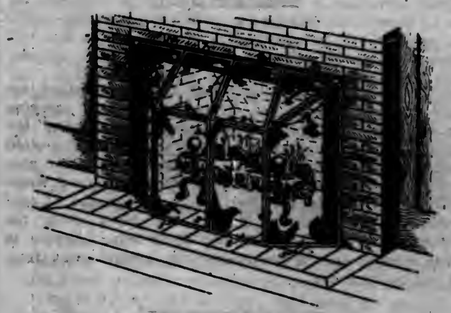
1. A split mold case for curing an inner tube comprising two parts each part comprising an annular groove portion, said grooves defining a mold for the tube and a plate within and rigid with said grooved portions, said plates defining the sides of a suction chamber.

1,751,804. EXTENSION HOLDER FOR EYEGLASSES. WILLIAM FISCHER, New York, N. Y. Filed Jan. 21, 1929. Serial No. 333,837. 3 Claims. (Cl. 88—52.)



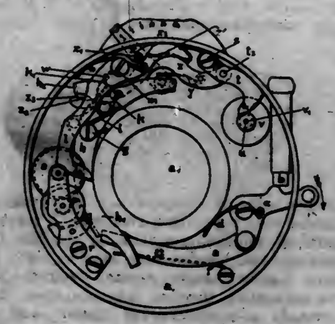
1. An extension holder for eye-glasses, comprising a frame for supporting eye-glass lenses, temple bars connected therewith, each temple bar being of two sections, telescopically engaged with each other and arranged for assuming various extended positions, one of said sections being formed with elongated slots and recesses communicating with the slots, and the other with a transverse pin engaging the slots for holding the sections against relative turning, and engageable in the recesses for aiding in holding the sections against longitudinal relative movements.

1,751,805. PROCESS OF VENTILATING. WALTER L. FLEISHER, New York, N. Y., assignor to Cooling and Air Conditioning Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 13, 1928. Serial No. 246,470. 18 Claims. (Cl. 236—44.)



3. A ventilating system comprising, in combination, means for supplying air to an enclosure, means for conditioning said air, means for supplying fresh air and return air to the conditioning apparatus, means differentially responsive to the condition of the fresh air and of the return air for determining the proportions of fresh air and return air for conditioning.

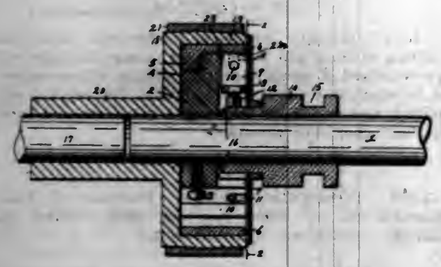
1,751,806. VENTILATING SYSTEM. WALTER L. FLEISHER, New York, N. Y., assignor to The Cooling & Air Conditioning Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 8, 1928. Serial No. 252,759. 15 Claims. (Cl. 236—44.)



1. In a ventilating system, in combination, means for admitting external air to said room, means for maintaining a standard of humidity within a room, means responsive to external temperature conditions for varying said standard, and means for imposing a minimum and maximum limit upon such variation.

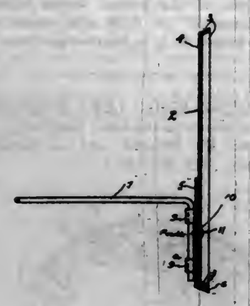
1,751,807. FOLDABLE SCREEN. HANNIBAL C. FORD, Jamaica, N. Y. Filed Jan. 24, 1929. Serial No. 334,069. 12 Claims. (Cl. 126—202.)

1. In a foldable screen, a series of vertically disposed screen-sections having parallel edges, a second series of screen-sections comprising triangular end screen-sections, the screen-sections of the latter series being flexibly connected to each other and to the screen-sections of the first series to form a top, means to limit the relative movement of the screen-sections to such an extent that the screen-sections of the second series have their free edges in the plane of the free side edges of the first series when the screen is in operative position.



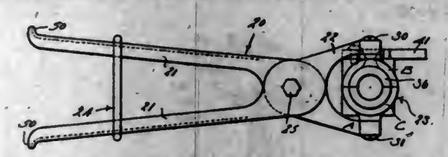
1,751,808. PHOTOGRAPHIC LENS SHUTTER. ALFRED GAUTHIER, Calmbach-on-the-Ens, Germany. Filed Jan. 30, 1929, Serial No. 336,191, and in Germany June 4, 1927. 4 Claims. (Cl. 95—63.)

1. A photographic lens shutter comprising in combination spring actuated operating means, two toothed



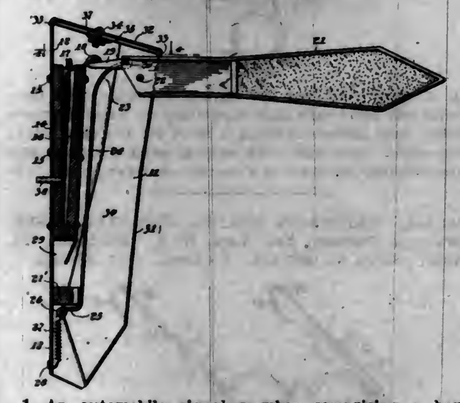
wheel retarding mechanisms, and means for bringing the said retarding mechanisms separately and independently into operative association with the said operating means as and for the purpose set forth.

1,751,809. FRICTION CLUTCH. JOHN F. GLISCH, Milwaukee, Wis. Filed May 28, 1927. Serial No. 194,933. 6 Claims. (Cl. 192—77.)



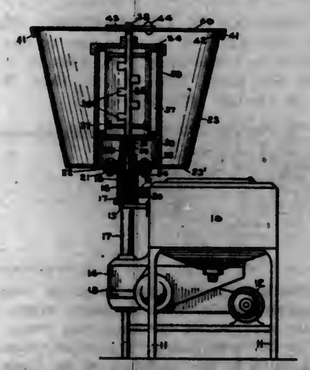
1. The combination with clutch members having opposed friction surfaces, of driving connections carrying one of said members, driven connections carrying the opposed member, a channel member providing a slotted guideway, a reciprocable block provided with pivot pins receivable in said slots, said block having a curved working face adapted, in one position, to engage one of said members, and means for forcing the block along the guideway into said position, said block being adapted to bodily retract, and to simultaneously oscillate away from the engaged member.

1,751,810. GRENADE SUPPORT FOR FIRE EXTINGUISHERS. HENRY MILTON GRILLS, Toronto, Ontario, Canada. Filed June 11, 1928. Serial No. 284,414. 4 Claims. (Cl. 169—26.)



1. A grenade support comprising a flat hanger plate for attachment to a supporting structure, a bracket contacting part of the hanger plate, a fusible fastener entered through the bracket and hanger plate for securing them together under normal temperature conditions and permitting them to separate when the temperature exceeds a predetermined degree, and an infusible grenade holder connected to the bracket for embracing the grenade and supporting it from below.

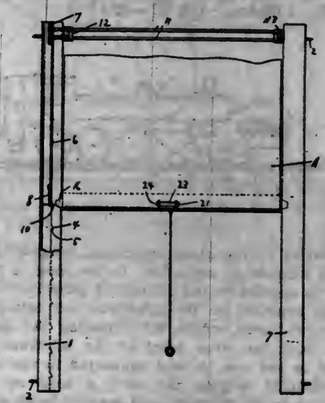
1,751,811. SPLICING MOLD. RUSSELL B. GUILBAULT, Culver City, Calif. Filed June 2, 1928. Serial No. 282,316. 2 Claims. (Cl. 22—116.)



1. A device of the character described including, a tubular mold divided longitudinally into two sections having inner walls substantially parallel to its axis and having end portions of reduced diameter, and a pair of pivotally connected levers, each lever having a jaw carrying a mold section.

1,751,812. AUTOMOBILE SIGNAL. ADOLPH P. GUSTAFSON, Chicago, Ill., assignor of one-half to Harry Goldstine, Chicago, Ill. Filed Apr. 19, 1929. Serial No. 356,368. 8 Claims. (Cl. 116—89.)

1. An automobile signal member comprising a housing, the outer side of said housing being open; a signal arm pivotally mounted in the upper portion of said housing to swing upwardly through the open side of the same; a bellows in said housing; a link connecting the movable side of said bellows with said arm; a spring arranged to hold said signal arm both in said housing and in extended position; and means for operating said bellows.

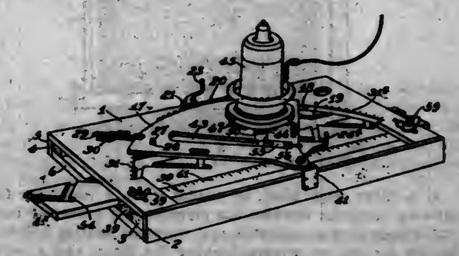


1,751,813. POWER-OPERATED ICE-CREAM FREEZER. CHAUNCEY A. HAGER, Jr., Ord, Nebr. Filed Sept. 18, 1929. Serial No. 393,409. 3 Claims. (Cl. 259—53.)

1. A power operated ice cream freezer comprising an external container for ice, a sleeve projecting downwardly

from the bottom of said container and having a flange secured to the bottom of the container, a cream receptacle rotatably mounted within said container, a tubular housing below said container enveloped by said sleeve, a drive shaft within said housing spaced therefrom, a drive mechanism connected to said drive shaft, means between said drive mechanism and the sleeve for holding the sleeve and ice receptacle against rotation, and a rotary coupling member between said drive shaft and cream receptacle having a part supported on said housing and in turn supporting said flange and sleeve upon the housing.

1,751,814. ADJUSTABLE SHADE HOLDER AND GUIDE. JOSEPH M. HAUSE, Tulsa, Okla. Filed June 14, 1928. Serial No. 285,837. 3 Claims. (Cl. 156—27.)

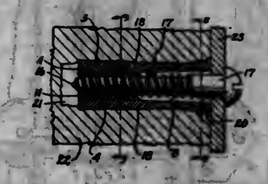


1. In a guide for window shades comprising a pair of slotted uprights, said uprights being secured to the opposing vertical portions of the usual window frame, a shade roll carrier slidable between said guide members, a pull bar having its ends engaged within the slots of the uprights and being secured to the free end of the usual shade strip, means on the carrier complemental to the upright whereby the carrier may be adjusted vertically between the uprights, and means on the pull bar for releasing said adjusting means.

1,751,815. SELECTOR. ROBERT HELMERT, Berlin-Lichterfelde, and BENNO JOHANNESSON, Berlin-Tempelhof, Germany, assignors to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed Aug. 29, 1928, Serial No. 302,715, and in Germany Sept. 6, 1927. 9 Claims. (Cl. 179—27.5.)

1. In a selector for automatic telephone and remote control systems, the combination with sets of field brushes and their contact banks, of a main brush selector carrying said field brushes, and an auxiliary selector the contact bank of which is rigidly connected to and movable with the field brushes and main brush selector.

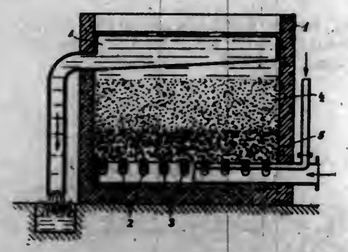
1,751,816. ROUTING MACHINE. SAMUEL HUNTER, Bellevue, Pa. Filed Mar. 5, 1929. Serial No. 344,175. 7 Claims. (Cl. 144—144.5.)



1. A stair routing device comprising a framework, a face plate thereon cut away to provide an opening bounded on one side by an arc of a circle, a segmental templet above the face plate pivoted adjacent the center of said arc and overlapping the curved edge of said opening, said templet being provided with guide slots, clamping means for holding the templet against the top of the face plate, a support for the stringer to be grooved extending beneath the face plate and templet, a spacing or filler plate beneath the templet, also of segmental shape and pivoted concentric with the templet and provide with slots registering with those of the templet, and clamping means supported by the framework beneath the stringer and adapted to press it tightly against the spacing plate.

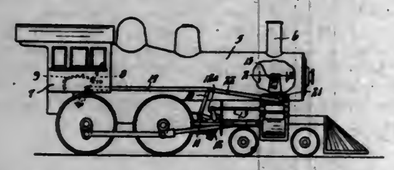
1,751,817. RUBBER DERIVATIVE AND METHOD OF MAKING SAME. WEBSTER N. JONES and HERBERT A. WINKELMANN, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1925. Serial No. 26,520. 18 Claims. (Cl. 260—1.)

1. The method of producing a composition of matter which comprises incorporating into rubber a halide of an amphoteric metal in which the halogen has an atomic weight of 35.46 or greater, and applying heat to the mix sufficiently to cause a pronounced exothermal temperature rise therein.



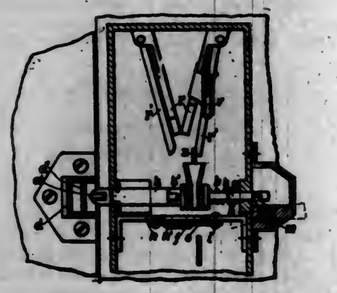
10. A composition of matter comprising the reaction product of undissolved rubber and a halide of an amphoteric metal in which the halogen has an atomic weight of 35.46 or greater.

1,751,818. BOLT ANCHOR. JOHN KARITZKY, Garwood, N. J., assignor to Henry B. Newhall Corporation, Garwood, N. J., a Corporation of New Jersey. Filed Sept. 28, 1928. Serial No. 308,929. 2 Claims. (Cl. 85—2.4.)



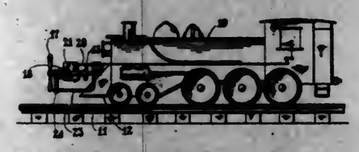
2. A new article of manufacture comprising a ductile anchor provided with an axial bore and primary interior longitudinally extending expanding means, and secondary interior longitudinally extending expanding means of shorter length than the primary expanding means said secondary means being mounted near the inner end of the anchor, and alternating with the primary expanding means.

1,751,819. FILTER. RICHARD KNIESEL, Berlin, Germany, assignor to Bamag-Meguin A.-G., Berlin, Germany, a Corporation of Germany. Filed June 22, 1928, Serial No. 287,546, and in Germany Feb. 20, 1928. 2 Claims. (Cl. 210—130.)



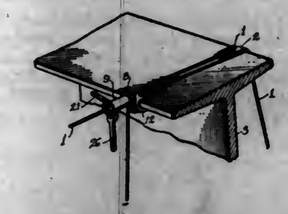
1. A filter comprising, in combination, a container for filtering material, distributing pipes in said container having orifices each constituted as a water-jet suction injector for air for use in reverse flushing the filter, and a main connected with said pipes.

1,751,820. LOCOMOTIVE NOZZLE RESTRICTOR. JALMER KNUDSON, Minneapolis, Minn. Filed May 23, 1927. Serial No. 193,544. 2 Claims. (Cl. 230—100.)



1. In a locomotive structure, an exhaust nozzle, a circular plate disposed at the upper portion of said nozzle, a rod passing centrally across said plate and secured thereto, being journaled in the sides of said nozzle, gear means at the outer side of said nozzle for oscillating said member, and means connected to said last mentioned means and extending to the cab of the locomotive, for operating said gear means, whereby said member may be disposed in a plane substantially at right angles to the axis of said nozzle or in a substantially vertical plane for regulating the flow of said gas through said nozzle.

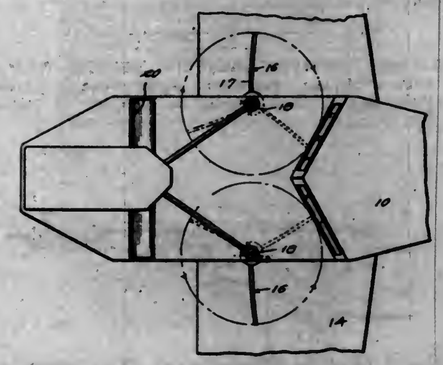
1,751,821. LOCKING DEVICE FOR CLOSET AND LAVATORY DOORS. ROBERT OSKAR KRASSELT, Leipzig, Germany. Filed Apr. 2, 1929, Serial No. 352,040, and in Germany June 21, 1928. 10 Claims. (Cl. 194—78.)



1. A coin controlled locking mechanism for doors for locking the door in a partly open position and upon the insertion of a coin permitting of the door being unlocked and opened and the locking mechanism retained by the inserted coin in position to permit of the door being fully closed and locked when closed, said mechanism comprising normally disconnected automatically projectible main and auxiliary locking bolts on the door, a locking device on the door frame having a keeper, engageable respectively by said bolts, for locking the door in partly open and closed positions, and a part for holding the main bolt retracted when the door is closed, coin holding and releasing means for coupling the main bolt with the auxiliary bolt, and means for shifting the auxiliary locking bolt to retract the main locking bolt on a coupling connection being effected by a coin.

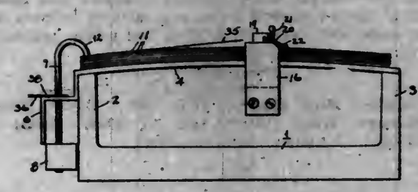
1,751,822. SNOWPLOW FOR ENGINES. LUDWIK KUDZIA, Jaraczew, Poland. Filed June 21, 1928. Serial No. 287,065. 3 Claims. (Cl. 37—22.)

1. A device of the class described, comprising a base, standards adjustably connected to the base, a sub-frame pivotally connected to the standards, propellers and driving means mounted on the sub-frame, an arm projecting from the sub-frame, means for adjusting the distance of the arm from the pivot point of the sub-frame, linkage connected to the arm, a cord connected to the linkage, a bracket slidably holding the cord, a head on the cord resting against the bracket, said bracket being adjustably mounted, and a U-shaped bracket positioned above said bracket and also adjustably mounted, the head on the cord being liftable to engage the U-shaped bracket so to raise the sub-frame.



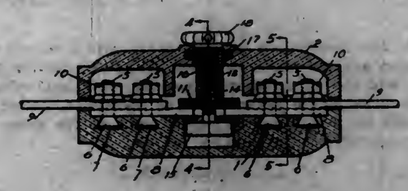
1,751,823. ADJUSTING TOOL FOR FORM TIES. HENRY H. LAMPERT, Chicago, Ill. Filed Apr. 28, 1928. Serial No. 273,671. 2 Claims. (Cl. 254—29.)

1. A tool for adjusting a form tie relative to its clamp, comprising a jaw including a bearing part having an opening therein for receiving the tie, a clip formed on said bearing part and offset from said opening, said clip having a pocket for receiving one edge of the clamp, and a jack swiveled on said bearing part and having means adapted to grip the tie for pulling it relative to said jaw.



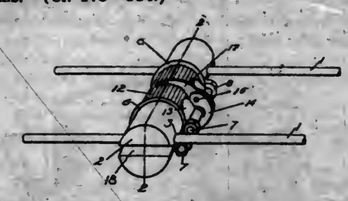
1,751,824. PROPELLING MEANS FOR AIRSHIPS. FRANK G. LANDWEHR, Detroit, Mich. Filed Aug. 10, 1929. Serial No. 384,892. 8 Claims. (Cl. 244—18.)

1. An airship including a fuselage, wings supporting the fuselage, rotatable propellers mounted upon vertical axes on each side of the fuselage, the fuselage being open to accommodate said propellers, a motor, and means for driving the propellers from the motor, the forward end of the fuselage being upwardly and rearwardly curved to



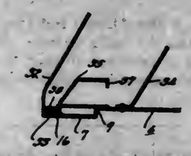
receive the impact of air drawn into the interior of the fuselage by said propellers and forced forward therein, the fuselage above the forward end having an opening through which the air is discharged.

1,751,825. TICKET HOLDER. MURDOCK MACDONALD, Cleveland, Ohio. Filed July 27, 1927. Serial No. 208,732. 6 Claims. (Cl. 129—1.)



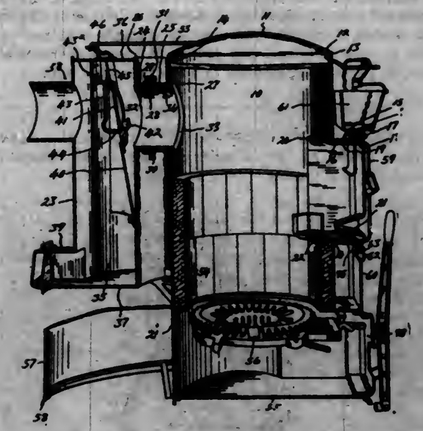
1. In a ticket holder, the combination of an open rectangular frame, means for removably retaining a series of tickets on the top of said frame, and a second open rectangular member embracing said tickets and the top of said frame, said second member being movable along said tickets and serving as an edge against which the uppermost ticket may be severed.

1,751,826. SWITCH. JOHN R. MARSHALL, McKean, Pa. Filed Sept. 10, 1927. Serial No. 218,673. 6 Claims. (Cl. 200—158.)



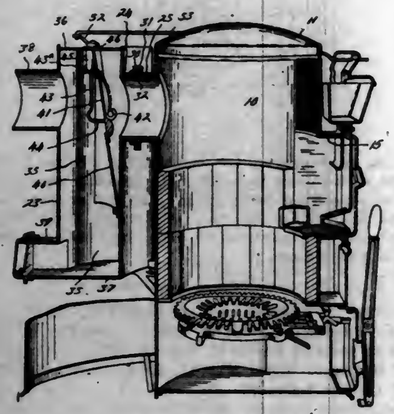
1. In a switch, the combination of a base; a cover secured to the base; wire clamps on the base comprising connector bars, said clamps being adapted to secure the ends of conductors to physically connect said conductors and adapt the same to sustain opposing endwise strain; a bridge piece; and means moving the bridge piece into and out of contact with the bars.

1,751,827. INSULATOR. JOHN R. MARSHALL, McKean, Pa. Filed Sept. 10, 1927. Serial No. 218,674. 8 Claims. (Cl. 173—314.)



1. In an insulator, the combination of two insulator blocks, each formed in halves with opposing grooves forming wire-receiving perforations; and means securing the halves and blocks together, said means permitting the adjustment of the blocks to vary the relative directions of the perforations.

1,751,828. VEHICLE BODY CONSTRUCTION. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed May 11, 1925. Serial No. 29,602. 11 Claims. (Cl. 296—28.)

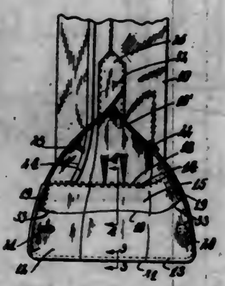


9. In a front end construction for vehicle bodies, the combination with a pillar having an inner section, of an instrument board and cowl secured upon opposite sides of the inner section adjacent one edge thereof.

1,751,829. FURNACE. RALPH S. MCNANEY, Dowagiac, Mich., assignor to Dowagiac Steel Furnace Company, Dowagiac, Mich., a Corporation of Michigan. Filed Oct. 22, 1928. Serial No. 314,209. 8 Claims. (Cl. 126—99.)

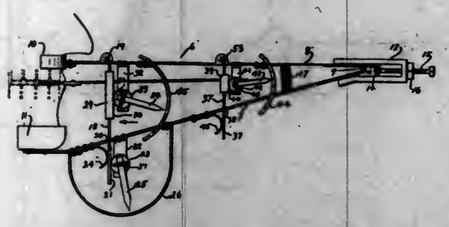
7. In a warm air furnace, a body portion formed of sheet steel and having welded joints and a door frame of substantially heavier section than said sheet steel, said door frame forming a reinforcement for imparting rigidity to said sheet steel structure at the door opening and being composed of a steel casting and a welded joint between said cast steel door frame and sheet steel body.

1,751,830. DAMPER FOR WARM-AIR FURNACES. RALPH S. MCNANEY, Dowagiac, Mich., assignor to Dowagiac Steel Furnace Company, Dowagiac, Mich., a Corporation of Michigan. Filed Oct. 22, 1928. Serial No. 314,232. 4 Claims. (Cl. 126—99.)



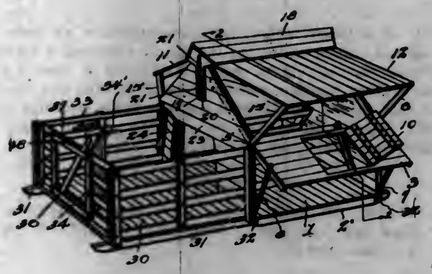
1. In a furnace, a sheet metal radiator, a damper therein, operating means for said damper extending through said radiator and a bearing of cast metal having substantially the same expansion coefficient as said sheet metal and welded thereto.

1,751,831. EXTENSION TABLE. FRANK P. MCNULTY, Los Angeles, Calif. Filed Mar. 21, 1928. Serial No. 263,231. 8 Claims. (Cl. 45—112.)



1. A table construction including slidable end sections, a vertically movable central leaf, operating means for moving the leaf vertically, including an actuating member, and a control for the operating means including a manually operable control part and a flange on the actuating member having a notch to receive the control part for operation in one direction and having a recess to receive the control part for operation in the other direction.

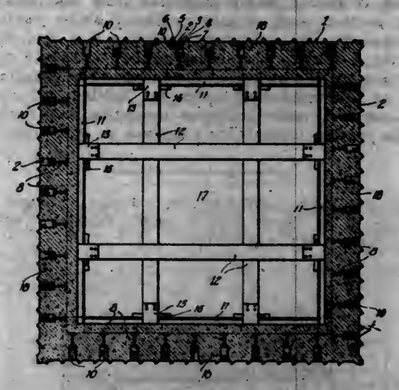
1,751,832. SHIRT CUFF SLEEVE. ABRAHAM MENKIN, New York, N. Y. Filed Oct. 25, 1928. Serial No. 314,857. 2 Claims. (Cl. 2—123.)



1. A sleeve for clothing, comprising material formed in tubular shape and having a slot connecting with one end, panels formed adjacent the slot by folding and sewing the said material, a cuff with a transverse pleat held in formation by stitches arranged for being broken open, and said cuff being attached on the said material, longitudinal pleats formed in the material and starting at the cuff, and a means for securing the cuff and material adjacent the slot together.

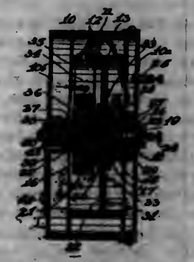
1,751,833. DENTIST'S MEASURING DEVICE. WILLIAM PURKIS MILLAR, Saskatoon, Saskatchewan, Canada. Filed Mar. 8, 1928. Serial No. 260,159. 5 Claims. (Cl. 33—174.)

1. In a device of the class described, in combination, a frame comprising two divergent branches hingedly connected at their convergent ends, jaw portions carried at the free ends of said branches, a bar hingedly connected at one end to one branch, the other branch having an orifice receiving the free end of the bar, a rack on said bar, a scale carried by said last mentioned branch, a bracket also carried by said branch, a pinion mounted upon said bracket and operatively engaging said rack, a pointer carried by said pinion and adapted to move over said scale, and means for locking said pinion against rotation.



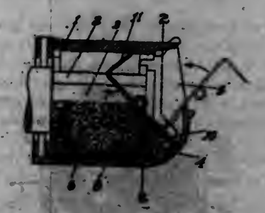
1,751,834. HOG HOUSE AND PEN. OSCAR MILLER, Spokane, Wash. Filed Apr. 30, 1928. Serial No. 274,005. 2 Claims. (Cl. 119—16.)

1. The combination in a hog-house with a hinged roof section adapted to swing upwardly, and means for holding said section in adjusted position, of a hood adapted to be lifted by the upward swing of the section, slotted end boards for said hood, and guide pins on the house for co-action with said slotted end boards.



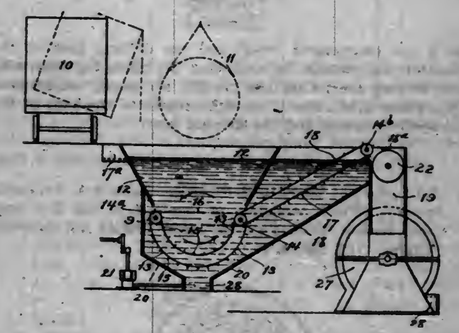
1,751,835. COFFERDAM AND METHOD OF CONSTRUCTION. WILLIAM S. MONROE, Chicago, and JOHN C. SANDERSON, Evanston, Ill., assignors to Sargent & Lundy, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1927. Serial No. 229,059. 2 Claims. (Cl. 61—84.)

1. In a coffer-dam, an outer sheet pile structure, inner brace members driven adjacent the pile structure, spacing means confined between the brace members and the pile structure, and an inner reinforcing wall enclosing



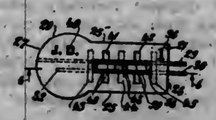
and connecting the brace members, said wall including as elements thereof said spacing means confined between the brace members and the pile structure.

1,751,836. REEL FOR ELECTRIC CONDUCTORS. ALBERT E. F. MOONE, Chicago, Ill. Filed Oct. 28, 1924. Serial No. 746,293. 12 Claims. (Cl. 200—153.)



1. In a reel for electric conductors, the combination of a support, a hollow shaft mounted for rotary movement on said support, a reel carried by said shaft, a fixed threaded member carried by said support, a second threaded member rotary with and movable longitudinally of said shaft and engaging said fixed member, and an electric contact carried by said shaft to control the circuit through conductors on said reel by movement of said second member relatively to said shaft.

1,751,837. PACKING RETAINER. LYMAN P. MOORE, Chico, Calif. Filed June 21, 1928. Serial No. 287,062. 1 Claim. (Cl. 308—89.)

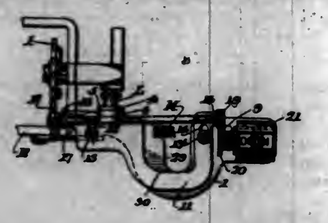


A packing retainer for a journal box, said box having a bearing member against which the upper portion of the journal bears, said journal and bearing being spaced from the side walls of the box, and packing partially filling the box from the front thereof and extending into the space between the journal and box; said retainer comprising side arms to extend upwardly and inwardly of said space and adapted to bear against the upper forward surface of the packing therein, extensions on the inner ends of said arms projecting upwardly thereof to engage the roof of the box in said space, and a horizontal member connecting the opposite ends of the arms to bear against the packing in front of the journal and to engage the front wall of the box.

1,751,838. APPARATUS FOR PREPARING CANE STALKS. WILLIAM HENRY MORGAN, Sr., Alliance, Ohio, assignor, by mesne assignments, to The Morgan Hurrycane Company, New York, N. Y., a Corporation of Florida. Filed Aug. 19, 1925. Serial No. 51,092. 8 Claims. (Cl. 146—194.)

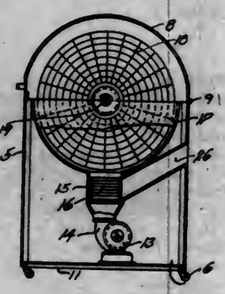
1. An apparatus for preparing sugar cane stalks for the extraction of the juice therefrom, comprising in combination a tank for containing a cleansing liquid, a loop-shaped conveyor located in the tank and arranged to extend partially about a bundle or mass of stalks deposited therein for imparting a rotary or rumbling movement to said bundle or mass of stalks, a hopper having its side walls arranged to direct the stalks between the side portions of the loop shaped conveyor, and means arranged to receive the stalks from said conveyor for removing the stalks from the tank after they have been acted upon by said conveyor.

1,751,839. SEAL. SIGMUND J. MOSKOVITS, Bayonne, N. J. Filed Feb. 26, 1927. Serial No. 171,272. 1 Claim. (Cl. 292—308.)



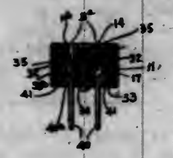
In combination a seal having a flat top face and a flat bottom face, said faces parallel to each other and a shackle having a pair of members extending into the seal, each of the members of the shackle deformed to provide a zigzag portion within the seal, each zigzag portion being in part parallel to the faces of the seal and in part at right angles thereto, said seal having indentations extending from its opposite faces and spaced from the side and end walls of the seal, said indentations having walls parallel to and between the parts of the zigzag portions that are perpendicular to the faces of the seal.

1,751,840. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 14, 1927. Serial No. 161,118. 4 Claims. (Cl. 235—102.)



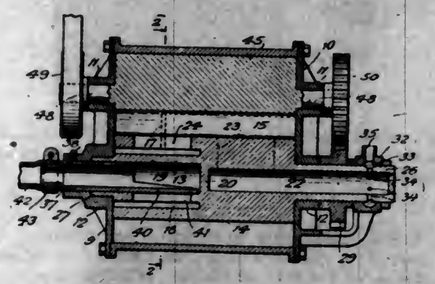
1. In a counter attachment for typewriting machines having a supporting frame, an escapement wheel, a bracket

attached rigidly to the frame, and a counter mounted on the bracket and including a driving gear therefor, the combination of means for transmitting motion from the escapement wheel to the driving gear comprising a plate and driving means mounted on the plate for cooperation



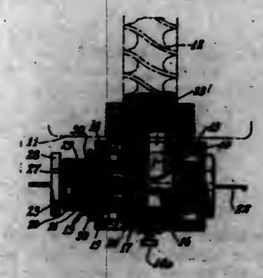
with the escapement wheel and the driving gear of the counter, and means for mounting the plate together with the driving means on the bracket for bodily adjustment in a plane substantially at right angles to the axes of the escapement wheel and the driving gear.

1,751,841. CLOTHES DRIER. CLAUDE A. PICKENS, Spokane, Wash., assignor of one-half to Art Sly, Spokane, Wash. Filed Feb. 23, 1929. Serial No. 342,015. 1 Claim. (Cl. 34—5.)



A clothes drier comprising a housing having an open bottom, a hinged top, a rotary basket within top portion of the housing having a door, a motor in the bottom of the housing arranged to rotate the basket, a fan actuated by said motor disposed vertically below the basket, a casing extending from said fan to envelop a portion of the gasket, a heating element within said casing actuated by the current for said motor, a damper for said casing, a conduit extending from said casing through said housing, and a damper for said conduit.

1,751,842. CURRENT TAP FITTING. MORRIS PROPP, New York, N. Y., assignor to The M. Propp Co. Inc., New York, N. Y., a Corporation of New York. Filed July 28, 1925. Serial No. 46,555. 2 Claims. (Cl. 173—334.)

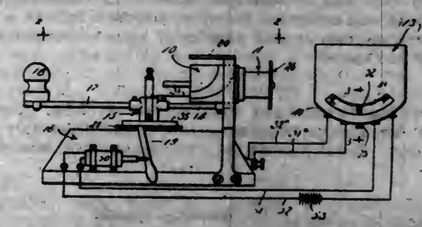


1. An attachment fitting of the character described comprising an insulating body portion having a recess formed in an end thereof, said body having passages leading from said recess therethrough, contact members mounted in each of said passages, each of said contact members having an inturnad foot extending into said recess, conductor blades projecting from said insulating body portion, each of said conductor blades having an inturned foot in engagement with the foot of a contact member, conductor wires engaging the feet of said contact members, and an apertured insulation cover engaging the feet of said conductor blades for holding said contact members and conductor blades in position, said conductor blades passing through the apertures in said cover member.

1,751,843. AIR COMPRESSOR. JOSHUA ROSETT, New York, N. Y. Filed June 5, 1929. Serial No. 368,465. 5 Claims. (Cl. 230—150.)

4. A device of the character described, comprising a housing including casings, main and auxiliary rotors located within said casings and provided respectively with a vane and a vane-receiving pocket through the latter of which said vane is adapted to pass, said rotors being adapted to engage each other and form, with said vane and one of said casings, compression and intake chambers of variable capacities, said main rotor having an inlet passage formed in one end thereof and having an intake port affording communication between said intake passage and said intake chamber and having at its other end an outlet passage and an annular chamber, said outlet passage and annular chamber being separated by a wall having a communicating port therein, said main rotor having an outlet port communicating with said annular chamber at a point substantially diametrically opposite said communicating port and adapted to communicate with said compression chamber, and valve means for closing said outlet passage with respect to said inlet passage at such time as said vane enters said vane-receiving pocket.

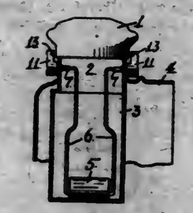
1,751,844. EXTRUDING MACHINE. GEORGE H. SCHANZ, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 11, 1927. Serial No. 204,714. 5 Claims. (Cl. 18—13.)



3. An extruding machine comprising an extruding die, means for drawing a flat strip of material therethrough with its flat faces disposed in determinate planes, means for forcing a plastic therethrough to coat the strip, and stock-confining means interposed between the stock-forcing means and the die and formed on opposite sides of the strip's path of movement with symmetrically disposed passages for the stock, the said passages having their longitudinal middle plane substantially in coincidence with a plane medial, parallel and normal to the strip and the stock-confining means being formed with a plurality of overflow apertures symmetrically disposed with relation to the axis of the die.

1,751,845. AUTOMATIC RAILWAY SAFETY SIGNAL. FRANK SMITT, Port Washington, N. Y., assignor of six per cent to Nellie Krupinski, Port Washington, N. Y. Filed Aug. 14, 1929. Serial No. 385,900. 3 Claims. (Cl. 246—294.)

1. A railway switch apparatus comprising slidable elements having movable track members thereto attached and the said slidable elements located at the junctures of a pass-over track and main lines of track which are relatively parallel to each other, means to move the said slidable elements into closed positions simultaneously through the action of contact elements placed in the respective lines of approach of the switch proper, means to lock the said slidable elements in closed positions and means to simultaneously release the locking elements by the operation of rocking levers adjacent thereto and connected to each other by elements forming a parallelogram and adapted to exert the force thereof when acted upon by one of a pair of release elements, which elements are respectively connected to the said rocking levers and are located in the lines of departure from the switch assemblies.

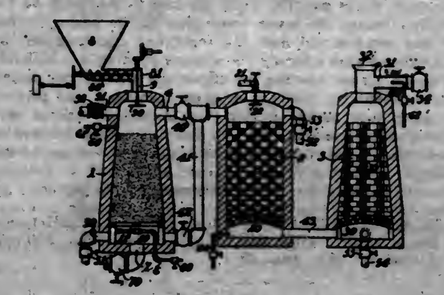


1,751,846. CASTING MACHINE. ALFRED L. WILKES, Los Angeles, Calif. Filed Apr. 30, 1928. Serial No. 273,980. 7 Claims. (Cl. 22—65.)

1. In a casting machine a receptacle for the material to be cast, a mold to receive the material, operating means for causing the material to discharge from the receptacle to the mold, and a control for the operating means whereby it operates upon the material reaching a predetermined temperature, the control including a thermo-couple at the receptacle, an electro-magnetic unit in connection with the operating means and a contact device electrically connected to the thermo-couple and operable to cause energization of the unit.

1,751,847. RADIATOR GAUGE. JOHN J. WILT, Bakersfield, Calif. Filed June 19, 1928. Serial No. 286,530. 1 Claim. (Cl. 116—118.)

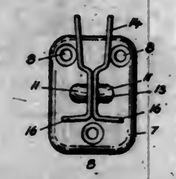
In combination with a radiator reservoir having a filling neck, and a cap fitted to sa'd neck, a device for indicating the level of the liquid in said reservoir including a yoke depending within the reservoir, the free ends of the arms of said yoke being bent in opposite directions and journaled respectively in the front and rear walls of the reservoir neck below the cap; a hous'ng shell into which each of said journalled ends of the yoke arms project, said shell



having a sight aperture; a flanged bushing fitted to the reservoir neck and in which the yoke ends are journaled, said bushing clamping the housing shell to the reservoir neck; an indicator carried upon the yoke ends within the housing shell, visible through the sight aperture thereof; and a float within the reservoir, carried by the yoke.

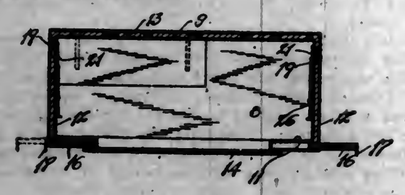
1,751,848. RUBBER COMPOSITION AND METHOD OF PRODUCING THE SAME. HERBERT A. WINKELMANN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1924. Serial No. 750,463. 10 Claims. (Cl. 18—53.)

1. The method of improving the aging properties of rubber on vulcanization with sulphur which comprises adding to a rubber mix before vulcanization a blown product of the distillate residues of petroleum capable of producing a blown product having the combined properties of a softening point of substantially 300° F. and a penetration at 122° F. of between 8 and 16, and vulcanizing the resulting mixture with the production of a vulcanized rubber product having improved aging properties.



1,751,849. GAS-MAKING PROCESS. DANIEL J. YOUNG, Tacoma, Wash., assignor to Young-Whitwell Gas Process Company, Tacoma, Wash., a Corporation of Washington. Filed June 22, 1922. Serial No. 570,207. 11 Claims. (Cl. 48—208.)

1. An improvement in the usual two cycle process of making carbureted water gas, carried out in a plant comprising a single generator having a bed of solid fuel, a single carburetor and a single superheater, one cycle consisting in air blasting the fuel bed of the generator and storing the resulting heat successively in the carburetor and superheater, a second cycle consisting in making a forward steam run successively through the fuel bed of the generator in an upward direction, then through the carburetor and superheater, and withdrawing the resulting water gas directly from the superheater; the improvement which consists in making a third cycle



in which steam is passed directly to the top of the fuel bed in the generator and the resulting water gas withdrawn directly from the bottom of the generator for storage or use.

1,751,850. CLOTHESLINE CLAMP OR HOLDER. HENRY C. ZIEBURTZ, Cleveland Heights, Ohio. Filed July 8, 1929. Serial No. 376,625. 1 Claim. (Cl. 24—133.)

A line holder comprising a back plate having a slot and recesses at the rear beside the slot, a clamping member having an ear projecting through the slot, and a pivot pin extending through the ear behind the plate and seated at its ends in said recesses, the plate having tongues at the ends of the slot, projecting behind the plate and pressed inwardly to confine the ear.

1,751,851. COOLER. REGINALD J. BENNETT, Spokane, Wash. Filed Apr. 22, 1929. Serial No. 357,051. 1 Claim. (Cl. 312—101.)

The combination with a window frame of a cooler installed therein, said cooler having an outer and an inner spaced wall for its top, bottom, front, rear and ends, insulator material within said spaced walls, an extension wing for each front end portion of the cooler slidably disposed between the outer and inner front wall and arranged to be extended outwardly therefrom, flanged end portions for said wings adapted to be secured to the sides of the window frame, the lower front edge of the cooler resting on the window sill and the top front edge engaged by the window sash whereby the window opening is completely closed, a screen opening for either end wall of the cooler, a door pivotally mounted at each opening, a rod pivoted to each door having a slot therein, and a pin for said slot whereby the doors may be pivotally moved to open or close said screened openings by slidable movement of the rods.

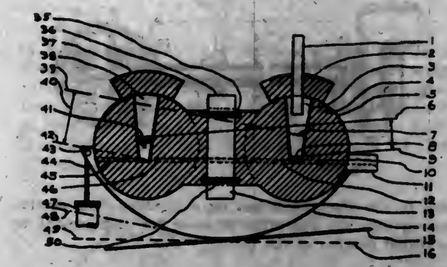
1,751,852. ELEVATOR. JOHN BERGSTEN, Hermosa Beach, Calif. Filed Feb. 4, 1924. Serial No. 690,347. 4 Claims. (Cl. 294—91.)

1. A casing elevator comprising a body element, a gate element hinged to said body element for movement between open and closed positions with respect thereto, a lug on one of said elements, the other of said elements having a recess to receive and completely surround said lug when said gate element is closed whereby said gate element is held against movement relative to the body element in all directions transversely of said lug, and means to hold said gate element closed.

1,751,853. BATTER FORK. EDWINA BUCK, Glendale, Calif. Filed June 17, 1929. Serial No. 371,571. 4 Claims. (Cl. 259—144.)

1. A batter fork comprising a handled shank having a tined head lying in a plane at an angle to the major portion of said shank, said head having a plurality of spaced flat tines lying in the same plane and extending in a longitudinal direction and two remote tines having a serrated outer edge at one side and a straight inner edge at the other.

1,751,854. RADIO APPARATUS. ROBERT C. DA COSTA, Philadelphia, Pa., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 24, 1928. Serial No. 272,385. 6 Claims. (Cl. 175—359.)

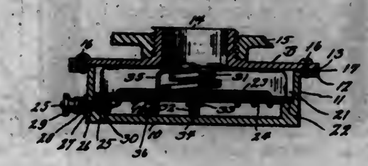


1. An air-core, radio frequency coil comprising a tubular form machined to uniform, predetermined diameter, a plurality of circumferentially spaced apertures at one end of said form and at least one aperture at the other end thereof, and conductor wound on said form between a selected aperture of said plurality of spaced apertures and said one aperture.

1,751,855. FOUNTAIN PEN, LEVER FILLER. EMILE C. FRANZMANN, West Somerville, Mass. Filed July 20, 1928. Serial No. 294,188. 12 Claims. (Cl. 120—46.)

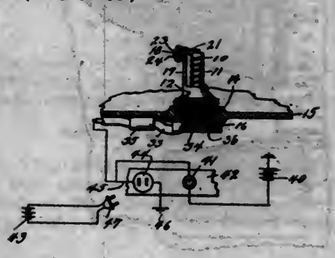
1. A fountain pen having, in combination, a casing, a sack of flexible material adapted to contain liquid and enclosed within said casing, open at one end thereof and closed at the opposite end, a presser located within said casing and arranged to bear against said sack, a lever normally positioned in a slot provided in the wall of said casing, a spring extending longitudinally of said lever adjacent its inner face and fastened adjacent one end thereof to said lever, and an arcuate support for said lever positioned within said casing and projecting between the lever and its spring and contacting with said spring, one end of said lever bearing against said presser, whereby said lever may be rocked to cause said presser to be moved inwardly and compress the sack.

1,751,856. ELECTRIC INDUCTION FURNACE PROCESS. ALBERT E. GREENE, Seattle, Wash. Filed Mar. 25, 1921, Serial No. 455,601. Renewed May 12, 1923. 8 Claims. (Cl. 266—1.5.)



1. The method of treating molten metal by causing it to pass through a constricted area duct closed except on its ends and having its ends opening into adjoining parts of the channel of an induction furnace larger than the ducts and at a part of said channel below the metal level therein and while forcing it through said conduit heating it by passing induced current through the metal therein.

1,751,857. OIL HEATER. CHARLES W. NELSON and ROBERT L. NELSON, Sioux City, Iowa, assignors to Nelson Bros. Mfg. Co., Inc., Sioux City, Iowa. Filed Dec. 26, 1929. Serial No. 416,562. 12 Claims. (Cl. 219—38.)



1. In a heater for viscous oils that are non-fluid at temperatures near zero degrees Fahrenheit, an upwardly opening open-mouthed shell adapted to be extended through and secured in the wall of an oil container at a low point thereof, and an electrical heating element in the shell, the space within the shell being entirely unoccupied with the exception of the space occupied by the heating element and the latter being spaced from the wall of the shell at any temperature of use, whereby oil from the container may fill the shell and contact directly with the heating element from all sides, thereby aiding in insulating the element from the shell wall, and being provided with a path for maximum circulation through the shell.

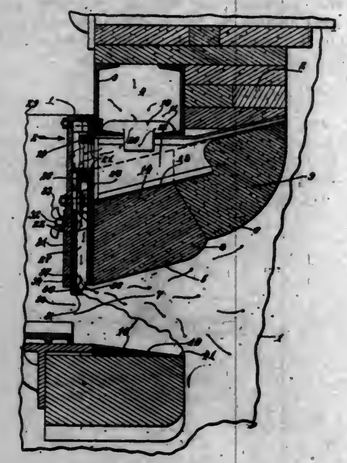
1,751,858. OIL HEATER. ROBERT L. NELSON and CHARLES W. NELSON, Sioux City, Iowa, assignors to Nelson Bros. Mfg. Co., Inc., Sioux City, Iowa. Filed Dec. 9, 1929. Serial No. 412,678. 15 Claims. (Cl. 219—38.)

1. In an oil heater for an oil container having an opening, a receptacle provided with an opening, high and low voltage heating units encased within the receptacle, and means for attaching the receptacle to the outer side of the container so as to form a closure for said container opening with the two openings inter-communicating, whereby oil from the container may fill the receptacle and submerge the heating unit, the low voltage unit being grounded at one end to the receptacle, and the high voltage unit being insulated at both ends from the receptacle.

1,751,859. OIL HEATER FOR CRANK CASES. CHARLES W. NELSON and ROBERT L. NELSON, Sioux City, Iowa, assignors to Nelson Bros. Mfg. Co., Inc., a Corporation of Iowa. Filed Apr. 20, 1929. Serial No. 356,708. 11 Claims. (Cl. 219—38.)

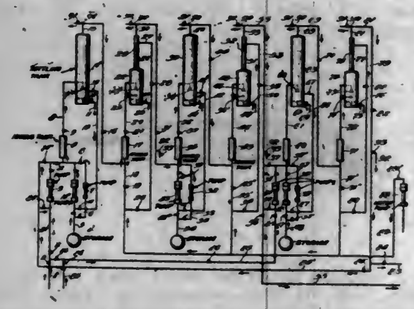
1. In an oil heater for a crank case having a threaded drain opening, a threaded plug receivable in said opening, an exposed heating coil supported by the plug and insulated therefrom except at one end, said end being grounded to the plug, and means insulated from the plug, to connect the other end of the coil to a source of current, said means including a thermostatic switch, adapted to be surrounded by the body of oil, and to open at a predetermined maximum temperature of said oil.

1,751,860. LAMP TESTER. WILLIAM F. HAYES, Providence, R. I. Filed Apr. 27, 1928. Serial No. 273,247. 7 Claims. (Cl. 175—183.)



4. A connector device for testing lamps comprising a sectional body, one of the sections thereof having spaced depending ears, contact members mounted in said ears and disposed on both sides thereof, a contact member depending from the body and insulated from the said ear contact members, and means for electrically connecting the said contact members whereby the said ear contact members will be connected in parallel.

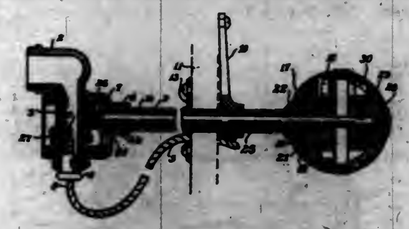
1,751,861. FURNACE. CHARLES J. HUBER, Baltimore, Md., assignor of one-half to Flynn and Emrich Company, Baltimore, Md., a Corporation of Maryland. Filed June 2, 1925. Serial No. 34,312. 2 Claims. (Cl. 110—67.)



1. In a furnace having a hopper with a hopper opening, an arch extending rearwardly from above the hopper opening, a coking shelf extending rearwardly from beneath the hopper opening, an air passage in the arch, the hopper having having a double rear wall providing an air passage therein connected to the arch passage leading downward to the hopper opening into which it discharges, and an ad-

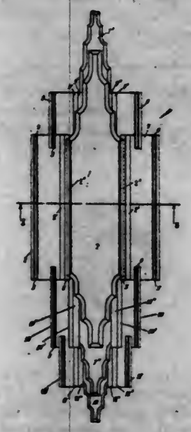
justing plate to control the size of the hopper opening, with means for securing the same in various positions of

adjustment, said plate having a lip to deflect the air from said passages backward into the combustion space of the furnace.



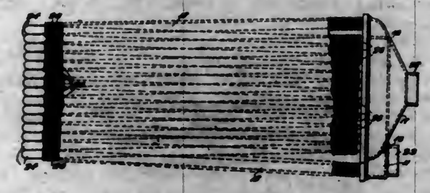
1,751,862. PROCESS AND APPARATUS FOR TREATING AND PURIFYING HYDROCARBON OILS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 15, 1923, Serial No. 674,807. Renewed July 2, 1928. 5 Claims. (Cl. 196—38.)

1. A process for purifying liquid distillate obtained from the pressure distillation of hydrocarbon oils, consisting in initially introducing a quantity of the distillate and a quantity of plumbite to a mixing chamber, in thence passing the mixed plumbite and distillate to a settling chamber, in then subjecting the distillate successively to a treatment with sulphuric acid and caustic soda and subjecting the distillate to successive water washing treatments following each of said treatments, and in maintaining a superatmospheric pressure on the distillate undergoing treatment.



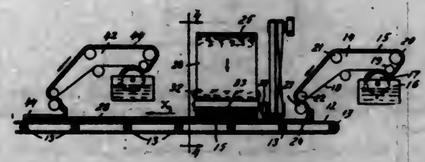
1,751,863. SPOTLAMP FOR AUTOMOBILES AND THE LIKE. ROBERT H. HUMMERT, Dayton, Ohio, assignor to The S. H. Thomson Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 20, 1926. Serial No. 155,836. 2 Claims. (Cl. 74—39.)

1. In combination with a shaft, of a hollow operating member secured to the outer end of the latter, and having an inset serrated face, a sleeve into which the shaft projects for a turning movement therein, a collar



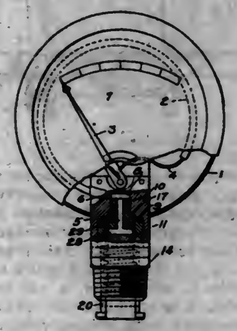
secured to the sleeve and having a serrated face portion projecting into the operating member for engagement by the serrated portion of the latter.

1,751,864. LIGHT FIXTURE HAVING REMOVABLE PANELS. ABRAHAM KRAMER, New York, N. Y. Filed Apr. 4, 1929. Serial No. 352,473. 6 Claims. (Cl. 240—110.)



1. A light fixture comprising a plurality of parallel groups of spaced frame members, said frame member groups being disposed about a common axis, and said frame members being provided with panel retaining grooves.

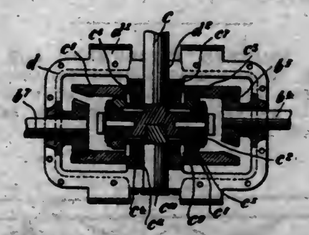
1,751,865. METHOD OF BRAZING HEATING COILS. ALEXANDER THORNTON LEWIS and DONALD E. FRENCH, Merion, Pa., assignors to York Heating and Ventilating Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 9, 1928. Serial No. 260,458. 4 Claims. (Cl. 113—112.)



1. The method of securing a tube to a header plate where one article is copper and the other is steel, which consists in locating the tube in a hole in the header, subjecting the copper article to a cooling medium to maintain it at a temperature lower than the fusing point of copper, flowing a bonding material having a fusing point substantially that of copper about the joint between said tube and plate while simultaneously subjecting the two adjacent portions of the two articles to a temperature closely approximating the fusing point of copper.

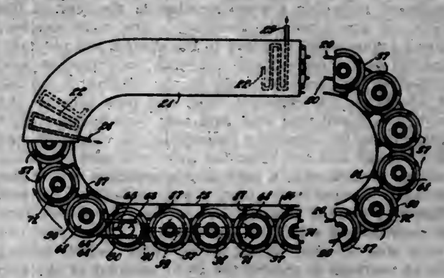
1,751,866. APPARATUS FOR MAKING FIBROUS MATERIAL. RALPH L. LOOMIS, Boston, Mass., assignor to C. F. Burgess Laboratories, Inc., Madison, Wis., a Corporation of Delaware. Original application filed Aug. 5, 1926, Serial No. 127,291. Divided and this application filed May 11, 1929. Serial No. 362,163. 16 Claims. (Cl. 92—39.)

1. In a machine of the character described, means for slitting a moist pulp web and means for laying down overlapping folds of said moist pulp web.



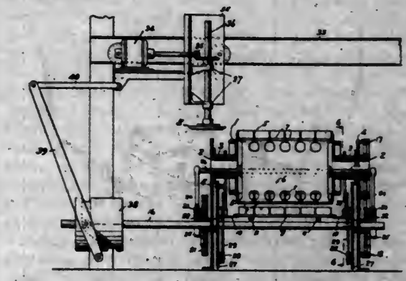
1,751,867. POP GAUGE. CHARLES J. MANUEL, La Crosse, Wis., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Apr. 2, 1929. Serial No. 351,915. 1 Claim. (Cl. 251—8.)

A relief valve for a gauge casing, comprising a two part valve structure slidingly mounted with a reduced part projecting within said casing, a valve seat formed within said casing, an inner regulating member adjustably mounted in said casing, a pressure means positioned between said members, a stop on said inner member for determining the amount of pressure exerted by said pressure means upon said outer member, projecting flanges on said casing and said valve for holding said outer member after same has been retracted and turned and a blow off passage capable of being opened by the retraction of said outer member.



1,751,868. FREE-WHEEL DRIVE. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 18, 1929. Serial No. 407,858. 4 Claims. (Cl. 74—99.)

1. A final drive for vehicles comprising driving wheels, a differential, a power shaft journaled in the differential housing and carrying driving planetary pinions, a stub shaft mounted in the housing, spaced bevel gears on opposite sides of the pinions journaled on the respective shafts, spaced skew bevel gears driven by the respective bevel gears and journaled on the respective shafts, shafts



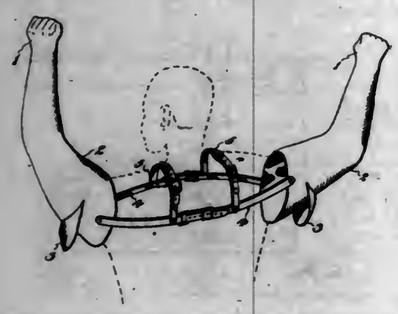
driving the respective wheels and mounted above the axis of the differential, and skew bevel pinions on the last named shafts engaging the respective skew bevel gears.

1,751,869. VULCANIZING APPARATUS. ROBERT MAYNE, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1928. Serial No. 328,016. 3 Claims. (Cl. 18—4.)

1. In apparatus of the character described, the combination of a sectional mold comprising mating mold sections, means within the mold sections for producing magnetic flux therein, means for feeding the mold in a course which extends through a vulcanizer, and means for energizing the flux-producing means at a determinate region of said course.

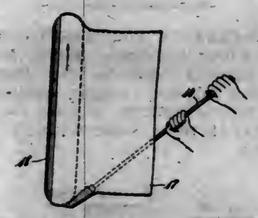
1,751,870. BRICK MACHINE. ROY I. MCCARTY, Barree, Pa. Filed Sept. 11, 1928. Serial No. 305,174. 4 Claims. (Cl. 25—81.)

1. A brick machine including in combination a generally rectangular hollow mold carrier having mold frames on opposite faces thereof, hollow trunnions by means of which the mold carrier is mounted for rotation about a horizontal axis, a plunger head arranged within the carrier and having mold bottoms for the frames, means for rotating the mold carrier with a dwell in its movement when in vertical position, pintles arranged in the hollow trunnion and connected with the plunger head, and cam mechanism



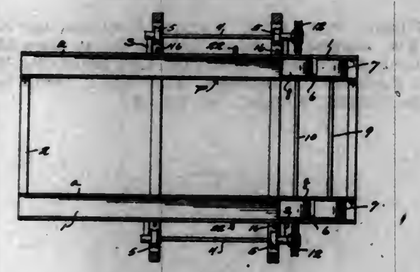
operative on the pintles for preventing relative movement of the plunger head and carrier while rotating and for causing relative movement of these elements when held against rotation.

1,751,871. WHEELED ATTACHMENT FOR MOTOR TRUCKS. WILLIAM R. MCCULLA, Sidney, Ohio, assignor to Plus-Two Wheels, Inc., Sidney, Ohio, a Corporation of Ohio. Filed Feb. 20, 1929. Serial No. 341,462. 1 Claim. (Cl. 280—106.5.)



In combination with a vehicle; wherein the vehicle comprises a chassis, a pair of rear springs attached to the chassis, a rear axle assembly on the rear springs; of an attachment including a cross member in the rear of the chassis, an arm pivotally mounted to the cross member, a spring transversely disposed to the chassis and pivotally connected at its center with the arm, an extension axle mounted on the opposite ends of the transverse spring, and wheels on the extension axle, and rods between the axle assembly and rear axle, said rods including universal joints, means for pivotally connecting the rods with the axle assembly and the extension axle, said arm including a casting formed with a pair of side members converging rearwardly toward each other, a web connecting the side members, a pair of bearings one at the rear end of each side member and a pair of bearings one at the front end of each side member, blocks in the cross member having pairs of bearings to receive the front bearings of the arm casting, pins for pivotally engaging the last mentioned bearings, a spring seat on the transverse seat having a bearing between the rear bearings of the arm casting and a pin pivoting said last mentioned bearings together.

1,751,872. GLOVE. WILLIAM M. MEDAUGH, Ohio City, Ohio. Filed Jan. 24, 1928. Serial No. 249,116. 2 Claims. (Cl. 2—159.)

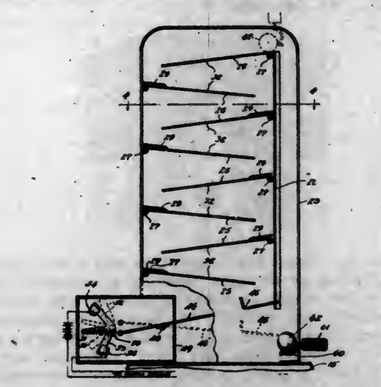


1. A glove having a sleeve extension of shoulder length, and a water shedding shield adjacent the shoulder end of the sleeve disposed circumferentially of the sleeve across the inner portion thereof and normally extending towards the shoulder end of the sleeve in diverging relation thereto and adapted to fold against the body when the gloved arm hangs and to spring outward when the arm is extended.

1,751,873. TIRE-BUILDING TOOL. CHRISTIAN J. MERZ, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 1, 1929. Serial No. 336,790. 7 Claims. (Cl. 154—9.)

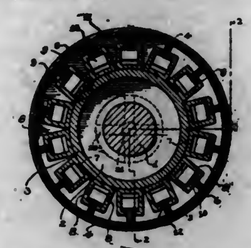
1. A tire-building tool comprising a hand bar and a sectional, tapered roller journaled on one end portion thereof.

1,751,874. AUTOMOBILE HANDLING APPARATUS. HORATIO S. MOORE, Bellefonte, Pa. Filed June 19, 1928. Serial No. 286,592. 2 Claims. (Cl. 254—144.)



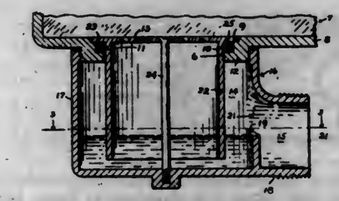
1. An automobile handling apparatus comprising a platform having a pair of spaced trackways, means for holding said trackways in spaced relation to each other and to a floor or the ground, a pair of transverse shafts rotatably mounted beneath said trackways and spaced inwardly from one end thereof, said shafts being mounted in spaced relation to each other, a plurality of drums rotatably mounted on said shafts and within said trackways, a gear secured to each of the opposite ends of one of said transverse shafts, a pair of parallel shafts rotatably mounted outwardly of said trackways, a gear secured to one end of said shafts and adapted to engage said first gear whereby to turn said parallel shafts cooperatively with said transverse shafts, a plurality of posts mounted on the floor or ground, winding means secured to said parallel shafts and engaging guide means on said posts whereby to raise the platform upon the turning of the drums, and holding means for holding the platform in raised position.

1,751,875. AUTOMATICALLY-TIMED ELECTRICAL DEVICE. JENTJE MULDER, Detroit, Mich. Filed May 26, 1928. Serial No. 280,787. 5 Claims. (Cl. 200—38.)



1. A timing device for electrical appliances, comprising an overthrow switch adapted to be actuated by the movement of a lever in a vertical plane, a platform on said lever, and means for causing a weight to drop on said platform and thereby actuate said lever and cause the latter to actuate said switch, said means comprising a vertical series of inclined shelves above said platform, each shelf inclined toward the one next below with the

lowermost inclined toward said platform, and a spherical weight adapted to be placed upon the topmost shelf and to

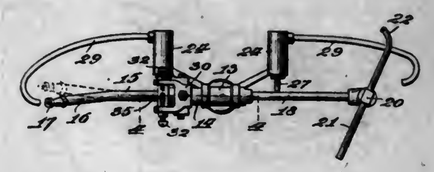


roll over said shelves in series and drop upon the said platform whereby to actuate the said lever and thereby said switch.

1,751,876. IRONING ROLL. GEORGE A. MUMFORD, Rochester, N. Y. Filed June 13, 1928. Serial No. 285,151. 7 Claims. (Cl. 68—9.)

1. An ironing surface comprising a rotary support, a plurality of surface forming members, resilient means acting upon said surface forming members to hold them in normal positions, and guiding means between the rotary support and the surface forming members preventing sidewise movement of the surface forming members in the direction of turning of the rotary member.

1,751,877. DRAIN TRAP. WILLIAM B. NANCE, San Leandro, Calif. Filed May 10, 1929. Serial No. 362,071. 1 Claim. (Cl. 182—20.)

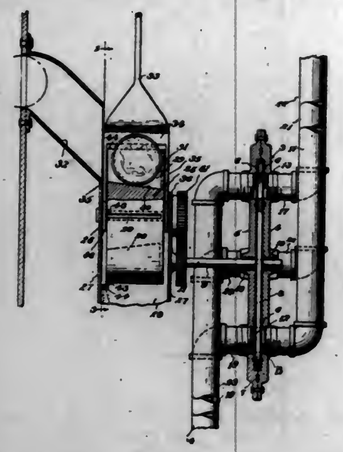


In a sink, a drain aperture, a seat for a strainer plate at said aperture, a strainer plate engaging said seat, a tubular discharge member depending from the aperture, a member mounted beneath the sink and providing a chamber enclosing said first member and having a side outlet above the bottom thereof, a sealing member for sealing said plate in its seat and to exteriorly seal said tubular member in said aperture, and tension means cooperative between the strainer plate and second member to releasably secure the said plate and member in their operative positions with respect to the aperture.

1,751,878. RACK. BENJAMIN H. NEWCOMER, Charleston, W. Va. Filed June 8, 1929. Serial No. 369,391. 1 Claim. (Cl. 211—51.)

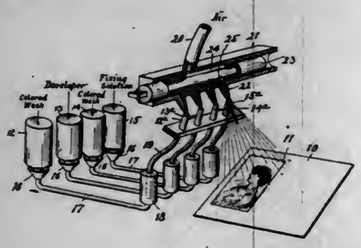
A rack structure of the class described comprising a base, a pair of front bars rising perpendicularly from the base, a pair of rear bars rising from the base, the opposed sides of the pair of bars converging upwardly, a plurality of superposed shelves mounted between the bars the widths of which are progressively reduced from the lowermost to the uppermost thereof, spring pressed rods across the shelves and extending beyond the marginal edges thereof and retractile springs secured, at one end, to the opposite end portions of the rods and having their opposite end anchored to the subjacent shelf.

1,751,879. WATER SPRINKLER. FINGAL C. OAR, Glendale, Calif. Filed Apr. 1, 1926. Serial No. 98,964. 3 Claims. (Cl. 299—71.)



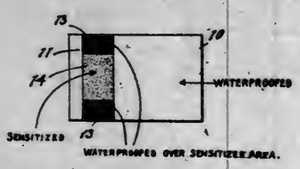
1. In a sprinkler, a supply pipe, a tubular arm mounted to rotate on a vertical axis on said supply pipe and having communication with the latter, an angularly disposed jet nozzle carried by said tubular arm and mounted for limited rotary movement thereon, a pair of cylinders adjustably mounted on the supply pipe, pistons arranged for operation within said cylinders, piston rods projecting from said pistons, an arm depending from the rotatably mounted tubular arm in position to engage the piston rods on oscillation of said arm thru the arc spacing said rods, tubes leading from said cylinders to a point in the path of travel of the jet nozzle on said vertical axis, said tubes having their open outer ends positioned to receive water discharged from said nozzle at the respective ends of its horizontal path of movement, whereby to actuate the respective piston rods in one direction and thereby cause rotation of said jet nozzle about its means of support, and means to return each said piston to its original position.

1,751,880. GASOLINE-DISPENSING PUMP. WALDO F. PEREZ, Jacksonville, Fla. Filed Aug. 16, 1928. Serial No. 300,064. 2 Claims. (Cl. 194—84.)



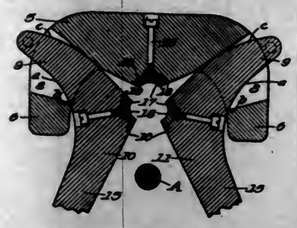
1. A coin controlled mechanism comprising a chute, a shaft journaled in the chute, a drum fixed to the shaft

and having radial coin receiving pockets formed therein, an actuating lever having an abutment, spaced arms depending from the abutment for spanning the drum, said



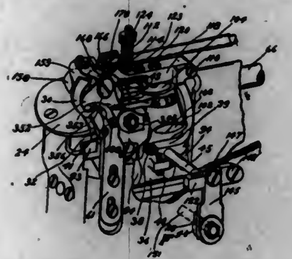
arms being pivotally connected to the shaft, and means for depositing a coin into a pocket of the drum for engagement with the abutment of the lever.

1,751,881. PROCESS FOR MAKING COLORED PHOTOGRAPHS. GEORGE N. PIFER, Cleveland, Ohio, assignor, by mesne assignments, to American Phototure Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 22, 1927. Serial No. 185,681. 7 Claims. (Cl. 95—5.)



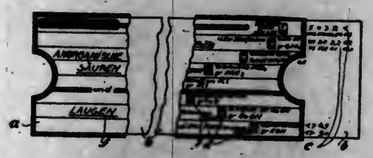
1. The process of producing a colored photograph which comprises developing an exposed surface and utilizing a colored washing solution in the developing process.

1,751,882. PHOTOGRAPHIC CARD AND METHOD OF PRODUCING THE SAME. GEORGE N. PIFER, Cleveland, Ohio, assignor to American Phototure Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 18, 1927. Serial No. 234,120. 6 Claims. (Cl. 95—8.)



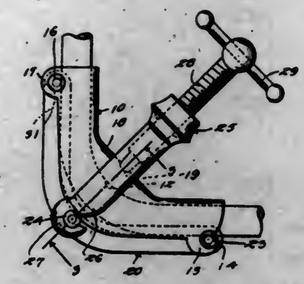
1. A method of producing a photographic card, comprising applying a strip of emulsion entirely across the card from one edge to the other, and applying a waterproof coating to the ends of said strip.

1,751,883. ROPE CLAMP. HARRY P. REIBER, Elyria, Ohio. Filed Sept. 21, 1928. Serial No. 307,426. 6 Claims. (Cl. 24—135.)



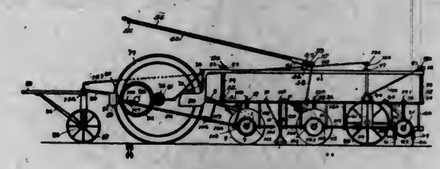
1. In a rope clamp, the combination with a body having a rope-gripping portion and openings on opposite sides thereof, a jaw loosely mounted in each opening for sliding movement and adapted for fulcruming engagement with a wall therein, each jaw having a rope-gripping portion, the movement of the jaws toward each other serving to cause each gripping portion to move substantially radially toward the center of the rope.

1,751,884. FOLDING MACHINE. ANDREW R. RIDDERSTROM, Nahant, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 13, 1923 Serial No. 668,345. 22 Claims. (Cl. 12—55.)



1. A folding machine having, in combination, means for feeding sheet material, a plow movable back and forth substantially in the line of feed for initiating a fold in the margin of the material, and means for varying the feed of the material without affecting the operation of the plow.

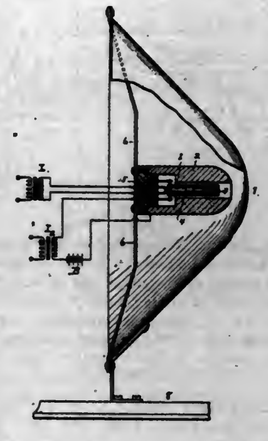
1,751,885. RECORD CARD AND COVER THEREFOR. FRANZ RIEHLE, Stuttgart, Germany. Filed Dec. 22, 1926, Serial No. 156,327, and in Germany Dec. 28, 1925. 1 Claim. (Cl. 40—65.)



A device of the character described comprising a cover having two open edges and composed of front and back portions secured together at two other edges, said cover being composed of a transparent material having a coating thereon leaving parts thereof uncoated forming transparent portions; and a card slidable in said cover through the open edges thereof and having indicia thereon visible through the transparent portions of the cover, said front and back portions also having indicia thereon, whereby by slidably adjusting the card in the cover the card is positioned to indicate the desired indicia thereon through the transparent portions in cooperation with the indicia on the cover.

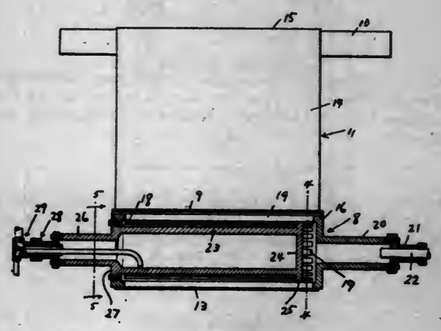
1,751,886. APPARATUS FOR BENDING SMALL PIPES. EDGAR A. ROCK, deceased, Norfolk, Nebr., by Caroline F. Rock, administratrix, Norfolk, Nebr. Filed Mar. 30, 1929. Serial No. 351,271. 6 Claims. (Cl. 81—15.)

1. In a bending apparatus for use with small pipes, an angular member having a trough formed in its cambered face, a similarly angled bending bar having a pipe receiving groove formed in its inner face, coacting means at corresponding ends of the angular member and bending bar for detachably pivotally connecting the same to one another, the bending bar being movable into the trough of the bar, and means detachably engageable with one of said elements and having an adjustable pressure bar for engagement with the other of said elements for moving the free end of the bending bar toward and into the trough of said member.



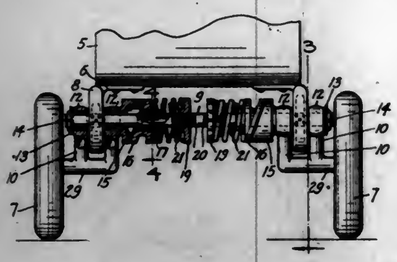
1,751,887. SOIL-WORKING COMBINE. CLARENCE F. ROSE, near Modoc, Ind. Filed Apr. 5, 1928. Serial No. 267,699. 6 Claims. (Cl. 97—40.)

1. A soil working machine comprising an upper frame including, an extension projecting forward from said main portion and located on a level lower than the main portion, rear guide wheels supporting the rear portion of said frame, drive wheels supporting the forward portion of said frame, a truck attached to the forward end of said frame, front guide wheels carrying said truck, means for automatically turning said rear guide wheels by the turning of the front guide wheels and in directions opposite thereto, a lower frame resiliently suspended below the main portion of the upper frame, a plurality of soil working tools carried by the lower frame, and means for operating said tools with power generated by the rotation of said drive wheels traveling on the ground.



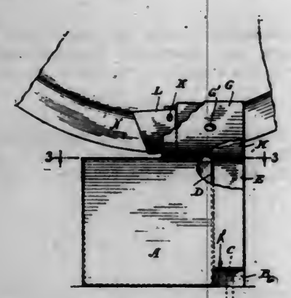
1,751,888. SOUND-EMITTING DEVICE. SAMUEL RUBEN, New York, N. Y., assignor to Ruben Patents Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 29, 1929. Serial No. 359,163. 9 Claims. (Cl. 179—113.)

1. A sound emitting device comprising a gas-filled container having a sound opening, an anode, an indirectly heated cathode having an equipotential operating surface, means for discharging an ionizing current through the gas, means for producing acoustic vibrations of the gas by



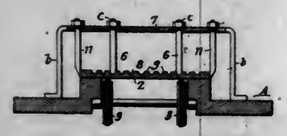
varying the ionization of the gas responsively to audio signal currents, and, means for directing the acoustic vibrations from the sound opening, away from the device.

1,751,889. APPARATUS FOR IMPREGNATING ROOFING FELT. CHARLES ROY SCULLEY, East St. Louis, Ill. Filed Jan. 18, 1929. Serial No. 333,828. 2 Claims. (Cl. 91—46.)



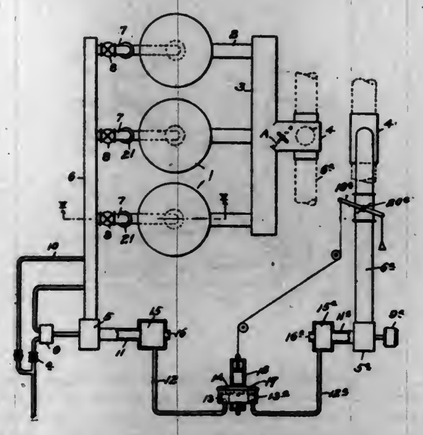
1. In a roofing felt saturating apparatus, a trough, a plurality of longitudinally spaced rotary applicators mounted for idling rotation in said trough, said applicators being in the form of hollow apertured rollers having means at one end for introducing liquid asphalt under pressure, and means at the opposite end for introducing a heating medium, individual shields mounted in the trough over each applicator, and a plurality of rotary heating and feeding elements supported above the trough, whereby to permit a strip of felt to be trained over said elements and rollers in a loop like tortuous manner.

1,751,890. MACHINE FOR AERIAL NAVIGATION. BENJAMIN F. SEYMOUR, Washington, D. C. Filed Sept. 16, 1927. Serial No. 219,981. 12 Claims. (Cl. 244—2.)



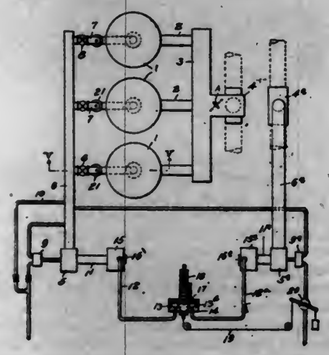
3. A landing gear for aeroplanes or the like including an element adapted to be engaged with the ground and yieldable means for taking up the shock due to said engagement, said yieldable means including axially aligned cooperating cam members, one of which is rotatable relative to the other about said axis by the ground engaging element.

1,751,891. CLEANING DEVICE FOR SLICING-MACHINE KNIVES. PETER SIVERTSEN, New York, N. Y. Filed Jan. 4, 1926. Serial No. 79,174. 5 Claims. (Cl. 146—102.)



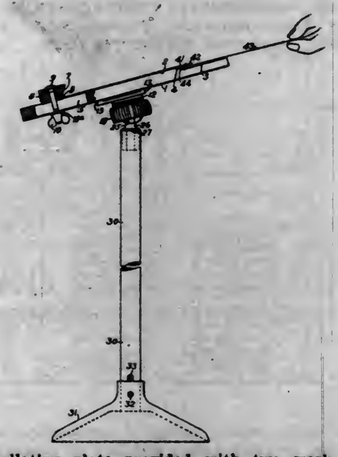
1. A cleaning device for slicing machines combining a receptacle having an extended portion, a free end located contiguous to the extended portion and a supporting post adjacent to the free end and extended portion.

1,751,892. DEVICE FOR SHAPING BATTERY SEPARATORS. VERNON A. SMITH, Berkeley, and CHARLES BACKMAN, Oakland, Calif. Filed Sept. 8, 1925. Serial No. 55,033. 4 Claims. (Cl. 144—2.)



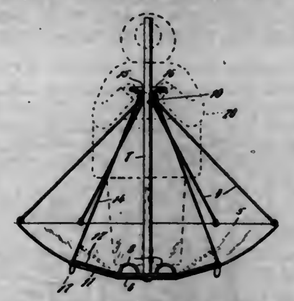
1. A device for shaping battery separators having corrugated faces comprising a cutting table, spaced apart stationary blades carried by the cutting table, a battery separator magazine positioned at one end of the table, a conveyer for moving the separators from the magazine and into cutting engagement with the blades and guides for engaging the grooves of a corrugated face of the separator during the shaping thereof by the cutting blades.

1,751,893. REGULATION OF COMBUSTION OF GASES IN FURNACES. ALFRED STEINBART, Pittsburgh, Pa. Filed Dec. 11, 1925. Serial No. 74,736. 6 Claims. (Cl. 110—31.)



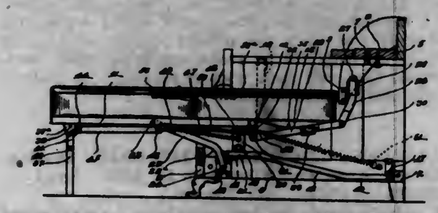
1. In combination a furnace, a producer for supplying gas to the furnace, conduits for conducting air to the furnace and producer respectively, a variably operable means for forcing air through one of said conduits, means adapted to supply to the other conduit a quantity of air greater than is necessary to effect combustion of gas supplied at any given time, a valve in the latter of said conduits, and means operative by and in accordance with changes of pressure in the variably supplied air for shifting said valve.

1,751,894. REGULATION OF COMBUSTION OF GASES IN FURNACES. ALFRED STEINBART, Pittsburgh, Pa. Filed Feb. 7, 1925. Serial No. 7,636. 14 Claims. (Cl. 110—31.)



1. The method herein described for effecting the progressive combustion of coal which consists in effecting a preliminary combustion of coal, supplying air for such preliminary combustion in quantities less than that required for complete combustion of the coal, effecting the combustion of the gas formed during the preliminary combustion and regulating the supply of air for one of such combustion stages by and in accordance with the air supplied for the other combustion stage.

1,751,895. COLLATING TABLE. HARVEY J. STEWART, San Francisco, Calif., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Sept. 13, 1927. Serial No. 219,313. 19 Claims. (Cl. 282—29.)

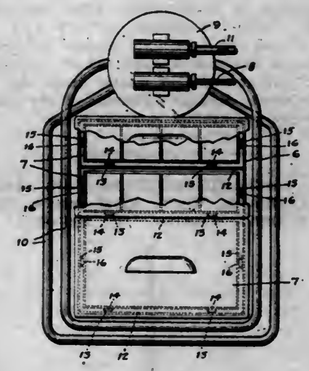


1. A collating plate provided with two work sheets supporting surfaces disposed in separate parallel planes and means for directing a work sheet from one to the other of said surfaces.

1,751,896. RETARDING DEVICE FOR PERSONS ESCAPING FROM A SUBMERGED VESSEL. RAYMOND A. TAYLOR, Frederick, Md. Filed Feb. 8, 1929. Serial No. 338,484. 6 Claims. (Cl. 114—16.6.)

1. An apparatus of the class described comprising a stand, a post rising from the stand, a body disposed about the stand, openings in the body, valves associated with the opening, and means operable from the post for opening the valves.

1,751,897. FURNITURE. MARTIN THUM, Rochester, N. Y. Filed Oct. 28, 1925. Serial No. 65,464. 10 Claims. (Cl. 5—17.)

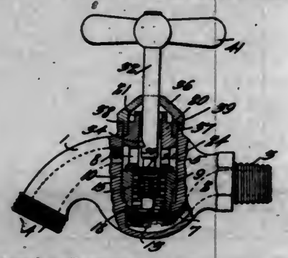


1. In furniture, the combination with a frame, of a bottom member movable to an inner and to an outer position on the frame, an extension for the rear edge of the bottom member pivoted on the latter to move to and from an extended position, and means connected with said extension for causing the latter to swing upwardly as the bottom member moves inwardly, said means comprising two links pivoted to the bottom member, guides on the links with which said extension engages, and links pivoted to the first mentioned links and also to the frame above the bottom member to cause the first mentioned links to swing upwardly.

1,751,898. DEVICE FOR WEIGHING MATERIAL DURING ITS MOTION THROUGH A CONVEYER. RICHARD UHLIG, Bethlehem, Pa. Filed July 15, 1927, Serial No. 206,104, and in Germany Dec. 19, 1925. 3 Claims. (Cl. 265—27.)

1. A device for weighing material during its motion through a conveyer, comprising a weighing device, a travelling belt mounted on reversing rollers and adapted to serve for the supply of said material to said device as well as for the discharge of said material therefrom, means for mounting said weighing device and said reversing rollers displaceably in the direction of travel of said belt for the purpose of changing at will the place of weighing of said material as well as the place of discharging the same from said device.

1,751,899. COOLING UNIT. HARRY A. WHITFIELD, Arlington, N. J. Filed July 30, 1927. Serial No. 209,418. 6 Claims. (Cl. 62—111.)

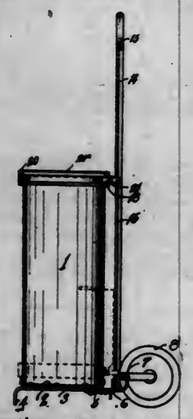


1. In a cooling unit for a refrigerating machine, means for chilling the unit, drawer supporting means located within the unit, drawers carried by said supporting means, and means cooperating with said supporting means and said drawers for preventing said drawers from freezing to said supporting means, said means including a carrying medium for a fluid having a low freezing point.

1,751,900. FAUCET. CHARLES W. WILSON, Renton, Wash. Filed Aug. 4, 1927, Serial No. 210,652. Renewed Nov. 9, 1929. 1 Claim. (Cl. 277—42.)

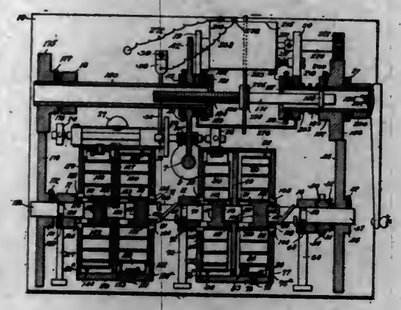
A valve operating means for faucets, including a body having a vertical well therein and formed with inlet and outlet openings to the well, the wall of said well being threaded, a valve barrel exteriorly threaded and

adapted to be positioned in the well, a shoulder formed on the valve barrel providing a stop for said barrel, a valve seat formed at the lower end of the valve barrel, a valve seating on said valve seat, a valve stem integral with the valve extending upwards into said barrel, said stem being reduced and threaded in its upper portion, a U-shaped yoke carried on the valve stem, the reduced portion providing a shoulder upon which the bend of the yoke rests, the side arms of said yoke being bent laterally adjacent their extremities, a coil spring bearing against the bottom of the valve barrel and the bent ends of the



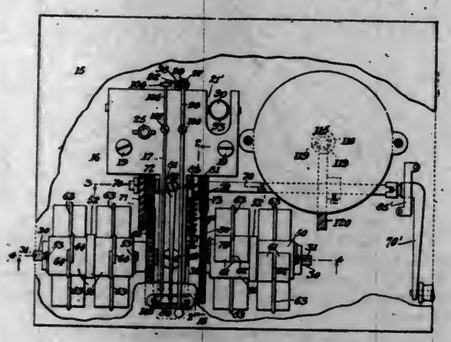
yoke, a second coil spring positioned over the reduced portion of the valve stem, a shoulder formed interiorly of the valve barrel above the yoke, a gasket seated in said shoulder, a cam operating rod adapted for movement within the valve barrel and formed with a head adapted to seat on the gasket, said head also bearing against the second spring and bent yoke arm, whereby movement of the operating rod unseats the head from the gasket, depresses the yoke which unseats the valve opening the inlet, the second spring preventing chattering of the operating rod.

1,751,901. PROCESS OF WORKING NATURAL SODIUM SULPHATE DEPOSITS. GEORGE F. ANDERSEN, Seattle, Wash., assignor, by direct and mesne assignments, to Weltha Process Corporation, Seattle, Wash., a Corporation of Washington. Filed Nov. 12, 1928. Serial No. 318,897. 6 Claims. (Cl. 23—41.)



1. The process of obtaining sodium sulphate from natural sodium sulphate deposits, which consists in excluding the silt and foreign matter from said deposits and permitting the natural formation of the sodium sulphate from natural sodium sulphate brine.

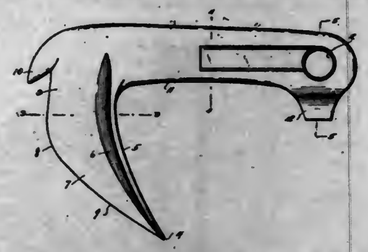
1,751,902. WHEELED SHOPPING BAG. LEMUEL A. BROWN, Charleston, Wash. Filed June 5, 1928. Serial No. 283,087. 3 Claims. (Cl. 280—51.)



1. The combination with a wheeled frame having a slotted handle, of a collapsible bag secured to said frame, a bag-holder adapted to slide in said slotted handle, and means on the handle to support the holder with the bag in extended position.

1,751,903. ELECTRICALLY-WOUND SPRING MOTOR. JOHN BAILEY BROWNING, Camden, N. J. Filed Nov. 9, 1921. Serial No. 513,972. 48 Claims. (Cl. 185—37.)

1. A spring motor, having in combination, a supporting frame provided with a plurality of depending brackets; a shaft rotatably mounted through each bracket, being substantially centrally supported and having each of its ends freely projecting therefrom on each side of said brackets, and a spring unit mounted on and between the free ends of said shafts between said brackets, said units being freely removably therefrom without removing said shafts from said brackets.



1,751,904. ELECTRICALLY-WOUND SPRING MOTOR. JOHN BAILEY BROWNING, Camden, N. J. Filed July 3, 1919. Serial No. 308,408. 47 Claims. (Cl. 185—4.)

1. A spring motor having in combination a support, a shaft extending rotatably therethrough and projecting in opposite directions therefrom, and a spring unit including a rotatable cage inclosing a coiled spring surrounding said shaft upon each side of said support, said spring units being connected in series and being freely withdrawable from said shaft without changing the position of said shaft in said support.

1,751,905. LUMBERMAN'S LOG GRAB. CYRUS L. BUTTON, Kane, Pa. Filed June 18, 1929. Serial No. 371,791. 3 Claims. (Cl. 294—82.)

1. A lumberman's log grab comprising a shank having an eye at one end and a bill at the opposite end, said bill at its outer end having a relatively broad chisel like penetrating edge, and being of gradually decreasing width

from said end to the point of joinder with the shank, said shank being of less width at its inner edge than at its outer or back edge and having a reduced inner portion.

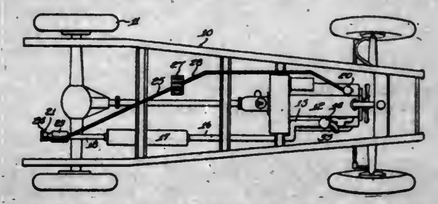
1,751,906. HOLLOW CYLINDER OR BUSHING AND METHOD OF RECESSING THE SAME. GEORGE HALL CLARK, Cincinnati, Ohio, assignor, by mesne assignments, to Merriman Brothers, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,318. 18 Claims. (Cl. 29—149.5.)

1. The hereindescribed method of preparing bushings for the reception of lubricant inserts which consists in drilling a hole through the wall of the bushing from the exterior thereof and forming a recess in the inner face of said wall by means of a tool passed through said hole.

7. A hollow cylinder having a continuous annular wall provided with a series of holes some of which pass entirely through said wall and the remainder of which comprise recesses in the inner face of said wall, extending only part way through the latter, and disposed diametrically opposite said first named holes.

1,751,907. ADJUSTABLE SEAT. ALBERT A. CRIPPS, Detroit, Mich., assignor, by mesne assignments, to Chrysler Corporation, a Corporation of Delaware. Filed Mar. 19, 1928. Serial No. 262,917. 8 Claims. (Cl. 155—14.)

1. In combination, a motor vehicle having a flooring, a seat, and means for pivotally and adjustably mounting said seat upon said flooring including a pair of spaced racks secured to the flooring, each rack being provided with spaced recesses, a tie rod carried by said seat and receivable in said recesses, and means for locking said tie rod to said racks.



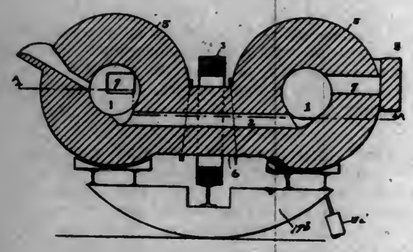
1,751,908. PROCESS OF AND PRODUCT FOR PHOTOGRAPHIC ETCHING. ALEX BROOKING DAVIS, Cincinnati, Ohio, assignor, by mesne assignments, to Keystone Watch Case Corporation, Riverside, N. J., a Corporation of Pennsylvania. Filed Dec. 16, 1926. Serial No. 155,336. 33 Claims. (Cl. 95—5.7.)

1. A photographic etching prepared by coating the object to be etched with a solution of asphalt, allowing the solvent to evaporate, washing the deposited film with ether, exposing to a light pattern, developing the image and etching.

1,751,909. PHOTOGRAPHIC RESIST AND PROCESS OF PHOTOGRAPHIC ETCHING. ALEX BROOKING DAVIS, Cincinnati, Ohio, assignor, by mesne assignments, to Keystone Watch Case Corporation, Riverside, N. J., a Corporation of Pennsylvania. Filed Jan. 28, 1927. Serial No. 164,380. 15 Claims. (Cl. 95—5.7.)

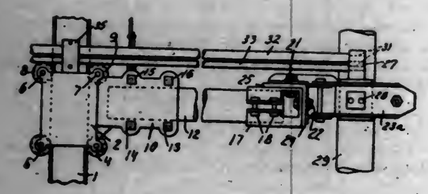
1. As the body of an alkali-insoluble resist for photo etching, the reaction product of shellac with tannin-bearing substances.

1,751,910. VENTILATING MEANS FOR MOTOR VEHICLES. DANIEL C. DOZIER, Norfolk, Va., assignor to Edgerton-Dozier Corporation, Suffolk, Va., a Corporation of Virginia. Filed Mar. 12, 1928. Serial No. 261,007. 5 Claims. (Cl. 123—171.)



1. A device of the character described comprising a conduit communicating with one side of the crank case of an internal combustion engine to deliver air thereto, a pipe communicating at one end with the opposite side of the crank case, means connected to the opposite end of said pipe for creating a partial vacuum therein, and a ventilator connected to said pipe intermediate its ends and adapted to deliver air thereto in insufficient quantities to satisfy the depression therein created by said means.

1,751,911. BRAKE BLOCK. HEINRICH CONSTANTIN GEORGI, Berlin-Zehlendorf-West, Germany, assignor to Deutsche Asbestwerke A. G., Berlin-Zehlendorf, Germany, a Joint Stock Company. Filed May 11, 1929, Serial No. 362,311, and in Germany Nov. 30, 1927. 5 Claims. (Cl. 188—259.)



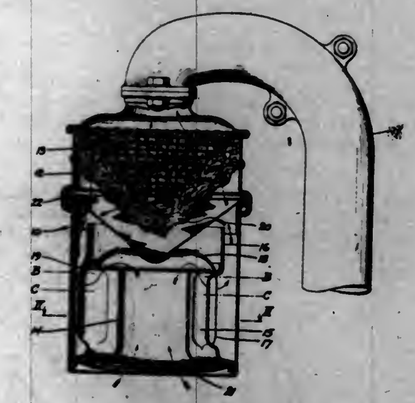
1. A fibrous brake block having a central core and a surrounding body of compressed fibrous material, the fibers in the body extending generally in a direction angularly with respect to the axis of the core.

1,751,912. ELECTRIC INDUCTION FURNACE. ALBERT E. GREENE, Seattle, Wash. Original application filed Jan. 3, 1913, Serial No. 740,034. Divided and this application filed Aug. 30, 1920. Serial No. 406,894. 26 Claims. (Cl. 266—1.5.)

1. An electric furnace comprising a horizontal cylindrical shell lined with refractory material forming a main chamber within, means for tilting about an axis parallel to that of the horizontal cylindrical shell to tilt said shell backwards or forwards, a transformer attached to said furnace having a primary winding for magnetizing the core, an induction channel encircling said core and connecting with the main chamber at one side thereof, means for heating charge in the main chamber by current through electrodes entering said chamber and means for independently heating the metal in the induction channels by inducing current therein when desired.

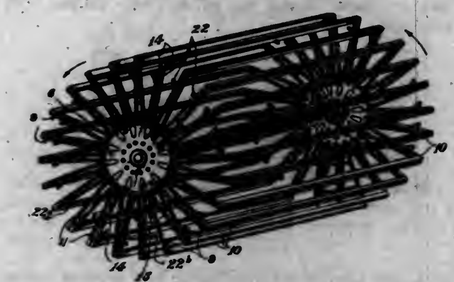
1,751,913. ELECTRIC FURNACE. ALBERT E. GREENE, Medina, Wash. Filed Feb. 8, 1927. Serial No. 166,676. 8 Claims. (Cl. 266—1.5.)

1. An electric furnace electrode mechanism comprising an electrode holding arm movable vertically to raise or lower an electrode held thereby, and a clamping member attached to said arm for clamping an electrode, and means for lateral adjustment of the position of said clamping member with respect to the axis of said arm.



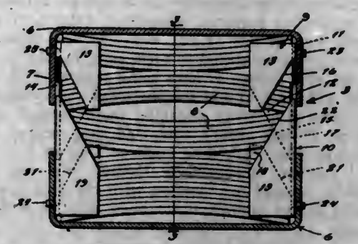
1,751,914. PUMP BARREL. EDGAR E. GREVE, Bellevue, Pa. Filed Mar. 28, 1928. Serial No. 265,284. 2 Claims. (Cl. 74—108.)

2. In a pump barrel, a tubular replaceable liner formed of a series of liner sections each having its exterior surface provided with rows of spaced-apart projecting contact elements providing noncontinuous contacting surfaces with the elements of one row staggered with relation to the



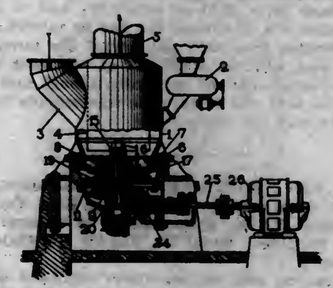
elements of an adjacent row, an upper and a lower collar disposed on the upper and lower ends of the barrel and co-operating with the liner.

1,751,915. AIR CLEANER. ELBERT J. HALL, Berkeley, Calif., and CHARLES A. WINSLOW, Michigan City, Ind. Filed Jan. 4, 1926. Serial No. 79,142. 4 Claims. (Cl. 183—15.)



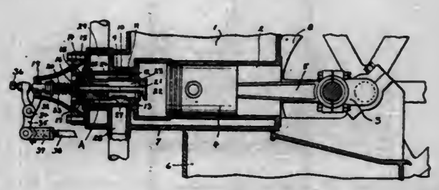
4. An air cleaner comprising a casing having an outlet in its upper portion for connection with a suction device, a filtering element comprising a conical basket extending across the casing below the outlet and filled with filtering material, said casing having an opening in its bottom, a standpipe surrounding the opening and extending upwardly within the casing and forming in conjunction with the latter an annular reservoir, a perforated cylindrical member arranged in the reservoir, a baffle disposed above the standpipe and below the filtering element for directing incoming air through the perforated member in the reservoir whereby the air comes in contact with the liquid and the liquid is carried into the filtering material, said baffle being so arranged as to return the liquid draining from the filtering material back into the reservoir.

1,751,916. FLAX-PULLING MECHANISM. THOMAS WALTER HALL, Leonard, Ontario, Canada. Filed Apr. 8, 1927, Serial No. 182,049, and in Canada Apr. 14, 1926. 2 Claims. (Cl. 55—66.)



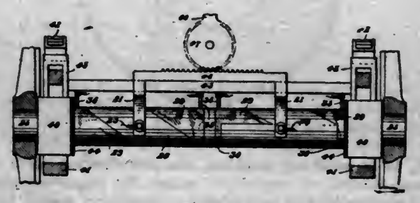
1. A flax pulling mechanism including a reel comprising radially fixed arms and co-operating pivoted arms arranged in pairs with each of said pivoted arms normally spaced from the co-operative fixed arms; toggle hinges between each pivoted arm and its co-operative fixed arm; means for successively opening said toggle hinges and thereby drawing each pivoted arm into engagement with its co-operating arm, at times; and means to co-operate with said last mentioned arms in pulling the flax stalks.

1,751,917. RAILWAY-CAR-TRUCK SPRING. CYRUS HANKINS, Baltimore, Md., assignor, by mesne assignments, to T. H. Symington and Son, Inc., Baltimore, Md., a Corporation of Maryland. Filed June 13, 1925. Serial No. 36,976. 16 Claims. (Cl. 267—3.)



1. In a railway car truck spring device, a pair of casing sections of pan-like formation arranged with their open sides toward each other and normally spaced apart, sets of cushioning devices located within and between the casing sections, and means detachably mounted within said sections for spacing the adjacent sets laterally apart.

1,751,918. GRINDING MILL. RALPH M. HARDGROVE, Bethlehem, Pa., assignor to Fuller Lehigh Company, Fullerton, Pa., a Corporation of Delaware. Filed May 14, 1928. Serial No. 277,437. 13 Claims. (Cl. 83—45.)

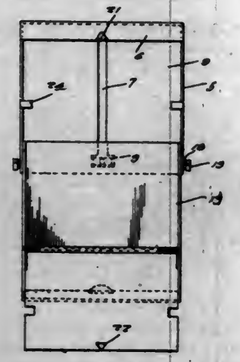


1. In a grinding mill, a grinding ring having a grinding surface sloping downwardly and outwardly, a member inside of said ring having a surface sloping downwardly and outwardly at a greater angle than the grinding surface of said ring, and balls between said ring and member.

1,751,919. INTERNAL-COMBUSTION ENGINE. CORNELIUS B. HARDMAN, Columbus, Ohio. Filed Mar. 26, 1928. Serial No. 264,743. 3 Claims. (Cl. 123—79.)

1. In an internal combustion engine provided with intake and exhaust passages, a common passage leading into the engine cylinder and communicating with both the intake and exhaust passages, a cage member located within said common passage and provided at its inner end with a flange and a valve seat, a hollow distributing sleeve rotatably supported on the exterior of said cage member, means for imparting turning motion to said sleeve to uncover said intake and exhaust passages in their proper order, a primary valve working on the valve seat of said cage member, a cap section fastened to the head of said cylinder for retaining said sleeve against longitudinal movement and adjustable means carried by said cap section and acting on the outer end of said cage member for maintaining said flange in fluid-tight seating engagement with the inner end of said passage.

1,751,920. VALVE CONTROL FOR DRIVING ENGINES. FRED E. HOLBROOK, Elmira, and CHARLES H. HOLBROOK, Hornell, N. Y. Filed May 28, 1925. Serial No. 33,412. 1 Claim. (Cl. 200—26.)

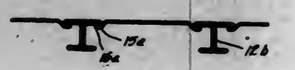


Circuit making and breaking means, comprising in combination, an axle having a longitudinal keyway, an insulating sleeve keyed to said axle for relative longitudinal movement in respect thereto, said sleeve being held against lateral movement relative to the bearings, a plurality of contacts embedded in said sleeve and arranged in pairs, a collector ring formed integrally with each contact, a slide bar connecting said bearings, an electricity supply brush for each collector ring carried by the slide bar, a yoke for each pair of contacts slidably carried by said bar and straddling the sleeve and journal, a brush carried by each end of each yoke, and means for sliding said yokes in unison longitudinally of the slide bar and sleeve.

1,751,921. CIGARETTE CASE. HARDING O. JORDAN, Langston, Okla. Filed Dec. 18, 1928. Serial No. 325,852. 3 Claims. (Cl. 206—41.)

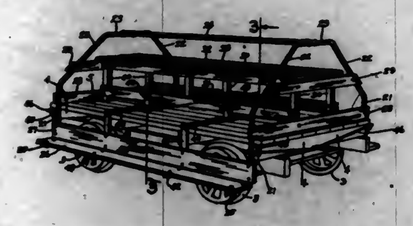
1. A cigarette case of the class described comprising a casing open at its front and bottom sides, a cigarette container mounted for sliding movement in the casing and

open at its upper portion, trunnions carried by the container and supported by the casing for the pivotal move-



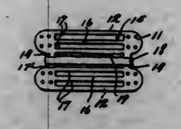
ment of the former when arranged in outward position and a door hingedly mounted at the front side of the container.

1,751,922. WASHING MACHINE. JOE H. JOSEPH, Cincinnati, Ohio. Filed Apr. 8, 1929. Serial No. 353,314. 3 Claims. (Cl. 259—108.)



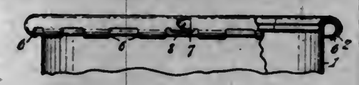
1. In a washing machine, the combination with the vessel thereof, of mechanical means for imparting eccentric movement, and an agitator eccentrically moved thereby, said agitator having substantially continuous walls of substantial depth in the direction of the axis of the vessel.

1,751,923. STRUCTURAL MATERIAL. THOMAS H. KANE, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Dec. 21, 1925. Serial No. 76,665. 2 Claims. (Cl. 189—34.)



1. A roofing or flooring material comprising a continuous sheet of metal, a plurality of stiffening ribs therefor formed of sheet metal folded to I or T shape, and means for securing a double flange of said ribs to one side of said sheet, said means comprising folds formed of the metal of said sheet crimped over the edges of said double flange.

1,751,924. SET-OFF VEHICLE TOP. WALTER F. KASPER, Fairmont, Minn., and EDWARD J. MCKERNAN, Topeka, Kans., assignors to Fairmont Railway Motors, Inc., Fairmont, Minn., a Corporation of Minnesota. Filed May 29, 1929. Serial No. 367,002. 11 Claims. (Cl. 105—162.)

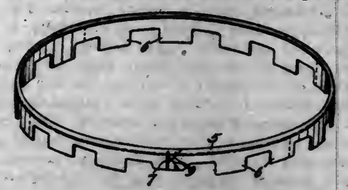


1. A unit adapted for attachment to a wheeled vehicle including parts arranged to provide a seat above the level of the vehicle floor, of dimensions to expose sufficient floor surface to provide seating space laterally of the seat.

1,751,925. FASTENING DEVICE FOR GARMENT STRAPS. LILLUS A. KELLEY, Calistoga, Calif. Filed Mar. 15, 1928. Serial No. 261,949. 1 Claim. (Cl. 24—196.)

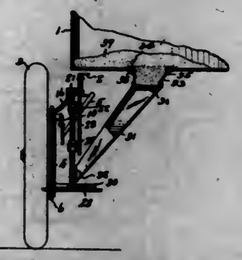
A fastening device adjustable for securing a garment supporting strap to a garment, comprising a flat body formed to provide two groups of bar members, the members of each group being separated to form slots for the reception of a strap, said groups of bars being separated to form a relatively wide central slot therebetween and substantially parallel therewith, strap engaging teeth formed along a bar of one of said groups bordering said central slot, a strap engaging bar extending longitudinally of the central slot and shiftable transversely thereof, said bar having teeth along one side for coaction with the first mentioned teeth, and means whereby said body may be secured to a garment.

1,751,926. CONTAINER. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed June 19, 1928. Serial No. 286,622. 5 Claims. (Cl. 220—61.)



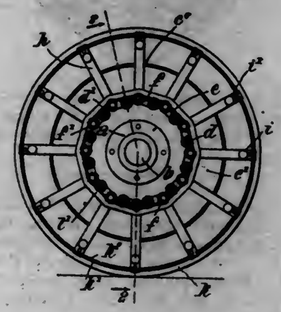
1. A sealing ring of the character described, comprising a single strip of sheet metal, one end of said ring having therein a transverse slot and an inwardly pressed seat extending from said slot toward the terminal edge of said end, and the other end of said ring having a struck-up tongue entered outwardly through said slot and engaged in said seat so as to lie substantially flush with the first named end of the ring.

1,751,927. CONTAINER. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed June 19, 1928. Serial No. 286,623. 2 Claims. (Cl. 220—61.)



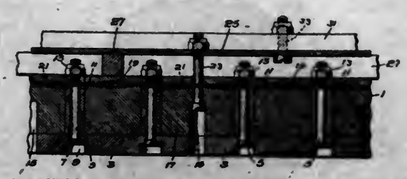
1. A sealing ring for containers composed of a strip having an opening adjacent one end and having oppositely disposed tongues at the ends of the opening, the other

end of the strip being of reduced width and received in said opening and having oppositely disposed tongues in a plane parallel to and in register with the plane of the



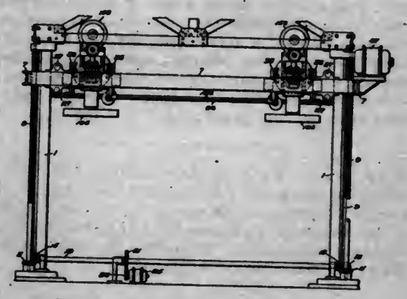
first named tongues and bent outwardly to engage the inner face of the first named end of the strip, the first named tongues being engaged over the outer face of the reduced end of the strip.

1,751,928. SAND SPREADER FOR TRUCKS. MARTIN LACHNER, Delawana, N. J. Filed Mar. 7, 1927. Serial No. 173,404. 2 Claims. (Cl. 275—8.)



1. A spreader for trucks comprising, a hanger secured to the truck chassis well in advance of the rear wheels of the truck, a bearing carried by said hanger, a vertical spreader shaft mounted in said bearing for rotation about a vertical axis, a horizontal spreader disk secured to said spreader shaft, a chute secured to the truck chassis, said chute having its discharge end positioned over the spreader disk and its intake end positioned under the truck body, and a discharge member provided on the bottom of the truck body over the intake end of said chute, said discharge member having its lower outlet portion positioned to extend into the intake end of said chute during the spreading operation, said discharge member being arranged to move out of the intake end of said chute during a dumping operation of the truck.

1,751,929. FLEXIBLE WHEEL. JEAN JOSEPH CHARLES LAROZE, St. Cloud, France, assignor to The French Society "La Roue Elastique," Billancourt, Seine, France. Filed Dec. 1, 1928, Serial No. 323,024, and in Germany Dec. 10, 1927. 3 Claims. (Cl. 152—29.)



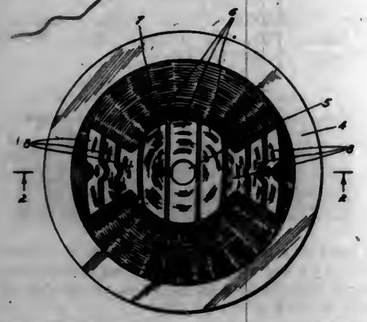
1. A wheel comprising a rim assembly including a substantially circular elastically deformable rim element, a plurality of spokes connected to said rim assembly, said spokes having a portion thereof which is displaceable radially, and means operative to oppose the outward displacement of all but one spoke, when the displaceable portion of said last-named spoke is displaced inwardly.

1,751,930. POLISHING HEAD. PETER S. LEGGE, Somerville, Mass. Filed Jan. 5, 1927. Serial No. 159,119. 12 Claims. (Cl. 51—195.)

1. A polishing head comprising a disk of flexible material carrying a plurality of spaced abrading members, and a separate rigid backing for said disk supporting the same in spaced relation at spaced points.

1,751,931. STONEWORKING MACHINE. PETER S. LEGGE, Pompton Lakes, N. J. Filed Aug. 2, 1927. Serial No. 210,072. 9 Claims. (Cl. 51—56.)

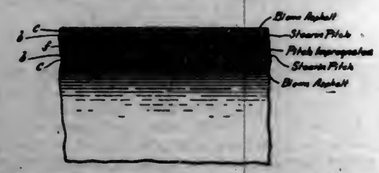
1. A machine of the character described having, in combination, a framework, a plurality of carriages each supporting a tool and a motor, the latter for driving said tool, a second carriage upon which said plurality of carriages are mounted, a single motor, and means actuated by said motor for traversing said plurality of carriages upon said second carriage and the latter upon said framework.



1,751,932. SALTS OF ALKALINE-EARTH METALS. FELIX LINDNER, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Apr. 25, 1927, Serial No. 186,592, and in Germany June 8, 1926. 5 Claims. (Cl. 23—102.)

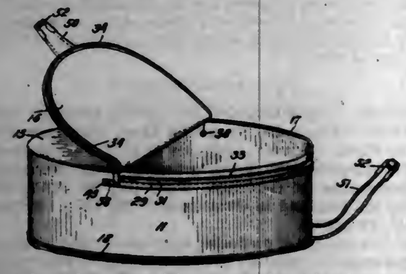
2. The process of producing salts of alkaline earth metals which comprises grinding an alkaline earth metal sulfid with an ammonium salt of a strong acid to be combined with the alkaline earth metal, with an addition of a small amount of water.

1,751,933. PRODUCTION OF HYDROCYANIC ACID. FELIX LINDNER and FRIEDRICH LINK, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Oct. 18, 1927, Serial No. 227,051, and in Germany Oct. 30, 1926. 3 Claims. (Cl. 23—151.)



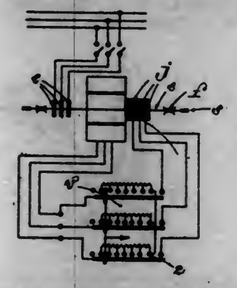
3. The process of producing hydrocyanic acid which comprises passing a mixture of carbon monoxide and ammonia over a catalyst comprising iron carbide and molybdenum at a temperature of about 450° C.

1,751,934. ANTIGLARE REFLECTOR. REGINALD LINTON and WILLIAM JOHN JARVIS, Sydney, Australia, assignors to The Egarsol Glareless Reflector Co. Ltd., Sydney, Australia, a Corporation of New South Wales. Filed Mar. 9, 1928, Serial No. 260,383, and in Australia Nov. 8, 1927. 2 Claims. (Cl. 240—41.)



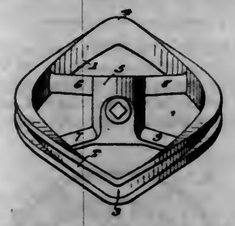
1. An anti-glare concave reflector, comprising a plurality of substantially rectangular embossed transversely flattened and polished surfaces adjacent to the center of the reflector for the purpose of reflecting a beam of light from a light source within the reflector, that will penetrate a long distance ahead, a mat or non-highly polished surface above and below the said embossed polished surfaces for producing a soft widely diffused beam of light directly in front of the reflector, and highly polished embossed transversely flattened portions disposed on each side of the central embossed portion, whereby a wide penetrating beam of light is reflected.

1,751,935. WATERPROOF FIBER ARTICLE AND METHOD OF MANUFACTURING THE SAME. EVERETT W. LOVERING and WALLACE B. VAN ARSDEL, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Dec. 12, 1928. Serial No. 325,428. 14 Claims. (Cl. 91—68.)



1. A product comprising pitch-impregnated fibrous material, a coating comprising blown asphalt on such material, and a substance under said coating firmly bonding it to the fibrous material.

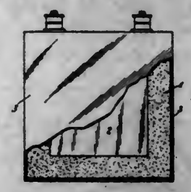
1,751,936. HAND BAG. JOSEPH N. LOWE, New York, N. Y. Filed Dec. 15, 1926. Serial No. 154,947. 10 Claims. (Cl. 206—8.)



1. A hand bag, comprising, a peripheral band composed of flexible material, strip-form stiffening means reinforcing it from its inner surface, side walls secured to the edges of the peripheral band, and one of the side walls adapted to open to provide with the adjacent free edge of the peripheral band a mouth portion for the bag, the stiffening means extending substantially to the free edge, hookless fastening means secured to the openable side wall and to the peripheral band for substantially the length of the mouth portion of the bag and overlapping the outside of the band when the bag is closed, such means comprising a manually operable slide for causing the mutual engagement of the hookless fastenings or the disengagement thereof, such hookless fastening means having a backing support upon the reinforced adjacent portion of the band when the bag is closed.

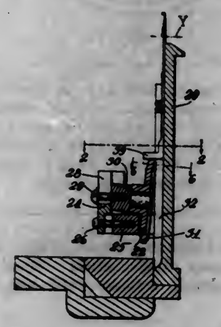
1,751,937. SELF-EXCITING COMPENSATED ASYNCHRONOUS MACHINE. JEAN LOUIS MATABON and CHARLES MICHEL FOUCAULT, Lyon, France. Filed Nov. 28, 1925, Serial No. 72,025, and in France Dec. 26, 1924. 1 Claim. (Cl. 172—274.)

In a compensated asynchronous machine, a rotor having slots extending throughout its length, two windings wound together, on the said rotor in said slots, slip rings for three phase operation connected to one of said windings, a stator, three brushes connected to the stator winding, a commutator on which the said brushes are so adjusted that the machine runs in synchronism at no load or under light load, and a starter coupled to the said brushes and the said stator winding.



1,751,938. CAM. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Mar. 6, 1929. Serial No. 344,695. 2 Claims. (Cl. 74—1.)

1. A cast iron traverse cam comprising a rim treated at its return points to harden them, a hub and spokes connecting the hub with the rim between said hardened return points.



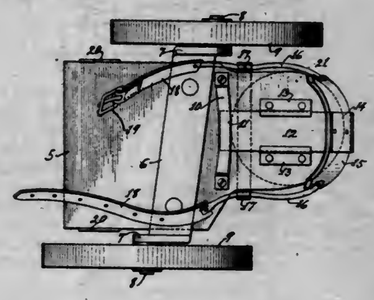
1,751,939. INSULATION OF ELECTRICAL APPARATUS. ALEXANDER MEISSNER, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed July 18, 1929, Serial No. 379,130, and in Germany July 12, 1928. 5 Claims. (Cl. 175—356.)

1. An electrical apparatus comprising one or more members housed within said casing and spaced therefrom, said spaces being subject to electric potential stresses produced by said member or members, there being

pulverized piezo-electric material disposed in said spaces, whereby said members are insulated from the casing and one another.

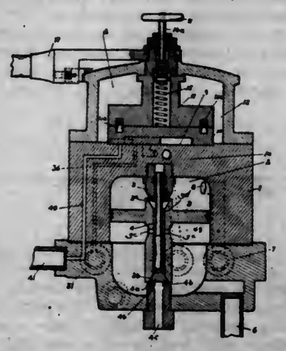
1,751,940. KNITTING MACHINE. FRANK J. MOLONEY, South Manchester, Conn., assignor, by direct and mesne assignments, to Howard E. Page, Belmont, Mass. Filed Dec. 31, 1928. Serial No. 329,377. 7 Claims. (Cl. 66—50.)

1. In a circular knitting machine having a needle-cylinder and needles, a pattern wheel consisting of a single disk adapted to engage and selectively raise said needles, said wheel having gear teeth projecting from the plane of one of its faces and directly meshing with said cylinder.



1,751,941. WRITING DEVICE. HOWARD I. MORRIS, Cleveland, Ohio, assignor to The Yoder Pencil Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 29, 1921. Serial No. 525,585. 53 Claims. (Cl. 120—17.)

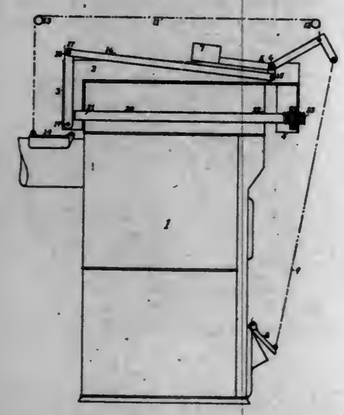
1. A pencil comprising a body adapted to support a writing element at one end, a guide element through which the writing element moves, means normally acting on one of said elements in an outward direction, and means actuated by pressure transmitted in an endwise direction through one of said elements at the writing end of the pencil for effecting feeding of the writing element outwardly.



2. In a pencil, the combination of a body adapted to support at one end a writing element, a guide element through which the writing element moves, operating means including a spring normally acting on one of said elements in an outward direction, and an escapement means for controlling said operating means, whereby said writing element is fed outwardly at each operation of said escapement means.

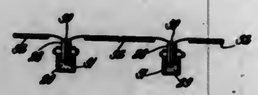
1,751,942. ROLLER SKATE. ROBERT NANZ, New York, N. Y. Filed July 1, 1927. Serial No. 202,797. 1 Claim. (Cl. 208—177.)

In a device of the character described, a platform, a wheel journaled at each side of said platform, means including a slide, a serrated stop and a strap on said platform to fasten a shoe thereto with the toe extending beyond the front edge thereof and the heel substantially in line with one of said wheels, said platform being suspended below the axis of said wheels.



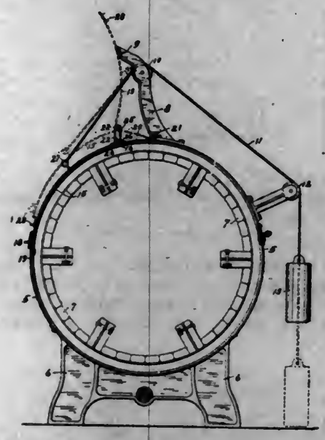
1,751,943. ENGINEER'S BRAKE VALVE FOR AIR-BRAKE SYSTEMS. ALEXANDER W. NICHOLSON, Dickerson Run, Pa. Filed Aug. 15, 1928. Serial No. 299,852. 15 Claims. (Cl. 303—55.)

1. In an air brake system equipped with retaining valves, an engineer's brake valve, said brake valve having ports and passages, certain of said ports and passages communicating with a high pressure supply, certain of said ports and passages communicating with a low pressure supply, certain of said ports and passages communicating with the train line, and certain ports and passages



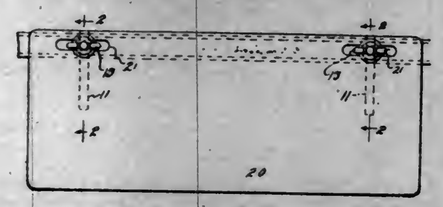
opening to the atmosphere, and valving means in said brake valve being movable to communicate the high pressure supply with the train line and arranged to communicate the train line with the exhaust ports and passages to operate the brakes and retaining valves, said valving means being also movable to communicate the ports and passages from the train line to the low pressure supply, said low pressure supply providing a pressure to the train line insufficient to operate the retaining valves.

1,751,944. REGULATOR FOR HOT-AIR FURNACES. FRED C. NOLL, Youngstown, Ohio. Filed Jan. 21, 1929. Serial No. 333,866. 3 Claims. (Cl. 236—10.)



1. In connection with a hot air furnace, a rigid metallic frame lying across the top of the bonnet thereof; an expanding member adjustably attached to said frame and passing thru said bonnet; a reciprocating series of levers carried by said frame and so arranged as to be actuated at one end by the force of said expanding member; and a connection between the other end of said reciprocating levers and the draft doors of said furnace.

1,751,945. METHOD OF AND APPARATUS FOR MAKING STRIP SHINGLES. FREDERICK C. OVERBURY, Hillsdale, N. J., assignor, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 16, 1926. Serial No. 129,484. 7 Claims. (Cl. 91—68.)

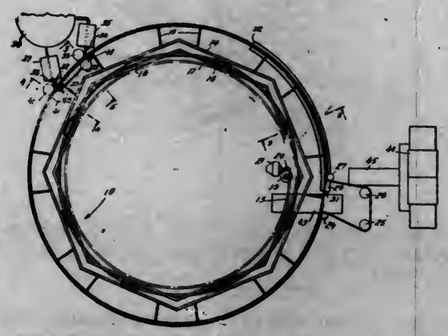


1. A method of making fabricated roofing elements, which comprises cutting a series of transverse slots in a sheet of roofing material of indeterminate length, saturating the sheet with waterproofing material, applying coating material to a face of the slotted and saturated sheet, surfacing the coating with comminuted material, slitting the sheet thus coated and surfaced longitudinally into strips through said slots, coating the newly cut edges only of the butt portions of the strips with additional waterproofing material, surfacing the edge coatings with grit, and cutting individual elements from the strips, each cut passing through a slot.

1,751,946. DOOR FOR WASHER DRUMS. HAROLD PROTHERS, Milwaukee, Wis., assignor to Vorclone Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 15, 1927, Serial No. 240,136. Renewed Aug. 29, 1929. 10 Claims. (Cl. 220—32.)

1. The combination with a drum provided with a door opening, of a hinged door interiorly overlapping substantially continuously the margin of said opening in liquid tight relation thereto, and means for affording clearance between said door and said margin preliminary to the hinged opening movement of said door.

1,751,947. LICENSE-PLATE HOLDER. FLOYD E. RADABAUGH, Pleasant Ridge, Mich. Filed May 4, 1927. Serial No. 188,630. 1 Claim. (Cl. 40—125.)

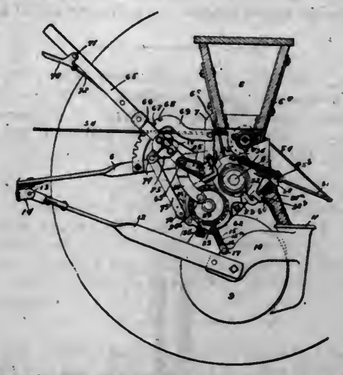


A license plate securing device comprising a bolt, a nut thereon, means to prevent removal of the nut from the bolt, and an integral T-head for said bolt having one end of the cross member of greater length and weight than the other.

1,751,948. STAPLE PULLER. HERMAN REICH, Des Moines, Iowa. Filed Apr. 16, 1928. Serial No. 270,380. 1 Claim. (Cl. 254—28.)

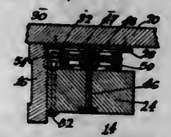
A staple puller especially designed for removing fence wires held to wooden posts by staples, said puller comprising in combination a straight handle portion formed oblong in cross section, so that it may be firmly held against twisting movements in the operator's hand, and having one end designed to receive hammer blows, the other end of the body being formed with a tapered end portion, the sides thereof being tapered from the body portion toward the point, and being also tapered from the under surface toward the upper surface, said under surface and said upper surface both being formed flat in cross section, and the lower surface being formed with a rounded portion near its end curved upwardly to meet the flat upper portion of the end portion, the said end portion being disposed at an angle relative to the body of approximately 32° so that an operator may by striking hammer blows upon the other end of the body easily drive the tapered end into a post under a staple and fence wire.

1,751,949. COATING APPARATUS. THOMAS ROBINSON, New York, N. Y., assignor to Lancaster Asphalt, Inc. Filed Dec. 16, 1926. Serial No. 155,245. 16 Claims. (Cl. 91—18.)



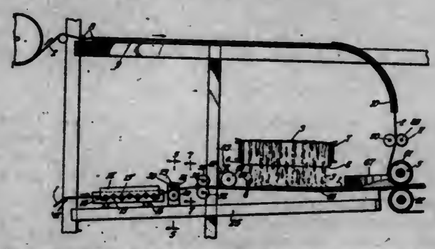
1. Apparatus for coating purposes, which comprises the combination of a rotary drum, an endless belt extending around the drum, this belt having a portion held free of the drum whereby articles to be coated may be inserted and held between the belt and the drum, and means for holding a supply of coating material out of contact with the drum, said means being disposed adjacent the periphery of the drum and in position to be entered by the articles held between the belt and the drum as the drum rotates.

1,751,950. CLAMPING MECHANISM FOR ROLLING SCREENS. GUIDO M. SACERDOTE, Bayside, N. Y., assignor to Belknap McLaughlin, Flushing, N. Y. Filed Dec. 2, 1925. Serial No. 72,702. 18 Claims. (Cl. 156—39.)



1. In a device of the class described comprising a frame and a panel movable within the same, longitudinal clamping means for the edges of said panel, hand controlled means independent of said panel, mounted on said frame, for setting said clamping means in their inoperative position, and means controlled by said panel adapted to set said clamping means in their operative position.

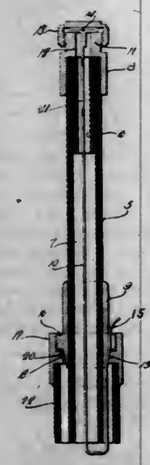
1,751,951. GRAIN DRILL. JOHN SCHAEFFER, Horicon, Wis., assignor to The Van Brunt Manufacturing Company, Horicon, Wis., a Corporation of Wisconsin. Filed July 22, 1921. Serial No. 486,751. 12 Claims. (Cl. 97—244.)



1. In a grain drill, the combination with the main frame, the ground wheel and the traction driven axle, of a plurality of drill units independently movable vertically, a lifter for moving all of the units vertically, means for actuating the lifter comprising a normally stationary drive wheel, means for optionally causing successive uni-directional half rotations of said drive wheel by the axle, a second wheel in constant engagement with and rotated by said drive wheel, power transmitting means actuated by the second wheel for moving the drill units vertically.

1,751,952. EXTENSION TABLE. HARRY SISKIN, Los Angeles, Calif. Filed Jan. 15, 1925. Serial No. 2,535. 4 Claims. (Cl. 45—112.)

3. In an extension table having movable top sections and angular bar slides connected thereto, a transverse side beam having grooves at opposite sides engaged by the bar slides, each angular bar slide having one flange attached to its top section and a flange depending at right angles from the top section, the depending flanges having teeth-engaging openings, and a gear mounted at the top of the beam having teeth engaging the openings to move the top sections oppositely.

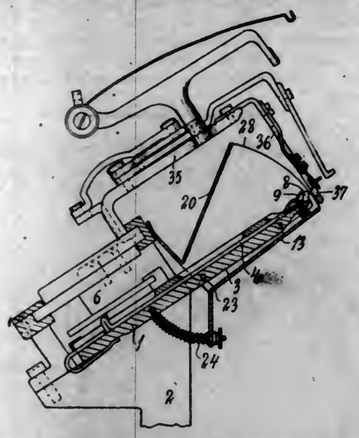


1,751,953. PLASTER-BOARD MANUFACTURE. CHARLES SPENGLER, Akron, N. Y., assignor, by mesne assignments, to Certain-teed Products Corporation, a Corporation of Maryland. Filed Nov. 17, 1926. Serial No. 148,843. 4 Claims. (Cl. 154—1.)

1. A plaster board apparatus comprising means for advancing a sheet over a perforating device for perforating

the margins thereof, means for folding the perforated margins, means for depositing plastic material on the sheet between the folded margins, means for affixing a cover sheet over the plastic material, and metal means arranged on each side of the sheets traversing therewith to support the folded margins for a predetermined distance.

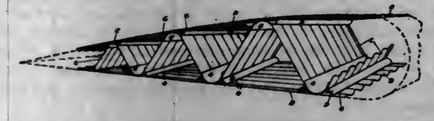
1,751,954. FUSE. ALWIN G. STEINMAYER, Milwaukee, Wis., assignor, by mesne assignments, to Line Material Company, South Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 2, 1928. Serial No. 266,614. 4 Claims. (Cl. 200—127.)



1. In an expulsion fuse of the character described, a tube having a bore of relatively small diameter extending throughout a portion of its length and a bore of greater diameter extending throughout the remainder of its length, said bore of greater diameter being unrestrictedly open to the atmosphere, contacts carried by the tube, and a fuse element positioned within the tube bores and electrically connected with the contacts.

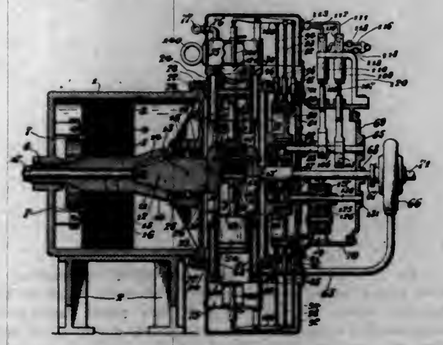
1,751,955. MANUFACTURE OF ACTIVE SILICA. FRITZ STOEWENER, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 16, 1926, Serial No. 123,027, and in Germany July 23, 1925. 4 Claims. (Cl. 23—182.)

4. The process of producing active silica which consists in preparing a precipitate containing silica in a liquid medium without the formation of sols and jellies, separating the precipitate from the mother liquor and subjecting it to a pressure of at least 100 atmospheres, washing and drying it.



1,751,956. WORK HOLDER ESPECIALLY FOR KNITTING MACHINES FOR MENDING KNITTED, WOVEN, OR SIMILAR ARTICLES. DAG TORGERSEN, Oslo, Norway. Filed Mar. 30, 1928, Serial No. 265,992, and in Germany Mar. 31, 1927. 3 Claims. (Cl. 66—2.)

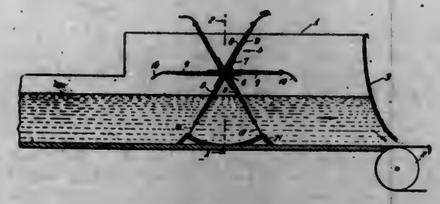
1. In a machine for mending knitted fabrics, having a needle bed provided with a plurality of reciprocating needles, a spring biased work supporting device pivotally mounted on said needle bed along an axis perpendicular to the path of said needles and substantially in the plane of the needle bed, said device being adapted to be moved about



said axis against the action of said spring to carry the supported work in a direction transverse to the path of said needles.

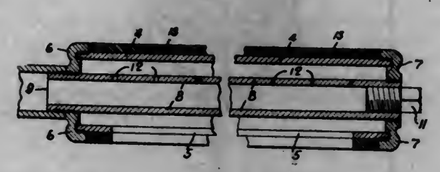
1,751,957. AIRPLANE-WING CONSTRUCTION. TOM TOWLE, Detroit, Mich., assignor to The Towle Aircraft Company, Detroit, Mich., a Corporation of Michigan. Filed July 5, 1929. Serial No. 375,972. 6 Claims. (Cl. 244—31.)

1. An all metal airplane wing comprising an upper and lower skin covering of corrugated sheet material having the corrugations parallel to the line of flight a stiffening sheet interposed between said skins dividing the space therebetween into triangular wedge shape portions, said stiffening sheet having corrugations also parallel to the line of flight reinforcing stringers at the lines of contact between the stiffening sheet and the outer skin.



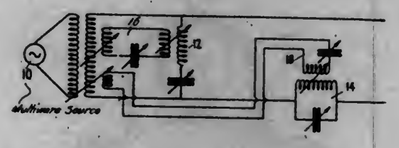
1,751,958. APPARATUS FOR GENERATING ELECTRIC CURRENT. OTIS D. TREIBER, Narberth, Pa., assignor to Treiber Diesel Engine Corporation, Camden, N. J., a Corporation of New Jersey. Filed Apr. 27, 1927. Serial No. 186,838. 17 Claims. (Cl. 290—1.)

2. In apparatus for generating electric energy, the combination of a generator having a casing and a rotatable



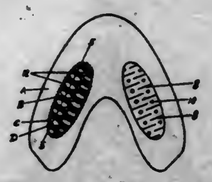
shaft, a radial internal combustion engine supported in contiguous relation to the said generator, the said engine also having a rotatable shaft, and means for connecting the said shafts together within the casing of the generator.

1,751,959. FLOW BOX FOR PAPER MACHINES. EDWARD J. TRIMBEY and GEORGE K. WALKER, Glens Falls, N. Y. Filed May 15, 1929. Serial No. 363,120. 8 Claims. (Cl. 92—44.)



1. A flow box for paper machines comprising a plurality of plates movable in succession across the path of the flowing pulp by the movement of the pulp itself.

1,751,960. WATER-FLOW DEVICE. BENJAMIN VEENSTRA, Hawthorne, N. J. Filed May 10, 1928. Serial No. 276,557. 9 Claims. (Cl. 299—58.)



1. A water-flow device comprising, in combination, a pipe connected to a water-supply and whose only outlet consists of a plurality of lateral apertures, and means mounted upon said pipe for breaking up and diffusing the individual water-jets emitted through said apertures and delivering the water as a sheet of uninterrupted continuity.

1,751,961. ALTERNATING-CURRENT SYSTEM. NICOLAI VON KORSHENEWSKY, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Sept. 10, 1923, Serial No. 661,821, and in Germany Oct. 13, 1922. 9 Claims. (Cl. 178—44.)

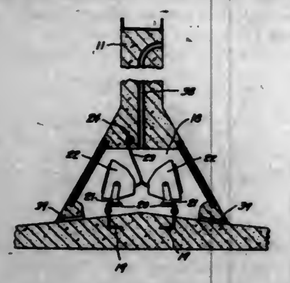
3. An alternating current system comprising an alternating current generator, a parallel resonant circuit tuned to the frequency of energy produced by the generator and an auxiliary circuit for impressing voltage on the parallel resonant circuit to compensate for the voltage-drop caused by the ohmic resistance of the parallel resonant circuit.

1,751,962. ORNAMENTAL LEATHER GOODS. JOHN JAMES WALSH, St. Louis, Mo., assignor to Millus Shoe Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 31, 1928. Serial No. 329,568. 12 Claims. (Cl. 41—10.)

1. An ornamental flexible product of superposed layers, including a gathering layer and a gathered layer, the gathered layer having passages therethrough, the gathering layer having portions extending through the passages, and serving to shape the passages by gathering the material therebetween.

1,751,963. TIE. WALTER WEINSCHREIDER, Chicago, Ill. Filed May 31, 1928. Serial No. 281,934. 2 Claims. (Cl. 2—145.)

1. Detachable means for retaining together the ends of a four-in-hand tie and attaching the tie to a shirt front, comprising a plurality of spaced apart cross or transverse members detachably engaged with the edges of the back part of the outer section of a tie, a longitudinal connecting strip connected with each of the cross members thereby to form a pocketing device for receiving the inner portion of a tie, and said cross members and longitudinal members having button holes therein for receiving one or more of the buttons of a shirt front to hold the tie in place.



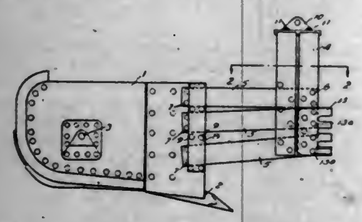
1,751,964. PHARMACEUTICAL COMPOUND AND PROCESS FOR MAKING SAME. WALTER T. WINCKLER, Chicago, Ill., assignor to Von Winkler Laboratories, Incorporated, a Corporation of Illinois. Filed Nov. 7, 1928. Serial No. 317,884. 5 Claims. (Cl. 260—11.)

5. A specific for gonorrhea comprising sulpho-ricin silver ammonium formate.

1,751,965. BUILDING STRUCTURE. HENRY L. WOOLFENDEN, Detroit, Mich. Filed June 16, 1928. Serial No. 285,815. 6 Claims. (Cl. 240—2.)

1. In a wash rack for automobiles, a pair of vertical walls, a floor extending between said walls and adapted

to receive an automobile thereon, and illuminating means built into said walls adjacent their junction with said

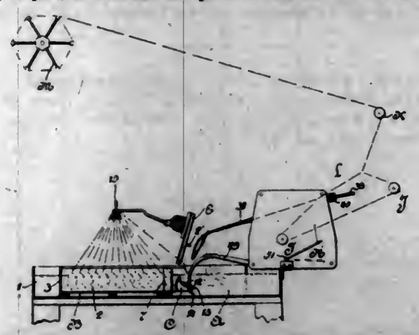


floor, and reflectors behind said means arranged to direct light therefrom on the chassis of an automobile between said walls.

1,751,966. EXTENSION SEAT. AVIS DICKSON WOOD, Lakewood, N. J. Filed Dec. 13, 1928. Serial No. 325,768. 2 Claims. (Cl. 155—8.)

1. In combination with a vehicle body, an extension seat comprised of inner and outer sliding frames, the inner one pivotally connected to a Y shaped element adapted to engage with and be held by a support fixed under the rear seat of said vehicle and the outer frame pivoted to a frame adapted to engage with a support fixed adjacent the back of the front seat of said vehicle.

1,751,967. DRAG BUCKET. LEWIS E. YOUNIE, Portland, Oreg., assignor to Electric Steel Foundry Company, Portland, Oreg., a Corporation of Oregon. Filed Oct. 3, 1928. Serial No. 310,074. 9 Claims. (Cl. 37—135.)

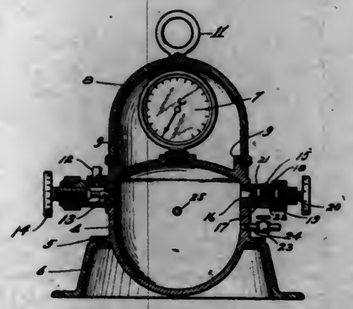


1. In a drag bucket, the combination of a bucket body; an arch in advance of the body; and a resilient connection between the body and the arch.

4. In a drag bucket, the combination of a bucket body; a resilient arch in advance of the body; and a connection between the body and the arch.

1,751,968. AUTOMATIC FILATURING MACHINE. TOICHIRO YUASA, Tokyo, Japan. Filed Mar. 28, 1928, Serial No. 265,371, and in Japan Apr. 15, 1927. 7 Claims. (Cl. 19—3.)

1. A machine for reeling silk from cocoons wherein the filaments of cocoons that are being unwound are reeled off together and twisted into one thread, said machine comprising a filament-guiding lever having a filament-joining head for guiding the filaments, a cocoon throwing-out device including a sluice into which reserve cocoons are fed, a pan, a movable scoop in said sluice for removing

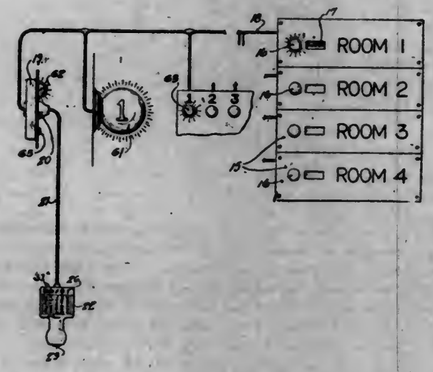


cocoons therefrom into said pan one at a time, and a filament-joining lever controlled by said guiding lever for actuating said scoop and for feeding a filament from a cocoon in said scoop to the head of said guiding lever.

1,751,969. STOP SIGNAL. VLADISLAV ALTMAN, Racine, Wis. Filed July 3, 1929. Serial No. 375,784. 2 Claims. (Cl. 116—63.)

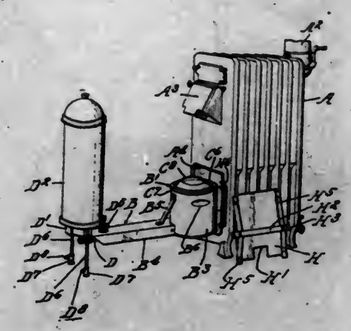
1. A signal of the character described, including a rotatable shaft, collars mounted upon said shaft and movable independent of the shaft, adjustable overlapping dials carried by said collars, an indicator carried by the shaft and movable over the dials, pinions carried by said collars and means cooperating with the pinions to independently adjust the dials.

1,751,970. PRESSURE REGULATOR FOR AIR-SERVICE APPARATUS. ARCHIE M. BAIRD, Topeka, Kans. Filed Nov. 21, 1927. Serial No. 234,864. 4 Claims. (Cl. 221—23.5.)



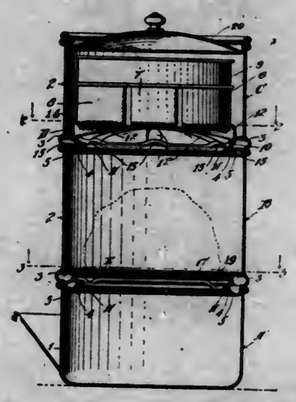
4. A pressure regulator for air service apparatus comprising an air reservoir of relative large volume and of large horizontal cross sectional area, a valve controlled inlet to said reservoir communicating with a supply of pressure fluid, a series of flexible tubes communicating with said reservoir through the side walls thereof, each of said tubes having a service valve at its free end adapted to normally close said tubes to maintain a pressure in said reservoir and to be quickly attached to a tire tube for inflating or deflating the same, an adjustable relief valve regulated to release pressure in said reservoir when a predetermined pressure is obtained therein and a base secured to said reservoir and extending therebelow to support said apparatus in an upright position.

1,751,971. PROCESS FOR PRODUCING ELECTRIC COILS. MARSHALL BARNUM, New Haven, Conn., assignor to The Acme Wire Company, New Haven, Conn., a Corporation. Filed Oct. 11, 1929. Serial No. 398,873. 2 Claims. (Cl. 175—2.)



1. A process for the manufacture of electric coils of the type comprising a fibrous absorbent core-tube and a coil of wire thereon, consisting in treating the core-tube prior to the winding of the wire thereon with a liquid having the characteristic, when solidified, of being substantially impervious to hot impregnating liquids, thereafter winding a coil of wire upon the core-tube so previously treated and then treating the core-tube and coil as a unit with a hot impregnating liquid; whereby during the latter treatment, the said core-tube is shielded from the softening and weakening effects of the hot impregnating liquid and the distortion of the unit avoided.

1,751,972. HOSPITAL SIGNALING SYSTEM. BORNETT L. BOBROFF, Milwaukee, Wis. Filed Nov. 17, 1924. Serial No. 750,302. 5 Claims. (Cl. 177—337.)

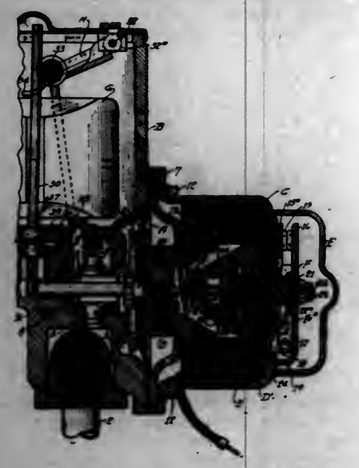


5. In a signaling system, the combination of signaling means for displaying any one of a plurality of cyclically-arranged want signals including an "attendant" signal to indicate to a nurse a want of a patient, means controlled by the patient for producing any one of said signals in a succession, and means for producing an attendant signal more frequently than the others to permit the rapid production of said attendant signal.

1,751,973. CLOSURE FOR USE WITH BURNER UNITS. JAMES L. BREESE, Jr., Chicago, Ill., assignor to Oil Devices Corporation, Chicago, Ill., a Corporation of Illinois. Original application filed Nov. 17, 1927, Serial No. 233,787. Divided and this application filed Mar. 14, 1928. Serial No. 261,465. 2 Claims. (Cl. 126—190.)

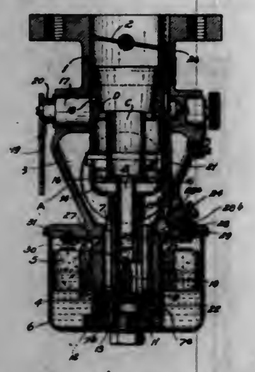
1. A closure for the door opening to the ash pit of a furnace comprising a free closure plate shaped to permit the passage of a fuel conduit and closely fitting the same and adapted to be applied over the said opening, and hinged means arranged to yieldingly hold the closure plate in place, movable independently of the plate and arranged to be swung into holding engagement therewith after the same has been applied.

1,751,974. COOKING APPARATUS. HENRY BRUCKER, Maplewood, N. J. Filed Oct. 19, 1928. Serial No. 313,429. 2 Claims. (Cl. 53—2.)



1. A cooking apparatus comprising a boiler, a steaming compartment arranged in superposed relation thereon, and comprising a tubular casing having an inturned perforated annular flange, a rack for material to be steamed removably mounted on said flange and consisting of a plate concavo-convex in cross-section with its concave side at the bottom and having upstanding projections in a common horizontal plane on its convex side to support said material, and a cover for said compartment having its inner side concave.

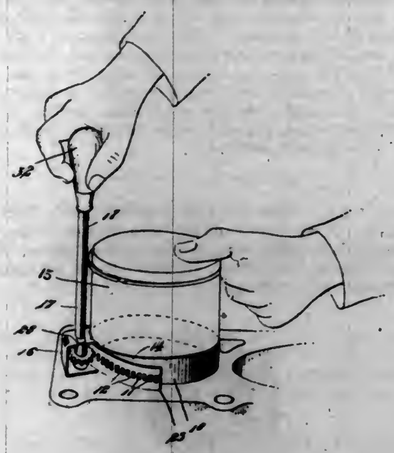
1,751,975. ELECTRICALLY-OPERATED FUEL PUMP FOR INTERNAL-COMBUSTION ENGINES. WILLIAM C. CARTER, Flint, Mich. Filed July 24, 1924. Serial No. 728,051. 15 Claims. (Cl. 172—126.)



1. In an electrically-operated pumping apparatus, a solenoid provided with a reciprocating core, contacts in

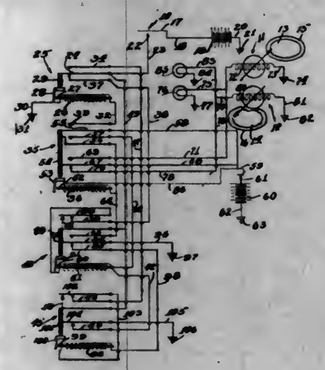
the circuit used to energize the solenoid, and means for utilizing the magnetic force produced in the solenoid for holding said contacts closed during the stroke of the core

of the solenoid in one direction, and to effect the separation of said contacts with a quick break at the end of the said stroke of said coil.



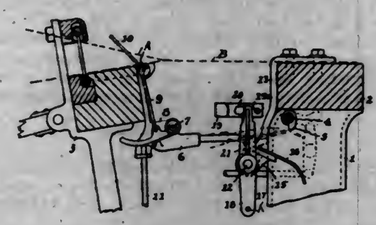
1,751,976. CARBURETOR. WILLIAM C. CARTER, Flint, Mich. Filed Feb. 18, 1928. Serial No. 255,313. 5 Claims. (Cl. 261—45.)

1. A carburetor provided with an accelerating well, a tubular member projecting upwardly through said well, substantially vertically-disposed slots in the lower end portion of said member, projecting upwardly from the bottom of the well and terminating at a point above the normal level of the fuel in the well, whereby air and fuel can pass simultaneously from the well into said tubular member, a fuel supplying device arranged inside of said tubular member, a suction amplifier associated with said fuel supplying device for increasing the velocity of the air flowing from said well into said tubular member at one stage of the cycle of operations of the carburetor, and a passageway for establishing communication between said well and the float chamber above the level of the fuel in said chamber.



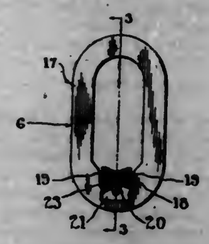
1,751,977. PISTON-RING COMPRESSOR. JOHN F. CAVANAGH, Providence, R. I. Filed Feb. 25, 1928. Serial No. 256,942. 6 Claims. (Cl. 29—86.4.)

1. A piston ring compressing tool comprising a band of a length greater than the circumference of a piston, an operating shaft, means attached to one portion of the band for mounting said shaft in a position parallel to the axis



of the piston to be encircled, toothed means keyed to said shaft and formations on said band to be engaged thereby for moving the same to contracted or expanded position.

1,751,978. SWITCHING RELAY SYSTEM. RAYMOND T. CLOUD, Chicago, Ill., assignor to Orchestraphone Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 4, 1928. Serial No. 252,024. 6 Claims. (Cl. 175—320.)

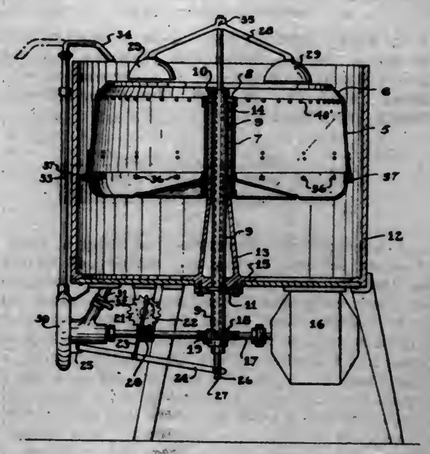


4. In an electrical switching system, electrical energy means, a pair of current operated devices adapted to be alternately connected to said means, a plurality of electrical relays, each including an electromagnetic coil associated with said devices and said energy means, the coil of one of said relays being adapted when energized to cause the energization of the coils of the other relays, an additional electrical relay including an electromagnetic coil adapted when energized to cause the de-energization of the electromagnetic coils of the other relays, and a switch for alternately operating said plurality of relays and said additional relay so as to cause said relays to alternately connect the energy means to said pair of devices, whereby said devices are alternately energized, said coil of the additional relay being adapted when energized to cause said above mentioned relay coil of said relays to become de-energized, whereby the other relay coils of said plurality of relays are also de-energized.

1,751,979. STOPPING MECHANISM FOR LOOMS. WILLIAM CRUTCHLOW, Fullerton, Pa. Filed Mar. 22, 1929. Serial No. 349,056. 8 Claims. (Cl. 139—340.)

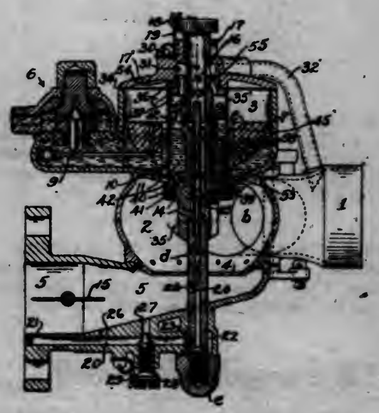
1. The combination of the fixed structure of a loom, a stopping member movable therein to cause stopping of the loom, a reciprocating lay-structure, a device to engage said member and thus move the same movable with the lay-structure and also shiftable thereon into position to engage said member, and means, controlled from the advancing sheet of warp and woven fabric, to thus cause said devices to shift when said sheet has advanced to predetermined extent.

1,751,980. LOOP BEARING. ANDREW W. DEAN, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Aug. 15, 1927. Serial No. 213,105. 9 Claims. (Cl. (308—2.)



1. A loop bearing for scales comprising a loop member and a bearing block, spaced from the sides of said loop member to permit lateral oscillation of said bearing block seated on said loop member, said bearing block having a groove in one surface thereof and a plurality of legs extending from the opposite surface, said legs straddling said loop member.

1,751,981. CONTACT PLUG. HENDRIK DE JONG, DIRK LELY, Jr., and RICHARD SHEPHERD, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven. Filed May 31, 1924. Serial No. 716,996, and in the Netherlands June 9, 1923. 12 Claims. (Cl. 173—361.)



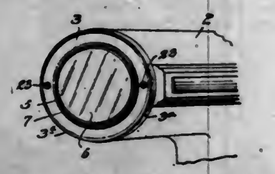
1. An electric contact plug having contact pins consisting of two or more resilient solid parts disposed against each other, the ends of said parts being embedded in the insulating material and joined together forming a spliced ring at the point of joining.

1,751,982. WASHING AND DRYING MACHINE. GEORGE W. DUNHAM, Utica, N. Y., assignor to Whirldry Corporation, Utica, N. Y., a Corporation of New York. Filed Nov. 15, 1924. Serial No. 750,035. 5 Claims. (Cl. 210—63.)

1. In a washing machine, a clothes receptacle having a number of drainage outlets in the side of the same, spring strips secured to the receptacle, closures carried by said spring strips over the openings and means for rotating the receptacle to swing the closures open against the tension of the spring supporting strips.

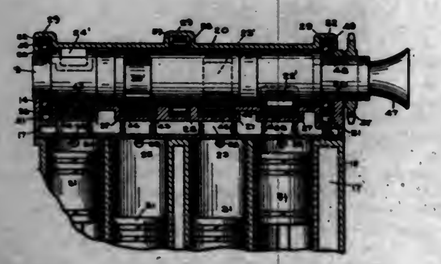
1,751,983. CARBURETOR. ROY F. ENSIGN, South Pasadena, Calif., assignor to Ensign Carburetor Company, Los Angeles, Calif., a Corporation of California. Filed Mar. 6, 1923. Serial No. 623,251. 2 Claims. (Cl. 261—50.)

1. In a carburetor having a fuel supply chamber and a mixing chamber, an accelerating well adapted to accumulate fuel by gravity from said fuel supply chamber, a delivery passage to deliver fuel from said accelerating well to the mixing chamber, a filling passage having an inlet submerged below the level of the fuel in the fuel supply chamber and a passage connecting said filling passage below its normal fuel level with said accelerating well; means to apply a depression upon the surface of the fuel in the fuel supply chamber, and means connecting said accelerating well and filling passage with the



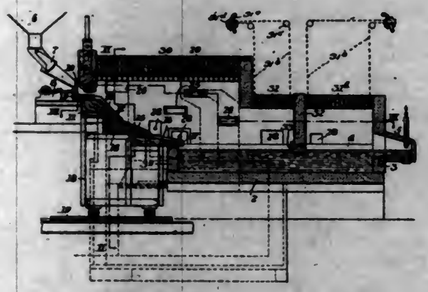
atmosphere, whereby the atmospheric pressure forces fuel through said delivery passage from said accelerating well, and into said fuel supply chamber from said filling passage, when depression is applied to the delivery passage and to said supply chamber.

1,751,984. REFLECTOR. SVEN AUGUST ESKILSON, Stockholm, Sweden, assignor to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 30, 1926. Serial No. 157,964. 3 Claims. (Cl. 88—1.)



1. A light reflector structure comprising a sheet of transparent material having the capacity of refracting light, the said sheet having a plurality of contiguously related projecting spherical surfaces of hexagonal shape, upon its opposite sides, one of the said sides constituting the front surface of the sheet upon which the light rays impinge and the other of said sides constituting the rear surface from which the said rays are reflected, the said spherical surfaces being arranged in pairs in oppositely disposed relation to each other, the surfaces of the respective pairs having a common center, and means for rendering the rear spherical surfaces light reflecting, and said sheet of transparent material having a rim, the rear edge of which projects beyond a plane tangent to the said rear spherical surfaces.

1,751,985. END ASSEMBLY FOR DRUM-SCALE CYLINDERS. ANDREW W. FERGUSON, Latrobe, Pa., assignor to Lincoln Scale Corporation, Latrobe, Pa., a Corporation of Delaware. Filed Jan. 7, 1929. Serial No. 330,725. 5 Claims. (Cl. 45—18.)



1. An assembly for a drum scale cylinder, which comprises a ring, a spring for supporting a mirror in said ring, means for securing said spring to said ring, and means cooperating with said first-mentioned means for connecting the ring and cylinder.

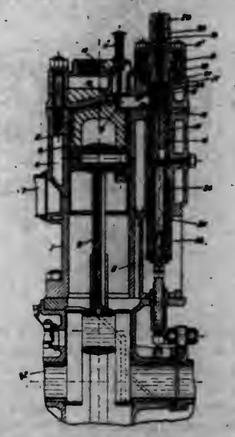
1,751,986. ROTARY VALVE MECHANISM. LOUIS FIESCHER, Winner, S. Dak., assignor of one-half to Morris Levey, Omaha, Nebr. Filed June 10, 1929. Serial No. 369,635. 7 Claims. (Cl. 123—50.)

1. In a rotary valve for internal combustion engines, a cylinder-head above the cylinders having an elongated valve-seat provided longitudinally with gas intake ports to the cylinders and exhaust outlet ports from the cylinders and provided longitudinally with depressions, a hollow valve revolubly mounted on the valve-seat and having pockets opening on its periphery for registering with the ports of the valve-seat, a cap mounted on the cylinder head for covering the valve, conduits for conducting lubricants to the depressions of the valve-seat, conduits for conducting lubricants from said depression, and a plurality of rollers in said depressions each engaging said valve.

1,751,987. METHOD AND APPARATUS FOR MELTING GLASS AND THE LIKE. ROBERT L. FRINK, Lancaster, Ohio. Filed Oct. 8, 1926. Serial No. 140,273. 16 Claims. (Cl. 49—54.)

3. The method of making molten glass-like material which includes subjecting constituent material to a melting temperature while maintaining it in a relatively thin and spread out condition, collecting the melted material in a pool, and controlling the temperature of the molten material in the pool by regulating the rate of heat dissipation.

8. Apparatus for making molten glass-like material including a relatively shallow refractory support adapted to receive constituent material, means for melting material on the support, and a receiver for the molten glass, the support and the receiver lying in a furnace enclosure, the support being mounted on a supporting carriage so as to be bodily removable therefrom, the support being made of a material adapted to withstand sudden temperature changes.



15. Apparatus for making molten glass-like material including a refractory support with a portion adapted to receive constituent materials and another inclined portion over which the material may pass while in process of melting, the last mentioned portion being inclined and of a substantially continuous character, the last mentioned portion being made up of blocks in over-lapping relationship, different blocks having their faces inclined in different amounts.

1,751,988. ADHESIVE. HARRY F. GARDNER, Buffalo, N. Y., assignor, by mesne assignments, to Certain-teed Products Corporation. Filed Mar. 31, 1922. Serial No. 548,540. 1 Claim. (Cl. 87—17.)

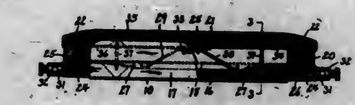
An adhesive for the purpose described, consisting of a mixture of sodium silicate of approximately 41° Baumé, 1.8 pounds of fibrous talc per gallon of silicate, and brine of approximately 20 Baumé, the quantity of brine being approximately 25% by volume of the silicate.

1,751,989. MEANS FOR FEEDING FUEL TO AN INTERNAL-COMBUSTION ENGINE OF THE HIGH-COMPRESSION TYPE. WALDO G. GERNANDT, South Bend, Ind., assignor to Gernandt Motor Corporation, Chicago, Ill. Filed Oct. 29, 1924. Serial No. 746,545. 4 Claims. (Cl. 123—33.)

1. In an internal combustion engine having a main cylinder and a piston therein, means for feeding fuel to said cylinder including a compression chamber having a plunger therein with means for actuating said plunger in proper time with respect to said piston, said plunger having a longitudinal passage and a cross bore leading from said passage to the periphery of said plunger, said engine having a single passage-way which is in alignment with said cross bore in the plunger when the plunger

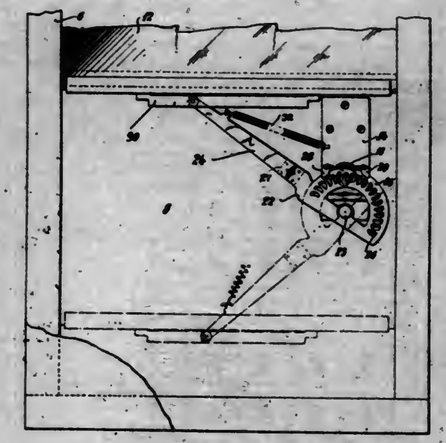
is at the end of its compression stroke, and means including said single passage-way in the engine for trapping products of combustion in the compression chamber when the plunger is at substantially the end of its non-compression stroke, and means leading into the compression chamber from the end opposite the plunger for passing the fuel into the upper end of said compression chamber at the proper time.

1,751,990. SHOE. JAMES F. GILKERSON, Stillwater, Minn. Filed Aug. 5, 1929. Serial No. 383,610. 8 Claims. (Cl. 36—17.)



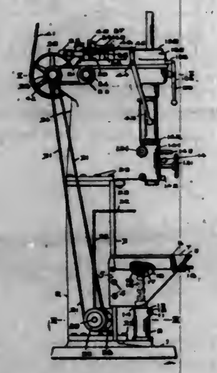
1. In a Goodyear welt shoe having a sewed heel seat with the usual welt, inner and outer soles, a spring heel construction interposed between the inner and the outer soles comprising a soft rubber member providing a spring heel portion, and a stitch-receiving marginal frame member of relatively stiffer material surrounding and secured to the outer edge portion of said spring heel portion and extending beneath the welt.

1,751,991. CUSHION SHOE. JAMES F. GILKERSON, Milwaukee, Wis. Filed Sept. 3, 1929. Serial No. 390,181. 4 Claims. (Cl. 36—17.)



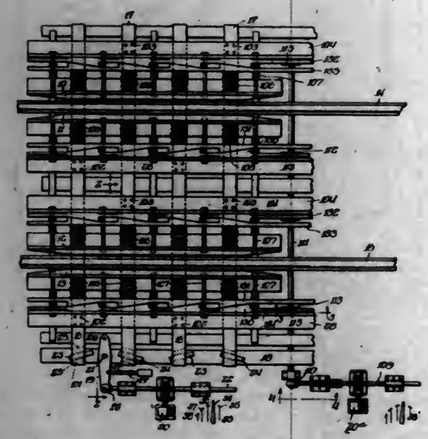
1. In a Goodyear welt shoe having a sewed heel seat, the combination with the inner sole, the welt, the inseam ridge and the outer sole, of a cushion sole interposed between the inner and outer sole comprising a soft rubber member having a cushion portion extending under the insole between the inseam ridges of the heel and shank of the shoe and secured thereto and having a heel portion extending under the inseam ridge, stitching securing the welt and outer sole directly together at the outer edge of the heel seat portion of the shoe, a heel, and fastening means for said heel attached to said outer sole.

1,751,992. ELECTRIC SWITCH FOR TOY ELECTRIC RAILWAYS. AARON H. GILL, West Haven, Conn. Filed Dec. 19, 1928. Serial No. 327,071. 6 Claims. (Cl. 246—254.)



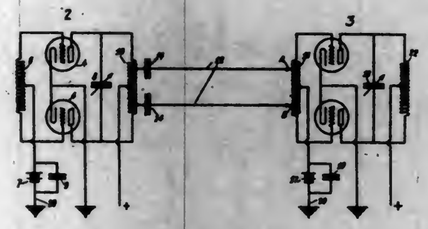
1. An electric switch for toy electric railways comprising a saddle-member adapted to rest upon and straddle a charged rail; two plates respectively located upon the opposite sides of the longitudinal center of the said saddle-member and supported thereby in position to be engaged by the shoe of a toy electric train, one of the said plates being insulated from the said saddle-member and adapted to be electrically connected to the third-rail by the engagement with it of the said shoe.

1,751,993. WINDOW REGULATOR. BERTRAM J. GOLDSMITH and EMIL KOEB, New York, and AMBROSIUS BRIECHLE, Brooklyn, N. Y., assignors, by mesne assignments, to The English & Mersick Company, New Haven, Conn., a Corporation of Connecticut. Filed May 28, 1925. Serial No. 33,376. 3 Claims. (Cl. 268—126.)



1. In a window-regulator, the combination with a reciprocating window and a guide-structure therefor; of a rotatable operator mounted for rotation in a plane substantially parallel with the said window; and driving-connections interposed between the said window and the said operator for effecting the movement of the former by the latter, and including a laterally-yielding arm mounted for rotation about an axis obliquely disposed with respect to the axis of the said operator and with respect to the plane of the said window.

1,751,994. NARROW-FRAME DRILL PRESS. GEORGE E. HALLENBECK, Toledo, Ohio, assignor to Baker Brothers, Inc., Toledo, Ohio, a Corporation of Ohio. Filed July 20, 1921. Serial No. 486,041. 15 Claims. (Cl. 77—5.)



1. A machine tool embodying a main frame including a work table, a spindle opposing said work table and carried by the frame, a drive for the spindle including a shaft extending rearwardly in the frame from the spindle, a second shaft extending at a right angle to and approximately in the plane of the shaft from the spindle, a drive pulley on the second shaft, said spindle carrying frame providing bearings for the second shaft one on each side of the pulley, and transmission connection to the first shaft from the second shaft embodying a third shaft parallel to the second shaft, bevel gear connection between the first and third shafts and spur gear connection between the third and second shafts.

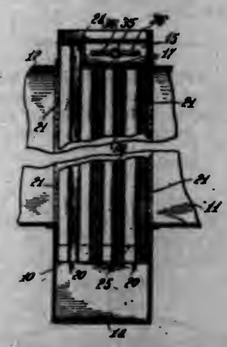
1,751,995. TRACK-BRAKE ARRANGEMENT AND CONTROL MEANS THEREFOR. GEORGE HANNAUER, Calumet City, Ill., and EDGAR M. WILCOX, Hammond, Ind., assignors to Hannauer Car Retarder Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1925. Serial No. 30,434. 25 Claims. (Cl. 188—62.)

1. Track brake apparatus for railroads comprising retarding means, main actuating means for said retarding means, and supplementary means for actuating said retarding means.

1,751,996. COUPLING. CLARENCE W. HANSELL, Rocky Point, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Jan. 18, 1927. Serial No. 161,770. 7 Claims. (Cl. 250—17.)

1. In energy transformation in electron emission tubes, the method which includes increasing the separation between stages to reduce interaction between, and improve the accessibility of the successive electron emission tube stages, and reducing the coupling losses by joining them by direct coupling, and so adjusting the coupling points at the succeeding stage that the impedance between said coupling points equals the characteristic impedance of the direct coupling means.

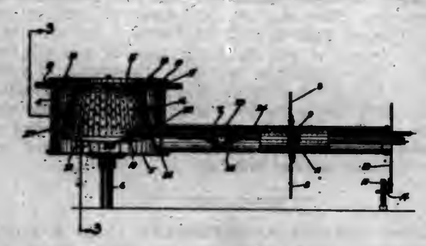
1,751,997. JAR-REIN SOCKET. FRANK J. HINDERLITER, Tulsa, Okla. Filed Oct. 19, 1927. Serial No. 227,197. 3 Claims. (Cl. 294—96.)



1. In combination, in a fishing tool of the class described, a body member, a downwardly extending element connected to said body member, said element having concave sides shaped to receive the reins of a broken jar in a well, gripping means carried by said element for engaging said reins, whereby the broken jar may be elevated from the well, and a guide tube disposed over said element and connected to said member adapted to fit over said reins and to align them with the concave sides of said element.

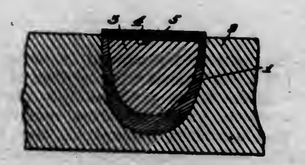
1,751,998. COMBINATION TAP AND DIE FISHING TOOL. FRANK J. HINDERLITER, Tulsa, Okla. Filed Oct. 22, 1928. Serial No. 314,060. 8 Claims. (Cl. 294—86.)

1. In combination in a fishing tool, a body having a tubular portion, said tubular portion being internally threaded to form a die, and an element extending into said tubular portion from said body and having its outer surface threaded to form a tap.



1,751,999. APPARATUS FOR FILTERING AIR. JOHN C. HINES, Chicago, Ill. Filed May 26, 1927. Serial No. 194,377. 1 Claim. (Cl. 183—28.)

Air filtering apparatus comprising a filtering chamber; an oil sump at the bottom of said chamber; an oil trough at the top of said chamber, said oil trough being provided with a plurality of slots arranged in zig-zag form; a plurality of filter plates in zig-zag form arranged in said filter chamber in substantially parallel relationship, said plates being provided at their tops with lugs engaging said slots but permitting the free flow of oil through said slots and over said plates, the lower ends of said plates being immersed in oil in said oil sump; means for passing air transversely through said filter chamber; back-turned flanges on said plates serving as barriers to prevent the oil on said plates from being entrained with the air current and carried transversely off said plates, and means for circulating oil between said sump and said trough.



1,752,000. LIQUID-FUEL BURNER. WILLIAM O. HORNE, Minneapolis, Minn. Filed Aug. 19, 1925. Serial No. 51,175. 6 Claims. (Cl. 158—92.)

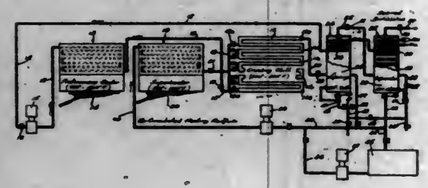
1. A liquid fuel burner including a casing, an air supply trunk connected therewith, a fuel vaporizing member mounted within said casing, a fuel feed pipe and an over-flow pipe connected with said member, said vaporizing

member having an annular groove exteriorly thereof communicating with said over-flow pipe to receive and conduct the over-flow fuel from said member in case of ignition.

1,752,001. METHOD OF MAKING A CHOCOLATE-COVERED CONFECTION HAVING A LIQUID MASS THEREIN. WENZEL HORRA, Berlin-Tempelhof, Germany, assignor to the Firm: Sarotti Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed Jan. 29, 1929. Serial No. 335,927. 2 Claims. (Cl. 107—54.)

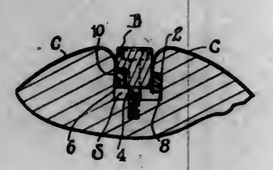
1. A method of making an article of candy comprising a chocolate shell having a liquid mass which consists in shaking a mold containing molten chocolate while said mold is held with its opening upwards, permitting part of the liquid chocolate to flow out of the mold, filling the chocolate shell thus formed with the desired liquid mass, sprinkling heated chocolate on the top of said liquid mass to form a preliminary cover, and then forming a second cover of chocolate on the rim of said chocolate shell.

1,752,002. SKYLIGHT. LOUIS ISGUR, Boston, Mass. Filed July 10, 1928. Serial No. 291,623. 2 Claims. (Cl. 108—16.)



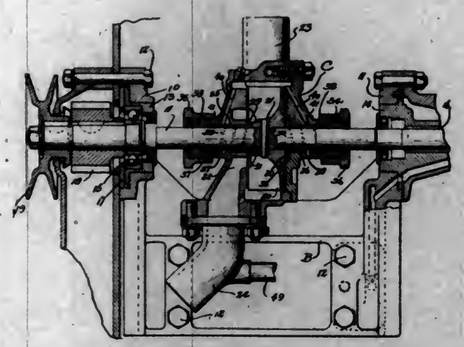
1. In a skylight structure, the combination of glass members having adjacent edges separated by a space, an underlying support, a gutter member superimposed upon said support and extending downwardly and inwardly on both sides to embrace said support, a clip superimposed upon said gutter member and extending downwardly and inwardly on both sides to embrace said support and part of said gutter member, a stud secured to said clip and extending upwardly through said space, and means cooperating with said stud to hold said glass members in place.

1,752,003. PROCESS FOR THE MANUFACTURE OF YEAST. KAI ALEXANDER JACOBSEN, Copenhagen, Denmark, assignor, by mesne assignments, to Standard Brands Incorporated, Dover, Del., a Corporation of Delaware. Filed May 28, 1928, Serial No. 281,363, and in Denmark June 8, 1927. 6 Claims. (Cl. 195—20.)



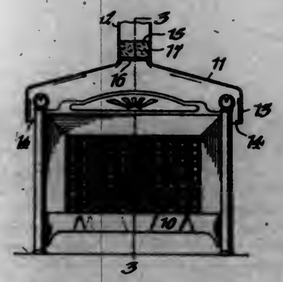
1. A method of manufacturing yeast by the aeration method, which comprises initiating propagation of yeast in a dilute nutrient solution with aeration, substantially continuously adding thereto a more concentrated nutrient solution, and at about the beginning of each cessation of budding increasing the addition of nutrients until the yeast is again actively budding.

1,752,004. OIL-CRACKING PROCESS. JOHN B. JAQUA, Alhambra, Calif. Filed Nov. 26, 1926. Serial No. 150,762. 19 Claims. (Cl. 196—47.)



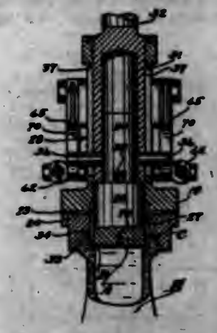
1. A method of cracking mineral oil which comprises: heating a fluent heat-transferring medium in the form of a relatively stable oil to a temperature above the temperature at which, under the given conditions of pressure, the first-mentioned mineral oil may be cracked; and advancing said medium, while so heated, into direct contact with said first-mentioned mineral oil and thence, after a sufficient time interval to permit a cracking reaction, at the resultant temperature, into a region of less pressure, the heat in the relatively stable oil being such as to obviate other application of heat, subsequently to said contact, to said first-mentioned oil, for the desired cracking effect.

1,752,005. COVERING FOR PLATER ROLLS. JAMES T. JOHNSTON, Holyoke, Mass., assignor to American Writing Paper Company, Holyoke, Mass., a Corporation of Delaware. Filed July 13, 1928. Serial No. 292,551. 7 Claims. (Cl. 92—47.)



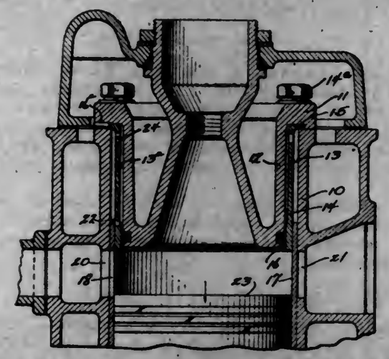
1. A roll and removable covering therefor in combination with means for securing them together comprising, a shoulder extending longitudinally of said roll, reinforcing bars at opposite ends of said covering one of which is adapted to engage beneath said shoulder and a clamp bar movable radially of said roll for engaging the other of said bars of the covering and drawing said covering tightly around said roll.

1,752,006. PUMP. LEWIS P. KALB, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Oct. 8, 1927. Serial No. 224,809. 7 Claims. (Cl. 103—103.)



1. A pump comprising a drive shaft, spaced aligned bearings rotatably supporting said shaft, an impeller fixed to the drive shaft intermediate said bearings, a pump housing surrounding said impeller, said pump housing being constructed and arranged so as to float on said shaft relative to said shaft bearing.

1,752,007. ATTACHMENT FOR GAS HEATERS. CHARLES L. KLINE, Buffalo, N. Y., assignor to Henry B. HARRINGTON, Buffalo, N. Y. Filed July 21, 1928. Serial No. 294,387. 7 Claims. (Cl. 126—92.)

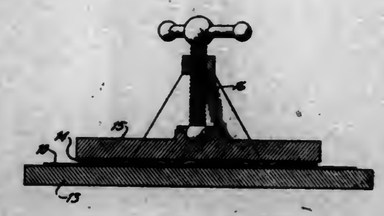


7. In a gas heater of the character described, the combination of a chambered member applied to the heater in spaced relation thereto to provide an air intake passage, and a catalyzing agent contained in the chamber of said member and with which the products of combustion and the oxygen of the air admitted through said passage are adapted to intimately contact.

1,752,008. BOTTLE-CAPPING MACHINE. VITALIS M. KLOSS, Minneapolis, Minn. Filed Nov. 17, 1928. Serial No. 320,112. 16 Claims. Cl. 226—92.)

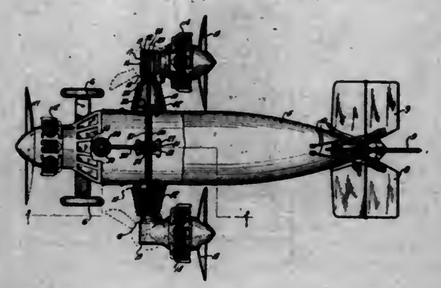
1. In a bottle capping machine, a cap applying device, folding means for forming a rib on a cap blank to complete the formation of a cap, and feeding means for feeding a cap blank to the folding means and for feeding a cap from the folding means to the cap applying device.

1,752,009. INTERNAL-COMBUSTION ENGINE. OSCAR C. KREIS, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed June 15, 1928. Serial No. 285,609. 18 Claims. (Cl. 123—81.)



1. In an internal combustion engine, a cylinder, a cylinder head depending within the cylinder, sleeve valve means working between the cylinder and depending cylinder head portion, means intermediate the cylinder and depending cylinder head portion accommodating itself to movement of the sleeve valve, and means preventing accumulation of deposits at one side of the first said means.

1,752,010. TARGET TOWING AND RELEASING DEVICE. WILLIAM ANTHONY LAMKEY, Dearborn, Mich. Filed May 22, 1928, Serial No. 279,823, and in France Aug. 12, 1927. 14 Claims. (Cl. 124—16.)



1. In combination, a cable having one end attached to a moving body, a target support, said target support being provided with a bore through which the cable is adapted to pass, a catch device mounted on the free end of said cable, and means carried by said catch device whereby the target support can be released.

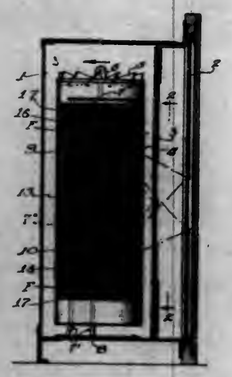
1,752,011. METHOD OF TREATING PICTURES. THOMAS L. LATTER, Chicago, Ill. Filed Dec. 12, 1928. Serial No. 325,512. 6 Claims. (Cl. 41—24.)

1. The method of treating a picture or print consisting of applying an adhesive to the print, adjusting the adhesive to simulate the appearance of a desired texture, applying a powdered finishing material to the adhesive, and baking the finishing material to form a permanent gloss.

1,752,012. AEROPLANE. GEORGE Y. LAUCHIN, Milwaukee, Wis. Filed Apr. 21, 1928. Serial No. 271,945. 6 Claims. (Cl. 244—25.)

5. An aircraft having a body portion, a fixed source of liquid fuel supply in connection with said body, an engine mounted on said body and adjustable to various angles with respect thereto, a propeller driven by said engine, and coiled means for feeding liquid fuel from said fixed source of fuel supply to said engine in any adjusted position of said engine.

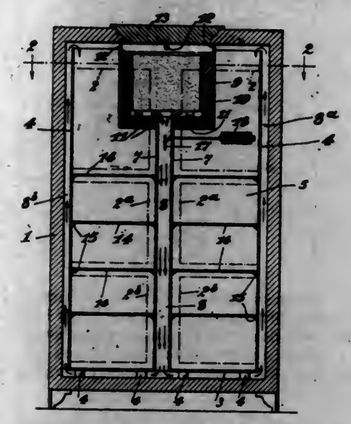
1,752,013. PIKE CONSTRUCTION. ELBERT C. LEACH, Oshkosh, Wis., assignor to Leach Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Apr. 13, 1928. Serial No. 269,727. 3 Claims. (Cl. 294—19.)



1. A pike for application to the end of a wooden pole, consisting of a one-piece metal member having a radially extending annular thrust flange, an elongated rear end portion which is considerably smaller in diameter than the flange and merges abruptly thereinto and is tapered at its extremity for forced fit insertion within an aperture in the end of a pole to a point where the flange is brought

into engagement with the end face of the pole, and an elongated front end portion which is also considerably

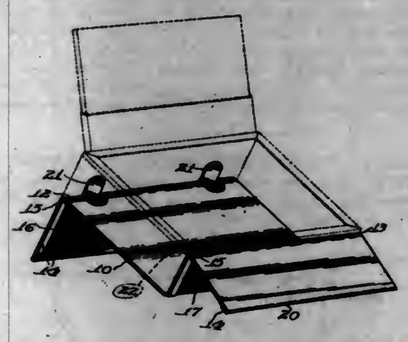
smaller in diameter than the flange and merges abruptly thereinto and is faced and tapered to present a work-engaging tip.



1,752,014. SHADOW-MOTION DISPLAY MEANS. AUBREY B. LEECH, Los Angeles, Calif. Filed Nov. 12, 1927. Serial No. 232,877. 3 Claims. (Cl. 40—40.)

1. An illuminated shadow motion display device to show diverse co-zonal movements simultaneously and comprising in combination a transparency receiving screen to receive and show the display matter, a vertically axled transparency rotor of figured design back of said screen, a pair of light producing elements disposed one above the other in said rotor, a light ray directing screen disposed between said receiving screen and said rotor, and a housing for said members, said ray directing screen having light transmitting parts corresponding respectively with and disposed convergently relative to said light producing elements to allocate the shadow display matter predeterminately at a common elevation on said receiving screen.

1,752,015. REFRIGERATING APPARATUS AND METHOD. JAMES W. MARTIN, Jr., Tuckahoe, N. Y., assignor, by mesne assignments, to Dryice Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed June 15, 1926. Serial No. 116,103. 24 Claims. (Cl. 62—92.)

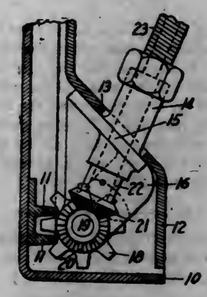


1. The method of refrigerating the interior of an insulated container, which includes evaporating therein a solid substance which evaporates without any intermediate liquid state, evolves hundreds of times its volume of gas much heavier than air, and which has its evaporation rate accelerated according to the percentage of air in bathing contact therewith; guiding and confining a circuit of downflow of the gas evaporated from said solid and upflow thereof through a counterbalancing column while conducting heat from refrigerated space into said gas and utilizing the upflow column as insulation for a wall or walls of said refrigerated space.

1,752,016. CATALYST FOR THE PRODUCTION OF ETHYLENE GLYCOLS AND ETHYLENE HYDROCARBONS. ALEXANDER T. MAXIMOFF, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed May 18, 1926. Serial No. 109,961. 2 Claims. (Cl. 23—233.)

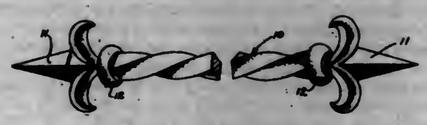
1. An improved reagent for the treatment of organic compounds, namely, an amalgam consisting solely of mercury, aluminum and a metal of the group consisting of zinc and cadmium.

1,752,017. DISPLAY STAND. MYER METZGER, Chicago, Ill. Filed June 7, 1926. Serial No. 114,090. 5 Claims. (Cl. 211—156.)



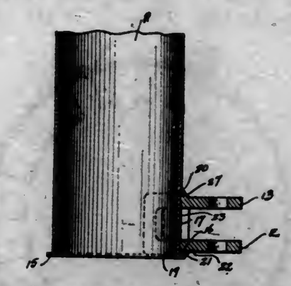
1. A stand of the character described embodying a body portion formed from a single piece of sheet material, portions of the body spaced from each other being bent in opposite directions, one of said portions extending upwardly and the other downwardly from the body, the latter said portion co-operating with the lower edge of the upwardly turned portion to support the body in an upwardly inclined position, another portion of the body adjacent the said downwardly bent portion forming a projecting portion extending above the upper surface of the body and spaced from and co-operating with the first recited upwardly turned portion to hold an article therebetween.

1,752,018. BALUSTRADE POST. ALBERT F. MILLER, Kansas City, Kans. Filed Aug. 24, 1928. Serial No. 301,766. 6 Claims. (Cl. 189—38.)



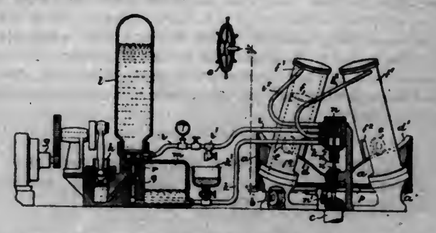
1. In a balustrade post, vertical side plates adjacent ones of which are disposed at an angle to each other, each plate along each longitudinal edge having a set of spaced inwardly extending arms which cross and alternate with the adjacent set of arms of the adjacent plate, and vertical corner locking bars at the inner sides of said plates and respectively embraced and held from lateral movement by the adjacent crossed arms of adjacent plates.

1,752,019. ODOMETER DRIVE. JOHN B. MILLS and FREDERICK O. GRAY, Dayton, Ohio, assignors to Ohmer Fare Register Company, Dayton, Ohio, a Corporation of New York. Filed June 28, 1926. Serial No. 118,957. 2 Claims. (Cl. 74—7.)



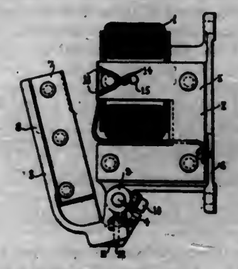
1. In a driving means a disk secured to a fixed part of an automobile, a bracket secured thereto, bearings extending at an angle to each other carried by said bracket, shafts mounted in said bearings, means operatably connecting said shafts, a brake drum, a spiral gear carried thereby, and means operatably connecting said gear to one of said shafts.

1,752,020. CONNECTION FOR DRAPERY RODS. PETER J. MITCHELS, Oakland, Calif. Filed May 16, 1928. Serial No. 278,282. 3 Claims. (Cl. 156—19.)



1. In combination with a twisted square drapery rod, an ornamental device adapted to be fitted to the end thereof, said device including a socket adapted to receive the end of the rod, means connecting said socket to said device permitting the socket to be turned relative to the device or relatively fixed thereto.

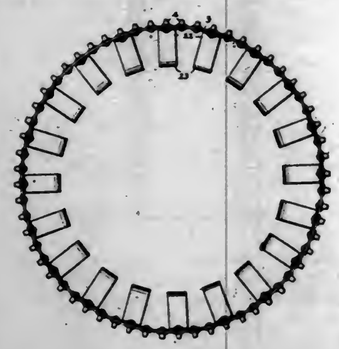
1,752,021. METHOD OF MANUFACTURE OF SLEEVE VALVES. ARCHIE MACPHAIL NIVEN, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Original application filed July 17, 1927, Serial No. 205,973. Divided and this application filed Aug. 23, 1928. Serial No. 301,444. 5 Claims. (Cl. 29—156.7.)



1. The method of manufacturing a sleeve valve provided with a driving lug for internal combustion engines consisting in deforming the sleeve by extending a portion thereof outwardly from the sleeve, and welding a portion of a sleeve driving lug to said outwardly extending sleeve portion.

1,752,022. MEANS FOR ACTUATING STEERING GEAR AND FOR ANALOGOUS PURPOSES. SIMON DOKK OLSEN, Walthamstow, England. Filed Jan. 12, 1925, Serial No. 1,908, and in Great Britain Jan. 24, 1924. 5 Claims. (Cl. 114—150.)

1. Means for operating ship's steering gear and for analogous purposes, comprising a shaft to which only a partial turn is to be given, a segmental cylindrical cam co-axially mounted on said shaft, such cam resting on one edge and having a V-shaped cam-like part at its other edge, stationary hydraulic rams exerting their thrusts on opposite sides of said recess, substantially as described.

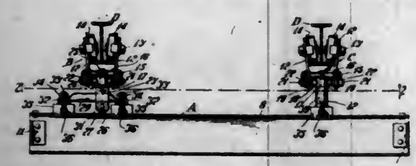


1,752,023. ALTERNATING-CURRENT ELECTROMAGNET. HORACE N. PACKARD, Wauwatosa, Wis., assignor, by mesne assignments, to The Cutler-Hammer, Inc., a Corporation of Delaware. Filed Feb. 11, 1924. Serial No. 691,897. 3 Claims. (Cl. 175—338.)

3. An alternating current electromagnet comprising field and armature members and a shading coil carried by one

of said members, said coil being formed of stranded wire having its end portions twisted together and connected by fusion at a substantial distance from the inner end of the twist.

1,752,024. ANTISKID DEVICE. FRED G. PARKER, Paterson, N. J. Filed Apr. 20, 1926, Serial No. 103,271. Renewed Jan. 13, 1928. 1 Claim. (Cl. 152—16.)

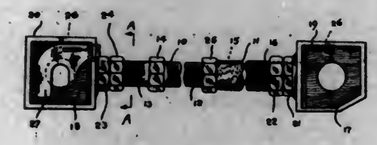


An endless vehicle wheel tire shoe including a stiff flexible band formed to approximately wholly embrace the tire and embodying a circumferential tread-portion and having a marginal portion normally assuming a position in cylindrical extension of said tread portion but yieldable radially inward, in combination with means to deform said marginal portion to a less diameter than the tread portion, whereby when the shoe is applied over a wheel whose tread said tread-portion closely fits and said means thereupon is made to contract the marginal portion to a less diameter than that of the wheel tread said shoe will be held against displacement off the wheel laterally thereof in one direction.

1,752,025. ELEVATOR INSTALLATION. EARL W. PETERSON, Chicago, Ill. Filed Jan. 8, 1929. Serial No. 331,037. 6 Claims. (Cl. 16—95.)

1. A closure for a door hanger installation, comprising a facing for the installation, brackets opposite the facing, and a cover plate detachably hooked to the facing and secured to the brackets.

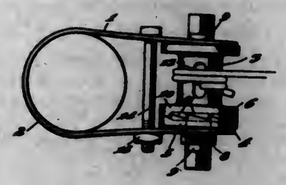
1,752,026. CRANE. ELLIS J. G. PHILLIPS, Aurora, Ill., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed June 6, 1928. Serial No. 283,213. 7 Claims. (Cl. 105—163.)



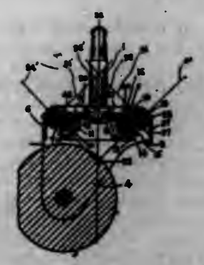
1. In a crane, the combination with two laterally spaced overhead tracks, of trolleys adapted to roll along said tracks, a beam, a depending swivel supporting one end portion of said beam on one of said trolleys, a depending swivel on the other trolley, a roller carried by said latter swivel, and a bridge member mounted on said beam and engaging said roller.

1,752,027. FISHING ROD. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 17, 1927. Serial No. 161,478. 11 Claims. (Cl. 43—22.)

1. A fishing rod having a handle, a reel seat above the handle, a reel having a cross plate resting upon the reel seat, a pair of bands surrounding the reel seat and adapted to enclose the ends of the cross plate, one of said bands being a split band, a bolt to secure the ends of the split band, and a finger grip, the bolt being passed through one end of the finger grip, that portion of the grip adjacent the bolt bearing against the rod and a noncircular surface on the grip bearing against the rod.



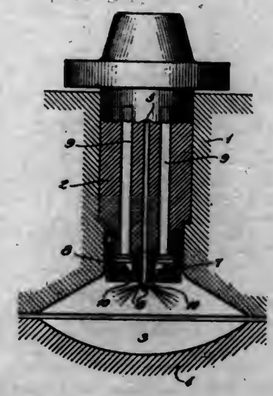
1,752,028. ADJUSTABLE PITMAN ROD. CHARLES ALEXANDER RITCHIE, D'Arcy, Saskatchewan, Canada. Filed May 31, 1928. Serial No. 281,810. 1 Claim. (Cl. 74—47.)



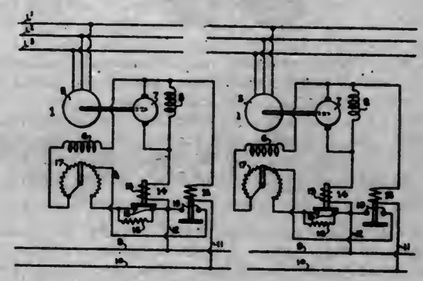
In an adjustable pitman rod having a bolt threaded at both ends and a nut positioned midway of its length; a tube threaded inside at one end to receive the said bolt and threaded outside at the opposite end; bearing housings; a nut welded to each of the bearing housings, one designed to receive the bolt, the other to receive the outer thread of the tube, and a plurality of check nuts to secure the bolt and tube, substantially as set forth.

1,752,029. WIRE STRETCHER. WILLIAM F. ROBERTSON, Cincinnati, Ohio. Filed Feb. 17, 1928. Serial No. 255,150. 7 Claims. (Cl. 256—42.)

1. A tightening device, comprising, a U-shaped frame, a ratchet element non-rotatably mounted in the outer end of one arm of the U-shaped frame, a spool having trunnions journalled within the ratchet element and the other arm of the U-shaped frame, concentrically disposed registering teeth formed on the respective adjacent faces of the spool and the ratchet element for preventing unwinding rotation of the spool, and the U-shaped frame having inherent spring tension therein compressing the arms thereof against the outer face of the spool and the outer face of the ratchet element for providing spring locking engagement of the teeth.



1,752,030. CASTER. MAYO E. ROE, Elyria, Ohio, assignor to The Colson Company, Elyria, Ohio, a Corporation of Ohio. Filed June 12, 1926. Serial No. 115,520. 3 Claims. (Cl. 16—21.)

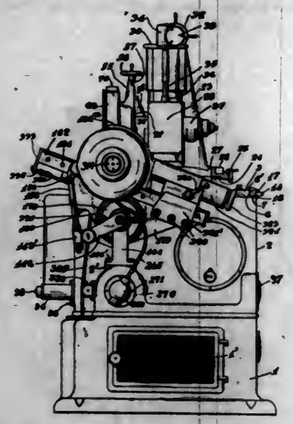


1. In a caster, the combination with a pair of superposed sheet metal disks joined at their central portions and extending divergingly in more remote portions, of a sheet metal caster fork element having a centrally perforated yoke, interposed between the diverging portions of said disks, the upper of said disks being folded to form an annular groove of substantially inverted V-form in transverse sections on its under surface, the lowermost disk being generally in the form of an inverted cup with divergent side walls and upturned outwardly extending rim portions to form an annular groove on the outer surface of the cup comprising upper surfaces of the said rim portion and adjacent outer surfaces of the divergent side walls; the side walls of the cup extending through the perforation in the yoke, the said interposed yoke portion being successively folded downwardly, upwardly and then downwardly in all radial sections proceeding inwardly from its border toward its central perforation to form a pair of concentric upper and lower bearing race grooves, of successively substantially V-form and inverted substantially V-form, radial sections, to cooperate with the grooves of the upper and lower disks, respectively, to retain separate sets of bearing balls in the said successive grooves.

1,752,031. INTERNAL-COMBUSTION ENGINE. CHARLES SCHAER, Langenthal, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 4, 1926, Serial No. 146,179, and in Switzerland Nov. 18, 1925. 2 Claims. (Cl. 123—32.)

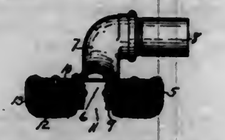
1. The combination in an internal combustion engine of a fuel injection nozzle having a discharge orifice opening directly into the engine cylinder, a fluid chamber having an independent opening into the cylinder adjacent the nozzle and means for directing the outflow from said chamber in cleansing relationship to the discharge orifice.

1,752,032. SYSTEM OF POWER TRANSMISSION AND DISTRIBUTION. EDWIN W. SEEGER, Wauwatosa, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed July 13, 1928. Serial No. 292,484. 5 Claims. (Cl. 171—123.)



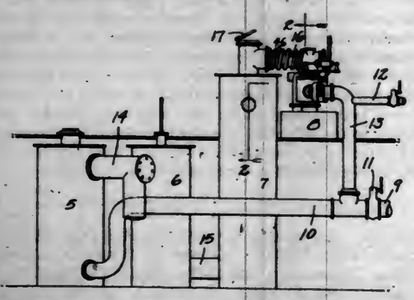
1. In combination, an alternating current system, a synchronous rotary transformer supplied from said system and delivering direct current, means responsive to variations in load on the direct current side to vary the excitation of said transformer on its alternating current side for regulation of the power factor of the altrenating current system, said means tending to reduce the excitation of said transformer under heavy load conditions on the direct current side and means to render the former means ineffective to so function when the load on the direct current side exceeds a given value.

1,752,033. METHOD AND APPARATUS FOR GENERATING GEAR TEETH. OLIVER G. SIMMONS, Lakewood, Ohio. Filed Mar. 31, 1926. Serial No. 98,791. 101 Claims. (Cl. 51—52.)



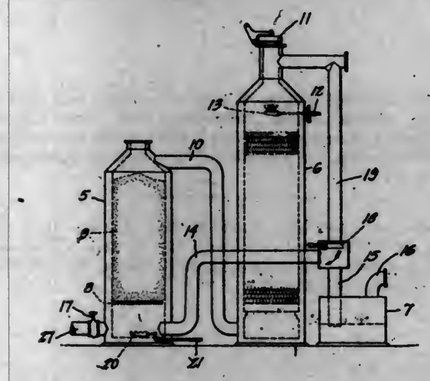
1. The herein described method of generating the faces of teeth of a gear shaped blank to an involute curve, which

comprises engaging the blank with a cutting element, oscillating the blank about its axis and simultaneously causing the same to move in a direction radial to its axis away from and toward the cutting element into and out of



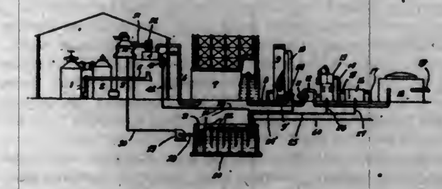
engagement therewith at a linear speed equal to the angular speed as measured on the circumference of a given circle, and operating the blank at increased speed during the entire portion of its movement in which it is out of contact with the cutting element.

1,752,034. PNEUMATIC CLEANING TOOL. IRA H. SPENCER, West Hartford, Conn., assignor to The Spencer Turbine Company, West Hartford, Conn., a Corporation of Connecticut. Filed Aug. 17, 1926. Serial No. 129,831. 5 Claims. (Cl. 15—158.)



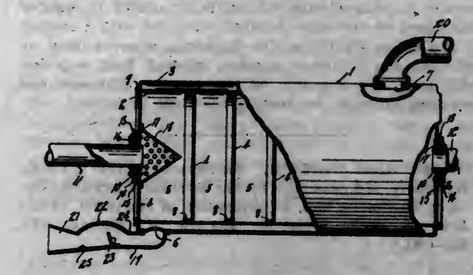
1. A pneumatic cleaning and polishing tool including a body having an air passage therethrough and means for attachment of an air conducting element thereto, and a polishing face composed of a comparatively firm polishing material and a comparatively flexible material, the latter comprising fibers extending in various directions across lines perpendicular to the plane of the face of the tool.

1,752,035. GAS MANUFACTURE. FRANK W. STEERE, Highland Park, Mich., assignor, by mesne assignments, to Semet-Solvay Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1924. Serial No. 739,289. 2 Claims. (Cl. 48—80.)



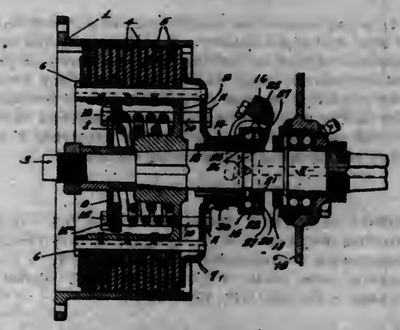
1. A water gas plant comprising a single generator, a single carburetor, a single superheater and wash box connected in series, a passage leading from the base of the generator to the wash box, an upwardly directed spray nozzle positioned within the superheater at substantially the top thereof, said nozzle having a pipe connection extending through the superheater wall, whereby said nozzle is positioned away from said superheated wall, and means for supplying water to said spray nozzle through said pipe connection, said water being generated into steam at substantially the top of said superheater for use during the back-run combustible gas-making cycle.

1,752,036. WATER-GAS MANUFACTURE. FRANK W. STEERE, Highland Park, Mich., assignor, by mesne assignments, to Semet-Solvay Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1924. Serial No. 757,399. 2 Claims. (Cl. 48—208.)



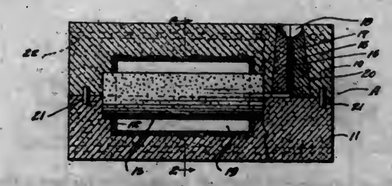
1. The process of manufacturing water gas in a two-shell set comprising a water gas generator having a bed of fuel therein and a superheater, the individual units being located in separate and detached shells, a washbox connected to the superheater and a conduit leading from substantially the base of the generator to the washbox, which involves passing a free oxygen-containing gas through the fuel bed in the generator, passing the resultant blast gases from the generator into and through the superheater; introducing steam into the base of the fuel bed and passing the water gas thus formed from the generator into substantially the base of the superheater, through the superheater into the washbox, and passing steam down through the superheater and from substantially the base of the superheater directly into substantially the top of the generator and down through the fuel bed therein, thereby generating water gas, and passing said water gas through the lower portion of said fuel bed into and through said conduit and into said washbox.

1,752,037. GAS MANUFACTURE. FRANK W. STEERE, Highland Park, Mich., assignor to Semet-Solvay Engineering Corporation, New York, N. Y., a Corporation of New York. Filed July 27, 1926. Serial No. 125,283. 3 Claims. (Cl. 48—208.)



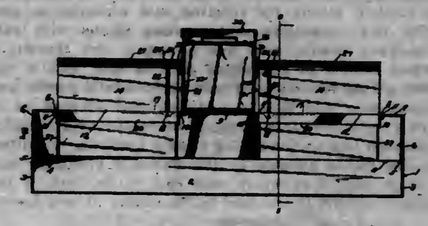
1. The process of disposing of effluent waste liquors in the manufacture of water gas in a plant involving a generator and heat regenerator, which comprises passing the effluent liquors into a decanter for the stratification of the liquor, passing the aqueous layer into the heat regenerator to volatilize it, and passing the volatiles through the heat regenerator and into the generator to produce water gas.

1,752,038. HEATER FOR AUTOMOBILES. JAMES J. SUNDAY, Detroit, Mich., assignor to James W. Kelch, Detroit, Mich. Filed Feb. 9, 1926. Serial No. 87,024. 2 Claims. (Cl. 257—241.)



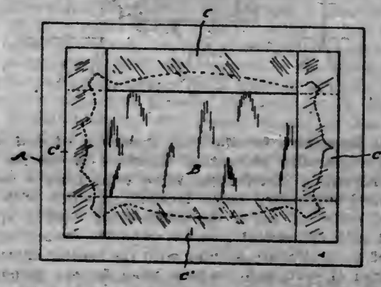
1. A heater for automobiles including a chamber for exhaust gases having an opening therein, an adapter for exhaust conduits having an opening in alignment with the opening in said chamber, means for detachably securing said adapter to said chamber including headed elements projecting outwardly from said chamber, and a deflector for said gases upon the inside of said chamber forming a receptacle surrounding the headed elements for preventing said securing means from falling or being pushed inside the chamber when the adapter is being adjusted.

1,752,039. FRICTION CLUTCH. HENRY W. SWEET, Syracuse, N. Y., assignor to The Brown Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed July 28, 1924. Serial No. 728,524. 1 Claim. (Cl. 192—69.)



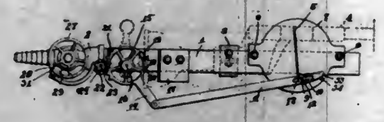
In a friction clutch, the combination of driving and driven elements having coacting friction means, one of said elements comprising a shaft arranged coaxially of the other element, an axially shiftable pressure plate for engaging said means and having a hub encircling the shaft, a main spring acting on the pressure plate for normally engaging said means, clutch release means for withdrawing the pressure plate against the action of the spring including a sleeve slidable along the shaft and having threaded engagement with said hub, the sleeve having a flange for turning it at its rear end, a throwout bearing mounted on the sleeve and abutting against said flange and a nut threading on the sleeve against the throw-out bearing for holding it against said flange.

1,752,040. MOLD. EZRA H. TRAUT, Detroit, Mich. Filed Apr. 2, 1928. Serial No. 266,602. 8 Claims. (Cl. 22—113.)



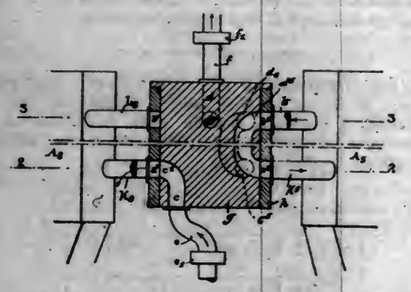
1. A mold of a permanent nature for use in casting articles from molten metal, said mold having a body portion of relatively coarse heat resisting porous material and a separable lining portion of relatively fine heat resisting porous material.

1,752,041. ANIMAL TRAP. STACY D. TRUMBO, Pittsburgh, Pa. Filed Dec. 13, 1926. Serial No. 154,482. 1 Claim. (Cl. 43—70.)



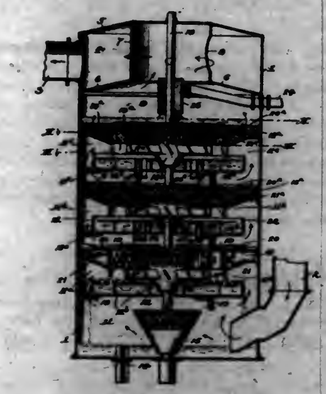
In a trap, the combination with a receptacle, a pair of tilting platforms over the receptacle, a pair of spaced opposed covers over the platforms, latch bars in the opposed ends of the covers and having notches therein, shafts journaled in the platforms, tripping plates associated with the platforms and fixed to the shafts, rods carried by the shafts and normally engaged in the notches to hold the platforms against tilting, the rods being releasable from the notches to permit tilting of the platforms upon actuation of the tripping plates.

1,752,042. PROCESS OF MANUFACTURING LEATHER. JOHN P. TOOLS, Detroit, Mich., assignor to Carl E. Schmidt & Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 15, 1928. Serial No. 326,354. 4 Claims. (Cl. 149—21.)



4. In a process of manufacturing leather the step which consists in setting out the wet skin upon a drying board, placing a strip of adhesive impregnated fabric so as to overlap the marginal portions of the skin and the board beyond the same to thereby firmly attach the skin to the board during the drying process.

1,752,043. SAFETY GAS COCK. WILLIAM VAHL, Rochester, N. Y. Filed Jan. 14, 1928, Serial No. 246,825. Renewed Jan. 13, 1930. 2 Claims. (Cl. 158—117.2.)



1. In an automatic shut-off mechanism for gas burners, the combination with a burner and a regulating valve, of a shut-off valve, a supporting frame supported by said burner, a vertical heating plate carried by said supporting frame at one end thereof and held on one side of the burner, a thermostatic needle mounted on the side of said vertical heating plate, a ratchet wheel carried by said shut-off valve, a pawl adapted to engage said ratchet wheel and hold said shut off valve in the open position, an eccentric adapted to engage said pawl and means for rotating said eccentric to rock said pawl and release said ratchet and said shut off valve, spring means adapted to operate said valve on the release of said ratchet, means for rotating said eccentric, a connecting link connecting said rotating means with said thermostatic needle, said link having a slot therein, a shoulder formed in the upper edge of said slot, a pin carried at the lower end of said thermostatic needle and engaging into said slot in said link and adapted to be moved in said slot into engagement behind said shoulder to pull said link on the flexing of said needle in one direction, and means adapted to automatically disengage said pin from said shoulder in said slot at the end of the movement of said link caused by the flexing of said needle.

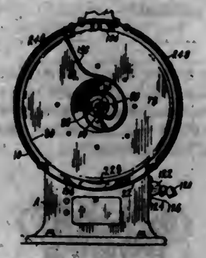
1,752,044. APPARATUS FOR THE MANUFACTURE OF SMOKELESS FUEL. CHARLES VIEU and LÉON MOURGEON, Paris, France; said Vieu assignor to said Mourgeon and Compagnie des Mines de Vicoigne, Noeux & Drocourt, Paris, France. Filed June 22, 1926, Serial No. 117,851, and in France June 27, 1925. 3 Claims. (Cl. 202—99.)

1. An apparatus for the heat treatment of coal, comprising a plurality of heating chambers to contain coal to be heated, a distributing valve comprising a hollow cylindrical stationary outer member provided with two parallel series of ports, the ports being equally spaced around said cylindrical member, conduits connecting the ports of the stationary member with the heating chambers, one series of ports and conduits being for the purpose of conducting heating fluid to the chambers and the other series of ports and conduits being for the purpose of conducting heating fluid from the chambers, and a rotatable cylindrical inner member disposed within the stationary member, said rotatable member and stationary member having a common axis, said rotatable member having separate channels therein, each of the channels terminating at the opposite ends thereof in opening in the cylindrical surface of the rotatable member, the channel openings at one end of said channels being spaced to register with one series of ports in the stationary member and the channel openings at the opposite end of each channel being spaced to register with the other series of ports in the stationary member, a main inlet channel to conduct heating fluid into the rotatable member, the opposite opening thereof registering with one of the ports on the outer member connected with a conduit for conducting heating fluid to the chambers, and a main outlet channel to conduct fluid from the rotatable member, the opposite opening of said channel being spaced to register with a port on the outer member connected with a conduit for conducting fluid from the chambers, whereby upon rotation of the rotatable member, heating fluid may initially pass into any one of the heating chambers and then pass through the heating chambers in series.

1,752,045. GAS WASHER. FREDERICK HENRY WAGNER, Baltimore, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed June 28, 1927. Serial No. 202,124. 12 Claims. (Cl. 261—91.)

1. In a gas washer, the combination of a casing having a gas inlet and a gas outlet; a liquid pumping and spraying element located within the casing; a series of plates extending inwardly from the wall of the casing forming a series of pockets open at their inner ends; a foraminous surface in the upper portion of the pockets and through which the gas passes; and means for supplying a wash liquid to the pumping and spraying element.

1,752,046. ELECTRIC COUPLING CIRCUITS. HORACE WHITTLE, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 6, 1927. Serial No. 181,530. 8 Claims. (Cl. 178—44.)

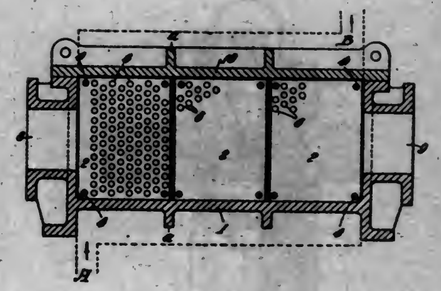


1. A circuit for coupling a line to a secondary circuit having a capacity reactance to transmit a wide band of frequencies, comprising a transformer having primary and secondary windings and leakage inductance, said leakage inductance being of such a value as to resonate with said capacity reactance near the upper limit of said band, and resistances in shunt, respectively, to said primary and secondary windings, and proportioned with respect to each other so as to give said coupling circuit a substantially flat transmission characteristic over said band.

1,752,047. FOOD SIEVE. HARRISON L. WIRT, Schenectady, N. Y. Filed Apr. 21, 1927. Serial No. 185,540. 4 Claims. (Cl. 146—176.)

1. The combination with a receptacle having a supporting ledge, of a flat self-supporting plate formed from relatively heavy sheet material adapted to be supported by said ledge, said plate having smooth surfaces and being provided with sharp edged holes to form a sieve through which food material may be forced, at least one open side of the plate being in the plane of the top of the receptacle whereby material on the plate may be operated upon with a straight edged tool.

1,752,048. AIR-SERVICE STATION. JOE C. WOODFORD, Bryan, Ohio, assignor to Service Station Equipment Company, Bryan, Ohio, a Corporation of Delaware. Filed July 5, 1927. Serial No. 203,301. 2 Claims. (Cl. 299—78.)



1. An air service station including a bracket, a hose reel revolubly mounted thereon, an air service hose wound on said reel, an air service line having an air tight connection with said hose at the center of the reel, a portion of said air service line being metallic tubing and being spirally arranged around such air tight connection whereby to preclude the rupturing of the connection upon movement of the connection relative to the air service line.

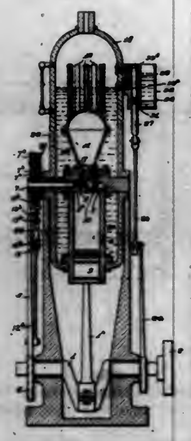
1,752,049. PRODUCTION OF HALOGEN SUBSTITUTION PRODUCTS OF OLEFINES. CHARLES O. YOUNG, Charleston, W. Va., assignor to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Filed Jan. 8, 1927. Serial No. 160,008. 3 Claims. (Cl. 260—165.)

1. The method of making mono-halogen substitution products of olefines which comprises heating an olefine dihalide under pressure with aqueous caustic alkali to a temperature above the boiling point of the dihalide.

1,752,050. REGENERATION OR PURIFICATION OF LUBRICATING OILS. HORACE JOHN YOUNG, Westminster, England, assignor of one-half to Swan, Hunter & Wigham Richardson Limited, Newcastle-upon-Tyne, England, an English Company. Filed Mar. 22, 1928, Serial No. 263,946, and in Great Britain Apr. 12, 1927. 8 Claims. (Cl. 196—16.)

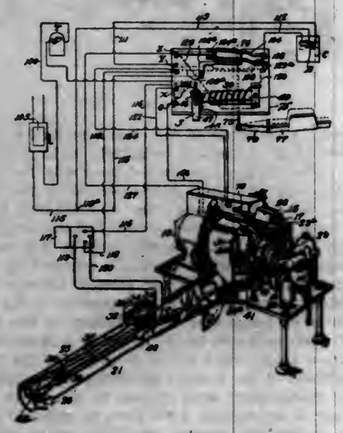
1. A process for freeing used lubricating oil from corrosive impurities which consists in bringing the oil to be treated into intimate contact with a non-ferrous metallic substance reactive with the corrosive ingredients of the oil without producing reaction products having the same deleterious effects as those of the aforesaid corrosive ingredients.

1,752,051. SWIMMING APPLIANCE. PORUS J. YOUNG, Bomont, W. Va. Filed May 19, 1928. Serial No. 279,084. 1 Claim. (Cl. 9—18.)



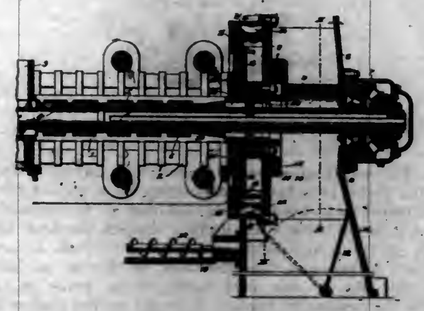
A swimming appliance of the class described comprising a float including a buoyant, relatively rigid horisontally disposed body having a concave upper side for disposal against the body of a user, means carried by the body for embracing the body of the user and holding the said buoyant body thereto, a rear vertical buoyant section connected with and supported by the buoyant body and having a rearwardly extending portion, a supporting bracket upon the under side of the rear vertical buoyant section inward of said extension, a bearing supported by the bracket for adjustment lengthwise with respect to the body, a propeller shaft mounted in the bearing, a propeller upon the shaft, a pedal crank shaft mounted in the bearing, the adjustment of the bearing providing for positioning of the pedal crank shaft with respect to the upper portion of the body in accordance with users of different heights, operative connection between the pedal crank shaft and the propeller shaft, and pedals carried by the cranks of the pedal crank shaft at opposite sides of the rear vertical portion of the body, the operative connection between the pedal crank shaft and the propeller shaft being arranged directly below the rearward extension on the rear vertical buoyant section.

1,752,052. FLUID-PRESSURE GENERATOR. EDWIN H AIKEN, Superior, Ariz. Filed July 27, 1927. Serial No. 208,791. 5 Claims. (Cl. 60—45.)



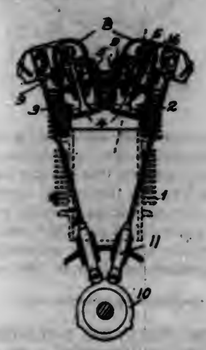
1. An internal combustion boiler consisting of a compression cylinder, a combustion chamber, a water container within which the combustion chamber and the compression cylinder are enclosed, means for supplying air to the compression cylinder, means for supplying fuel to the

combustion chamber, and means for maintaining a supply of water in the container, valves for controlling said fuel



and air supply, and means under control of the pressure in the container for determining the time of closing of said valves.

1,752,053. AUTOMATICALLY CONTROLLED OIL BURNER. LOYD I. ALDRICH, Peoria, Ill., assignor to Preferred Oil Burners, Inc., Peoria, Ill., a Corporation of Illinois. Filed May 1, 1925. Serial No. 27,181. 2 Claims. (Cl. 158—28.)

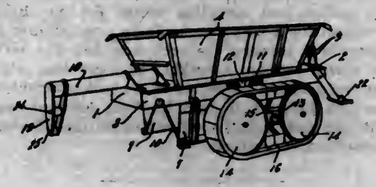


1. In combination with an electric motor driven fuel burner, an ignition member, automatic control means therefor comprising a thermostat, a starting switch controlled by combustion conditions, an electrically operated switch actuating mechanism, a switch requiring manual reset adapted to be operated thereby, a high voltage circuit including the electric motor, thermostat, combustion switch and electrically operated switch actuating mechanism, a circuit changing mechanism comprising a switch member completing the starting circuit through the above named members, a second switch adapted to complete a shorter electrical circuit, including the motor, prior to the opening of the first named switch and pending the movement of the combustion switch, and a third switch in a second circuit through the combustion switch adapted to close prior to the movement of said combustion switch.

1,752,054. PRESS. RAYMOND T. ANDERSON, Cleveland, Ohio, assignor to The V. D. Anderson Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 28, 1925. Serial No. 33,461. 7 Claims. (Cl. 100—48.)

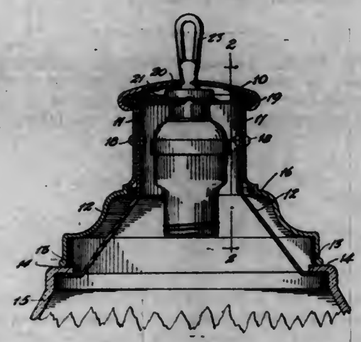
1. In a press the combination of a casing having openings therein for the passage of expressed liquid; means working in the casing to subject the material undergoing treatment to pressure and to advance the pressed material toward the discharge end of the press; a plurality of laterally adjustable members, the inner ends whereof extend into the discharge opening, said members producing a choke for said opening; and means for securing simultaneous adjustment of said members and maintaining them in their adjusted position.

1,752,055. VALVE-MECHANISM HOUSING. GLENN D. ANGLE, Cincinnati, Ohio, assignor to The Le Blond Aircraft Engine Corporation, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 23, 1928. Serial No. 314,471. 5 Claims. (Cl. 123—90.)



1. In combination in an engine cylinder having a valve and valve stem therein, a flange formed about an opening in said cylinder through which the stem of the valve projects, said flange being concentric with the valve stem axis, and a housing with a rocker arm therein for engaging the valve stem, said housing having a flange of a shape to take a full seat in various positions of radial adjustment upon the said engine flange, for the purpose described.

1,752,056. DUMP TRAILER. ARTHUR P. ARMINGTON and STEWART F. ARMINGTON, Willoughby, Ohio, assignors to The Euclid Crane & Hoist Company, Euclid, Ohio, a Corporation of Ohio. Continuation of application Serial No. 304,462, filed Sept. 7, 1928. This application filed May 1, 1929. Serial No. 359,600. 2 Claims. (Cl. 298—35.)

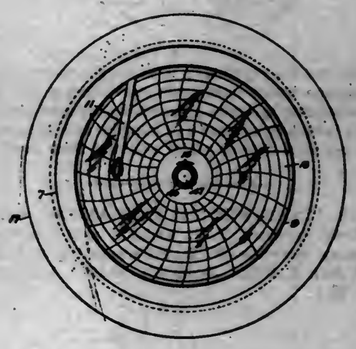


1. A heavy-duty dump trailer of cart class, comprising an open-bottom container-body, mobile supporting means

for said body, including running gear characterized by rolling elements of diameter less than the width of the body opening and medially located axle means associating the body with the running gear, said axle means being arched over the bottom opening and including arms depending from the body and having at their lower ends tilting bearing connection with said gear, whereby the body is supported in elevated position to tilt fore-and-aft

about the bearing axis and is substantially balanced but in unstable equilibrium over said axis, and a single pair of dumping doors for said opening each extending the full length thereof and mounted to swing downwardly and laterally to dumping position whereby dumping of the load will be uniform fore-and-aft of said axis of balance, and said balance will thus be maintained independent of whether the load is carried or dumped.

1,752,057. SHADE HOLDER. JACOB B. BANDER, New York, N. Y., assignor to Full-O-Lite Company, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1927. Serial No. 234,757. 4 Claims. (Cl. 240—133.)

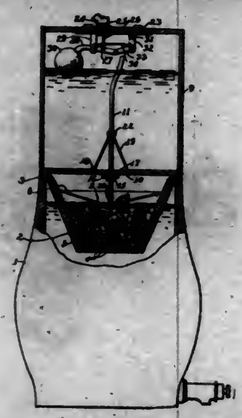


1. In a lighting fixture, a shade supporting member consisting of a supporting member having a central transverse portion, a pair of legs extending downwardly in parallelism from the ends of the transverse portion and having their lower ends diverging, and outwardly extending feet on said lower ends; a bell having a cylindrical upper portion surrounding the parallel portions of the legs and having a flaring lower portion provided with an outwardly extending peripheral flange adapted to engage the portion of a shade supported on said feet to clamp the shade on the feet, and means to secure the bell in position on the supporting member.

1,752,058. BUILDING CONSTRUCTION. ALBERT F. BEMIS, Newton, Mass., assignor to Bemis Industries Inc., Boston, Mass., a Corporation of Delaware. Filed May 13, 1927. Serial No. 191,044. 15 Claims. (Cl. 72—1.)

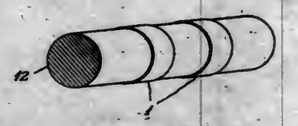
1. A wall construction comprising a row of parallel studs, slabs at either side of the studs, said slabs being formed with grooved undulatory inner faces which provide grooves in interfitting engagement with said studs.

1,752,059. RECORDING INSTRUMENT. EDGAR H. BRISTOL, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1928. Serial No. 269,258. 3 Claims. (Cl. 234—1.)



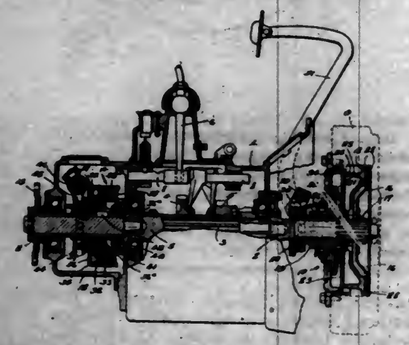
1. In a recording instrument, in combination with a clock-driven inner member for supporting a chart at an end thereof, a removable cap for securing the chart thereto having snap engagement therewith, and an element loosely associated with said cap and manipulable to engage and steady said inner member during removal of the cap.

1,752,060. WATER FILTER. CHARLES L. BURRIGHT and MELVIN J. SNYDER, Campbell, Calif. Filed Apr. 20, 1927. Serial No. 185,238. 4 Claims. (Cl. 210—105.)



1. A water filter comprising an olla, a receptacle mounted thereon having a perforated bottom portion and closed

at its top, a tube passing through the perforated bottom portion into the olla and extending upwardly to a point adjacent the top of the receptacle, a filtering pad covering



the perforated bottom portion, a foraminous cone mounted on said pad and encompassing said tube, and means mounted on the tube for engaging the apex of the cone and pressing it into engagement with the edge of the pad.

1,752,061. MAKING BACKING MEMBER FOR SLITTING MACHINES. JAMES A. CAMERON, Brooklyn, N. Y., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed May 25, 1928. Serial No. 280,516. 3 Claims. (Cl. 29—148.)

1. The method of making a backing member for a slitting machine which consists in converting a flat blank of sheet metal into a sleeve, then hardening said sleeve, then grinding said sleeve inside and outside, and then mounting said sleeve on a core of softer material than itself.

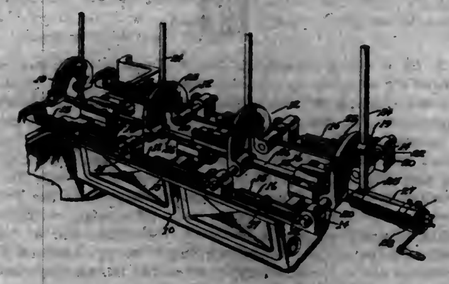
1,752,062. TRANSMISSION MECHANISM. GEORGE C. CARHART, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Mar. 8, 1926. Serial No. 93,101. 1 Claim. (Cl. 192—53.)

In a transmission mechanism, the combination of driving and driven shafts, a normally engaged clutch for connecting and disconnecting the shafts, the clutch comprising coacting friction sections and coacting positive sections, one of the positively engaged sections and one of the friction sections being shiftable and operable successively, whereby the positive sections disengage in advance of the friction sections and the sections reengage in the reverse order, throw-out means for one of the shiftable positive sections of the clutch and means between the shiftable sections whereby the positive shiftable section picks up the shiftable friction section during the throwing out of the clutch, spring means to shift the shiftable friction section into engaged position when not held disengaged by the positive section and operating means for the throw-out means comprising a rock arm having a cam follower thereon, connections between the rock arm and the shiftable positive clutch section, a rocking cam coacting with the follower and a spring connected to the rock arm which carries the cam follower to hold the cam follower engaged with the cam and to hold the positive shiftable clutch section in its engaged position.

1,752,063. LIFEBOAT. CHARLES C. CLIFFORD, Coleraine, Minn. Filed Apr. 6, 1929. Serial No. 353,070. 4 Claims. (Cl. 114—16.7.)

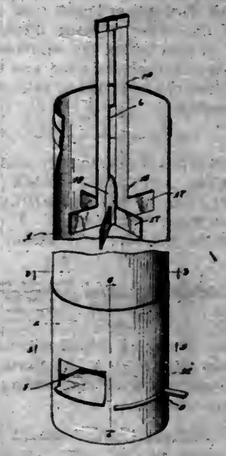
1. The combination with a submarine boat, of a life boat comprising a streamline normally closed body, a hatch by which access may be had to the interior of the body, hatches by which communication may be had between the boats, means to mount the life boat on the submarine boat with the hatches in associated relation, said last named means comprising a finger and eye connection toward the stern of the life boat and a jack screw toward the bow of the life boat.

1,752,064. TOOL. THOMAS F. CONNORS, Columbus, Ohio, assignor, by mesne assignments, to Charles G. McGhie, St. Catharines, Ontario, Canada. Filed July 1, 1927. Serial No. 202,840. 4 Claims. (Cl. 16—116.)



1. In a load bearing tool, the combination of a tool proper; a metallic shank integrally united at one of its ends with the tool proper; a tubular metallic handle having one of its ends integrally united with the other end of the said shank and comprising an elongated body portion knurled on its exterior surface; a heat insulating strip of composition cork spirally wound upon and cemented to the knurled surface of the said body portion; and a grip member secured to the free end of the said body portion and having a portion thereof overlying the end of the cork covering for protecting the same.

1,752,065. AUTOMATIC EXTENSIBLE TABLE. JOSEPH COOPER, New York, N. Y. Filed Dec. 1, 1927. Serial No. 236,923. 4 Claims. (Cl. 45—118.)



4. In automatic extension tables comprising a centre leaf, leaves adapted to lie under the centre leaf, a slide combination for the under leaves comprising a fixed slide member formed with a key slide-way, movable slide members adjacent the fixed member, rack and pinion connections intermediate the movable slide members, and cam and stud connections intermediate said movable slide members and the fixed slide member, rack bars slidable in said key slide-way and carrying said studs, the cams being carried by the movable slides and engaged by said studs, a pinion connecting said rack bars and rack and pinion connections intermediate the slides.

1,752,066. LINE-BORING MACHINE. MAURICE C. COX and RALPH B. RYAN, Oakland, Calif. Filed Apr. 12, 1927. Serial No. 183,062. 1 Claim. (Cl. 77—2.)

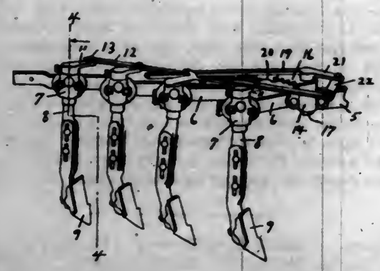
A boring bar support comprising a pair of bearings adapted to be secured to the crank case at opposite sides of a bearing to be bored and disposed at right angles to the bearing to be bored, a frame plate disposed intermediate said bearings and in a plane at right angles to the axis of the bearing to be bored, a trunnion projecting from each side of the plate and disposed in said bearings whereby the plate may rotate in a plane parallel to the axis of the bearing to be bored, said bearings being capable of adjustment to hold said plate in a stationary position, a member connected with the plate and disposed with its axis substantially parallel with the bearing to be bored, a bar arranged at right angles to said member and slidably connected therewith to slide in a plane at right angles to the axis of said member, said member being normally rotatable, means for simultaneously rendering said member and said bar fixed relative to said plate, a boring bar bearing carried at one end of said bar and arranged with its axis at right angles to the axis of the bar.

1,752,067. DISPENSING MACHINE. WILLIAM G. CRANKSHAW, Chicago, Ill. Filed Oct. 18, 1927. Serial No. 225,875. 6 Claims. (Cl. 146—60.)

1. A dispensing machine for plastic substances, comprising a container, a partition in the container dividing it into upper and lower sections, said partition being adapted to support a body of plastic material in the upper section and provided with means for severing portions of the material from the body, operating mechanism in the bottom of the container including the shaft which extends upwardly through the partition and into the upper section, a member having radially extending blades insertable over the shaft adapted to sever the substance into segments upon insertion thereof, said member engaging the shaft to rotate therewith whereby the radially extending blades rotate the body of substance within the container.

1,752,068. LIQUID-DISPENSING APPARATUS. JOHN B. DAVIS, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Feb. 16, 1929. Serial No. 340,395. 5 Claims. (Cl. 221—100.)

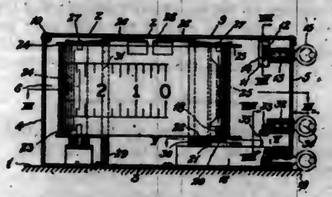
1. In a liquid dispensing apparatus, a pair of measuring cylinders, a piston in each cylinder, a piston rod fixed to each piston and extending outside its cylinder, a pulley rotatably mounted at a point outside said cylinders, a flexible member trained around the pulley and having its ends



connected one to each piston rod at points outside said cylinder, whereby when one piston is moved in one direction the other will be forced to move in an opposite direction, means for supplying liquid alternately to one end of each cylinder and for discharging liquid from such end of one cylinder while the other is being filled, and a pair of shoes mounted in said pulley for adjustment in a general direction toward and away from the axis thereof and each adapted during the reciprocation of said pistons to engage said flexible member.

1,752,069. SENSITIZED COATING AND METHOD OF MAKING AND APPLYING SAME AND PHOTOGRAPHIC PLATE OR FILM PRODUCED THEREBY. EMILE DE STUBNER, New York, N. Y. Filed Mar. 14, 1927. Serial No. 175,434. 10 Claims. (Cl. 95—9.)

1. The process of making photographic films, which consists in applying directly to a film having cellulose ester as its basic ingredient, a sensitized coating material having for its base nitro-cellulose.

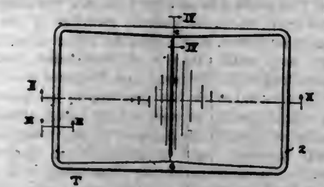


1,752,070. CULTIVATOR. MAURICE DOERSCH, Mount Horeb, Wis. Filed Dec. 5, 1927. Serial No. 237,831. 1 Claim. (Cl. 97—187.)

In a cultivator, the combination of a beam, said beam adjacent one end thereof being provided with a plurality of branches extending from one side thereof, said branches being disposed in a horizontal plane, and each of said branches terminating at their outer end in a bearing, vertically disposed longitudinally adjustable shafts having their upper ends rotatably mounted in said bearings, said shafts at their lower ends having bevels secured thereto, points detachably mounted on the upper end of said shaft, a connecting rod pivotally secured to the free end of each of said cranks, a bearing bracket secured to said beams, a vertical shaft journaled in said bearing bracket, said bearing bracket having a notched segment formed integrally therewith and extending laterally therefrom, said shaft being provided on the upper end thereof with an arm formed integrally therewith and extending laterally therefrom, a link pivotally connected at one end to one end of said arm and at its opposite end to one end of said connecting rod, said shaft being further provided with a lever formed integrally therewith and extending laterally therefrom for movement in a horizontal plane, and a detent structure carried by said lever and cooperable with said notched segment.

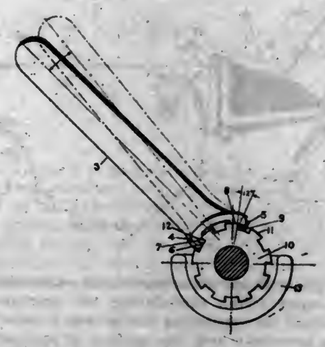
1,752,071. MEANS FOR REGULATING THE USE OF STREET PARKING SPACE. CHARLES C. DOYLE, Cleveland, Ohio. Filed June 2, 1926. Serial No. 113,240. 18 Claims. (Cl. 161—15.)

18. A parking-time regulatory mechanism for self-propelled vehicles comprising storage means capable of providing a perceivable record of use for only a predetermined approximate maximum duration of time, a signaling device operated thereby and a lock mechanism for controlling said signal independently of the movement of propelling parts of the vehicle whereby to permit of establishing inter-



mittent time intervals of depleting use of the power-storage means to correspond with the periods of time when said vehicle is stationary and during which intervals to permit the obligatory functioning of the mechanism to be noticed by any passer-by.

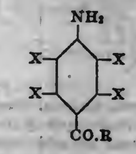
1,752,072. HYDRAULIC SHOCK ABSORBER. EDWIN EARL FOSTER, Austin, Tex. Filed Mar. 10, 1928. Serial No. 260,633. 6 Claims. (Cl. 188—88.)



1. In a shock absorbing device, telescoping members, means for securing one of said telescoping members to the chassis of a vehicle, means for securing the other telescoping member to the axle of the vehicle, a member having a central opening to permit oil to pass therethrough, secured within one of the telescoping members, a rod secured within one of the telescoping members and extending through the opening in the member positioned in the first mentioned telescoping member, said telescoping members containing oil, an air chamber on the upper end of the rod, and the oil in the telescoping members adapted to compress air in the air chamber when the telescoping members are moved towards each other.

1,752,073. METHOD OF MAKING ENAMEL-WARE ARTICLES. JOSEPH FOSTER, Jr., Bratenhal, Ohio, assignor to The Enamel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 16, 1927. Serial No. 199,383. 3 Claims. (Cl. 113—116.)

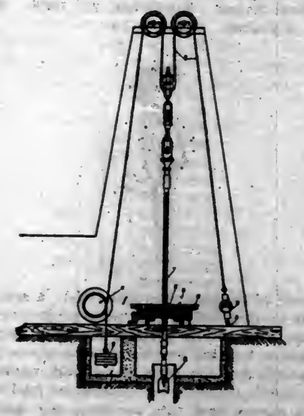
1. A process of manufacturing enamel ware pieces having a plain central expanse, which comprises stamping a sheet metal blank with a raised marginal ledge and introducing a corrective stress in the plane of the sheet by widening the ledge at the middle zone, and finally finishing the article.



1,752,074. SPANNER WRENCH. GIDEON R. GAGNÉ, Milwaukee, Wis., assignor to Blue Point Tool Company, Milwaukee, Wis., a Corporation of Illinois. Filed Jan. 26, 1929. Serial No. 335,249. 5 Claims. (Cl. 81—90.)

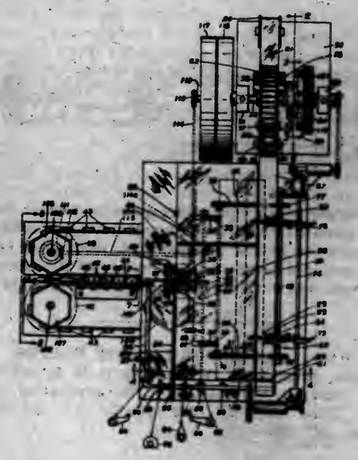
1. A spanner wrench for toothed nuts having a wrench head provided with spaced projections of less width than the space between adjacent teeth of the nut, whereby said wrench is applied directly to the nut by movement at right angles to its axis, and provided with tooth-end-engaging surfaces adjacent said projections.

1,752,075. AZO DYESTUFFS AND PROCESS OF PREPARING SAME. EUGEN GLIETENBERG and AUGUST SIGWART, Leverkusen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 28, 1927, Serial No. 236,362, and in Germany Dec. 3, 1926. 6 Claims. (Cl. 260—86.)



1. In the process for the manufacture of insoluble azo dyestuffs the step which comprises coupling a diazotized amino-compound of the general formula:

in which R signifies an aliphatic or aromatic residue and ω stands for hydrogen or a monovalent substituent with an acetoacet-arylamide.

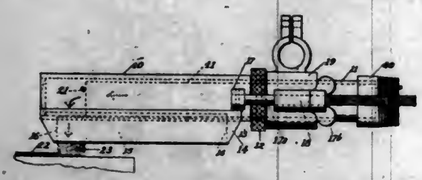


1,752,076. AUTOMATIC CONTROL DEVICE FOR WELL DRILLING. RAYMOND GODET, Ploesti, Rumania. Filed June 24, 1927, Serial No. 201,270, and in Rumania June 1, 1927. 2 Claims. (Cl. 255—19.)

1. A rotary drilling device comprising a drill stem having spirally arranged screw-threads thereon; a rotary table having screw-threads cooperating with the threads on the stem to permit helicoidal motion of the stem rela-

tive to the table; means for supporting said stem; and a constant tension device for the means to maintain a constant tension thereon.

1,752,077. AUTOMATIC MECHANISM FOR FORMING RADIATOR CORES AND THE LIKE. VITA HABIP, South Norwood, Ohio, assignor to The Ohio Automobile Radiator Company, Detroit, Mich., a Corporation of Ohio. Filed Dec. 2, 1926. Serial No. 152,143. 11 Claims. (Cl. 113—54.)

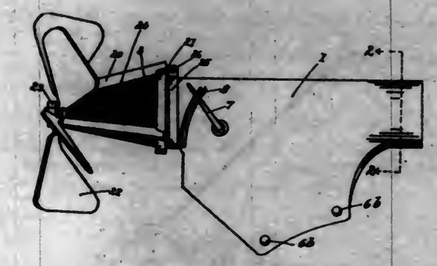


1. In a device of the class described, the combination of a pair of co-operating forming rolls for receiving between them a strip of material to be formed, a conveying mechanism for receiving the formed strip from the forming rolls, means for receiving the strips from the conveying means, a bending device adapted to strike the strip and to move it downwardly through the last mentioned receiving means whereby the strip is folded upon itself, a chute, means intermediate the chute and the last mentioned receiving means for engaging the folded strip and moving it into the chute, a series of stationary seaming dies, an anvil mounted beneath said series of dies and means for carrying the folded strip over the anvil whereby the free ends of said folded strip are moved through the stationary seaming dies for joining and seaming the free ends of the strip.

1,752,078. CHAIR-SEAT END CONSTRUCTION. GEORGE H. HAMILTON, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed Apr. 23, 1928. Serial No. 272,000. 3 Claims. (Cl. 240—4.)

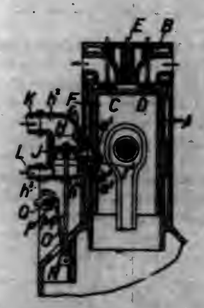
1. In a seat of the character described: a seat end having a middle portion and side portions projecting outwardly therefrom, said middle portion having a keeper orifice and a depression housing an electric lamp above the keeper orifice; a shield for the lamp detachably applied to the face of the middle portion in an assembled position wherein its edges engage said side portions, the shield having at its lower end a lug adapted to be thrust into the keeper orifice in a horizontal assembling position of the shield and to engage said middle portion in the assembled raised position of the shield, the shield having at its upper end releasable means for securing the same to said middle portion in assembled position.

1,752,079. APPARATUS FOR MANUFACTURING PAPER. TOM HARVEY, Middletown, Ohio. Filed Oct. 31, 1928. Serial No. 316,276. 5 Claims. (Cl. 92—43.)



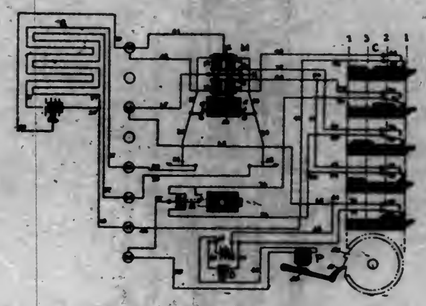
1. A shower deckle comprising an outer tubular member slidably mounted on an inner tubular member, said inner tubular member having an open end, said outer tubular member having a nozzle with an elongated discharge passage therein, and means for supplying liquid to said inner member.

1,752,080. FRAME FOR LICENSE PLATES. MEAD HEDGLON, Syracuse, N. Y., assignor to M. L. Oberdorfer Brass Company, Syracuse, N. Y., a Corporation of New York. Filed May 31, 1928. Serial No. 281,916. 2 Claims. (Cl. 40—125.)



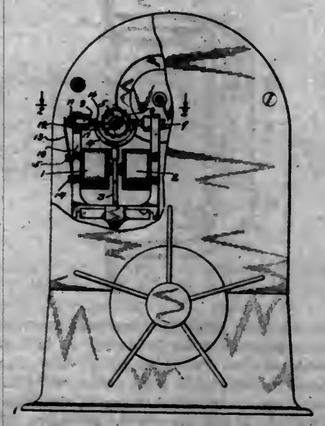
1. A frame for license plates of motor vehicles, said frame being in the form of a channel with the innermost flange of the channel arranged to engage the front side of the license plate within the edge of the plate, the outer wall of the channel being provided with spaced apart tabs movable into a position extending crosswise of the channel, each tab having an offset forming a shoulder for engaging the edge of the plate, the portion of each tab toward the free end of the tab beyond the offset overlying the rear face of the plate.

1,752,081. DUST SEPARATOR FOR INTERNAL-COMBUSTION ENGINES. CHRISTIAN F. HEINES, Sr., Fort Madison, Iowa. Filed Nov. 14, 1924. Serial No. 750,008. 3 Claims. (Cl. 183—72.)



1. In a centrifugal air separator for carbureter intakes, a cone-shaped screen surrounding the aperture to said intake, means for supporting said screen, a centrifugal fan rotatable exteriorly over the surface of said screen with means to support said centrifugal fan and a second fan rigidly attached to said centrifugal fan to supply the motive force necessary for the rotation of said centrifugal fan.

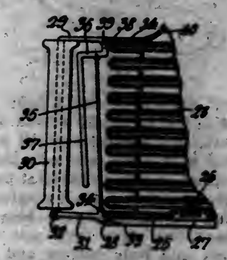
1,752,082. INTERNAL-COMBUSTION ENGINE. ERNST HEART, Kiel, Germany, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Germany. Filed Jan. 21, 1926, Serial No. 82,826, and in Germany Feb. 7, 1925. 6 Claims. (Cl. 60—13.)



1. A four stroke cycle internal combustion engine comprising a working cylinder and piston and exhaust and inlet valves at the head of said cylinder adapted to be opened in the normal manner during the exhaust and suction strokes respectively, a port in said cylinder so positioned as to be uncovered by said piston only when said piston is substantially at lower dead center, a turbine air compressor, a conduit connecting said port to said turbine for supplying to the latter exhaust gases escaping through said port at the end of the expansion stroke of said piston, a conduit connecting said air compressor to said port for supplying a charge of compressed air to the cylinder at the end of the suction stroke of said piston, and valve means for alternately opening and closing said conduits in accordance with the strokes of said piston.

1,752,083. BURGLAR-ALARM SYSTEM. SIMON B. HESS, New York, N. Y., assignor to Holmes Electric Protective Company, New York, N. Y., a Corporation of New York. Filed July 12, 1924. Serial No. 725,583. 14 Claims. (Cl. 177—314.)

1. In an electrical protective system for guarding premises against unauthorised entry, a line conductor subject to rupture by an unauthorised entry, an alarm circuit, a circuit controller of the step-by-step type controlling the conductor circuit and the alarm circuit, and means set into operation by the rupture of the line conductor for actuating the circuit controller to close the alarm circuit.

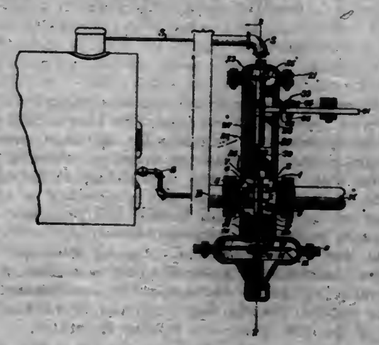


1,752,084. PRINTING TELEGRAPH. GEORGE S. HILTZ, Brooklyn, N. Y., and WILLIAM F. PURCELL, Hoboken, N. J., assignors to Stock Quotation Telegraph Company, New York, N. Y., a Corporation of New York. Filed Nov. 28, 1927. Serial No. 236,085. 7 Claims. (Cl. 178—35.)

1. Printing telegraphs comprising a receiving or recording machine, unisoning mechanism for unisoning the receiving machine, an electromagnet for operating said unisoning mechanism, resistance normally in the circuit of said magnet to render the same inoperative for unisoning, and means automatically operable for periodically cutting out said resistance to effect operation of said magnet for unisoning.

1,752,085. FLEXIBLE OIL CAN. JAMES M. HINKLE, Barbourville, Ky., assignor of one-half to Robert B. Minton, Barbourville, Ky. Filed June 25, 1928. Serial No. 287,926. 1 Claim. (Cl. 221—47.)

An oil can comprising a resilient metal body including an outlet, the body having a plurality of annular folds, the constituent walls of which are spaced apart widely enough so as to permit the body to be compressed to a marked degree in the general direction of its length, the body being corrugated throughout its entire length, so that it may yield at any point in its length, the body forming the extreme outer wall of the oil can, whereby the oil can may be compressed by pressure applied anywhere around the periphery of either end of the can,

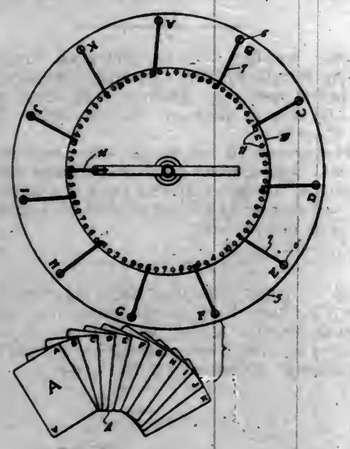


and mechanism for compressing the can, said mechanism comprising a grip connected at one end to one end of the body, an arm fulcrumed at said end of the grip and extended lengthwise of the grip in such position that an operator can reach the arm with the same hand that holds the grip, a lever fulcrumed on the opposite end of the grip, and engaging the opposite end of the body, and a link pivoted to the lever and to the arm.

1,752,086. PROCESS OF RECOVERING NITRIC ACID FROM WEAK NITRIC LIQUORS. HEINRICH HIRTZ, Ellenburg, Germany. Filed Feb. 28, 1924, Serial No. 694,710, and in Germany June 15, 1923. 5 Claims. (Cl. 23—161.)

1. The process of recovering nitric acid from weak nitric acid liquors, which consists in treating such liquors with pyrites, thereby converting the nitric acid into nitric oxide and recovering the nitric acid by converting the nitric oxide to nitric acid.

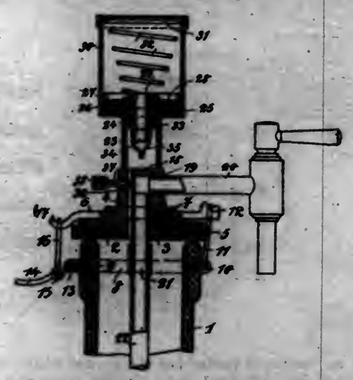
1,752,087. DUAL FLUID-PRESSURE-CONTROLLING DEVICE. JOHN F. HIXON, Ebeneser, N. Y., assignor to Gilfillan Machine Works, Inc., Ebeneser, N. Y., a Corporation of New York. Filed Nov. 16, 1927. Serial No. 233,611. 3 Claims. (Cl. 236—26.)



1. In a device for controlling the fluid fuel pressure and the generated vapor pressure of a boiler, the combination of a valve casing having inlet and outlet chambers for said fluid fuel, means normally operative to control the fluid pressure in said outlet chamber, means subject to said vapor pressure and adapted to close the valve when the vapor pressure reaches a predetermined value and means for preventing the first mentioned means from opening said valve while the vapor pressure remains at the predetermined value.

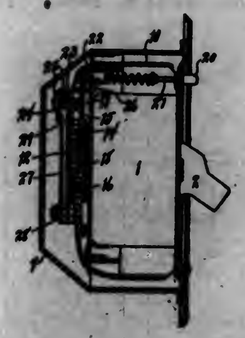
1,752,088. ARTIFICIAL BAIT. LEVIN B. HUNTINGTON, Annapolis, Md. Filed Apr. 4, 1928. Serial No. 267,329. 2 Claims. (Cl. 43—45.)

1. An artificial bait comprising a body portion having an opening and a slit forwardly of the opening for the passage of a hook, said opening and slit providing means for mounting the hook upon said body portion, and said body portion further having an integral part thereof providing a resilient retaining tongue extending into the slit for securing the hook to the body portion, said tongue being bent first away from said body and then reversely towards said body portion and extending into said slit to engage the hook for latching it upon the body portion.



1,752,089. GAME DEVICE. FRANCIS W. HYNES, Springfield, Mass. Filed Mar. 20, 1929. Serial No. 348,496. 2 Claims. (Cl. 273—141.)

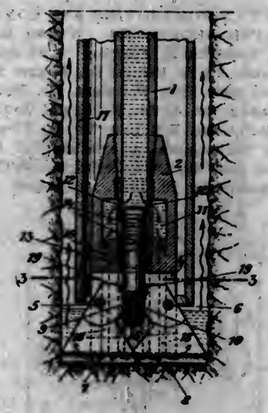
1. In a game device of the character described, a base member, a plurality of spaced vertical pins carried by the member, an inwardly extending flexible finger carried by each pin, a disk rotatably associated in vertically spaced relation with the base and terminating at its edge inwardly of the edge of the base, a plurality of pins arranged in spaced relation around the perimeter of the disk and extending upwardly therefrom, said fingers of the first mentioned pins being of a length to encounter the disk pins when said disk is rotated, a pointer arranged rotatably above the disk and having at one of its ends a flexible finger adapted to encounter the pins of the disk when said pointer is rotated.



1,752,090. CLOSURE FOR BOTTLES AND JARS. ERNST JOHANNSSEN, Hamburg, Germany, assignor to Schaefer & Fiedelmeier, Hamburg, Germany, a Corporation of Germany. Filed Dec. 23, 1927, Serial No. 242,177, and in Germany Mar. 4, 1927. 3 Claims. (Cl. 215—4.)

1. A closure for receptacles, comprising a disk, a member adjustable on said disk in axial direction and formed with two passages, clamping means adapted for engagement with said member and for clamping the disk to the receptacle, a tube member extending downwardly from one of said passages, a faucet connected with the passage communicating with said tube, a tubular extension on said

disk out of connection with said passage communicating with said tube and connected with the other passage, a cylinder and piston mounted on said tubular extension, a check valve intermediate said cylinder and tubular extension, and means for closing the passage communicating with said tubular extension.



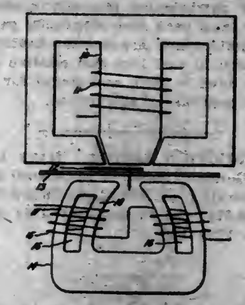
1,752,091. DELAYED CIRCUIT-BREAKING LIGHT SWITCH. CHARLES B. JOHNSON, Seymour, Tex. Filed Nov. 25, 1929. Serial No. 409,710. 2 Claims. (Cl. 200—116.)

1. In an electrical lighting apparatus provided with a circuit and a switch; wires connected to said circuit on opposite sides of said switch, a fixed contact point connected to said circuit on one side of said switch, a movable contact point and a spring bar carrying the same, a push-rod and a button carried thereby for actuating said spring bar for making contact with said contact points, a detent for automatically locking said points in contact and maintaining said contact, a thermostatic control electrically connected to said circuit on the other side of said switch, and electrically connected to said movable contact, and a pull-rod connected to said control and to said spring bar for breaking the contact.

1,752,092. EXPANSIBLE BORING TOOL FOR HYDRAULIC BORING APPLIANCES. MATHIEU ALKUNOWITSCH KAPELUCHNIKOFF, Baku, Russia. Filed Oct. 2, 1929, Serial No. 396,684, and in Germany Sept. 23, 1927. 2 Claims. (Cl. 255—76.)

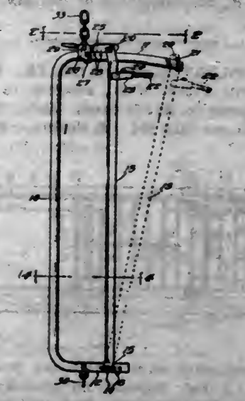
1. A boring tool for sinking shafts comprising, in combination, a cutter head having bevelled prong-like jaws, cutting blades supported between said jaws, said jaws extending so as to take up the forces arising in a horizontal plane and relieving thereby the trunnions of the jaws, said cutter head having an annular recess therein,

a tube, a piston movable in the tube, means controlled by said piston for spreading the cutting blades apart, and stops on said blades engaging said piston to limit the expansion of the blades.



1,752,093. COMPRESSOR. ROBERT L. KING, Richmond, Va. Filed May 28, 1926. Serial No. 112,342. 4 Claims. (Cl. 230—152.)

1. A compressor comprising a pressure chamber having an opening therein, a compressor mounted in said chamber and having a portion forming a closure for the opening therein, said compressor including a cylinder having an inlet port, and an outlet port directly communicating with the interior of said chamber, a shaft rotatable in said cylinder eccentric thereto, a rotor carried by said shaft concentric therewith, a plurality of radial sliding pistons carried by said rotor, heads closing the ends of said cylinder, said rotor being provided in each end with recesses surrounding said shaft, circular cams carried by said heads concentric with said cylinder and projecting into said recesses, said cams contacting with the inner edges of said pistons, and lubricant feeding means controlled by pressure in said chamber for feeding lubricant therefrom under pressure to the inner edges of said pistons.



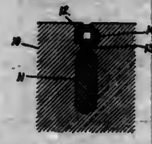
1,752,094. INDUCTION WATT-HOUR METER. ISAAC F. KINNARD, Lynnfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 7, 1927. Serial No. 173,248. 6 Claims. (Cl. 171—264.)

6. An induction type watthour meter having a current flux magnetic circuit of sufficient cross-sectional area at its smallest portion to operate below saturation over the entire range of current flux for which the meter is intended to operate, different series connected portions of

said magnetic circuit having materially different permeabilities when subjected to the light load range of current flux.

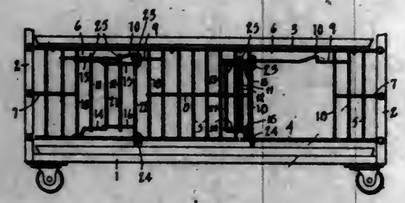
1,752,095. STANCHION. RUDOLPH J. LANGER, Monticello, Iowa, assignor to Franklin Equipment Company, Monticello, Iowa, a Corporation of Iowa. Filed Dec. 23, 1927. Serial No. 242,052. 8 Claims. (Cl. 119—147.)

1. In a stanchion comprising a side bar having a top and a bottom bar fixedly connected thereto, a swinging side bar, U-shaped in cross section, having a portion of each end cut away to form spaced apart extensions, the extension members of one end being adapted to embrace and be pivotally connected to the bottom bar of the stanchion, the other end extension members straddling and having sliding engagement with the top bar, a keeper connecting the free ends of the fork on said last mentioned end members, and a latch secured to the top bar and adapted to engage the keeper.



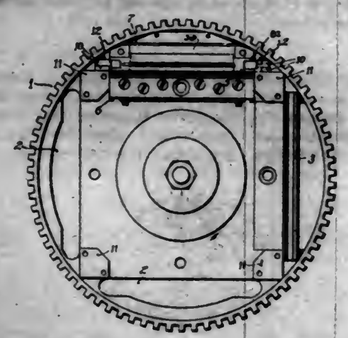
1,752,096. SEWING-MACHINE RUFFLER. HARRIS A. LAWTON and ANDREW J. CARMICHAEL, New Haven, Conn., assignors to The Greist Manufacturing Company, a Corporation of Connecticut. Filed May 28, 1928. Serial No. 280,036. 2 Claims. (Cl. 112—135.)

2. In a sewing machine ruffler, the combination with an operating lever, a pendulous lever having a shoulder,



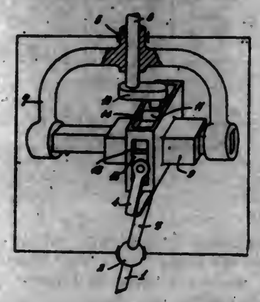
and a ruffling blade operatively connected with said pendulous lever, of a ratchet wheel having deep and shallow notches, a pawl-carrier pivotally mounted on said operating lever, and fixed and adjustable pawls mounted on said pawl-carrier, said pawl-carrier having lugs, a bar rotatably mounted in said lugs and relative to which bar said adjustable pawl is fixed, and means for holding said bar in different positions of adjustment.

1,752,097. INDUCTION MOTOR. HANS LUND, Berlin-Schoneberg, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 6, 1925, Serial No. 13,571, and in Germany July 29, 1924. 25 Claims. (Cl. 172—120.)



1. A rotor element for a dynamo electric machine comprising a core member and a pair of windings carried by said core at different fixed radial positions therein, and means dependent upon the speed of rotation of said element for varying the reluctance of the flux path between said windings.

1,752,098. POULTRY COOP OR CRATE. LYNN W. MACOMBER, Battle Creek, Mich., assignor to United Steel and Wire Company, Battle Creek, Mich. Filed Dec. 31, 1928. Serial No. 329,434. 5 Claims. (Cl. 220—19.)



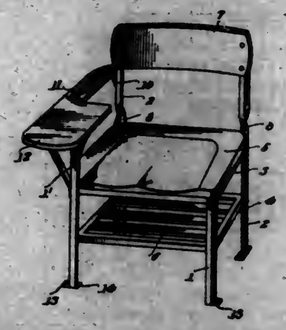
4. The combination of a wall panel provided with a door opening, a rod disposed horizontally across said door opening and having an offset therein providing a keeper, and a door comprising pivotally connected sections, the outer section being slidably engaged with said retaining rod to coact with said keeper thereof when the door is in closed position.

1,752,099. TYPOGRAPHICAL MOLD. HARLEY J. MOLEY, Chicago, Ill. Filed May 14, 1928. Serial No. 277,755. 29 Claims. (Cl. 199—55.)

1. In combination, a standard type line casting machine, a mold adapted for use thereon and adapted for casting a type slug, said mold having jaw means movable into open and closed positions and singly actuated means for moving said jaw means from one of said positions to the other independently of the type slug.

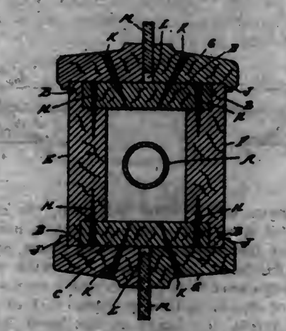
1,752,100. DEVICE FOR DRIVING AND CONTROLLING A FIN-SHAPED PROPELLER. WIGGER MEINDERSMA, Wassenaar, Netherlands, assignor to Findriven Syndicaat, Bestaande uit de Heeren Dr. Wigger Meindersma te Wassenaar voor Fifty Per Cent, Dr. Meine Rutgers te 's Gravenhage en Anton Ferdinand Johannes Dijk-Graaf te Rotterdam, Elk voor Twenty-Five Per Cent, The Hague, Netherlands, a Syndicate of the Netherlands. Filed June 30, 1928, Serial No. 289,592, and in the Netherlands July 16, 1927. 9 Claims. (Cl. 115—29.)

1. Apparatus for driving and steering a fin-shaped propeller, comprising a rotating driving shaft; a normally-stationary steering shaft associated with it; guide means connected to rotate with the drive shaft; a rotating propeller shaft; a slide mounted on the guide means to reciprocate thereon, and with which the upper end of the propeller shaft has a connection; and a member carried by the steering shaft and connected with the slide to shift said slide along said bar when the steering shaft is turned during steering.



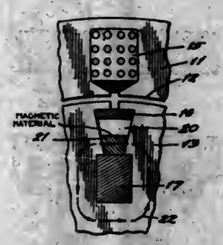
1,752,101. MINING PROP. HEINRICH MEUTSCH, Essen, Germany. Filed Dec. 22, 1926. Serial No. 156,808. 1 Claim. (Cl. 248—2.)

A mining prop, comprising a tubular member closed at one end, an inflatable member supported in said tubular member, and a piston-like member mounted for sliding movement in the tubular member, the inner end of said sliding member contacting with said inflatable member whereby the sliding member is caused to move outwardly from the tubular member when the inflatable member is inflated.



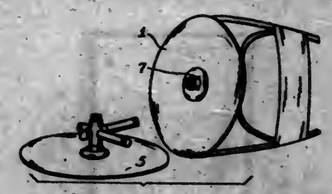
1,752,102. CHAIR. GEORGE H. MEW and LUCIUS NEAL SMITH, Emory University, Ga. Filed June 22, 1928. Serial No. 287,477. 1 Claim. (Cl. 155—194.)

A chair of the class described comprising front and rear legs and sets of upper and lower braces connecting the legs together, said legs and braces being formed of angle iron with contacting portions of the parts welded together, the rear legs having upwardly extending portions, each leg being twisted at a point above the upper braces so as to bring one of its flanges forwardly, a back piece fastened to the forward flanges of the extensions of the rear legs, one of the front legs being extended



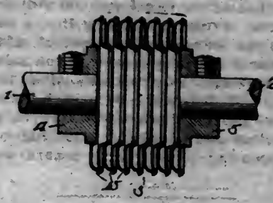
upwardly, an arm connected with the extension of one of the rear legs and with the upper end of the extension of said front leg, a seat supported by the upper braces, the lower end of each leg being split, with one flange bent outwardly and the other inwardly to form flattened enlarged parts at the lower end of each leg, the outwardly extending part having a hole therein whereby the leg can be fastened to a floor.

1,752,103. BUILT-UP PARTITION PILLAR. ISAAC H. MORRISON, Detroit, Mich. Filed Nov. 24, 1928. Serial No. 321,705. 5 Claims. (Cl. 20—4.)



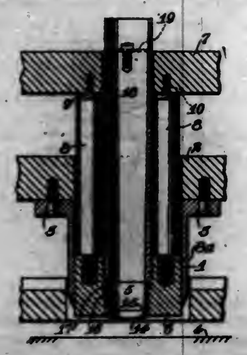
5. A built up partition post, consisting of a pair of spacedly disposed plain panels, and a pair of spacedly disposed marginally tongued panels arranged in perpendicular relation to the first named pair, the end portions of which latter fit in the shoulders constituted by the tonguing of the second named pair of panels in a way to position the tongued end surfaces of said second pair of panels in the same plane with the outer surfaces of the corresponding panels of the first named set, screw members engaging transversely of the planes of the first named pair of panels and lengthwise of the planes of the second named pair of panels for effecting their structural correlation about an available central space, spanner members arranged in pairs on either side of an interposed glass pane in a manner to concealingly cover the plain panel members first above recited and the overlapping tongued ends of the second named pair of panel members as well as the marginal edges of the exposed outer faces of the latter, thereby additionally holding the latter against displacement, and screw members passing through each unit of said spanner members into the bodies of the respective adjacent plain panel members.

1,752,104. INDUCTION MOTOR WITH VARIABLE REACTANCE. THOMAS G. MYERS, Los Angeles, Calif., assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Apr. 30, 1925. Serial No. 26,890. 7 Claims. (Cl. 172—120.)



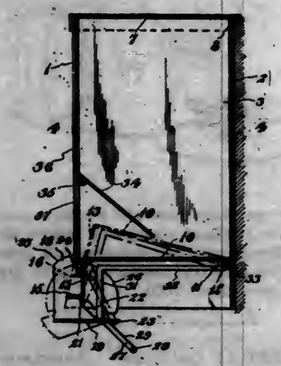
3. A rotor element for a dynamo electric machine comprising a magnetic core member and a pair of windings carried by said core member at different fixed radial positions therein, said windings being separated by slot spaces, and radially freely movable magnetic wedges in said slot spaces arranged to be moved outwardly by centrifugal force dependent upon the speed of rotation of said element and inwardly solely by magnetic force dependent upon the flux of said member to vary the reluctance of the flux path between said windings.

1,752,105. CHAIR FOR HUNTERS. WESTON M. NASH, Saginaw, Mich. Filed Oct. 29, 1928. Serial No. 315,657. 3 Claims. (Cl. 155—94.)



3. A seat of the class described having a seat, a base and a detachable standard comprising oppositely directed branches of different lengths secured to a T member, and means detachably securing the ends of said branches to said seat and base respectively.

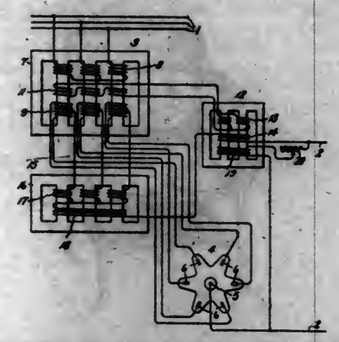
1,752,106. FLEXIBLE COUPLING. LAWRENCE M. PERSONS, Chicago, Ill., assignor to Cook Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1927. Serial No. 240,963. 2 Claims. (Cl. 64—26.)



1. In a device of the class described, the combination with a drive shaft, of a driven shaft, and a collapsible and expansible unit therebetween comprising metallic plates united peripherally by alternately arranged gutter and flange connections.

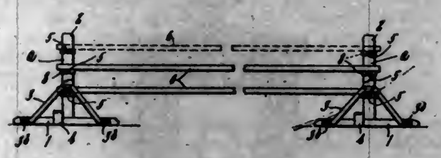
1,752,107. EMBOSSING CUTTER HEAD. ALBERT S. PLATER, Saginaw, Mich., assignor to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Aug. 9, 1929. Serial No. 384,734. 2 Claims. (Cl. 107—26.)

1. In a cutter head of a candy or biscuit cutting machine including an embossing plunger, an inner tubular hole-cutter having an outwardly projecting flange at its upper end received in a counter-bored recess formed in the back face of the plunger, a scrap tube received in said recess, said hole cutter having its tubular passage restricted at the cutting end, for the purposes set forth.



1,752,108. MATCH RECEPTACLE. JAMES C. POISTER, Morrill, Kans. Filed Aug. 15, 1928. Serial No. 299,826. 9 Claims. (Cl. 312—84.)

1. A match dispensing receptacle comprising a body open at its lower end and having side walls and front and rear walls, a bottom for said body pivoted at its rear end and having its free front end provided with depending tongues having outstanding lips, a shaft carried by the side walls below the front end of said bottom, a dispensing element pivotally mounted upon said shaft and held against movemnt longitudinally upon the shaft by said tongues, said dispensing element being adapted to receive matches passing downwardly between the tongues and front wall of said body, and actuating means to rotate said dispensing element and impart movement to said bottom.



1,752,109. ELECTRICAL SYSTEM. DAVID C. PRINCE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 11, 1926. Serial No. 87,688. 9 Claims. (Cl. 175—363.)

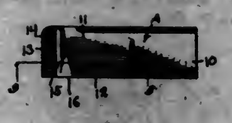
1. The combination of direct and alternating current circuits, a transformer comprising star-connected and Y-connected windings wound on the same core, a valve apparatus comprising a cathode and an anode connected between said circuits through said transformer, and means responsive to the third harmonic of the fundamental voltage applied to said transformer for regulating the transformation ratio of said transformer.

8. The method of regulating the voltage of a direct current circuit connected to an alternating current circuit through means comprising an interphase transformer and a saturation regulator which comprises successively saturating the cores of said transformer and said regulator.

1,752,110. COMBINATION SLIDE, SEESAW, AND JUMPING BOARD. MATILDA REMY, Wellesley, Mass. Filed Mar. 11, 1927. Serial No. 174,489. 2 Claims. (Cl. 272—54.)

1. In a device of the class described, the combination with a pair of standards, each of which is provided with a plurality of transversely extending rungs, of a pair of horizontal, flat-faced boards provided with recesses on their under sides near their ends, in which recesses the rungs of said pair of standards loosely engage each of said boards at different levels, the board at the lower level serving to maintain the device in rigid assembly.

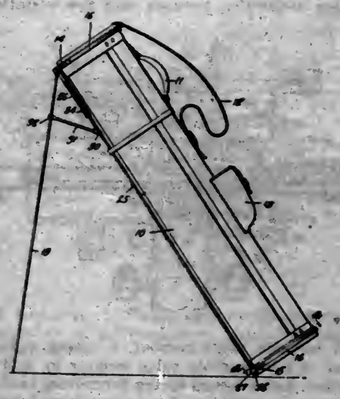
1,752,111. SLIDER FOR INTERLOCKING FASTENERS. EUGENE W. RUTHERFORD, New Haven, Conn., assignor to The Shoe Hardware Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 17, 1927. Serial No. 192,035. 11 Claims. (Cl. 24—205.)



1. A sheet metal slider for multiple interlocking fasteners comprising top and bottom walls rigidly united by a trough shaped sheet metal neck integral at all points with the top and bottom walls.

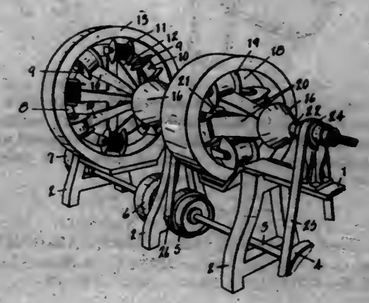
1,752,112. SPIRIT LEVEL. CHARLES D. SEVERANCE and RAYMOND O. STETSON, Greenfield, Mass., assignors to Goodell-Pratt Company, Greenfield, Mass., a Corporation of Massachusetts. Filed June 26, 1928. Serial No. 288,364. 6 Claims. (Cl. 33—211.)

1. A spirit level comprising in combination a stock having a sleeve retaining bore and recesses formed in the stock adjacent the bore, plastic material deposited in said recesses, a sleeve rigidly mounted in said bore and provided with clearance holes of larger diameter than the diameter of the level-glasses through which the ends of level-glasses may project, a pair of level-glasses mounted in said bore to extend across the sleeve and each glass having its ends projecting through the clearance holes in the sleeve and set solid in the plastic material in said recesses, a pair of bead carrying rods supported by said sleeve to extend across the sleeve adjacent the level-glasses, and a bead mounted on each rod and movable lengthwise thereof to the desired position of adjustment.



1,752,113. CHANNELING KNIFE. WILLIS S. SHAFT, Faribault, Minn., assignor to Shaft-Pierce Shoe Company, Faribault, Minn. Filed Jan. 25, 1927. Serial No. 163,491. 1 Claim. (Cl. 12—27.)

A shoe channeling knife comprising a shank, a blade extending forwardly from the shank provided with a longitudinal cutting edge and a transversely extending cutting end, and an auxiliary blade formed on the upper face of the blade and extending transversely thereof adjacent to but spaced from the transversely extending cutting end, one end of the auxiliary blade being provided with a cutting edge adjacent to the longitudinal cutting edge, the auxiliary blade extending at an angle to the vertical and inclining away from the transversely extending cutting end, and said transverse cutting end being beveled toward the longitudinal cutting edge of the blade.

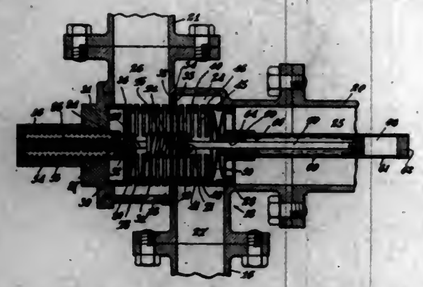


1,752,114. GOLF-BAG SUPPORT. GEORGE F. SHAW, Mayfield, Ky. Filed Apr. 20, 1928. Serial No. 271,515. 1 Claim. (Cl. 150—1.5.)

In combination with a golf bag, a pair of arcuate-shaped attaching members adapted to be positioned at opposite ends of the bag, legs having their upper ends pivotally secured to one of the attaching members, a sleeve rigid with and extending from said member between the points of pivotal attachment of the legs, a spring influenced rod having one of its ends slidingly mounted in the sleeve and its other end mounted for sliding movement in the other

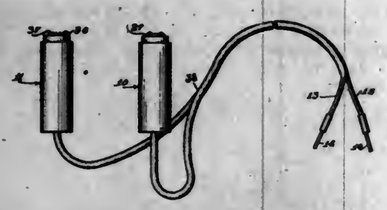
attaching member and normally extended beyond the end of the bag, and links having one of their ends connected with the rod and their other ends connected with the legs.

1,752,115. MACHINE FOR MANUFACTURING METALLIC PACKING. LEON A. SLITER, Kalamazoo, Mich., assignor to Durametallic Corporation, Kalamazoo, Mich. Filed Jan. 14, 1927. Serial No. 161,102. 6 Claims. (Cl. 117—1.)



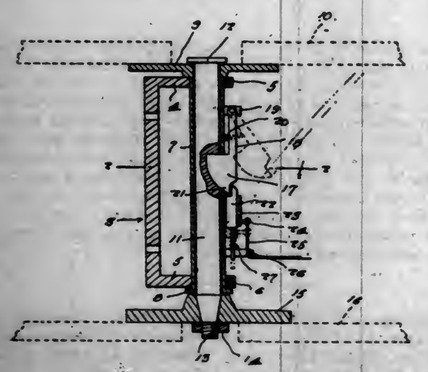
1. In a machine of the class described, the combination of a rotatably mounted spool turret provided with a plurality of spools adapted to receive strips of relatively thin metal mounted thereon and other spools adapted to receive reinforcing strands, a tubular rotatably mounted former disposed at the rear of and in axial alinement with said spool turret, a second rotatably mounted turret disposed at the rear of said former and provided with a plurality of spools adapted to receive strips of relatively thin metal, a second rotatably mounted former disposed at the rear of said second turret, and means for driving said formers and turrets at varying speeds.

1,752,116. COOLING-FLUID CONTROL. HERBERT A. SMITH, Bethlehem, Pa., assignor to Sarco Company, Inc., a Corporation of New York. Filed Mar. 11, 1926. Serial No. 93,862. 1 Claim. (Cl. 236—34.)



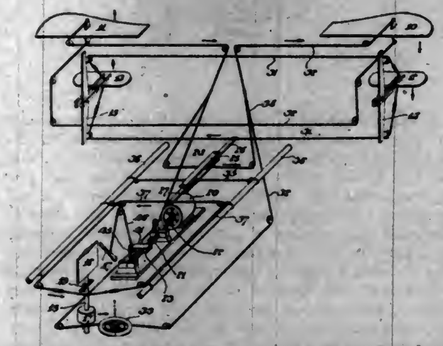
A thermostatic valve comprising a casing having three ports, a stationary valve member communicating with two

of said ports, a movable valve member communicating with a third of said ports, an expansible and compressible thermostatic device of the bellows-type located in one of said ports for moving said movable valve member, a lost motion connection between said thermostatic device



and said movable valve member, a spring opposing the movement of said movable valve member by said thermostatic device, and a second spring for moving said movable valve member to safety position upon breakdown of said thermostatic device.

1,752,117. TEMPERATURE DETECTOR. WILLIAM SMITH, Yonkers, N. Y. Filed Sept. 28, 1928. Serial No. 309,096. 3 Claims. (Cl. 174—89.)



1. A temperature detector comprising a handle, a thermocouple mounted in said handle and having a plurality of exposed junctions and a plurality of posts spaced around said junctions, the upper ends of said posts extending above the plane of said junctions.

1,752,118. AEROPLANE-RUDDER-BAR CONTROL. JAMES C. SPENCER, Chicago, Ill. Filed Mar. 12, 1929. Serial No. 346,362. 2 Claims. (Cl. 244—29.)

1. In a structure of the class described, in combination, an attaching bracket comprising bearings, a tubular shaft mounted for rotation in said bearings and provided at one end with a head, an auxiliary control bar connected with said head, a main shaft mounted for rotation in said tubular shaft provided at an opposite end with a head, a main control bar connected with said last named head, spring released clutch means for coupling said main and tubular shaft together for simultaneous operation, and a manually manipulated trip latch for cooperation with said clutch.

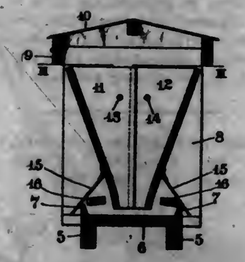
1,752,119. BALANCING SYSTEM FOR AIRCRAFT. JOHN P. TARBOX, Philadelphia, Pa., assignor to Tarbox Safety Aircraft Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 4, 1927. Serial No. 230,956. 7 Claims. (Cl. 244—29.)

1. In an aircraft, a lateral stabilizing system comprising air rush responsive devices at opposite lateral locations on the craft, differentially acting connections between them, a standard of position with respect to earth and differentially acting connections between the first named said connections and the said earth standard.

1,752,120. LIFE-SAVING SUIT. WILLIAM A. TAYLOR, Detroit, Mich. Filed Oct. 6, 1927. Serial No. 224,435. 4 Claims. (Cl. 9—20.)

1. In a device of the class described, a body, a helmet, means for connecting the helmet to the body, ear flaps connected to the helmet, ear plugs, and flexible elements connecting the ear plugs to the flaps, the flexible elements and the ear plugs being housed beneath the flaps when the ear plugs and the flaps are in place.

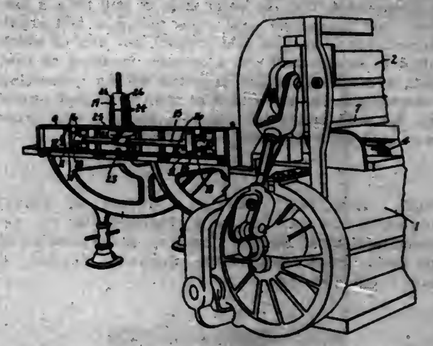
1,752,121. MANUFACTURE OF ORTHO-ANISIDINE AND SIMILAR AMINOPHENOL ETHERS. JOSEPH TCHERNIAC, Streatham Hill, London, England. Filed Sept. 29, 1927, Serial No. 222,940, and in Great Britain Oct. 2, 1926. 2 Claims. (Cl. 260—130.5.)



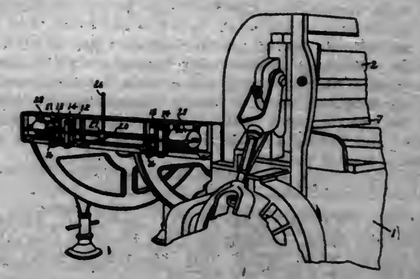
1. A manufacture of ortho-aminophenol ethers by heating the product of the reaction of hypochlorite and an alkali on an alkyloxyarylcarboxylic acid amide.

1,752,122. INDICATOR. JULIUS E. THIELER, New York, N. Y. Filed Mar. 28, 1928. Serial No. 265,394. 1 Claim. (Cl. 177—33.)

In a vehicle signalling device, a rotatably mounted drum having signalling indicia thereon to be selectively displayed, a motor for rotating said drum, an arresting member movable into the path of a part of said drum, a normally closed spring pressed switch mounted on said arresting member and engageable by said part, an electric motor circuit including said switch and said motor, said switch being opened when engaged by the part to open the circuit to the motor, said arresting member preventing forward movement of said drum, ratchet means to prevent retrograde movement of said drum, and electromagnetic means for moving said arresting member into and out of the path of said part for controlling the actuation of said motor circuit.



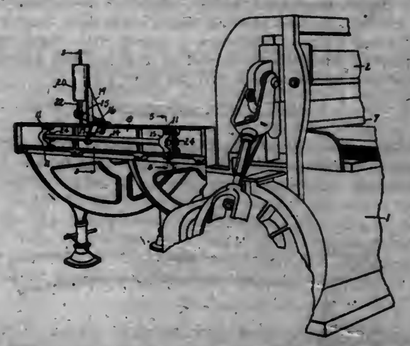
1,752,123. ANIMAL FEEDER. JESS A. THOMPSON, Washington C. H., Ohio. Filed Apr. 19, 1929. Serial No. 356,437. 4 Claims. (Cl. 119—54.)



1. In a hog feeder including a suitable supporting frame, a hopper composed of two parts adapted to slide on each other at edges thereof and means for pivoting said parts in said frame.

1,752,124. PAPER CUTTER. CLARENCE O. THORNE, Watervliet, Mich. Filed June 11, 1928. Serial No. 284,470. 9 Claims. (Cl. 164—59.)

8. In a structure of the class described, the combination of a table, a gauge bar slidably mounted at the side of the table, a rockshaft disposed in parallel relation to said gauge bar and provided with spaced eccentrics, eccentric blocks coacting with said eccentrics and operatively connected to said gauge bar whereby it is uniformly adjusted on the actuation of said rockshaft, and means for actuating said rockshaft.



1,752,125. GAUGE FOR PAPER-CUTTING MACHINES. CLARENCE O. THORNE, Watervliet, Mich. Filed July 2, 1928. Serial No. 289,650. 7 Claims. (Cl. 164—59.)

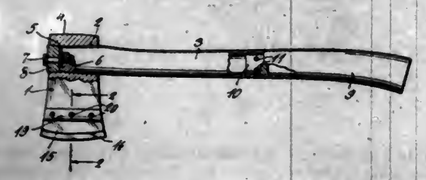
7. In a structure of the class described, the combination of a table, a gauge bar, supporting slides at the ends of said gauge bar, and actuating cams disposed in coacting pairs and operatively associated with said slides whereby the gauge bar is positively actuated and retracted.

1,752,126. GAUGE FOR PAPER-CUTTING MACHINES. CLARENCE O. THORNE, Watervliet, Mich. Filed July 2, 1928. Serial No. 289,651. 5 Claims. (Cl. 164—59.)

1. In a structure of the class described including a cutter and a table operatively associated therewith, the combination of a gauge support mounted at the side of the table and having an angled face, the horizontal portion of which is disposed in a plane flush with the surface of the table, a

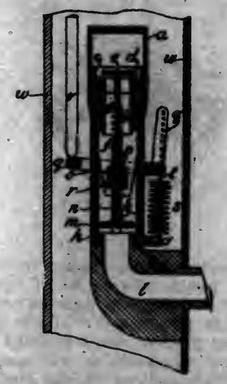
gauge bar slidably mounted on said support, pairs of adjusting rods for said gauge bars slidable in said support, cross pieces connecting the outer ends of said rods, a longitudinal rod connecting said cross pieces, a bell crank actuating lever pivoted on said support, one arm of which is slotted to engage said rod, a cylinder mounted on said support, a coacting plunger provided with a connecting rod connected to the other arm of said lever, and return springs for said gauge bar disposed between said cross pieces on said adjusting rods and said support.

1,752,127. ELECTRIC SWITCH. GEORGE H. TOVEY, Lansdowne, and CARL THUMIM, Philadelphia, Pa., assignors to General Electric Company, a Corporation of New York. Filed Jan. 5, 1928. Serial No. 244,596. 6 Claims. (Cl. 200—166.)



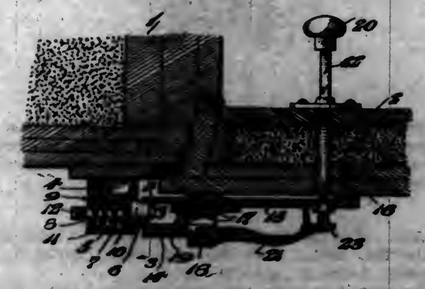
1. An electric switch having cooperating relatively movable contacts, a base member having a rigid member fixed thereto for supporting one of said contacts, means fixed to said one contact loosely connecting the same with the member and a resilient member fixed to said base member and having a point contact with said means arranged centrally thereof.

1,752,128. WATCH BRACELET. LOUIS J. VETTER, Attleboro, Mass., assignor to Bliss Brothers Company, Attleboro, Mass. Filed July 18, 1929. Serial No. 379,149. 4 Claims. (Cl. 58—88.)



4. A watch bracelet including a body having an opening, a watch movement holder composed of a ring-like front received in said opening and a back, said front and back having pairs of members provided with registering perforations, and screws extending through the perforations of said members and into the body.

1,752,129. AX. JOHN M. WATSON, Shell, Wyo. Filed May 25, 1929. Serial No. 365,826. 1 Claim. (Cl. 306—42.)

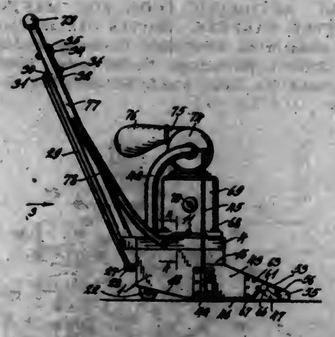


An ax comprising a head having a socket for a handle, the bit end of said head having a rabbet adapted to receive a removable blade, the side wall of the rabbet having a plurality of spaced studs adapted to project into openings in the removable blade, said studs having axial threaded openings, a cover plate adapted to form a cover for the open side of the rabbet and screws extending through the removable plate and into the threaded openings in the studs for holding the stud in place.

1,752,130. INTERNAL-COMBUSTION PUMP. ERIC WILLIAM MACKAY-WHITE, Rossland, British Columbia, Canada. Filed Sept. 17, 1927. Serial No. 220,260. 5 Claims. (Cl. 103—249.)

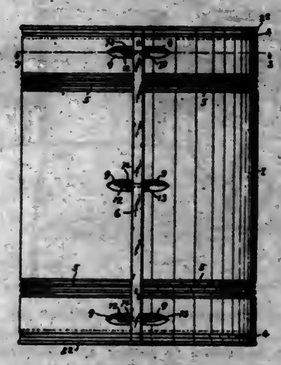
1. A device of the character described comprising a pair of compression chambers ported into communication, means for effecting compression of fluid in one of said chambers, a valve closing said port of communication with the second chamber arranged to open to admit fluid so compressed in the first chamber and to close upon the equalization of pressures in said chambers, a pressure fluid conduit extended outwardly from within the first chamber and ported into communication with said first chamber, a valve for closing said port, means within said first chamber normally effective to hold said valve closed, and mechanism cooperating with said port valves and controlled and operated by fluid pressure within said first chamber to maintain initially attained pressure in the second chamber during reduction of pressure in the first chamber to a point in determinate ratio to the pressure in the second chamber and thereafter automatically operative to open said conduit and second chamber port valves in order and subsequently effective to cause said valves to return to port closing positions.

1,752,131. DOOR FASTENER. GUNTHER PHILIP WILD, Philadelphia, Pa. Filed Jan. 5, 1928. Serial No. 244,568. 4 Claims. (Cl. 292—254.)



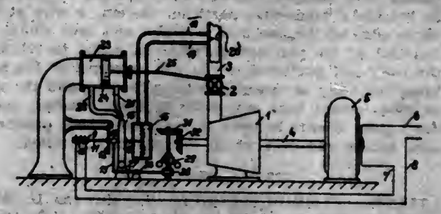
1. A latch device of the character stated comprising a casing having a rectilinear opening therein, a keeper the nose of which has opposed bevelled edges, the major part of said keeper being mounted within said casing, a horizontally disposed rod of rectangular cross-section extended outwardly from said keeper nose and penetrating said rectilinear opening in said casing, means passing vertically through the end of said rod as projected beyond said casing for limiting longitudinal movement of said keeper, and a spring interposed between the inner end of said keeper nose and said casing.

1,752,132. THERMIONIC DEVICE. DANIEL C. WILKERSON, Washington, D. C. Filed Jan. 26, 1924. Serial No. 688,731. 1 Claim. (Cl. 250—27.5.)



In a thermionic device the combination of an anode for controlling substantially the entire electronic emission, the surface of said anode being a surface of revolution having a major axis extending between the foci of said surface, said anode being provided with openings, a cathode and grid enclosed by said anode, the cathode extending in a direction with said axis and lying close to said axis whereby to occupy a position relative to the anode such that uniformity in the spacing between the cathode and anode at all points is closely approached, supports for the cathode and grid extending through said openings, and enlargements formed on said supports and providing shields near said openings for deflecting electrons traveling in a path of escape from said anode and confining the same within the anode, the shields being enclosed by the anode.

1,752,133. FLOOR-FINISHING MACHINE. HUGH M. WOLGAMOOD, Denver, Colo., assignor of one-half to J. E. Pickard, Denver, Colo. Filed Oct. 1, 1928. Serial No. 309,589. 5 Claims. (Cl. 51—174.)

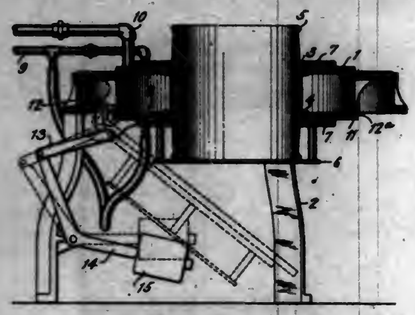


4. A machine of the type described comprising, in combination, a casing portion divided by a transverse partition into two compartments, a suction fan supported on said casing, a conduit extending from the intake port of the fan to one of said compartments, an assembly carrying two spaced rollers, a belt enclosing the rollers, means for rotating one of said rollers, and means comprising a hinge for securing the assembly to the casing so that it may swing away for the purpose of removing and replacing the belt.

1,752,134. KNOCKDOWN CONTAINER. WILLIAM S. WOODMAN, Lakewood, Ohio, assignor of one-fourth to Leo K. Woodman, Cleveland, Ohio. Filed May 9, 1928. Serial No. 276,234. 8 Claims. (Cl. 220—5.)

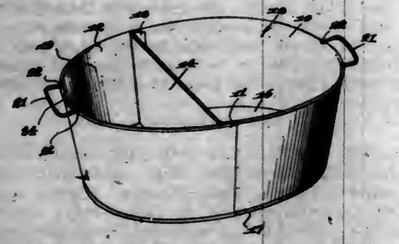
1. A knockdown container comprising a tubular body formed of a single metal sheet having its end edges adjoining from the top to the bottom of the container, the adjoining end portions of said sheet having transversely alined external recesses formed therein adjacent the top and bottom of the container, bolts having their ends in said alined recesses and connecting the adjoining ends of said sheets, and heads fitting in opposite ends of said body, said heads and body having interfitting circumferential portions for locking the heads in place when the body is contracted upon the heads by tightening said bolts.

1,752,135. APPARATUS FOR THE REGULATION OF DRIVING ENGINES FOR ELECTRIC-CURRENT GENERATORS. GUIDO WÜNSCH, Steglitz, near Berlin, Germany, assignor to Askaniawerke Aktiengesellschaft vormals Centralwerkstatt Dessau und Carl Bamberg-Friedenau, Kaiserallee, Berlin-Friedenau, Germany. Filed Jan. 16, 1928, Serial No. 247,227, and in Germany Jan. 18, 1927. 3 Claims. (Cl. 290—40.)



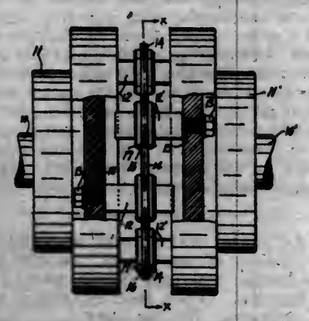
1. An apparatus for the regulation of driving engines for electric current generators which must constantly operate at approximately the same number of revolutions comprising, in combination with a driving engine, a generator and a power supply, means for regulating the supply of power to the driving engine, a regulator controlling said means and comprising two elements influenced by the output taken at the time from the electric current generator and by the power supply respectively, and a setting device inserted between said elements and adapted to set the ratio of transmission of the said two influences on the regulator for the purpose to suit the change in the efficiency of the entire plant.

1,752,136. APPARATUS FOR MANUFACTURING TIRES. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Mar. 27, 1929. Serial No. 350,238. 8 Claims. (Cl. 154—10.)



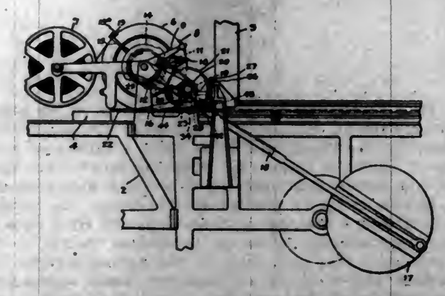
1. In an apparatus for shaping tire casings and permitting curing bags to be assembled therein, a hollow an-

nular chamber open on its inner periphery and having a movable lower wall, and means for creating less than atmospheric pressure within the chamber, in combination



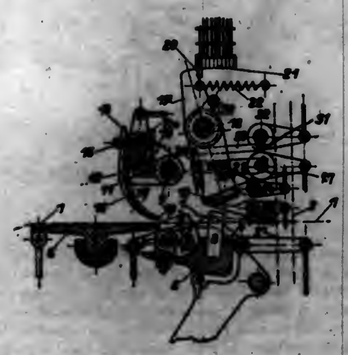
with means for governing the position of the movable lower wall, said means being automatically operated when the vacuum is broken to permit an assembled casing and bag to gravitate out of the chamber.

1,752,137. COMPARTMENT PAN. ELIZABETH F. AHEARN, Detroit, Mich. Filed Aug. 3, 1927. Serial No. 210,307. 1 Claim. (Cl. 141—9.)



A dish pan the body portion of which is formed from a single sheet of material shaped in circular form and extended from one side of said body portion to the other to provide a transverse partition therein, a wire at the upper edge of the pan and partition and over which the material of the pan and partition is rolled to reinforce the body and partition of the pan, portions of the bead being cut away at opposite ends of the pan and the wire at these points bent outwardly to form handles, and a short piece of wire between the outwardly bent portion of each handle and over which the material is rolled.

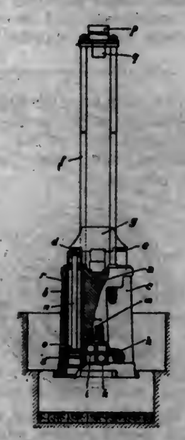
1,752,138. FLEXIBLE COUPLING. HOWARD D. AINSWORTH, Berkeley, Calif., assignor to F. A. B. Manufacturing Company, Berkeley, Calif. Filed Sept. 24, 1927. Serial No. 221,731. 5 Claims. (Cl. 64—26.)



1. A flexible coupling comprising a driving flange, a driven flange, removable pins carried by each of said flanges and extending toward the other of said flanges, said pins having alternatively flattened and rounded surface portions, a plurality of links for transmitting the driving force from the driving to the driven flange, each of said links having one end connected to a pin carried by the driving flange and its other end connected to a pin carried by the driven flange, resilient bushings interposed between said pins and said links, said bushings conforming to the alternately flattened and rounded surface portions of said pins and adapted to be uniformly distored by the action of the driving force.

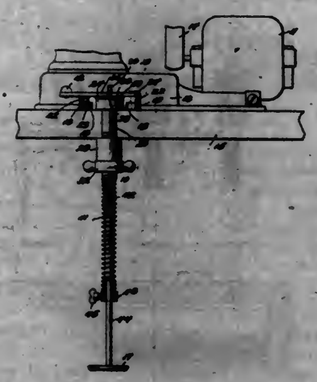
1,752,139. TORCH APPARATUS AND CARTON-SEALING MACHINE. JAMES L. ANDERSON, Tenafly, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 7, 1927. Serial No. 238,452. 5 Claims. (Cl. 93—56.)

1. In a machine for applying sealing tapes to cartons, comprising a tape carrier, and means for supporting the cartons in operative relation to the tape carrier and for turning the tape carrier and producing relative translational movement between the tape carrier and the cartons, blowpipe means and a support for the same, said blowpipe means being supported adjacent the periphery of the tape carrier and comprising means for delivering a plurality of sets of jets, so arranged as to heat the tape on the tape carrier and also to supply heat to the surface of the carton.



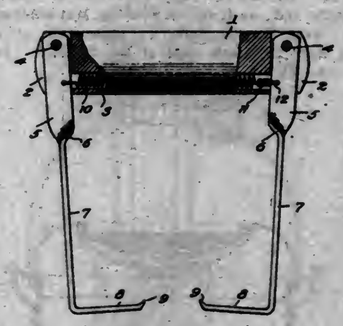
1,752,140. AUTOMATIC LOOM FOR MAKING REAL KNOTTED CARPETS. MAURUS BÁNYAI, Vienna, Austria, assignor to Vereenigde Knooptapytindustrie Systeem Bányai, Rotterdam, Netherlands. Filed Feb. 7, 1925, Serial No. 7,593, and in Germany Feb. 8, 1924. 15 Claims. (Cl. 139—4.)

1. In an automatic loom for the manufacture of genuine knotted carpets, the combination with means for weaving a ground fabric of warp lifters capable of swing-



ing from an inoperative position into a position for engaging and raising the warp threads of the ground fabric, colour selecting members for carrying the pile threads, said colour selecting members being capable of angular movement for placing a pile thread into position for insertion into the ground fabric, drawing out clamps for pulling out the pile threads to the required length for forming a knot, grippers for engaging the pile threads, said grippers being capable of rocking for transferring the pile threads to the point where the knot is to be inserted, and shears for severing the pile threads, said shears being capable of swinging from an inoperative position out of the path of the pile threads into a position for engaging the pile threads, as and for the purposes set forth.

1,752,141. DROP HAMMER. HANS BÄCHÉ, Huckeswagen, Germany. Filed Nov. 10, 1926, Serial No. 147,481, and in Germany Nov. 14, 1925. 11 Claims. (Cl. 78—25.)



1. A power hammer, comprising an anvil formed at its sides with vertical cylindrical holes, a ram, pistons mounted in said holes for reciprocating therein and loosely engaging said ram, means to supply a pressure fluid to said holes below said pistons, and guiding means for said ram.

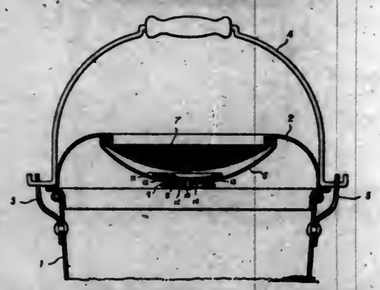
1,752,142. CONTROL MECHANISM FOR SEWING MACHINES. DAVID BESWICK, Brooklyn, N. Y. Filed Jan. 19, 1927. Serial No. 162,138. 9 Claims. (Cl. 74—81.)

7. In combination with a sewing machine having a base with a button projecting therefrom, of a clamp adapted to secure said base to a support, a member slidable in said clamp and adapted to be moved by the knee of an operator, a lever pivoted to said clamp and having one end in engagement with said button and means connecting said lever and member for movement in unison.

1,752,143. STORAGE-BATTERY CARRIER. WALTER A. BISHMAN, Minneapolis, Minn. Filed Dec. 17, 1927. Serial No. 240,787. 4 Claims. (Cl. 16—114.)

1. In a storage battery carrier, a handle having forked ends and abutting shoulders adjacent said ends, a pair of co-operating jaws having shanks disposed laterally of said handle and pivoted within said forked ends, said abutting shoulders limiting the inward movement of said jaws, a passage extending longitudinally through said handle and a contractile spring extending through said passage and having its ends connected eccentrically with said shanks to urge said jaws together.

1,752,144. LONG-STROKE PUMPING JACK. LAWRENCE G. BUAT, Tulsa, Okla. Filed Apr. 16, 1928. Serial No. 270,536. 8 Claims. (Cl. 74—5.)



8. A pump jack comprising a flexible reciprocable element, a framework over which the element is guided including confronting channels, and a counterbalancing weight connected to said element being received by and guided in said channels.

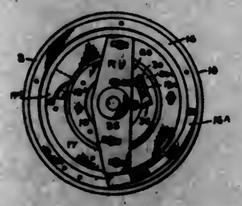
1,752,145. NONCORROSIVE ALCOHOLIC SOLUTIONS. WILLIAM S. CALCOTT and HERBERT W. WALKER, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 22, 1928. Serial No. 314,316. 9 Claims. (Cl. 23—5.)

8. The process of inhibiting the corrosion of iron by an aqueous solution of glycerine in contact therewith by the application to said iron of a higher fatty acid dissolved in said solution.

1,752,146. RECEPTACLE. CHARLES E. CARTER, Indianapolis, Ind., assignor to Sterling Manufacturing Company, Fort Wayne, Ind., a Corporation of Delaware. Filed Apr. 28, 1928. Serial No. 273,496. 12 Claims. (Cl. 31—51.)

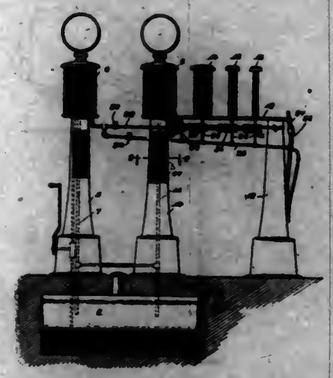
8. In liquid control apparatus for receptacles, the combination, with an intake member having an intake aperture, the intake member being formed with notches opening into the aperture, a valve beneath the aperture of the intake member, a supporting plate for the valve arranged above the intake member and having drain apertures, a conical sleeve projecting from the supporting plate through the aperture in position for resting against the edges thereof and allowing liquid to flow through said drain apertures and through said notches, and means of detachable connection of the valve with said supporting plate.

1,752,147. TENSION REGULATOR. LYNN B. CASE, Highland Park, N. J., assignor to John Waldron Corporation, New Brunswick, N. J., a Corporation of New Jersey. Original application filed June 11, 1926, Serial No. 115,398. Divided and this application filed June 20, 1928. Serial No. 286,923. 8 Claims. (Cl. 242—75.)



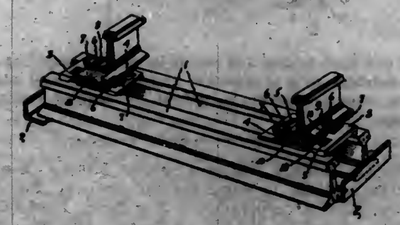
5. In a machine for coating web material, comprising a stationary frame; means for drawing a web of material continuously through the machine from a stock roll; means for automatically maintaining the web under uniform tension, while passing through the machine, comprising a movably supported frame adapted to revolvably support said roll, said frame and said roll being adapted to move in one direction by the pull of the material; a brake on the movable frame for retarding the rotation of the roll; a lever for operating said brake; a projection on the stationary frame adapted to engage and operate said lever; and means for moving the movable frame and the roll in the opposite direction to counterbalance the effect of the pull on the material and to cause actuation of the brake operating lever on the movable frame, by the operating projection on the stationary frame.

1,752,148. AUTOMOBILE HEATING APPARATUS. STEPHAN CHOLOWSKI, Portal, N. Dak. Filed May 2, 1929. Serial No. 359,954. 3 Claims. (Cl. 184—104.)



1. In an apparatus of the class described, the combination of a primary casing adapted to be placed contiguous to a crank case, an auxiliary casing around said primary casing, a cork gasket in said auxiliary casing and adapted to bear against a crank case, and means on said primary casing whereby steam may be supplied thereto.

1,752,149. CIRCUIT MAKER AND BREAKER. WILL N. CLURMAN, Long Beach, N. Y. Original application filed Mar. 29, 1927, Serial No. 179,203. Divided and this application filed Mar. 30, 1929. Serial No. 351,178. 5 Claims. (Cl. 200—11.)



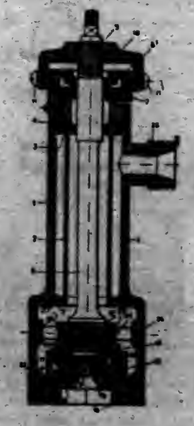
1. In a circuit maker and breaker, a support, an endless contact thereon, a second contact adjacent said endless contact, a third contact adjacent said second contact and having a part overlapping same, a fourth contact adjacent said second and third contacts and extending beyond the limits thereof, a fifth contact adjacent said fourth contact, parts of said fourth and fifth contacts overlapping each other, all of said contacts being insulated one from the other.

1,752,150. COIN-CONTROLLED LIQUID-DISPENSING APPARATUS. ERNEST C. COOPER, St. Stephens, Ala. Filed Aug. 17, 1927. Serial No. 213,638. 8 Claims. (Cl. 221—100.)

1. In a dispensing apparatus, an elevated reservoir, a vertically adjustable overflow pipe movable through the bottom thereof, a chart arranged to one side of the overflow pipe and having calibrations thereon indicating a predetermined quantity of liquid for a predetermined money value, an indicating finger carried by the overflow pipe and adjustable with the latter over the chart to facilitate reading of the latter, a vertical rod arranged to one side of the overflow pipe, a sleeve carried by the indicating finger and slidable on the rod, an interiorly threaded boss carried by the collar, a set screw threadedly received in the boss to engage the vertical rod and hold the overflow pipe against vertical adjustment and having a transverse opening for registration with the opening in the boss, and a lock engageable with the registering openings to retain the set screw against being rotated.

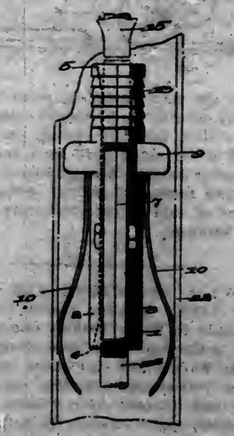
1,752,151. RAILROAD-TRACK STRUCTURE. WILLIAM DALTON, Glenville, N. Y. Filed Sept. 19, 1928. Serial No. 307,025. 2 Claims. (Cl. 238—107.)

1. In a railway track structure, the combination of a metal tie having a supporting plate which tapers in thickness, said plate being provided with openings at opposite edges to receive rail-fastening members, and a groove in the underside of the plate adjacent the opening at the thicker edge of the plate of a depth such that the same kind of fasteners may be used in each opening.



1,752,152. RAILROAD-TRACK STRUCTURE. WILLIAM DALTON, Glenville, N. Y. Filed Apr. 11, 1929. Serial No. 354,390. 7 Claims. (Cl. 238—351.)

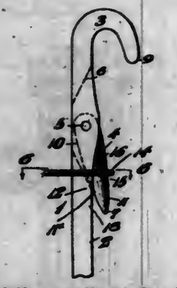
1. The combination with a tie plate having an opening, of a clamp adapted for insertion into said opening to fasten a rail in position, said clamp having a concave inner face and a convex outer face provided with a transverse ridge, said concave inner face receiving the adjacent edges of the opening and the rail flange, and said ridge wedging against the outer face of said opening on a line below its top edge.



1,752,153. SPRAYING OF LIQUIDS. ENRICO PIETRO DE ZAN, Spezia, Italy. Filed Mar. 2, 1927, Serial No. 172,154, and in Italy Nov. 19, 1926. 6 Claims. (Cl. 299—119.)

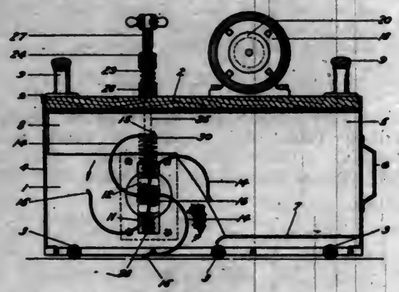
1. Improved liquid sprayer comprising in combination a casing having a closed end, means for supplying liquid thereto, a longitudinal shank extending within the casing, a primary valve at one end of the shank, a fixed abutment on the closed end of the casing in line with the primary valve, a secondary annular valve in threaded engagement with the primary valve and in sliding engagement with the abutment, two sets of atomizing ports passing through the wall of the annular valve, one set adapted to be closed by the abutment and the other by the primary valve, means whereby when the longitudinal shank is rotated to

open the ports the primary valve recedes from the abutment to form an intermediate atomising chamber therebetween and open one set of ports and at the same time move the annular valve relatively to the abutment and thereby open the second set of ports in the annular valve, the two sets of ports being simultaneously, identically and gradually opened or closed, and an outlet port in the fixed abutment to directionally discharge the atomized liquid.



1,752,154. ROD OR TUBING GUIDE. STEPHEN V. DILLON, Tulsa, Okla., assignor to Smith Separator Company, a Corporation of Oklahoma. Filed Dec. 1, 1927. Serial No. 237,112. 5 Claims. (Cl. 308—3.)

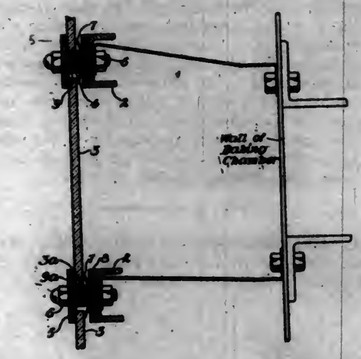
1. A rod guide adapted to be inserted in a well tubing, comprising a body portion having a channel therethrough for slidably engaging a sucker rod, a plurality of diametrically opposed rigid projections on said body portion for maintaining the same centrally of said tubing, and a plurality of bowed springs on said body arranged to friction-



ally engage the walls of said tubing in advance of said projections for automatically retaining said guide in a stationary position at the desired depth in said tubing after the string of rods has been inserted.

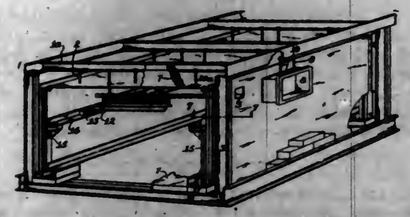
1,752,155. KNITTING NEEDLE. GEORGE C. EGLY, Bensalem Township, Bucks County, Pa. Filed Oct. 16, 1928. Serial No. 312,764. 4 Claims. (Cl. 66—121.)

1. In a latch knitting needle of the character stated, a needle shank terminating in a hook, a latch pivoted in a slot in said shank and coacting with said hook, and means for preventing the impact of the back of said latch against the juxtaposed portion of said shank when said latch is in the open position comprising rearwardly tapered rounded lugs integral with the sides of said latch and offset with respect to the back edge thereof.



1,752,156. POWER SCRAPING MACHINE. ALFRED H. ENDORF, Wheatland, Iowa. Filed Sept. 14, 1928. Serial No. 306,077. 1 Claim. (Cl. 144—115.)

A device of the class described, comprising a rollingly mounted casing open at the bottom, a container removably held in said casing, partially closing the bottom thereof and projected at its upper part from end to end of the casing, a scraper rotatably mounted above the open part of said casing, and formed of curved spring blades, means for adjustment of said scraper vertically, and means for rotating said scraper.

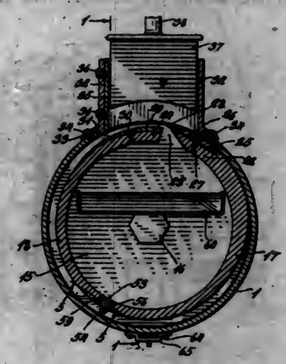


1,752,157. WALL STRUCTURE FOR BAKE OVENS AND THE LIKE. EUGENE OSCAR ENGELS, Saginaw, Mich., assignor to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Oct. 13, 1928. Serial No. 312,289. 2 Claims. (Cl. 72—24.)

1. An oven framework including upright supporting members and rails thereon in vertically spaced relation, panels closing the space between the rails and means for removably securing said panels in position while permitting removal of any individual panel, said fastening means comprising an exterior finishing strip, bolts holding the rails, panels and finishing strips in clamping relation, a panel-supporting bar carried by the bolts, a spring member also carried by the bolts and having its marginal edges engaging the panel and urging the panels outwardly against the finishing strip, a clip of easily bendable material secured to and engaging the panel-supporting bar, winged flanges on said clip overlapping the outer faces of the panel margins, said clip normally concealed by the finishing strip

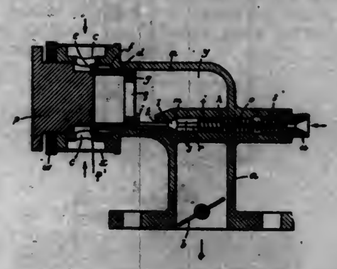
and arranged to hold the panels in place on said bar after the finishing strip is removed, said winged flanges adapted to be bent outwardly to permit removal of designated panels.

1,752,158. OVEN. EUGENE OSCAR ENGELS, Saginaw, Mich., assignor to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Oct. 13, 1928. Serial No. 312,290. 5 Claims. (Cl. 107—57.)



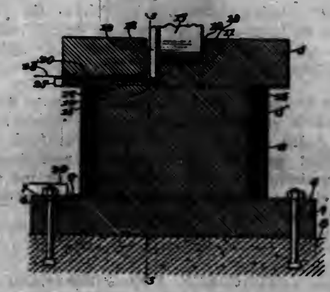
4. In an oven of the class described, a baking chamber formed of a crown or roof comprising a plurality of panel sections assembled edge to edge, expansion joints uniting the adjacent edges of successive sections, suspension rods sustaining said crown sections, and side wall members of sheet metal secured to the longitudinal edges of said crown sections, in substantially suspended relation thereto, for the purposes set forth.

1,752,159. WALL CONSTRUCTION FOR BAKE OVENS AND THE LIKE. EUGENE OSCAR ENGELS, Saginaw, Mich., assignor to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Oct. 29, 1928. Serial No. 315,643. 4 Claims. (Cl. 107—57.)



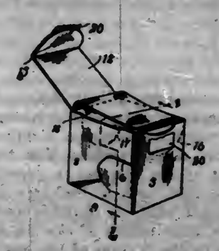
1. A bake oven including a baking chamber whose side wall is formed with a slot, cover plates having openings, heating elements registering with said openings and projecting in spaced relation through said slot and into said baking chamber, said elements with their respective plates adapted for independent adjustment of said spaced relation in the direction of the length of said slot, independently removable closure panels for said slot between said cover plates, and fastening means for securing said plates and panels to said side wall.

1,752,160. SLICING AND GRINDING MACHINE. OTTO EBL, Denver, Colo. Filed July 16, 1928. Serial No. 293,257. 3 Claims. (Cl. 146—92.)



1. In a machine of the class described, a cylinder having one end closed and the other open, a hollow rotor located within the cylinder and mounted for rotation about the axis of the cylinder, the wall of the rotor having an elongated opening extending parallel with the axis of rotation, one side of the opening having a groove adapted to receive a screw, a cutter blade holder located in the opening, said holder having one side provided with a groove that supplements the groove in the side of the opening for the purpose of enclosing the screw, the other side of the holder having a plurality of transverse spaced cuts adapted to receive cutter blades, cutter blades in the cuts and means for preventing the blades from moving longitudinally in the cuts.

1,752,161. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. HENRY EDWARD FAIRBROTHER and EDMUND CHARRINGTON, London, England. Filed Feb. 25, 1926, Serial No. 90,639, and in Great Britain May 11, 1925. 3 Claims. (Cl. 261—50.)



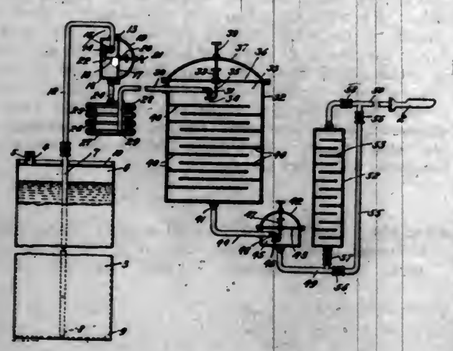
1. In an apparatus of the character described, the combination of a tubular casing having an open end, a mixture discharge end and a mixing chamber between said ends, said casing also having in its lateral wall adjacent its open end a series of radially disposed air admission ports of which the opposite ends are respectively on the outer face and the inner face of said wall, an open-ended tubular air valve slidably mounted within the casing between the said open end and the mixing chamber, a plugging member adjustably mounted on the open end of the casing and forming with said lateral wall a passage for the flow of air from the inner ends of said ports in a direction away from the said open end of the casing and towards the air valve, said plugging member having a projecting nose part adapted to extend within and obturate the outer end of the air valve when the engine is at rest and for a predetermined period at the starting of the engine, a fuel supply duct having an outlet arranged to discharge fuel within the mixing chamber in a direction towards the said open end, a spring-pressed needle valve slidably mounted in and normally closing the fuel valve, said needle valve having means extending into the path of movement of and engaged by the air valve for opening the fuel valve when the air valve is moved by suction of the engine toward open position, the said needle valve opening means and air valve being so related that the fuel valve is partially opened before the air valve opens said air passage.

1,752,162. CAR-RETARDING RAIL. CHARLES E. FEHRINGER and VIRGIL M. LANE, East St. Louis, Ill. Filed May 12, 1927. Serial No. 190,825. 16 Claims. (Cl. 188—62.)

5. A retarder for interposition between the sections of a track rail to form a continuation thereof comprising a body portion consisting of an electromagnet having arranged in the upper part thereof a normally inactive circuit closing means therefor, adapted to be engaged by the flange of a wheel travelling over the magnet to close the circuit for the latter thereby providing for the energizing of the magnet to cause the latter to attract the wheel to retard travel of the latter as it passes over the magnet, said body formed below its upper face with a tread surface for the wheel and further formed with a channel depending below the tread surface for the passage of the wheel flange, said passage having said means arranged at the bottom thereof.

1,752,163. CONTAINER FOR SURGICAL BANDAGES. BRADFORD B. FLINT, Glens Falls, N. Y. Filed Jan. 21, 1928. Serial No. 248,395. 1 Claim. (Cl. 206—52.)

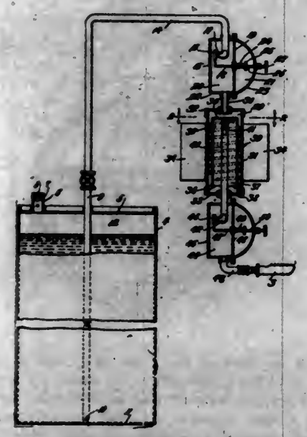
A container for bandage rolls comprising a blank cut to provide a bottom, back wall and a front wall, side flaps integrally connected respectively to the bottom, back and front walls, auxiliary cover flaps carried by the side flaps of the back walls, one of the cover flaps having tabs carried thereby, a main cover connected with the back wall, the side flaps of the front wall having slots therein having curved portions, tongues carried by the side flaps of the back wall and adapted to engage the slots when the blank is folded into container form with the side flaps overlapped, said tongues being separated from the side flaps of the back wall by kerfs adapted to engage said



curved portions, the auxiliary cover flaps being adapted to close the upper end of the container and upon which a portion of the bandage roll rests, said main cover being foldable upon the auxiliary covers to maintain a portion of the bandage roll engaged between said auxiliary cover flaps and the main cover.

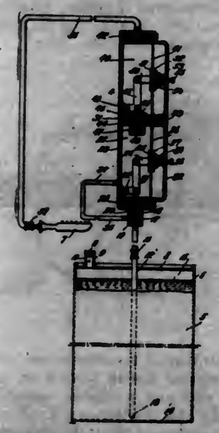
1,752,164. PROCESS FOR ORNAMENTING SURFACES. DAVID M. FLOURNOY and PERICLES D. GEORGE, St. Louis, Mo. Filed July 28, 1927. Serial No. 209,183. 5 Claims. (Cl. 91—70.)

1. The process of producing an ornamental water proof cloth, which comprises impregnating woven silk fabric with a liquid composition coagulable to form a flexible water proof material and applying to said product after the composition has been coagulated, a coating of a coagulable mixture containing treated China wood oil and promptly subjecting said coating to heat.



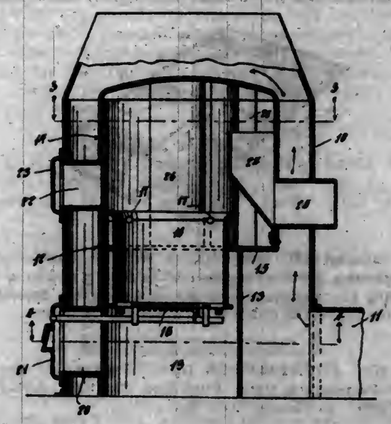
1,752,165. APPARATUS FOR PREPARING HYDROCARBON MIXTURES FOR COMBUSTION. REID G. FORD, Scarsdale, N. Y., assignor, by direct and mesne assignments, to Vapyre Corporation, Pleasantville, N. Y., a Corporation of New York. Filed Oct. 18, 1926. Serial No. 142,176. 1 Claim. (Cl. 158—53.)

The combination with a tank containing a supply of liquid hydrocarbon mixture, and a burner, of means for gasifying the liquid hydrocarbon comprising a heat absorption chamber, a pipe leading from the bottom of the tank to the top of the chamber, a pressure regulator interposed in the pipe, and a discharge pipe for the gas vertically arranged with the chamber and connected with the burner, the inlet orifice of the discharge pipe being relatively close to the bottom of the chamber so that the gas entering the inlet orifice will pass through and entrain liquid hydrocarbon on the bottom of the chamber.



1,752,166. APPARATUS FOR PREPARING HYDROCARBON MIXTURES FOR COMBUSTION. REID G. FORD, Scarsdale, N. Y., assignor, by direct and mesne assignments, to Vapyre Corporation, Pleasantville, N. Y., a Corporation of New York. Filed May 10, 1929. Serial No. 361,941. 5 Claims. (Cl. 158—53.)

1. In an apparatus of the character described including a tank for containing a liquid hydrocarbon mixture, and a reduction valve connected with the tank, a gasifying chamber comprising a housing into the top part of which the reduction valve discharges, a tubular guard member located within the housing, said guard member



being closed at its upper end and open at its lower end in the lower part of the housing, and a discharge pipe for the chamber having its inlet orifice in the upper part of the guard member.

1,752,167. APPARATUS FOR PREPARING HYDROCARBON MIXTURES FOR COMBUSTION. REID G. FORD, Scarsdale, N. Y., assignor, by direct and mesne assignments, to Vapyre Corporation, Pleasantville, N. Y., a Corporation of New York. Filed July 25, 1929. Serial No. 380,798. 4 Claims. (Cl. 158—53.)

1. In combination with a supply of liquid hydrocarbon and a gas burner, an apparatus for converting liquid hydrocarbon into gas comprising a chamber, a pipe leading from the supply of liquid hydrocarbon into the chamber, a reducing valve for controlling the passage through the pipe, a by-pass leading from the chamber to a point adjacent to the burner and then back into the chamber, said by-pass serving to conduct liquid hydrocarbon to the point adjacent to the burner and to conduct the resulting gas into the chamber, a dry gas chamber, a passageway between the two chambers, a reducing valve for controlling the passageway, and a pipe leading from the dry gas chamber to the burner.

1,752,168. HOT-AIR FURNACE. HARRY KINGSLEY FLOWERS, Oakland, Calif. Filed June 4, 1928. Serial No. 282,620. 1 Claim. (Cl. 126—99.)

A furnace of the class described comprising a casing, a heating unit within the casing in spaced relation to the side wall thereof, said heating unit having a lower section eccentric with respect to the casing and an upper section on said lower section eccentric with respect to the first mentioned section and concentric with respect to the casing, said upper section being closed at the top and having a base wall, a firepot disposed partly above and below said wall and thus in both sections, said firepot at the upper edge having an outwardly extending marginal portion, air blast openings in said marginal portion, air ducts through the upper section having their entrances outwardly of the lower section and their exits in communication with the casing above said top, the lower portion of the first mentioned section constituting an ashpit, a duct providing communication through the casing with said ashpit, means providing a fuel supply passage through the casing and upper section communicating with the latter above the firepot, and a flue from the upper section through the casing having a down portion and an outlet portion, said down portion being open at the top adjacent said top.

1,752,169. CONCENTRATOR. FORREST D. GOODY, Denver, Colo. Filed June 22, 1926. Serial No. 117,836. 5 Claims. (Cl. 209—458.)

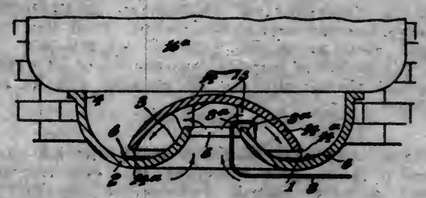
1. An ore concentrating apparatus, comprising a flume box adapted to receive placer gravel and water, said box having a slanting bottom, and means for concentrating the ore particles to the bottom of said box, said means including a metal screen having short upright walls defining diamond shaped openings therebetween, said screen being so secured to said box that the short upright walls are inclined toward the in-flowing gravel and water.

1,752,170. STARTING AND SELECTING MECHANISM FOR AUTOMATIC MUSICAL INSTRUMENTS. CLIFFORD H. GREEN, Grand Rapids, Mich. Filed Sept. 15, 1921. Serial No. 500,802. 31 Claims. (Cl. 194—9.)

29. In a controlling mechanism for motor operated musical instruments, the combination of a switch for controlling the circuit of the motor of said instrument, a bodily movable latch for engaging said switch to open the same, controllable means operated through the operation of said

instrument by said motor for bodily moving said latch into switch-engaging position, and optionally actuable means for controlling the engagement of said latch with said switch.

1,752,171. MULTIRECORD CONTROLLER. CLIFFORD H. GREEN, Grand Rapids, Mich., assignor to National Piano Mfg. Co., Grand Rapids, Mich., a Corporation of Arizona. Filed Oct. 13, 1923. Serial No. 668,266. 54 Claims. (Cl. 84—120.)

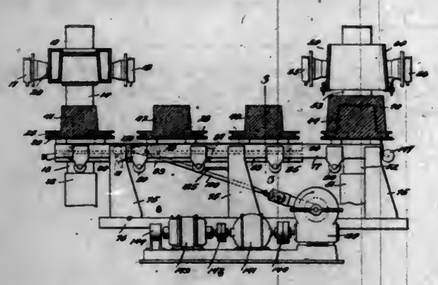


13. The combination, with an automatic musical instrument having note-sounding devices, pneumatically operable means for actuating them, and an air-pump for supplying pneumatic power for operating said actuating means, of a device separate from said instrument but connected therewith for controlling the operation of said actuating means and comprising means for supporting and propelling a record, and means for controlling the operation of said air-pump and the playing of said record upon said instrument.

1,752,172. COLLAPSIBLE BONNET. FRANK GUST, Chicago, Ill. Filed Nov. 2, 1928. Serial No. 316,709. 8 Claims. (Cl. 2—187.)

1. A collapsible bonnet comprising a quadrilateral sheet of rainproof material containing pleats extending from one side to the opposite side across said sheet and being folded over centrally across the pleats, having the joining side portions of the sheet secured together and said central folded-over part contracted to provide a peak for the bonnet, and being of proper size to protect the head and shoulders.

1,752,173. FUEL-OIL BURNER. JOHN EDWARD HACKFORD, London, England. Filed Oct. 29, 1927, Serial No. 229,742, and in Great Britain Nov. 4, 1926. 4 Claims. (Cl. 158—92.)



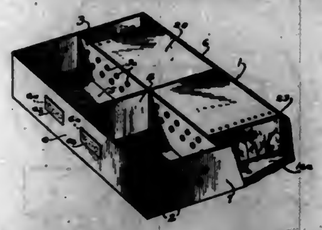
1. An oil burner comprising, in combination, a shallow trough of curved cross-section, means for supplying oil

to the interior of said trough so as to maintain a thin film of non-vaporized oil at the bottom of said trough, and an inlet for cold air, said inlet being formed on the inside by the inside wall of the trough and on the outside by a curved deflector which extends over and in spaced relation to the upper edge of the inside wall of the trough and downwards into the trough to a position where its bottom edge is in close proximity to the surface of the film of oil, thus forming a narrow outlet for the cold air which is thereby caused to sweep transversely and in the form of a blanket across the whole burning surface of the oil outside the bottom edge of the deflector so as to maintain partial combustion on the surface only of the oil by removing the products of such partial combustion as fast as they are formed.

1,752,174. PHOTOGRAPHIC CHEMICAL PROCESS AND MATERIAL. OLIVER ANTRUM HALL, Seattle, Wash., assignor to Brown Line Process Company, a Corporation of Washington. Filed May 17, 1927. Serial No. 192,165. 10 Claims. (Cl. 95—7.)

1. The process of photographic printing which comprises producing a latent image on a surface sensitized to light with the reaction product of diazotized pyridine sulfonic acid with a tartaric acid solution of a sodium salt of 1 amino, 2 naphthol, 6 sulphonic acid, tartar emetic, and nickelous sulfate, and then treating the latent image so formed with an alkali.

1,752,175. MECHANISM FOR FORMING AND HANDLING MOLDS. EDWARD HARMES, Wilkinsburg, Pa., assignor to New Process Multi-Castings Company, a Corporation of New Jersey. Filed Oct. 27, 1926. Serial No. 144,515. 6 Claims. (Cl. 22—31.)



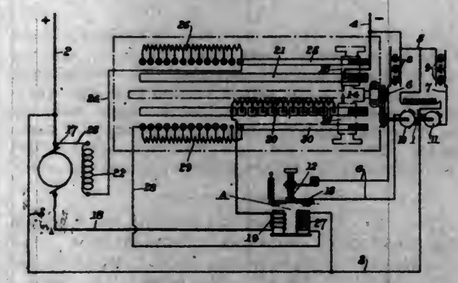
1. Apparatus for forming and handling molds, including drag mold forming mechanism, cope mold forming mechanism, an assembling and transfer table from said drag mold forming mechanism to said cope mold forming mechanism for intermittently moving a series of drag molds thereto, means for stopping said series and positioning the leading drag mold thereof with respect to said cope mold forming mechanism in position for having a cope mold accurately deposited thereon, and means for positioning a cope mold with respect to said leading drag mold and depositing said cope mold thereon.

1,752,176. METHOD OF PREPARING EMULSIONS. KENZO HATTORI, Saitama-Ken, Japan. Filed Mar. 31, 1926. Serial No. 98,924. 2 Claims. (Cl. 252—6.)

1. The method of preparing an emulsion of oil which comprises mixing with the oil protalbic acid as an emulsifier.

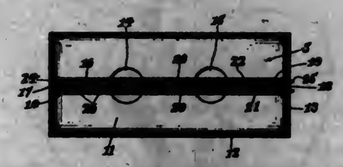
1,752,177. SHIPPING BOX FOR BABY CHICKS. ALBERT B. HILKEMEYER, Westphalia, Mo. Filed Oct. 31, 1927. Serial No. 230,024. 2 Claims. (Cl. 119—33.)

1. A baby chick shipping box having a compartment with an inner lining formed from a single sheet of material folded to provide a bottom, sides and top, the top having a depending flange along its free side edge to overlap one of the sides of the lining, the sides and top terminating short of the front end of the bottom so that



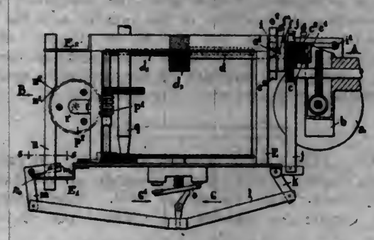
when applied the compartment will be double-walled throughout a portion only thereof to form a warming and a cooling chamber for the chicks, and a curtain depending from the top of the lining to separate said chambers.

1,752,178. FOUNTAIN-PEN GUN. FERNAND L. HUGUENIN, Portsmouth, Ohio. Filed Sept. 24, 1928. Serial No. 307,930. 10 Claims. (Cl. 42—1.)



1. A firearm comprising a cylindrical barrel provided therein slightly in advance of its inner end a seat for a cartridge flange, said barrel further formed with a cartridge extractor notch extending from said seat to its inner end edge, a hollow cylindrical body portion provided in proximity to its forward end with a partition for closing the inner end of the barrel and further formed adjacent its forward end with a longitudinal slot, said body portion and barrel having interengaging means for detachably connecting them together forwardly of the partition, a shiftable firing pin carried by said partition, a spring controlled hammer slidably connected with said body portion rearwardly of said partition and including a head for shifting said pin, a spring controlled, hammer setting trigger disposed in the slot of said body portion, and having its rear end normally positioned in the path of said head, said trigger at a point between its transverse median and its forward end provided with apertured means extending into the partition, means for pivotally connecting the apertured means to the partition, and the controlling spring for the trigger bearing thereon forwardly of said apertured means.

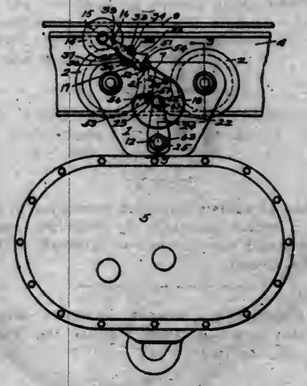
1,752,179. ELECTRIC-MOTOR-CONTROL SYSTEM. HENRY VINCENT JAMES, Radlett, England. Filed May 12, 1927, Serial No. 190,940, and in Great Britain June 9, 1926. 2 Claims. (Cl. 172—288.)



1. An electric motor control system of the type wherein a motor-driven speed regulating means or controller for a main power motor is governed by switches, comprising a trip switch controlling the continuity of the circuit for the controller motor, an electromagnet coil in the main power circuit and adapted under overload conditions of said circuit to operate the trip switch and thereby interrupt the controller motor circuit, a compensating coil having its field opposed to that of the first mentioned coil, and means for simultaneously increasing the energization of the compensating coil and decreasing the energization of the main motor field.

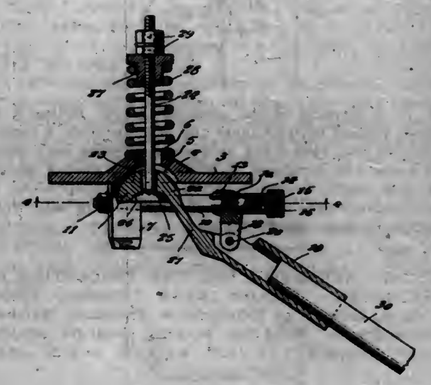
1,752,180. STRINGED MUSICAL INSTRUMENT. LOUIS CURTIS JOHNSON, Fayette, Ala. Filed Sept. 11, 1928. Serial No. 305,211. 4 Claims. (Cl. 84—263.)

1. A stringed musical instrument comprising a rectangular hollow body portion having a pair of spaced, opposed openings in the top thereof, a fretted supporting bar secured upon the top, and of the same length as the length of the body portion, said bar extending across said openings at the diametric center of the latter and of a width less than the diameter of the openings, a pair of spaced bridge pieces mounted upon the upper face of the bar transversely of the latter, strings anchored at one end to one end of the bar and seating on said bridge pieces, and tuning keys connected to the other end of the bar and to the other end of the strings.



1,752,181. WINDING UP OF SPRING-DRIVEN DEVICES. NEVILLE GEORGE JOHNSON, Hove, England. Filed Dec. 11, 1928, Serial No. 325,279, and in Great Britain Jan. 4, 1928. 7 Claims. (Cl. 185—40.)

1. In talking machines and other spring-driven devices a driving spring, an electric motor for winding up the driving spring, an automatic electric switch for closing the circuit of the electric motor when the driving spring is to be wound up and for opening it when the driving spring is wound up, a member capable of controlling the closing of the switch in dependence upon the unwinding of the driving spring and a transmission between the driving spring and the electric motor, which transmission includes means capable of disconnecting the electric motor from the driving spring by a mechanical displacement in the said transmission under the action of the resistance offered by the spring to its being further wound up when the same is nearly wound up.



1,752,182. CURRENT COLLECTOR FOR HOISTING APPARATUS. EARL R. JONES, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 28, 1928. Serial No. 329,040. 5 Claims. (Cl. 191—45.)

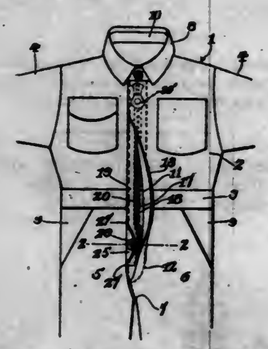
1. A current collector comprising contact means adapted to co-act with a conductor, and supporting means for said contact means including an adjustably-mounted member, and a spring, said spring being mounted for angular

as well as lateral adjustment on said member, whereby said contact means may be independently adjusted in a plurality of planes relative to said conductor.

1,752,183. TAIL SKID FOR AIRCRAFT. GEORGE KELL, Louisville, Ohio. Filed Nov. 4, 1929. Serial No. 404,711. 4 Claims. (Cl. 244—2.)

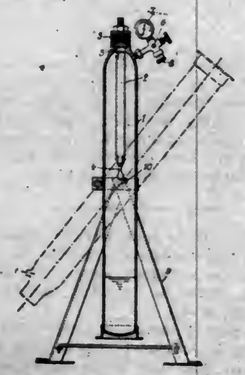
1. The combination with the tail of an air craft, of a disc fixed thereto, an arcuate guide rod connected with the disc, a sleeve slidable on the guide rod, means for yieldably interlocking the sleeve with the guide rod, a head pivotally connected with the sleeve, means for yieldably connecting the head with the disc, and a ground engaging wheel connected with said head.

1,752,184. DYE. WOLF KRITCHEVSKY, HAROLD C. PRUTSMAN, and ELLIOTT MORRILL, Chicago, Ill., assignors to Rit Products Corporation, Chicago, Ill., a Corporation of Delaware. Filed Dec. 3, 1928. Serial No. 323,564. 7 Claims. (Cl. 8—6.)



1. A composition of matter adapted to be dispensed in packages and to be combined with a liquid for use, comprising sulphonic acid salt of an alkylated polynuclear hydrocarbon residue possessing a high wetting power, and a water soluble dye.

1,752,185. ACOUSTIC APPARATUS, PARTICULARLY SIGNALING APPARATUS. HEINRICH KÜCHENMEISTER, Berlin, Germany. Filed Oct. 4, 1926, Serial No. 139,547, and in Germany Oct. 28, 1925. 17 Claims. (Cl. 116—24.)

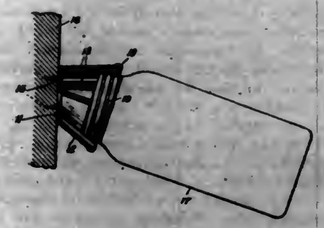


1. A method of audible signaling consisting in repeatedly exciting a sound generator by individual sound impulses that succeed one another at intervals of less than one third of a second.

1,752,186. GARMENT. SAMUEL LABOVITZ, Minneapolis, Minn. Filed Aug. 30, 1929. Serial No. 389,502. 6 Claims. (Cl. 2—79.)

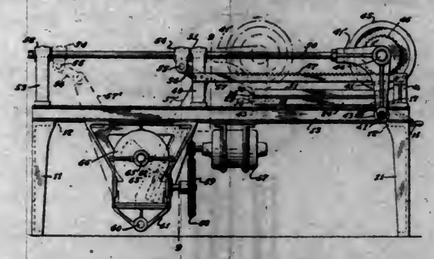
1. In a garment of the open front type having a fly opening formed with an inner and an outer wall, a closure means for said open front, said walls opposing each other, said outer wall arranged inwardly of said closure means, and said walls having coacting means independent of said closure means for detachably connecting said walls together to close the fly opening.

1,752,187. APPARATUS FOR THE PRODUCTION OF HYDROGEN. FERNAND EMILE LEFEBVRE, Clichy, France, assignor to L'Oxhydrique Francaise, Malakoff, Seine, France. Filed July 16, 1928, Serial No. 292,985, and in France July 18, 1927. 3 Claims. (Cl. 23—282.)



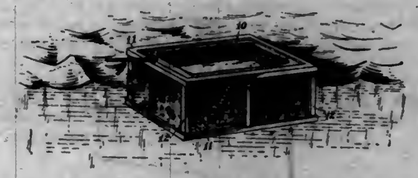
1. An apparatus for the production of hydrogen which comprises a pivotally supported closed vessel adapted to withstand the pressure of the hydrogen generated therein and to contain a caustic alkali solution, a tube adapted to contain a pulverized silicon compound mounted within said vessel in the upper part thereof, said tube having a number of discharge ports at its lower end and a distributing valve freely suspended at said lower end of the tube and adapted to swing and control said ports when an oscillating motion is imparted to said vessel.

1,752,188. MECHANICAL TIME FUSE. PAUL LIEBERGELD, Bad Thal, Germany. Filed Oct. 25, 1928, Serial No. 315,078, and in Sweden Sept. 15, 1928. 2 Claims. (Cl. 102—36.)



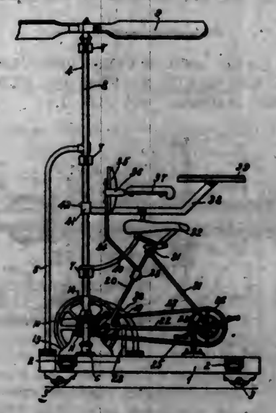
1. A mechanical time fuse for projectiles, comprising in combination a clockwork mechanism, a rotary shaft in the said mechanism, a pointer mounted on the shaft, a first securing device for securing the pointer in the inoperative position and capable of releasing the pointer at the moment of firing, a time determining ring capable of coacting with the said pointer, a gap in the time determining ring, means for causing the pointer to engage through the said gap on the pointer coming opposite the gap, an igniting device capable of being secured in the inoperative position and of being released by the said pointer, a second securing device for the pointer positioned between the pointer and the time determining ring and capable of remaining effective after the moment of firing for preventing the coaction of the pointer and the time determining ring, but not the rotary motion of the pointer, for a period of the time which is sufficient for preventing a premature explosion of the projectile within a predetermined radius of safety, as set forth.

1,752,189. JAR-COVER REMOVER AND FASTENER. JOSEPH LOTZ, Euclid, Ohio, assignor of one-half to Phillip Becker, jr., Cleveland, Ohio. Filed Mar. 28, 1929. Serial No. 350,761. 1 Claim. (Cl. 81—3.1.)



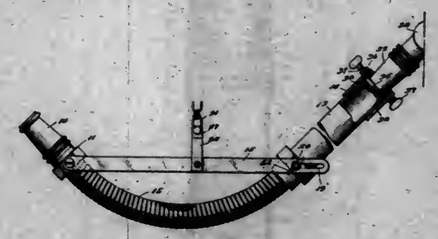
A container cover remover and fastener consisting of a hollow element in the form of a frustum of a cone presenting a conical wall, and an end wall disposed in a plane at an angle to the plane of the base of the cone, said conical wall having spaced jaws in the form of cross-sectionally triangular ribs, said end wall having holes for the reception of fastening elements whereby to fixedly secure said element to a suitable support, and said jaws being adapted to grip said container cover in the removing and fastening operations.

1,752,190. BACON FORMING OR SHAPING MACHINE. HOWARD C. MASSEY, Kansas City, Mo. Filed Apr. 23, 1929. Serial No. 357,489. 11 Claims. (Cl. 100—57.)



4. A bacon-forming machine including a frame, a main roller reciprocatingly mounted therein and an adjustable bacon mold mounted upon the frame and disposed to hold the bacon with the top exposed to the main roller to permit said roller to compress the bacon into the mold, said mold having a fixed base and two spring projected side walls, and means operable with the roller for simultaneously moving the walls toward each other as the main roller is moved over the mold in one direction, said side walls being released as the roller is moved in the opposite direction due to the action of the spring tension thereon to permit free access to the formed bacon.

1,752,191. SEA TUB. JERE C. MORAY, New York, N. Y. Filed July 16, 1929. Serial No. 378,739. 4 Claims. (Cl. 4—171.)

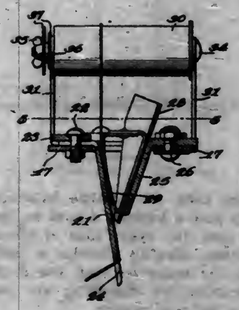


1. An aquatic device comprising a body in the form of a tub made of soft and buoyant material, and a rigid buoyant structure applied to the body to reinforce the same.

1,752,192. FAN. FIACRO MORENO, Torreon, Mexico. Filed Apr. 30, 1928. Serial No. 273,956. 1 Claim. (Cl. 230—243.)

A device for the purpose set forth comprising a platform, a tubular frame arising from one end thereof, a shaft guided through the frame and having a bearing support on the platform and said shaft having a fan on the upper end thereof, a gear on the shaft, intermeshing gears coengaging with the shaft gear, a sprocket on the shaft of one of the intermeshing gears, a pedal operated sprocket wheel having an endless chain trained thereover and trained over the first mentioned sprocket and a seat above the last mentioned sprocket.

1,752,193. FIRE NOZZLE. JOSEPH O'HANLON, Brooklyn, N. Y. Filed June 27, 1928. Serial No. 288,743. 18 Claims. (Cl. 299—78.)

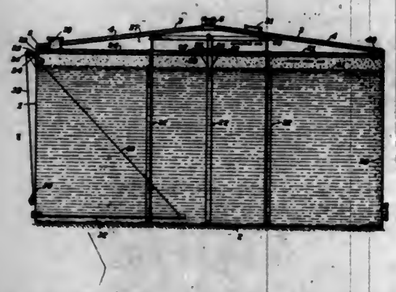


1. A fire nozzle comprising a tip, a spirally wound flexible metallic tube on said tip of diameter substantially equal to the internal diameter of the tip, and a coupling on the other end of the tube, in combination with adjustable support means attached to the tube adjacent each end adapted to fix the distance between the ends of said tube.

1,752,194. PROCESS OF PREPARING AN OXYCHLORIDE CEMENT. JØRGEN ULRIK AHLMANN OHLSEN, Copenhagen, Denmark. Filed Nov. 12, 1924, Serial No. 749,559, and in Denmark Nov. 13, 1923. 2 Claims. (Cl. 106—29.)

1. The process of preparing an oxychloride concrete which comprises mixing diatomaceous earth with liquefied bituminous materials normally solid, in quantity insufficient to change the powdery characteristics of the earth, and then mixing the resulting product with an oxychloride cement.

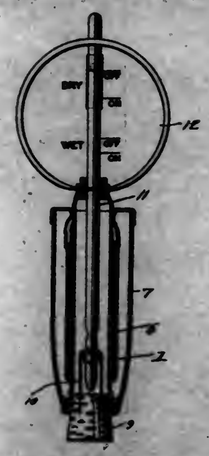
1,752,195. TENSION DEVICE FOR WINDING MACHINES. DAVID PALIN, Pawtucket, R. I. Filed July 20, 1928. Serial No. 294,166. 2 Claims. (Cl. 242—149.)



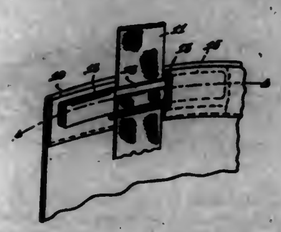
2. A tension device for a winding machine comprising a support, a pair of convergent members carried by the support and forming a V-shaped recess, the lower end of which is open and one of the members having a notch in its lower end whereby a thread can pass through the notch and through the recess and a wedge-shaped weight in the recess and pressing the thread against one of the convergent members.

1,752,196. RADIO APPARATUS. RONALD E. PATRIE, Loretto, Mich. Filed Jan. 16, 1926, Serial No. 81,839. Renewed Jan. 7, 1930. 6 Claims. (Cl. 250—14.)

1. A device of the class described including a body casing, a socket piece threaded in one end thereof, a vacuum tube carried by the socket piece, batteries within the casing, means forming connection between the batteries and tube, a rheostat control carried by the socket and a collar carried by the socket and arranged above the rheostat control rim.



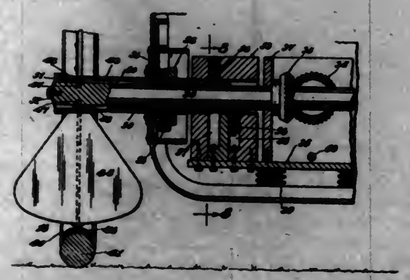
1,752,197. STORAGE TANK. JOHN F. PATTERSON, Warren, Ohio, assignor to The Warren City Tank & Boiler Company, Warren, Ohio, a Corporation of Ohio. Filed Apr. 27, 1929. Serial No. 358,639. 6 Claims. (Cl. 220—85.)



1. A storage tank for volatile hydrocarbons comprising side walls and a bottom, a roof on said tank, and a deck secured near the upper edge of the side walls, said deck having one opening therein, a baffle plate above said opening, the space between the deck and the roof forming a chamber for expanding air, and conservation vent valves in the roof proper.

1,752,198. TEMPERATURE INDICATOR FOR HAIR-CURLING DEVICES. ARNAUD E. PAUSSER, Philadelphia, Pa. Filed Nov. 18, 1926. Serial No. 148,174. 3 Claims. (Cl. 219—24.)

1. In a hair-curling apparatus, an electrical heating element whereby the curled hair is heated, and a temperature indicator comprising a second electrical heating element electrically connected to the first mentioned heating element, and a heat-responsive indicator associated with said second heating element to indicate a predetermined temperature condition at the curled hair.

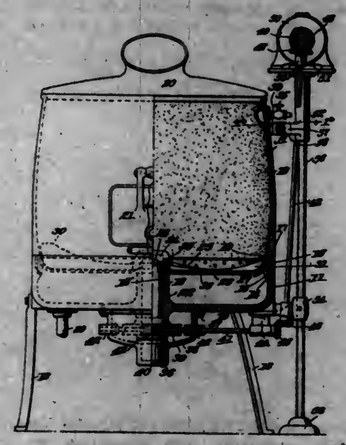


1,752,199. TROUSERS SUPPORT AND ATTACHING MEANS. CARL F. PERTHEL, Northfield, N. H. Filed Aug. 22, 1928. Serial No. 301,844. 3 Claims. (Cl. 241—25.)

1. Means for attaching a supporting strap to a garment comprising a garment carried member including spaced end sections substantially U shaped cross section and a bar connecting said sections, spaced pockets carried by the garment to receive the end sections of the garment carried member, and a strap carried member detachably engaged with the end sections of the garment carried member.

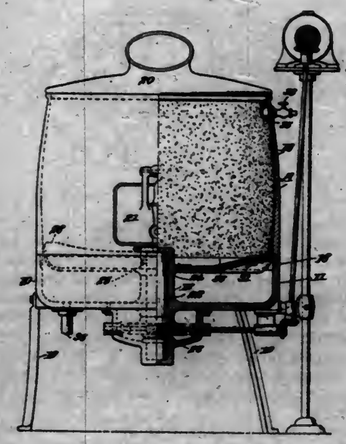
1,752,200. LAND AND WATER VEHICLE. GAETANO RAIMONDI, New York, N. Y. Filed Apr. 12, 1929. Serial No. 354,553. 9 Claims. (Cl. 115—1.)

6. In combination with the driven axle of a vehicle, a wheel mounted thereon, propelling blades pivotally mounted within said wheels for movement to an idling position within the plane of said wheel and to an operative position at right angle thereto, and means for successively moving said blades to idling and operative positions during each revolution of said axle.



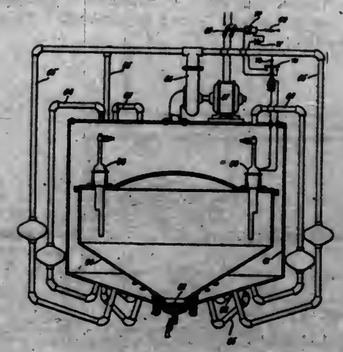
1,752,201. SOUND REPRODUCER FOR PHONOGRAPHS. FRANK B. REED, New Bedford, Mass. Filed Aug. 27, 1928. Serial No. 302,224. 5 Claims. (Cl. 274—25.)

1. A phonograph reproducer comprising a housing, a pair of flexible diaphragms mounted in said housing, a stylus bar fixedly attached to one of said diaphragms, and an adjustable screw threadedly carried by the other of said diaphragms and bearing against the fixed end of said stylus bar whereby turning of the screw will vary the flex of said diaphragms.



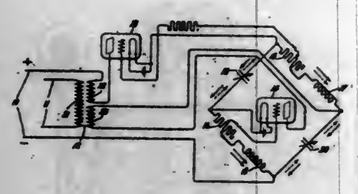
4. In a phonograph reproducer having a diaphragm, a stylus bar wholly supported by said diaphragm and being provided with a needle receiving socket at its free end.

1,752,202. AGITATING, ETC., MACHINE. HENRY ROBINSON, New York, N. Y. Filed Aug. 21, 1929. Serial No. 387,472. 17 Claims. (Cl. 259—107.)



1. A machine of the class described having a centripetally impulsive agitating means having an arm-like projection on one side of its axis, said projection extending generally radially and laterally, said projection being laterally dished and adjacent its outer end having a portion higher than the part thereof between the same and said axis, said part being relatively narrow whereby it does not affect the motion of material during agitation, substantially as described.

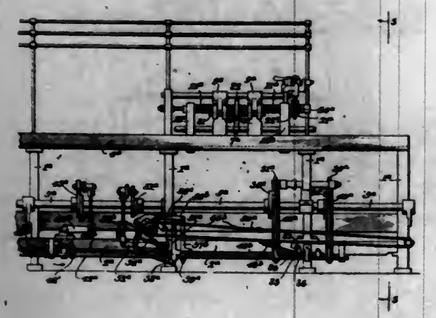
1,752,203. AGITATING, ETC., MACHINE. HENRY ROBINSON, New York, N. Y. Filed Aug. 21, 1929. Serial No. 387,473. 9 Claims. (Cl. 259—101.)



1. In a machine of the class described, a centripetally impulsive agitating means having an arm-like projection on one side of its axis, said projection generally extending radially and laterally and being laterally dished, and means carried by said projection serving to support the material engaged by the projection, substantially as described.

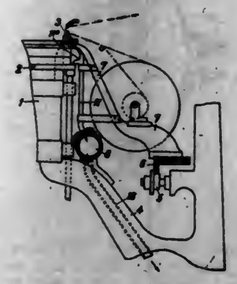
1,752,204. VAPOR ELECTRIC DEVICE. CAMILLE A. SARDAM, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 30, 1925. Serial No. 40,654. 7 Claims. (Cl. 250—27.5.)

1. The combination of means forming a vapor chamber, an anode external to and insulated from said means, and means controlled by the temperature of said anode for regulating the temperature of said chamber.



1,752,205. POWER-CONVERTING APPARATUS. CAMIL A. SABBAH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 27, 1928. Serial No. 315,577. 6 Claims. (Cl. 175—363.)

1. The combination of a pair of electric valves, an oscillatory circuit including reactors and capacitors connected alternately in series with one another and provided with opposed terminals, a direct current circuit connected between said opposed terminals through means including one of said electric valves, and means for subjecting the other of said electric valves successively to the resultant difference between the reactance and capacitor voltage drops of said oscillatory circuit and to the resultant sum of said voltage drops.



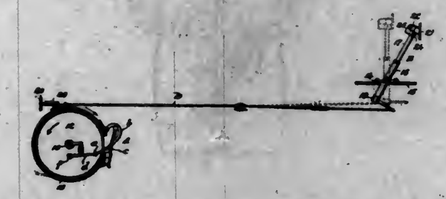
6. The combination of a pair of electric valves each provided with a control grid, an oscillatory circuit including pairs of resistance, reactance and capacity elements connected in series with one another, a direct current circuit connected through means including one of said valves to a terminal at the junction between one of said resistance elements and one of said capacity elements, means for subjecting the grid of said valve to a potential dependent on the voltage drop of said resistance element, means for connecting the other of said valves between terminals located respectively at the junction of the other of said capacity elements with one of said reactance elements and at the junction of the other of said resistance element with said first mentioned capacity element, and means for subjecting the grid of said other valve to a potential drop dependent on the voltage drop of said other resistance element.

1,752,206. ATTACHMENT FOR FLAT-KNITTING MACHINES. RICHARD B. SCHLEITER, Philadelphia, Pa., assignor, by mesne assignments, to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed July 25, 1928. Serial No. 295,285. 15 Claims. (Cl. 66—129.)

1. In a straight knitting machine, reciprocating yarn guide carrier rods, a finger supported independently of said yarn guide carrier rods said finger being adapted to be connected to one or more yarn guide carrier rods to reciprocate therewith, and stops arranged to limit the movement of the finger in opposite directions.

1,752,207. MEANS FOR KEEPING KNITTING MACHINES CLEAN. OTTO SEIFERT, Burgstadt, Germany, assignor to Maratti Societe Anonyme, Geneva, Switzerland, a Swiss Company. Filed Aug. 17, 1928, Serial No. 300,301, and in Germany Aug. 22, 1927. 4 Claims. (Cl. 66—168.)

1. In a circular warp knitting machine having rotating yarn feeding means, a suction device for removing dust, fibre and the like comprising an air exhauster, and means for directly applying suction produced by said exhauster to parts of the knitting machine to be kept clean the said means being rotatable with the yarn feeding means.

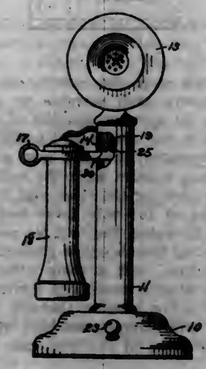


1,752,208. STADIUM CHAIR. JESSE MARKHAM SHELTON, Atlanta, Ga. Filed Mar. 13, 1928. Serial No. 261,379. 1 Claim. (Cl. 155—85.)

A chair for stepped stadiums and the like, comprising, in combination, standards each presenting an enlarged, flanged, horizontal base adapted to be anchored to the rear portion of a tread and contact at its rear edge with the adjacent riser; the leg portion above the tread having an opening to receive a bolt adapted to secure the leg portion to the riser below the tread above so as to bring the standard in contact with the forward edge portion of the upper tread; back-rest supports on the standards; and forwardly and downwardly inclined arms connected to said supports and standards so arranged as not to catch in and tear the clothing of an occupant.

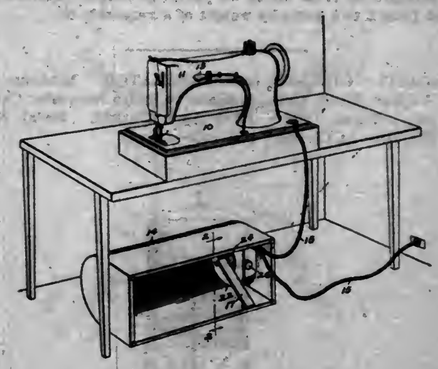
CARNEGIE LIBRARY OF ATLANTA

1,752,209. BRAKE SYSTEM. GEORGE L. SMITH, Washington, D. C., assignor to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed Mar. 15, 1926. Serial No. 94,881. 15 Claims. (Cl. 188—2.)



9. The combination with a pair of brakes, of mechanism automatically operable to maintain an invariable ratio between the braking effects of said brakes, and means connected to said mechanism manually operable to vary said ratio.

1,752,210. FABRIC AND THE TREATMENT OF SUBDIVIDED MATERIALS. STANLEY COCHRAN SMITH, London, England. Filed Mar. 31, 1928, Serial No. 266,437, and in Great Britain Apr. 5, 1927. 21 Claims. (Cl. 23—286.)



1. In a filter, at least one liquid venting layer of perforate rubber material.

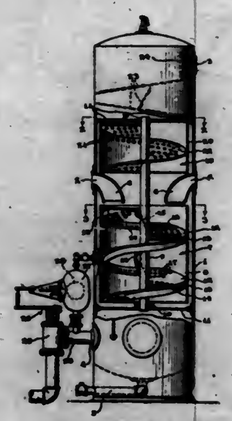
1,752,211. AUTOMATIC TELEPHONE-RECEIVER SIGNAL. ADAM L. SZWAJKART, Chicago, Ill. Filed Jan. 4, 1929. Serial No. 330,163. 1 Claim. (Cl. 179—81.)

A signal device for use upon telephones having stationary contacts within the standards therefor adjacent the receiver carrying arms, a contact member carried by the arms and insulated therefrom designed for contacting engagement with the stationary contacts upon the occasion of their being elevated by the removal of the receivers, and arms upstanding from the hooks in advance of the contacts to prevent access thereto by unscrupulous persons.

1,752,212. CONTROLLING DEVICE FOR ELECTRIC SEWING MACHINES. HUGH M. STEPHENSON, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Nov. 3, 1928. Serial No. 317,013. 20 Claims. (Cl. 112—218.)

1. A sewing machine having an electric motor for driving the same, a removable cover for said machine, and means secured to said cover for controlling said motor, said controlling means being adapted to be operated when said cover is removed from said machine.

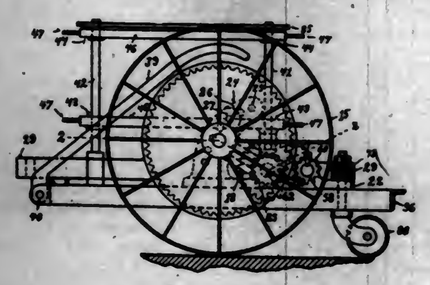
1,752,213. SWITCH. EDWARD D. TREANOR, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 8, 1929. Serial No. 338,515. 9 Claims. (Cl. 200—16.)



1. A switch including a plurality of fixed contacts, means for connecting together two of said contacts, and means for insulating the remainder of said contacts from each other and from said two contacts, said contacts and said connecting and insulating means being relatively movable.

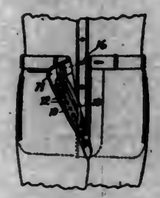
1,752,214. MANUFACTURE OF BITUMINOUS CONCRETE. LEONARD SCHADE VAN WESTRUM, London, England, assignor to Bitucrete Limited, London, England, a British Company. Filed May 16, 1927, Serial No. 191,989, and in Great Britain May 31, 1926. 2 Claims. (Cl. 106—31.)

1. The process for the manufacture of bituminous concrete, comprising first mixing a dry cement and an aggre-



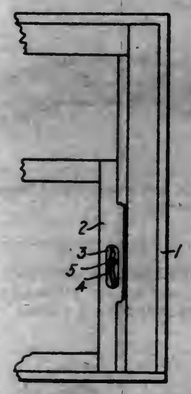
gate in the proportion by weight of from 5 to 20 per cent of cement to from 95 to 80 per cent of the aggregate, and then forming a homogeneous mass by mixing with said mixture from 5 to 20 per cent of the weight of said mixture of a soap formed by heating with dilute aqueous alkali a mixture of from 30 to 50 parts by weight of bitumen and from 2 to 5 parts by weight of a vegetable oil.

1,752,215. OIL AND GAS SEPARATOR. MILLARD F. WATERS, Tulsa, Okla., assignor to Smith Separator Company, Tulsa, Okla. Filed Apr. 9, 1928. Serial No. 268,748. 11 Claims. (Cl. 183—2.7.)



8. In an oil and gas separator tank, a baffle member comprising a rotatably mounted cylinder having a perforated spiral baffle secured within the walls thereof, and about its axis of rotation, the walls of said cylinder being provided with a series of spirally arranged perforations, the remaining area being imperforate, the convolutions of the spiral series of perforations being spaced apart a distance substantially equal to the distance between the convolutions of the spiral baffle.

1,752,216. CORN-HARVESTING APPARATUS. JOSEPH WEBB, Cincinnati, Ohio. Filed Aug. 5, 1926. Serial No. 127,426. 9 Claims. (Cl. 56—102.)



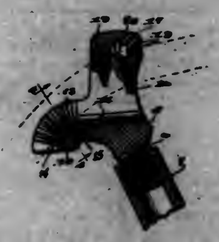
1. Corn harvesting mechanism comprising a supporting frame adapted to move along the corn row, a blade mounted stationarily upon said frame and adapted to engage one side of the members to be severed, a rotary cutter mounted in relation to said blade to sever the members to be severed above said blade and diagonally of the members to be severed and means for deflecting the standing portions of the cut members during the passage of the mechanism.

1,752,217. SHIRT AND TROUSERS HOLDER. SOL BERNARD WEINSTEIN, Greensboro, N. C. Filed Aug. 6, 1929. Serial No. 383,938. 3 Claims. (Cl. 241—7.)

1. An attachment for fastening together the shirt and trousers comprising anchoring means for attachment to one and a detachable fastening element for engagement with the other, and a band slidably engaging the detachable fastening element and having its ends provided with spaced fasteners for detachable connection with said anchoring means.

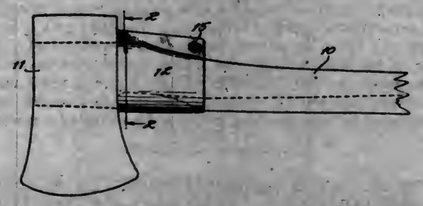
1,752,218. WINDOW STOP. GEORGE A. WILBUR, Lansing, Mich. Filed July 28, 1928. Serial No. 294,622. 2 Claims. (Cl. 292—240.)

1. In a window stop, the combination with a window frame, of a window sash movable up and down in the frame, a casing let into the upright of the window sash, a lever pivoted in the casing and comprising a cam portion and a leg portion, the said cam portion adapted to move into binding contact with the said frame, a spring attached to the pivot of the lever and having one portion engaging the leg of the said lever and another portion engaging the said casing, the said leg portion of the lever having a fastening thumb screw projecting from the end of said leg portion, and a plate attached to the said upright of the window sash and having a curved slot, the said thumb screw passing through the said slot and being rotatable into clamping contact with the said plate to secure the position of the said cam head against the frame.



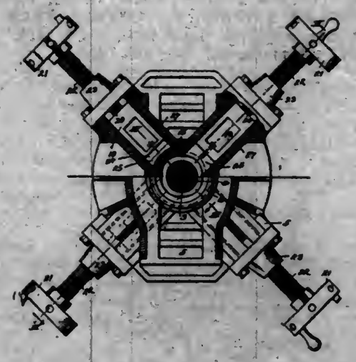
1,752,219. STOCKING AND SOCK HOLDER. OTTO ADAM, Berlin, Germany. Filed Mar. 8, 1928, Serial No. 260,191, and in Germany Mar. 19, 1927. 2 Claims. (Cl. 241—6.)

1. A stocking and sock holder, comprising, in combination, an elastic garter; a loop at one end thereof; a rigid shield connected with the other end of the garter; a flat tongue in said shield and adapted to be coupled with said loop; two separate rigid members, of which one has a slot at one end and the other forms at one end a hook adapted to be put through said slot to hold fast the rim of a



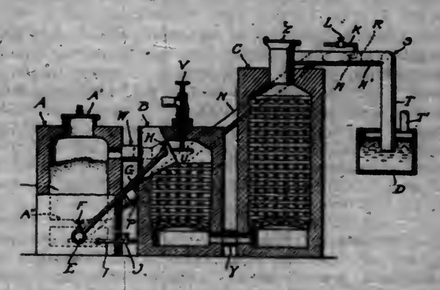
sock or stocking; and a pliable member connecting said two members with one another and passing through a slot in the said shield.

1,752,220. PIPE-BENDING TOOL. ANDREW B. ALLEN, Cincinnati, Ohio. Filed Mar. 12, 1929. Serial No. 346,388. 4 Claims. (Cl. 81—15.)



1. In a pipe bending tool, a casting having an attaching shank upon its under face and a longitudinally curved channelled jaw at one end, a second jaw carried by the casting and offset inwardly from the curved jaw, the inner face of the curved jaw having transversely stepped surfaces whereby to permit the pipe to initially expand to an irregular configuration and then forced back into normal configuration during the bending operation.

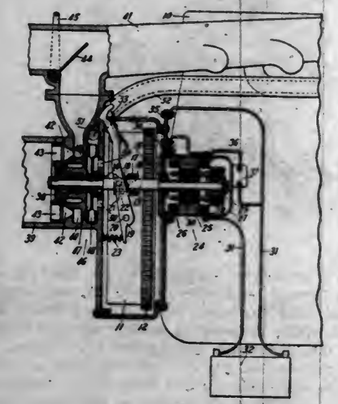
1,752,221. GUARD. ADOLPH E. ANDERSON and ALFRED ANDERSON, Lindsborg, Kans. Filed Dec. 26, 1924. Serial No. 758,201. 1 Claim. (Cl. 806—37.)



A guard for tool handles formed from a single sheet of metal, trapezoidal in contour, to conform to the shape of said handle, said sheet being bent upon itself to provide a sleeve adapted to be inserted over the handle of the tool in abutting relation with respect to the tool, the corners of said sheet having apertures therethru in alignment on one side of the handle, clamping bolts extending thru the apertures to clamp the sleeve upon the handle and inwardly extending penetrating elements formed on the sheet adjacent the tool and adjacent one of said clamping disks, said elements being adapted to be forced into positive engagement with the handle by the clamping action of said bolts.

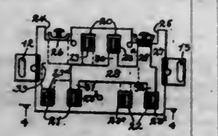
1,752,222. PRESS. RAYMOND T. ANDERSON, Cleveland, Ohio, assignor to The V. D. Anderson Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 12, 1926, Serial No. 101,507. Renewed Feb. 11, 1930. 3 Claims. (Cl. 100—48.)

3. In a press, the combination of a shell; a shaft extending through and outwardly from the same; means sustained from the shaft for exerting pressure upon the material within the shell; a casting mounted adjacent the end of the shell, said casting having a central opening formed therein and likewise provided with a plurality of guideways extending radially from said opening in spaced relation; a guide block secured to the inner face of the casting in line with the end of the shell, said block having a central opening and laterally extending guideways aligning with certain of the adjacent guideways formed in the casting; a second guide block mounted in the inner face of the casting, said second block having guideways formed therein which align with the corresponding ways formed in the casting; a slide mounted in each of the guideways of the casting; a jaw secured to the inner end of each slideway, said jaws being so arranged as to pass through the respective ways formed in the guide blocks; a nut secured to the casting at the outer end of each slideway; and a screw threaded into the nut, the inner end of the screw being likewise threaded and passing into a threaded opening formed in the outer end of the adjacent slide, the threads upon that part of the screw which passes into the slide being greater in number per inch than those formed upon that portion of the screw which take into the nut.



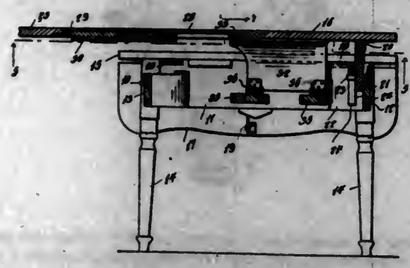
1,752,223. BACK-RUN METHOD OF OPERATING GAS PLANTS. GEORGE E. WHITWELL, Seattle, Wash., assignor to Young-Whitwell Gas Process Company, Tacoma, Wash., a Corporation of Washington. Filed Apr. 26, 1923. Serial No. 634,811. 7 Claims. (Cl. 48—208.)

1. The improvement in the process of making carburetted water gas, which consists in varying the water gas making run by at intervals passing a mixture of combustible



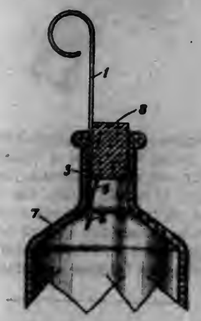
gas and steam successively through a single superheater, a single carburetter and through a solid fuel bed in a single generator whereby water gas is generated.

1,752,224. COMBINED ELECTRIC STARTER, BATTERY RECHARGER, AND ENGINE SUPERCHARGER. VINCENT G. APPLE, Dayton, Ohio. Filed Dec. 7, 1928. Serial No. 324,434. 11 Claims. (Cl. 290—4.)



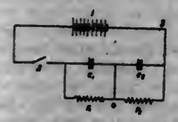
9. The combination of an internal combustion engine and a storage battery with auxiliary mechanism comprising a gas turbine, a blower and a starting generating dynamo joined to rotate in unison, said engine being adapted to exhaust into said turbine, said blower being adapted to discharge into said engine and said starting generating dynamo being adapted to be connected to said battery.

1,752,225. MULTIPLE-PLUG RECEPTACLE. HENRY BIRCHALL, New York, N. Y. Filed Sept. 14, 1927. Serial No. 219,554. 1 Claim. (Cl. 173—330.)



A device of the character described having a face plate provided with three oblong slots, an insulating member arranged adjacent to said face plate, a second insulating member arranged adjacent to said first insulating member and provided with a plurality of perforations therethrough and a plurality of pairs of spring clips arranged each in an independent perforation, a bus bar at the top of said second insulating member and having tongues bent downwardly into said perforations for receiving alternate spring clips and a tongue for receiving a power wire, a second bus bar arranged at the bottom of said second insulating member and provided with tongues for receiving the other alternate spring clips and a tongue for receiving a power wire and a third insulating member arranged under said second insulating member and adapted to shield the current carrying members and a bracket under said third insulating member for supporting the whole in the receptacle box as herein set forth.

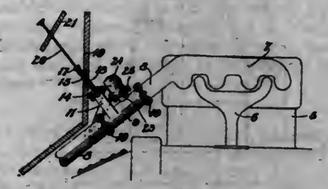
1,752,226. COMBINATION IRONING BOARD AND BREAKFAST TABLE. ADELBERT BRAGG, Marion, Ind. Filed May 2, 1929. Serial No. 359,840. 3 Claims. (Cl. 68—10.)



1. A table having a frame, a plurality of leaves thereon, a slide in a vertical guide way on said frame connected to one of the leaves to permit the latter to be elevated, and normally retracted means to support the said one leaf in the elevated position so that it may serve as an ironing board.

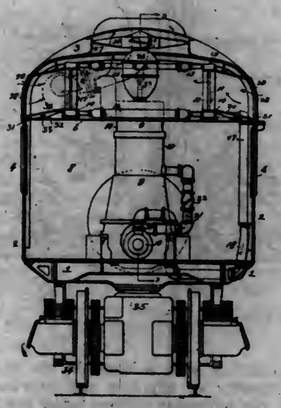
1,752,227. CORK PULLER. HENRY ELMER BRIGGS, Columbia Falls, Mont., assignor of four-tenths to Nels John Smith, Columbia Falls, Mont. Filed June 28, 1929. Serial No. 374,570. 1 Claim. (Cl. 65—47.)

A cork extractor formed from a piece of resilient metal whose outer portion is flat and which has its end rounded to afford a finger hold, the sides of the flat portion being gradually inclined inwardly and merging into a cross sectional elliptical portion whose end is arched and pointed, and said elliptical portion being slitted transversely from one of its sides and further slitted longitudinally toward its arched and pointed end to provide a spring finger which is arched outwardly from the member but which when depressed is fully received in the body of the said member.



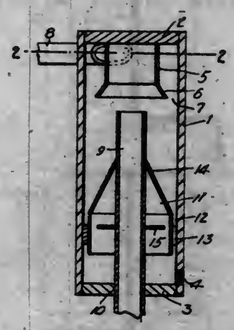
1,752,228. DEVICE FOR PRODUCING AN ELECTRIC DISCHARGE. LÉON NICOLAS BRILLOUIN, Paris, France. Filed Jan. 25, 1928, Serial No. 249,468, and in France Mar. 8, 1927. 5 Claims. (Cl. 250—27.)

3. A device for producing a current of constant intensity and predetermined small duration having a range



from less than [illegible] second to several seconds duration comprising a circuit consisting of two condensers, a battery in series therewith, a resistance shunting each condenser and a switch in series with the condensers, means for producing suddenly in a point of said circuit between the condensers a potential having a predetermined value and decreasing afterwards according to an exponential law to a second predetermined value, a vacuum tube comprising a filament, plate and grid, means for impressing the above mentioned potential on the vacuum tube, means adapted to cause the plate current intensity to fall to zero during the exponential decrease of the above-mentioned potential, a second vacuum tube, means for impressing the plate potential of the first vacuum tube on said second vacuum tube and a utilization circuit adapted to be fed by the current passing out of the second vacuum tube.

1,752,229. COMPRESSION BRAKE. LEE D. BRUECKEL, Steubenville, Ohio. Filed Nov. 7, 1925. Serial No. 67,692. 1 Claim. (Cl. 123—97.)



The combination with the exhaust pipe of an automobile engine, of a pipe section interposed therein, said section including a valve box extending perpendicularly from the section, a cut-off gate valve slidably mounted in said box and projectable completely across the exhaust pipe, and yieldable means normally holding the valve retracted, leaving the passage through the exhaust pipe entirely unobstructed, said valve having an escape opening for the exhaust gases when the valve is fully projected.

1,752,230. COOLING SYSTEM FOR INTERNAL-COMBUSTION LOCOMOTIVES. CONRAD C. C. BURKHARDT, Philadelphia, Pa. Filed Feb. 11, 1928. Serial No. 253,737. 2 Claims. (Cl. 123—174.)

1. The combination in an internal combustion locomotive, of a base frame; a body mounted on the base frame and having windows in each side and end; a ceiling extending over the operator's compartment; radiators located in the space above the ceiling; air inlets at the sides of said space; a fan for drawing the air through the space occupied by the radiators and discharging it at the roof of the car; an electric motor in said space for driving the fan; an internal combustion engine extending above the bottom of the radiators and having a water jacket; a pump driven by the engine; pipes leading from the pump to the water jacket of the engine; a check valve in said pipe; a tank at one side of the engine; pipes leading from the water jacket of the engine to the upper portion of the radiators; pipes leading from the lower portion of the radiators to the tank; and a pipe leading from the tank to the pump, the parts being so arranged that when the locomotive is stopped the water will flow from the radiators into the tank and the check valve will close, preventing the flow of water from the water jacket of the engine.

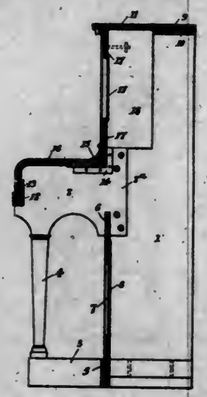
1,752,231. STEAM CLEANER. ALICK CLARKSON, Stratford, Ontario, Canada, assignor to Brooks Steam Motors, Limited, Stratford, Ontario, Canada, a Corporation of Canada. Filed Oct. 3, 1928. Serial No. 310,026. 5 Claims. (Cl. 183—82.)

1. A steam cleaner comprising a cylindrical casing having upper and lower heads, a steam inlet pipe leading tangentially into the upper end of the casing, a cylindrical member depending centrally from the upper casing head to form an annular interspace between itself and the wall of the casing and having an outturned lower edge portion forming a constricted annular steam outlet within the casing, a steam discharge outlet leading through the lower end of the casing, and means for baffling that portion of the steam with the descending particles of foreign matter to prevent the upward passage of such matter to the steam outlet.

1,752,232. CEDAR PLASTER. EDWIN D. CODDINGTON, Milwaukee, and ERNEST A. KEALER, West Allis, Wis.; ROE R. BLACK, Pittsfield, Mass.; and HARVEY S. OWEN, Milwaukee, Wis., assignors to E. D. Coddington Manufacturing Company, North Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 23, 1929. Serial No. 342,295. 7 Claims. (Cl. 106—24.)

1. A wall plaster composition comprising plaster forming material and odor emitting material of such a character and in such amount as to emit the characterising and predominating aroma of cedar wood from the solidified plaster after application and solidification upon the wall.

1,752,233. EYE SHIELD OR GUARD FOR USE IN CONNECTION WITH SPECTACLES, EYEGLASSES, GOGGLES, OR THE LIKE. HENRY CLORAN, Ambleside, England. Filed Nov. 13, 1928, Serial No. 319,125, and in Great Britain Nov. 17, 1927. 1 Claim. (Cl. 2—13.)

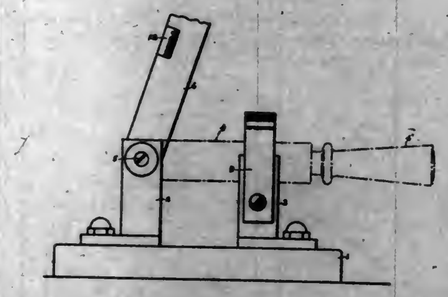


An attachment for eye glasses comprising a shield having shoulders formed in its side edges, a pair of resilient

strips extending transversely of the shield and upon opposite faces thereof, clamps fixed to the ends of the strips and adapted to abut said shoulders to limit the sliding

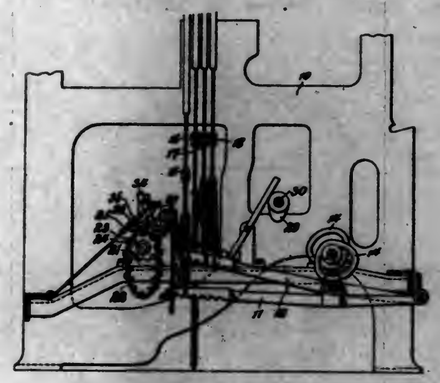
movement of the shield in one direction between the strips, said clamps being adapted to detachably engage the rim of the eye glass.

1,752,234. PIANOFORTE. ROBERT HENRY COLLEN, East Ham, England, assignor of one-half to John Broadwood & Sons Limited, London, England. Filed Nov. 9, 1926, Serial No. 147,270, and in Great Britain Nov. 26, 1925. 2 Claims. (Cl. 84—177.)



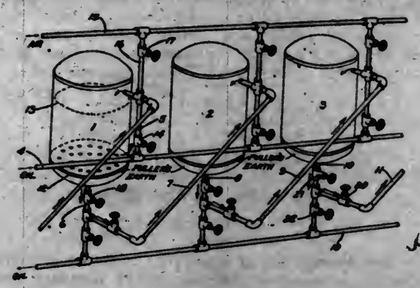
1. A pianoforte comprising a pianoforte case constructed as a unit apart from the playing mechanism and without a bottom board, in combination with a playing mechanism constructed separately upon a bottom board and adapted to be fixed in place by sliding the bottom board into place and fastening it there.

1,752,235. RADIATOR. WILLIAM GREEN COLLINS, Wichita Falls, Tex. Filed Aug. 17, 1928. Serial No. 300,290. 2 Claims. (Cl. 257—125.)



2. A radiator comprising a shell formed with an upper compartment and a lower compartment, a partition within the upper compartment to divide the same into a pair of sub-compartments, a partition within the lower compartment to divide the same into a pair of sub-compartments, one of said upper sub-compartments having an overflow pipe and further having a plurality of tubes connecting it with one of said lower sub-compartments, the other of said upper sub-compartments having a steam escape pipe and further having a plurality of tubes connecting it with each of said lower sub-compartments, said upper compartment being provided with an inlet and said lower compartments being provided with an outlet.

1,752,236. ELECTRIC SWITCH. VERNON A. CONKLIN, Maplewood, N. J. Filed Apr. 6, 1928. Serial No. 268,025. 1 Claim. (Cl. 200—162.)



The combination with a switch, including a pair of contacts spaced apart, a pivoted blade movable between the contacts to close the circuit, enlargements on opposite sides of the blade, and spring tongues exerting cam action on the enlargements to complete the closing movement of the blade when said movement is manually initiated.

1,752,237. HARNESS-CONTROL MECHANISM FOR PATTERN WEAVING. JAMES O. COBB, Columbia, S. C. Filed Mar. 28, 1928. Serial No. 264,204. 7 Claims. (Cl. 139—76.)

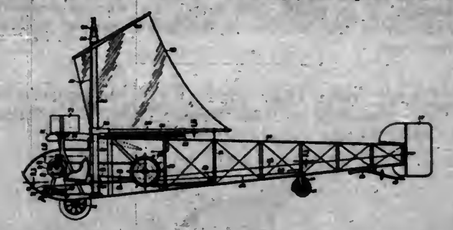
1. In combination with a loom of the character described, a plurality of adjacent cam operated treadles connected to the harnesses thereof below the lower ends of the harnesses; mechanism for controlling the operation of the treadles to produce pattern weaves including pattern controlled latch means periodically engaging the end of one of the treadles to hold it out of engagement with its cam while the other treadles are being operated.

1,752,238. PROCESS OF RECLAIMING OIL. DAVID C. COX, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 18, 1925. Serial No. 16,554. 5 Claims. (Cl. 196—16.)

1. The process of reconditioning a mineral insulating oil after use at a temperature sufficiently high to produce sludge therein which consists in conducting said oil through a bed of absorptive material and adding thereto a sufficient quantity of new mineral insulating oil to form an insulating oil mixture which is capable of being used under substantially the same conditions as the original oil before being sludged.

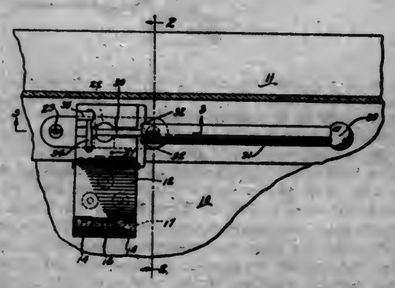
1,752,239. PROTECTION OF METALS. SEBASTIAN ZIANI DE FERRANTI, Hollinwood, England, assignor to Ferranti, Limited, Hollinwood, England. Filed Feb. 10, 1925, Serial No. 8,280, and in Great Britain Mar. 4, 1924. 2 Claims. (Cl. 91—70.1.)

1. A method of protecting the rotor of a mercury bath electricity meter from amalgamation with mercury, which consists in applying a coating of platinum to the rotor, heating it slowly to a temperature of about 700° C. in an atmosphere which is inert with respect to platinum and to the metal constituting the rotor, maintaining the temperature for sufficient length of time to produce the desired depth of alloying and then while still in the said atmosphere allowing the rotor to cool.



1,752,240. SHOCK ABSORBER. GEORGES HENRI ERNEST DE RAM, Boulogne-sur-Seine, France. Filed Aug. 10, 1926, Serial No. 128,489, and in France Aug. 27, 1925. 4 Claims. (Cl. 267—8.)

4. A shock absorber comprising two pivotally connected members, a hydraulic element and a friction element carried by one of said members, the other member constituting the operating lever and associated with said friction element, resilient tightening means associated with said friction element, a fluid reservoir associated with said member carrying said hydraulic element, an eye joint plug disposed in said fluid reservoir, means for automatically supplying said hydraulic element with fluid upon the rotation of said friction element in one direction from its normal position, and means for automatically returning said fluid to said reservoir on the return of said friction element to its normal position.



1,752,241. AIRCRAFT. JOHN DOMENJOZ, New York, N. Y., assignor to Domenjoz Sail Plane Co., New York, N. Y., a Corporation of New York. Filed July 6, 1928. Serial No. 290,770. 2 Claims. (Cl. 244—29.)

1. In an aircraft, a fuselage, a rudder pivotally mounted on the tail of the fuselage, laterally extending wings on the fore part of the fuselage, vertical stabilizers respectively arranged on opposite sides of the fuselage, each of said stabilizers being mounted for pivotal movement, a pivotally mounted bar on the fuselage, and operative con-

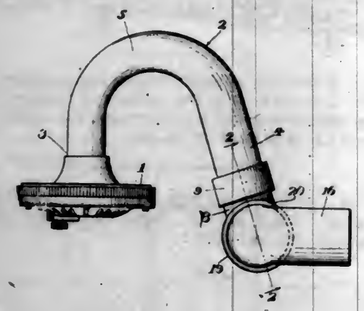
nections respectively between the bar and stabilizers and the bar and rudder for the purpose of simultaneously moving either one of the stabilizers and the rudder in response to the movement of the bar.

1,752,242. WINDOW LATCH. LADISLAS DUGOVIC, Chicago, Ill. Filed Apr. 21, 1928. Serial No. 271,938. 6 Claims. (Cl. 292—278.)

1. A device of the character stated including a member including a housing, another member adapted to normally be disposed within said housing, an arm pivotally mounted on said last named member, said housing having a slot formed in the walls thereof, said arm including a reduced portion adapted to be disposed in said slot, and means on said housing adapted to support the reduced portion of said arm in a position relative to said slot such that a shoulder defined by said reduced portion will engage the wall portions of said housing adjacent said slot when said members are moved relative to each other.

1,752,243. WAD FOR WHALE GUNS AND THE LIKE. KARL EMIL HJALMAR ENGBERG, Drammen, Norway. Filed Aug. 21, 1928, Serial No. 301,080, and in Sweden July 24, 1928. 4 Claims. (Cl. 102—42.)

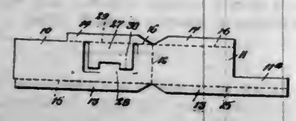
1. A wad for guns for shooting out harpoons consisting of two tightening discs and an intermediate resilient filler, a housing surrounding said discs and filler, and means at one end of said housing for containing the powder bag.



1,752,244. PROCESS FOR REFINING AND PURIFYING BARIUM SULPHATE. HENRY V. FARR, Ferguson, Mo., assignor to Mallinckrodt Chemical Works, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 4, 1926. Serial No. 92,351. 16 Claims. (Cl. 23—122.)

3. The process of making complex barium salts, comprising the step of treating barium sulphate with a con-

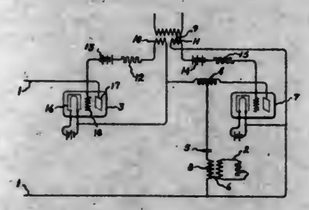
centrated solution of a soluble salt of another metal capable of forming a complex barium salt.



15. The process of refining crude barium sulphate which comprises treating the crude sulphate with a concentrated solution of an alkali earth metal salt, and subsequently hydrolyzing the mixture to precipitate barium sulphate therefrom.

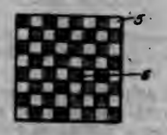
1,752,245. TONE ARM. JULIUS A. FISCHER, Philadelphia, Pa. Filed July 20, 1928. Serial No. 294,270. 3 Claims. (Cl. 274—23.)

1. An attachment for sound boxes comprising, a goose neck adapted to be connected with a sound box, an elbow rotatably connected with the goose neck, means for limiting the rotary movement between the elbow and goose neck, a tone arm coupling adapted to be connected with a tone arm, and means connecting the tone arm coupling with the elbow to permit a limited rotary movement therebetween, said last named means coacting with the connection between the elbow and goose neck to provide for horizontal and vertical movements of the sound box regardless of the angular relation of the tone arm with respect to the goose neck.



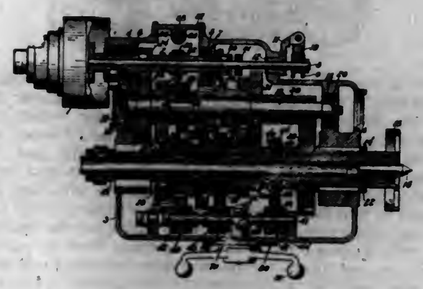
1,752,246. DISPLAY HOLDER. LEO FLIER, New York, N. Y., assignor to Universal Jewelry Case Co., a Copartnership composed of Leo Flier and Joshua Zelman, Brooklyn, N. Y. Filed Apr. 11, 1928. Serial No. 269,163. 4 Claims. (Cl. 206—75.)

3. A display holder for strap-watches or the like including a pair of relatively stiff spaced plates cooperatively forming a body and defining a pocket between them, a portion of the upper plate terminating short of the corresponding portion of the lower plate to provide a mouth through which one strap of a watch laid on the extended end of the lower plate may be inserted, and a bendable easel integrally connected to the lower plate and accommodated in an opening therein when not in use, one end of the upper plate forming a rib to limit downward sliding movement of the watch when the easel is set up.



4. A display holder for strap watches or the like, including an upper plate and a lower plate, the upper plate having one corner thereof cut away, relatively narrow spacing members interposing the plates respectively along the adjacent side edges thereof, to form a longitudinal pocket between the plates having a mouth through which one strap of a watch laid on the lower plate in the space afforded by the cut-away may be inserted.

1,752,247. CONVERTING APPARATUS. ALAN S. FITZ GERALD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 18, 1929. Serial No. 356,223. 7 Claims. (Cl. 175—363.)

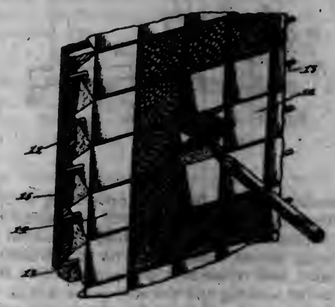


2. The combination of a plurality of electrical valves, a capacitor, a capacitor charging circuit including one of said valves, a capacitor discharging circuit including another of said valves, an alternating current circuit common to said charging and discharging circuits, and means for successively changing the conductivities of said valves.

1,752,248. EDUCATIONAL PUZZLE. JOHN EDWARD FRANSEN, Brooklyn, N. Y. Filed Apr. 19, 1929. Serial No. 356,433. 1 Claim. (Cl. 273—157.)

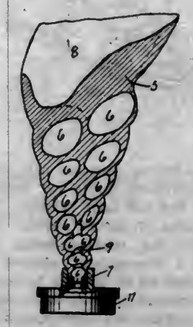
An educational puzzle of the character described comprising a plurality of separate interfitting units each in the form of a complete letter of the alphabet, said units adapted to form a rectangular board having an unbroken surface when properly assembled with respect to each other, each unit further having its face marked off in squares defining a checker board when the units are in assembled position.

1,752,249. CHANGE-SPEED GEARING FOR LATHE HEADS. ALFRED C. GETZ, Sidney, Ohio. Filed Oct. 28, 1926, Serial No. 144,779. Renewed Mar. 15, 1929. 13 Claims. (Cl. 74—59.)



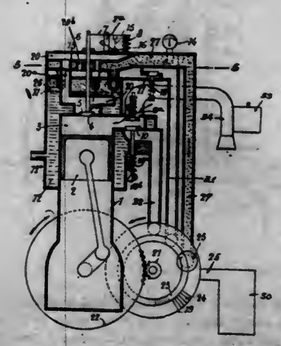
3. In a gear mechanism, the combination of a shaft, a double-faced clutch keyed to said shaft, a gear journaled on said shaft at one side of the clutch, a sleeve journaled on said shaft at the other side of the clutch, said clutch being shiftable into engagement with either the gear or the sleeve, a driven member parallel to said shaft, a second double-faced clutch slidably keyed to said driven member, a hub journaled on said driven member at one side of the second clutch and permanently geared to both the gear and the sleeve on said shaft, a gear journaled on the driven member at the other side of said clutch and independently geared to the sleeve on the shaft, said second clutch being shiftable into engagement with the hub or gear adjacent thereto, and means for selectively shifting the first clutch in either direction and at the same time selectively shifting the second clutch in the same or in the opposite direction.

1,752,250. MOP HOLDER. JOHN HAMILTON GILLIS, Gainesville, Tex. Filed Nov. 30, 1928. Serial No. 322,779. 1 Claim. (Cl. 15—151.)



The combination with a mop stick; of a holder for connecting a mop head to the stick comprising a loop to carry the head and having parallel legs to straddle the stick, guiding and retaining eyes carried by the stick in which the legs of said holder are adapted to slide, one of said legs having ratchet teeth on its inner face, a plate spring secured at one end to the stick and having its other end curved outwardly to form a locking dog to engage the teeth of said leg, whereby the holder is locked to the stick, and a combined spring releasing and tensioning device slidable on the stick over said plate spring to release the dog from the ratchet teeth and to vary the tension of the spring.

1,752,251. CHANGEABLE SIGN. CHARLES A. GIROUX, Montreal, Quebec, Canada. Original application filed Feb. 4, 1928, Serial No. 251,972. Divided and this application filed July 13, 1929. Serial No. 378,095. 2 Claims. (Cl. 40—28.)

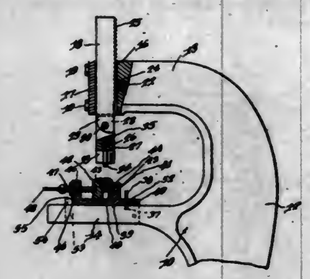


1. A changeable exhibitor comprising a frame, a plurality of three sided blocks rotatably mounted in the frame and arranged to selectively exhibit any one of the sides, and means for automatically securing the blocks in stationary position, said means including a cushion of yieldable material secured in the frame in the rear of the blocks adapted to engage the blocks and hold the same in position.

1,752,252. AMPLIFIER. JOSEPH V. GODBEY, San Francisco, Calif. Filed Jan. 16, 1925. Serial No. 2,890. 1 Claim. (Cl. 181—27.)

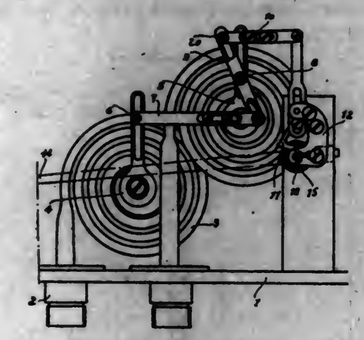
An ornamental radio amplifier comprising a shell body having a tortuous passage formed therein of increasing diameter from end to end and defining a plurality of connected convolutions, and a channel formed in the lower portion of said shell and in communication with the lowermost convolution of the passage.

1,752,253. POWER PLANT. JOSEPH MARIE ARSÈNE GOINARD, St.-Nazaire, France. Filed Feb. 7, 1925, Serial No. 7,625, and in France Feb. 8, 1924. 5 Claims. (Cl. 60—13.)



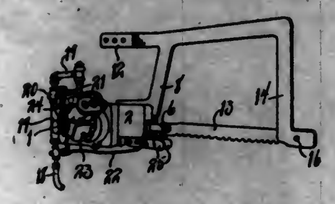
5. In a combined water cooled internal combustion engine and turbine: a vaporization chamber in communication with the cooling water jacket of said engine, a gas chamber bounded by the engine cylinder head, the water-jacket and said vaporization chamber, ducts extending through said vaporization chamber and opening into said gas chamber, a gas pipe for connecting said ducts with the admission of said turbine, a valve adapted to afford communication between said gas chamber and the interior of the cylinder at the beginning of the expansion stroke, a steam conduit opening into said vaporization chamber and leading to the admission of said turbine, said steam pipe and gas pipe having a common wall adapted to afford exchange of heat between the gas and the steam, and connecting means for connecting the exhaust conduit of the engine with the admission of said turbine.

1,752,254. MEANS FOR FACILITATING THE FITTING OF SHOES. VAN GORDON GOSNELL, Hamilton, Ontario, Canada. Filed Nov. 27, 1928. Serial No. 322,240. 1 Claim. (Cl. 36—1.)



A key shoe for fitting purposes comprising an ordinary shoe upper formed with a cut out portion substantially corresponding to the toe area thereof, the major portion of said upper being of actual fitting size corresponding to the last, said toe portion being larger than the fitting size, and a transparent, shaped member for the toe portion adapted to fit therein to form a transparent backing for the cut out portion, said transparent member being of actual fitting size corresponding with the last to provide a fitting shoe having interior dimensions corresponding throughout with the actual saleable shoes.

1,752,255. VISE ATTACHMENT FOR PRINTING AND STENCILING DEVICES. OLAF HALVORSEN and SAMUEL F. KIESLING, Chicago, Ill. Filed Sept. 2, 1927. Serial No. 217,202. 1 Claim. (Cl. 81—41.)



In a vise structure for a stenciling machine including a shelf, a base plate having the rear edge portion provided with spaced parallel notches and having a bearing head at the forward end thereof, a stationary jaw on said base plate, a movable jaw co-operating with said stationary jaw, said jaws having co-operating substantially semicircular grooves formed therein, said stationary jaw having a substantially hexagonal notch provided in the upper surface thereof, a threaded member in said bearing head having connection with the movable jaw whereby said movable jaw will be movable relative to said stationary jaw upon rotation of said threaded member, securing elements threaded in said shelf and having shank portions projectable into said notches in said base plate and including head portions adapted to bear on said base plate for securing said base plate in position on said shelf, and a plate on one side of said shelf extended above the upper edge thereof against which said base plate may be disposed to orient said base plate and said clamping jaws relative to the operating parts of said stenciling machine.

1,752,256. GAUGE FOR MEASURING THE DIFFERENCE BETWEEN TWO PRESSURES. FRIEDRICH OTTO HANNI, Jegenstorf, Switzerland. Filed Feb. 10, 1928, Serial No. 253,488, and in Germany Feb. 12, 1927. 2 Claims. (Cl. 73—109.)

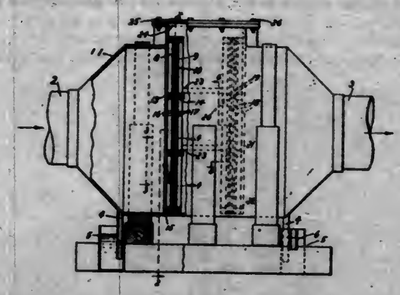
1. In a gauge for measuring the difference between the two pressures and in combination, a casing having a bottom plate, two tubes spirally bent after the Bourdon fashion, socket joints adapted to join said tubes to the bottom of the plate and to pressure conduits, two slotted parallel crank arms fixed to the centers of said tubes and located in the same plane and turned into the same direction, an equal-armed lever having slotted ends and being pivotally attached intermediate its slotted ends to the end of one of said cranks and a rod pivoted to one end of said lever and to the end of the other crank all arranged so that an equal stroke of said cranks will leave the free end of said lever stationary, a bracket, a toothed segment having an arm pivoted on said bracket, a link pivoted to this arm and to the free end of said lever, an axle mounted on said bracket and a pinion fixed to the axle and meshing with said segment, a hand held by said axle and a rotatably arranged registering drum disposed so as to be capable of registering the path of said hand.

1,752,257. CARCASS SPLITTER. BERTIE S. HARRINGTON, Fort Worth, Tex., assignor to Wolf Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 11, 1928. Serial No. 245,975. 5 Claims. (Cl. 142—68.)

1. A carcass splitting machine, comprising a motor, a reciprocating cutter blade operatively connected to said motor, a supporting frame operatively connected to the motor housing, means engageable with said frame to suspend the same, said frame having a portion offset laterally from the motor housing and the suspension means, whereby to position the blade in sight of the operator, and means carried by said off-set portion for guiding said blade.

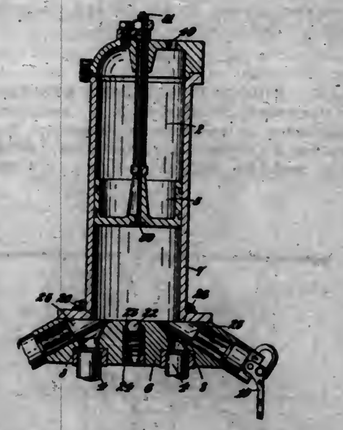
1,752,258. FILM CUT-OUT. HENRY E. BUTLER, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 3, 1928. Serial No. 317,023. 8 Claims. (Cl. 200—118.)

1. A film cutout comprising metal pieces separated by an insulating film, said metal pieces being held together magnetically.



1,752,259. FILM CUT-OUT. HENRY E. BUTLER, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 3, 1928. Serial No. 317,024. 2 Claims. (Cl. 200—118.)

1. A film cutout comprising metal pieces with an insulating film between them, one of said pieces being provided with flange means which engages the other piece for holding the pieces in the assembled relation relatively to each other.

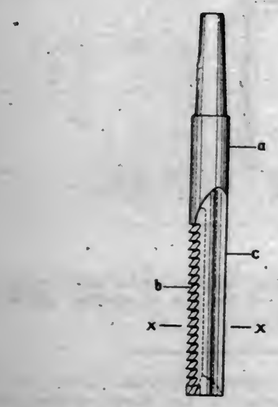


1,752,260. GAS SCRUBBER. WILLIAM ALEXANDER SKEEN CALDER, Ravensthorpe, Harborne, and WILLIAM HAROLD PALMER, Smethwick, Birmingham, England. Filed July 14, 1924. Serial No. 726,033. 1 Claim. (Cl. 183—70.)

A gas scrubber comprising a casing provided with inlet and outlet means at opposite ends thereof and having shoulders adjacent the respective inlet and outlet means and an opening at its top, grid frames insertable through said opening and engaging the shoulders, perforated scrubber plates insertable through said opening, grid spacers insertable through said opening, said perforated scrubber plates and grid spacers being alternately arranged to form two sets of spaced scrubber plates engaging the respective grid frames, another pair of grid frames insertable through said opening and engaging the other sides of said sets of scrubber plates, and removable

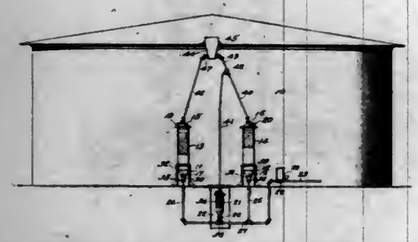
wedge means engaging said last named grid means to retain said frames and the sets of scrubber plates in position within said casing.

1,752,261. LIQUID-SUPPLY SYSTEM. GEORGE DEAN, Armthorpe, near Doncaster, and HENRY AINSLEY, Seascale, England; said Ainsley assignor to said Dean. Filed July 23, 1927, Serial No. 208,004, and in Great Britain July 30, 1926. 2 Claims. (Cl. 103—2.)



1. In a liquid supply system, the combination of a pump provided with a piston which completely fills the clearance space within its cylinder, a head for the pump provided with a plurality of separate conduits adapted to be connected to containers for various liquids, said head containing a plurality of cut off valves adapted to control the conduits in which each cut-off valve is in the form of a plug, movable in a direction axially with respect to its seating, which seating is around the conduit at the latter's junction with the pump wall, and the part of the valve exposed to the interior of the pump is shaped to conform to the surface of the pump wall.

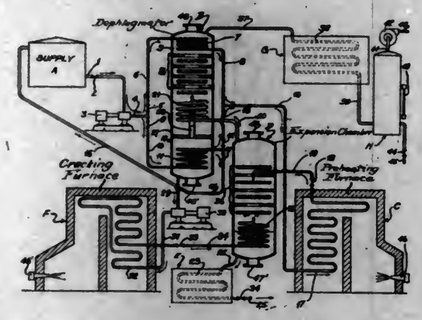
1,752,262. BIT FOR BORING LONG HOLES. EDUARD MÜHLHOFF, Remscheid, Germany, assignor to Firm of Peter Friedr. Mühloff, Werkzeugfabrik, Remscheid, Germany. Filed Apr. 22, 1929, Serial No. 357,276, and in Germany Sept. 20, 1928. 1 Claim. (Cl. 145—116.)



A bit for boring long holes comprising a shank and a relatively long working portion provided with two distinctly different types of cutting edges arranged longi-

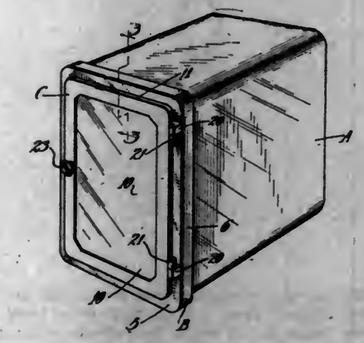
tudinally thereof, spaced circumferentially at least 90°, and comprising, respectively, a preliminary notching or chip dividing means and a finish cutter, said notching or chip dividing means being made up of a plurality of re-

lieved serrated teeth having perceptible rake and said finish cutter being made up of a continuous relieved, smooth cutting edge, so that strain on the cutting edges and working portion of said bit and consequent danger of breakage thereof will be reduced.



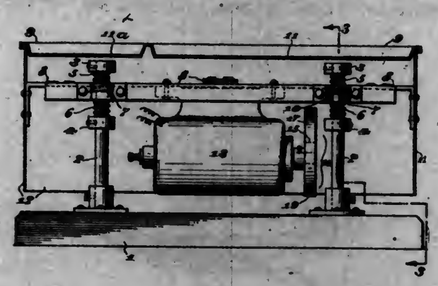
1,752,263. FIRE-EXTINGUISHING SYSTEM. DUNCAN W. PATTERSON, Douglaston, N. Y., assignor, by mesne assignments, to American La France and Foamite Corporation, a Corporation of New York. Filed Sept. 20, 1921. Serial No. 501,946. 3 Claims. (Cl. 169—15.)

1. A fire extinguishing system comprising containers for separately holding acid and basic salts, a receptacle for holding a foam producing substance, means operable in time of fire for introducing a solvent into the containers for dissolving the salts, means for conducting the resulting basic solution and the foam producing substance into intermixing relation to produce the basic chemical component solution and means for thereafter conducting the said basic chemical component solution into intermixing relationship with the solution of the acid salt to produce a fire extinguishing foam compound.



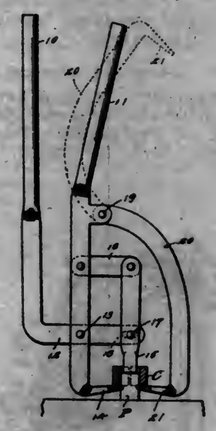
1,752,264. MANUFACTURE OF HIGH-COMPRESSION AUTOMOTIVE DISTILLATE. CLIFTON JOHN PRATT, St. Louis, Mo. Filed July 13, 1927. Serial No. 205,283. 3 Claims. (Cl. 196—60.)

2. The process of treating hydrocarbon oils which comprises preheating said hydrocarbon oil, subjecting said pre-heated oil to a preliminary cracking operation where-by coke-forming constituents are removed therefrom in a liquid form, said cracking operation being conducted at substantially atmospheric pressure, said cracking operation being effected by filming said preheated oil and intimately contacting the same with cracked oil vapors to form precracked vapors, partially condensing said pre-



cracked vapors to a precracked oil, subjecting said precracked oil to a vapor phase cracking operation without substantial coke formation, and bringing the cracked vapors into contact with said preheated oil to crack said preheated oil, and removing light cracked hydrocarbon vapors and condensing the same.

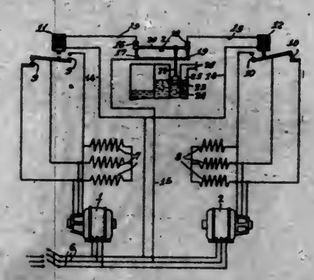
1,752,265. STERILIZING CABINET. ARTHUR R. SCHWARZKOPF, Chicago, Ill., assignor to Theo. A. Kochs Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1929. Serial No. 354,507. 5 Claims. (Cl. 215—1.)



1. A sterilizing cabinet having an open side to which is applied a frame having a seat extending continuously adjacent its inside edges, a door consisting of a frame hinged to the cabinet frame, a panel in the door frame resting against the inner face thereof, a plate bearing against the panel edges upon the inner face thereof, screws having their heads bearing against the plate and entered within threaded sockets proceeding within the door frame from the inner face thereof, flanges extended oppositely from the outer edges of the door frame and the plate defining therebetween a slot extending continuously around the inner face of the door frame adjacent its outer edges and opposite the seat in the cabinet frame, and resilient sealing means secured within said slot and protruding slightly therefrom adapted to enter the seat when the door is closed whereby to provide a tight closure for the cabinet.

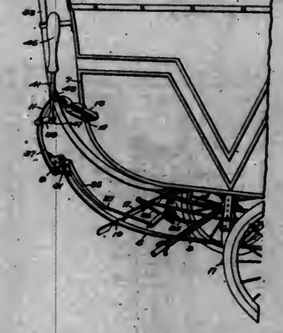
1,752,266. VIBRATORY DEVICE FOR DENTAL MOLDING MACHINES. ALFRED C. SLOAN, Philadelphia, Pa. Filed May 29, 1923, Serial No. 642,852. Renewed Aug. 2, 1929. 10 Claims. (Cl. 22—45.)

1. A vibratory device of the character described, which comprises a stationary base member, a motor having a rotor shaft yieldingly supported on said base member, means carried on the rotor shaft of said motor to effect the unbalance of said shaft in the operation of the motor.



1,752,267. TERMINAL PULLER. ERASTUS C. STEPHENS, Canton, Ga., assignor of one-half to Steve E. Smith and one-half to David Lemon Turner, Pickens County, Ga. Filed Dec. 1, 1928. Serial No. 323,167. 4 Claims. (Cl. 29—84.)

1. In a terminal puller, a handle member having at its lower end an angular foot, a second handle member having an angular extension, said angular extension being pivoted to the first named handle member above the foot and in spaced relation thereto and having an end extending outwardly over and beyond the foot, a link pivoted to the first named handle member above said extension and paralleling said extended end thereof, and a pressure bar pivoted at its upper end to said link and at its lower end to the said end of the extension.

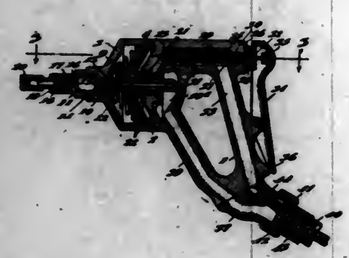


1,752,268. APPARATUS FOR FLUID-PRESSURE REGULATION. FLOYD H. VIETS, Alhambra, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 15, 1925. Serial No. 23,330. 5 Claims. (Cl. 50—10.)

3. A pressure operated float control device comprising a chamber in communication with a source of variable pressure, a second chamber in communication with a source of fixed pressure, said two chambers being also in communication with one another at their lower portions to permit passage of liquid from one to the other, a body of liquid in said chambers and subjected to the pressures therein, means preventing communication between said chambers above the surface of said body of liquid, a float

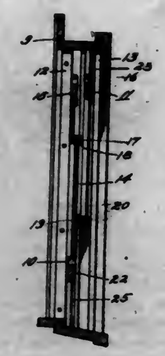
in one of said chambers and operable by the liquid therein and adapted to be connected to control means, liquid storage means, and means independent of said fixed and variable pressures for effecting transfer of liquid in either direction between said liquid storage means and said two chambers so as to vary the total amount of liquid in said chambers.

1,752,269. BRAKE FOR BABY CARRIAGES. HAROLD F. SHAW, Leominster, Mass., assignor to F. A. Whitney Carriage Company, Leominster, Mass., a Corporation of Massachusetts. Filed Apr. 17, 1929. Serial No. 355,860. 6 Claims. (Cl. 188—20.)



1. In a baby carriage an underframe comprising longitudinal perches to underlie the body, laterally extending supports at the ends thereof, bowed springs carried by said supports and suspending the body between them, a resiliently pressed brake on the underframe, a mechanism for springing the same, a rocker pivoted to one of said supports connected to said mechanism, and a hand lever pivoted adjacent the end of the spring rising from the support and linked to the rocker.

1,752,270. LUBRICATING APPARATUS. CLYDE G. BUTLER, Cincinnati, Ohio, assignor to The Cincinnati Ball Crank Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 18, 1928. Serial No. 293,681. 3 Claims. (Cl. 221—47.3.)

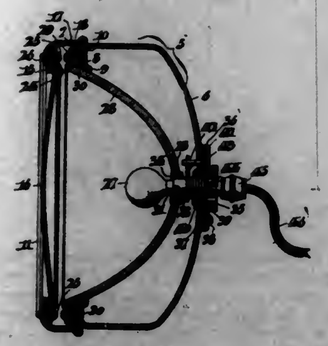


1. A grease gun, comprising, an air cylinder, a high pressure grease discharge cylinder secured on the forward

end of the air cylinder, a handle carrying said cylinders and attached to the rear of the air cylinder, said handle having a supply chamber therein, a hollow plunger reciprocably mounted between said high pressure cylinder and said supply chamber, a valve in said plunger, said valve opening during rearward movement, an air actuated

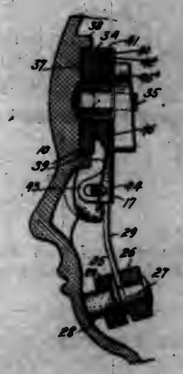
piston in said air cylinder connected to said plunger, means in the handle for controlling the air supply to the cylinder, said supply chamber of shallow depth and having the intake conduit thereof disposed at right angles to the plunger axis whereby the plunger moves toward the rear wall of the chamber for a positive displacement of grease through the plunger.

1,752,271. WINDOW. HARRY B. FORESMAN, Enid, Okla., assignor, by direct and mesne assignments, to Lock Joint Window Company, Kansas City, Mo., a Corporation of Delaware. Filed Dec. 27, 1927. Serial No. 242,719. 3 Claims. (Cl. 20—52.4.)



1. A window, comprising a frame having an upper and a lower sash slidable therein, a continuous groove in the outer edges of each of said sashes extending across three sides thereof, respectively, tongues carried in said frame to engage said grooves, said tongues being coextensive with said grooves when said sashes are in the closed position, and means integral with said sashes to interlock and draw said sashes together and against said tongues as they are moved to the closed position.

1,752,272. TRAY ATTACHMENT FOR SMOKERS' AND LIKE STANDS. JOHN S. KANDEL, Chicago, Ill., assignor to Chicago Hardware Foundry Company, North Chicago, Ill., a Corporation of Illinois. Filed June 11, 1928. Serial No. 284,488. 1 Claim. (Cl. 248—20.)

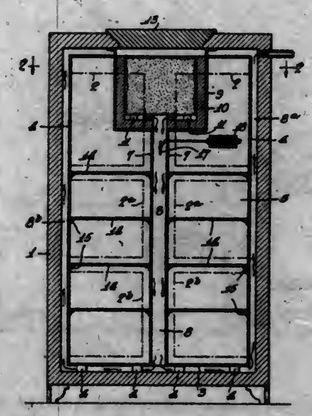


In a stand of the type described, the combination of an upright member having at its upper end an overhanging bracket of a curved shape and with a lower bracket in vertically spaced relation beneath said upper bracket, the lower bracket extending in an approximately horizontal plane and having a wedge form in cross section, the upper bracket member having a curved form providing an open bottom receiving recess, and a detachable tray member, having a marginal formation corresponding with the engaging portions of the aforesaid brackets adapting the tray for detachable engagement between the aforesaid upper and lower bracket arms.

1,752,273. HEADLIGHT. HARRY G. LEWIS, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 19, 1926. Serial No. 149,367. 2 Claims. (Cl. 240—44.)

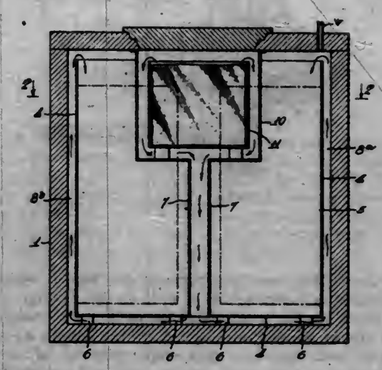
1. A headlight of the character described comprising a casing enclosing a parabolic reflector, a lamp socket extending into the casing having its central portion screw-threaded with its inner end guided for longitudinal shifting in an axial bushed opening of the reflector, a regulating nut constrained with respect to axial displacement but rotatably held by the casing and in operative engagement on the screw-threaded portion of the socket for the purpose of enabling focal adjustment of the lamp, an arm fast on the socket, and a stationary guide cooperating with said arm to prevent rotation of the socket incidental to its adjustment.

1,752,274. MOUNTING FOR DOLL-EYE SETS. SAMUEL MARCUS, Brooklyn, N. Y., assignor to Markon Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 6, 1926. Serial No. 92,728. 11 Claims. (Cl. 46—40.)



1. In a doll eye set, the combination of anchoring means composed of yielding material and for attachment to a head, a hanger-bracket having serrated edges, and for supporting a pair of eyes, and securing means for pressing the serrated edges into said anchoring means.

1,752,275. DOLL'S-EYE CONSTRUCTION. SAMUEL MARCUS, Brooklyn, N. Y., assignor to Markon Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 6, 1926. Serial No. 92,729. 12 Claims. (Cl. 46—40.)

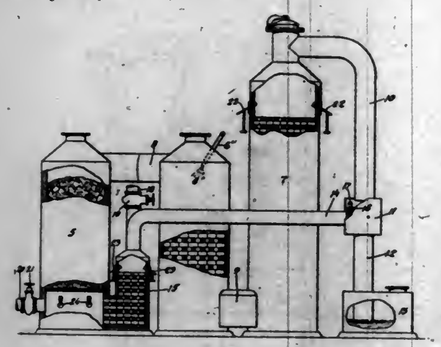


1. In a doll's eye construction, the combination of an eye provided with a slotted back member, a supporting rod adjacent the back member at a point opposite the slot, and securing means in frictional engagement with the back member looped into the slot and engaged about said rod to clamp the rod frictionally to said back member.

1,752,276. REFRIGERATING APPARATUS AND METHOD. JAMES W. MARTIN, Jr., Yonkers, N. Y., assignor to Dryice Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 8, 1928. Serial No. 324,639. 20 Claims. (Cl. 62—92.)

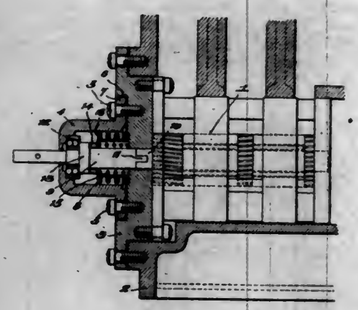
1. A refrigerating apparatus comprising a receptacle, a container for solidified carbon dioxide in the upper portion thereof, a downflow conduit therefrom and an upflow outlet conduit from the latter; the container being closed against inlet of air and the upflow outlet discharging outside the apparatus.

1,752,277. REFRIGERATIVE HEAT-INSULATING APPARATUS AND METHOD. JAMES W. MARTIN, Jr., Yonkers, N. Y., assignor to Dryice Equipment Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 2, 1929. Serial No. 343,988. 9 Claims. (Cl. 62—92.)



1. The method of preserving or improving the insulating quality of the walls of a container, which includes by absorbing heat and sublimating solid carbon dioxide within said container, and confining and guiding circulation of the cold freshly evolved carbon dioxide gas in intimate contact with an inner surface of said walls.

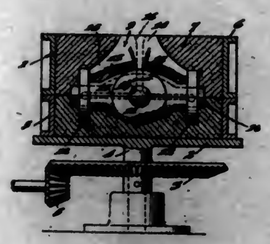
1,752,278. GAS MANUFACTURE. FRANK W. STEERE, Highland Park, Mich., assignor, by mesne assignments, to Semet-Solvay Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 25, 1925. Serial No. 25,951. 2 Claims. (Cl. 48—80.)



1. In a water gas set, a single generator, a single carburetor, a single superheater and a seal connected in se-

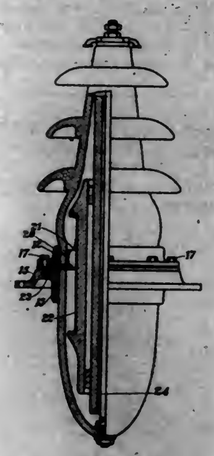
ries, a checkerbrick chamber contiguous to and connected with the base of said generator, a conduit leading from the top of said chamber to the connection between the

superheater and seal, a pipe connected to the top of said chamber to supply air thereto, and means to supply water to said chamber.



1,752,279. STUFFING BOX. ALBERT E. THORNLEY, Pawtucket, R. I., assignor to Narragansett Machine Company, Pawtucket, R. I. Filed May 12, 1927. Serial No. 190,776. 2 Claims. (Cl. 286—11.)

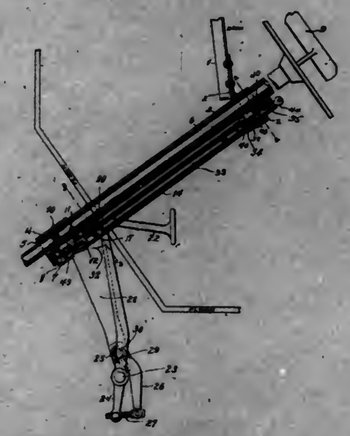
2. In a stuffing box for pumps or the like, a casing, a demountable cap carried by a wall of the casing, a sectional shaft having a slip-joint between its sections and having one of its sections carried by the cap so as to be removable from the other section upon removal of the cap, thrust means on said shaft section, and packing means between the thrust means and said wall of the casing and being mounted on said first named shaft section and having abutting engagement with said wall of the casing so as to be removable and replaceable as a unit with said first named shaft section and the cap upon removal or replacement of the cap.



1,752,280. METHOD AND APPARATUS FOR CASTING METAL. ELMER S. SAWTELLE, Cincinnati, Ohio, assignor to The Sawbrook Steel Castings Company, Lockland, Ohio, a Corporation of Ohio. Filed July 13, 1928. Serial No. 292,427. 10 Claims. (Cl. 22—65.)

1. A casting apparatus, comprising, a rotatable mold having a mold cavity formed therein, said cavity having regions of relatively greater cubical dimension, said mold having a head pressure chamber formed on its axis of rotation above said mold cavities, and a plurality of ancillary

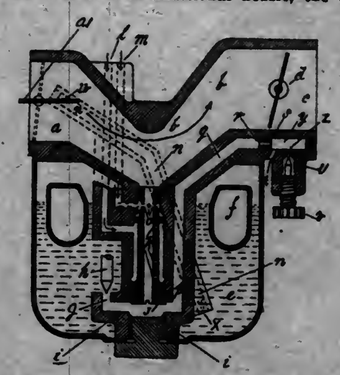
supply passageways extending from the head pressure chamber to the mold regions of relatively greater cubical dimension.



1,752,281. INSULATOR-BUSHING JOINT. ARTHUR O. AUSTIN, near Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 11, 1924. Serial No. 731,501. 8 Claims. (Cl. 173—318.)

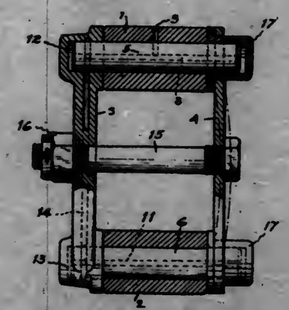
1. An insulator bushing comprising a pair of shell members having edges arranged to register with each other, means for clamping said shell members together to form a closed chamber, said means comprising a separately formed flange secured to one of said shell members adjacent the edge thereof but displaced outwardly from said edge in a position to leave said edge exposed, an imperforate dam held between the edges of said shell members and completely spanning the joint between said flange and its shell member to prevent leakage through said joint and a gasket between said edges.

8. A bushing insulator comprising a pair of dielectric shell members having open sides facing each other and having their edges, surrounding said sides, in confronting relation, to form a housing, a separately formed clamping ring surrounding the rim portion of each of said shell members and disposed entirely outside of the outer periphery of said housing, means for connecting said clamping rings to press said confronting edges together, the material of each of said shell members being extended inwardly substantially as far, at the confronting edge of said member, as it is throughout the portion thereof in radial registration with its clamping ring, so that the confronting edges of said shell members will be in direct alignment in the direction of the axis of said housing with the material immediately within said clamping rings.



1,752,282. AUTOMOBILE LOCK MEANS. KARL A. BRAUNING, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Aug. 4, 1926, Serial No. 127,110. Renewed Aug. 18, 1928. 22 Claims. (Cl. 70—127.)

2. The combination with the steering means, ignition switch means, and clutch shaft means of an automobile, of operating means slidably supported by the steering column for simultaneously locking all of said means against operation, and means to lock said operating means.



1,752,283. CARBURETOR. HENRY B. PETIT, Detroit, Mich., assignor to George M. Holley, Detroit, Mich. Filed Dec. 3, 1926. Serial No. 152,824. 3 Claims. (Cl. 261—41.)

1. In a plain tube carburetor having an air entrance, a mixing chamber of Venturi form and having a constant area, a constant level fuel supply chamber, a mixture outlet and a throttle valve therein, an air vented fuel nozzle discharging into the Venturi mixing chamber, an unvented nozzle discharging into an unrestricted portion of said air entrance, and a choke valve located therein on the atmospheric side of said additional nozzle, the unvented

nozzle being located a considerable distance above the level in the constant level fuel supply chamber, and being independently fed therefrom.

1,752,284. SPRING SHACKLE. HARRY G. TRENCH, Hartford, Conn., assignor to The Union Trust Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Jan. 18, 1926, Serial No. 81,947. Divided and this application filed May 26, 1927. Serial No. 194,294. 6 Claims. (Cl. 267—54.)

1. A shackle unit for vehicle springs comprising a pair of spaced shackle plates, pintle bearing cups carried by said plates, a pintle for each end of the shackle plates, a transverse pressure applying assembly bolt connecting intermediate portions of said plates, one of said plates being relatively yielding in order to impose adjustable pressure between the end portions of said plates.

ALPHABETICAL LIST OF REGISTRANTS OF TRADE-MARKS

Abraham & Straus, Inc., New York, N. Y. Women's coats. 269,356; Apr. 1; Serial No. 292,859; published Jan. 14, 1930. Class 39.

Actien-Gesellschaft für Feinmechanik, vormals Jetter & Scheerer, Tuttlingen, Germany. Tongs, forceps, pincers, etc. 269,353; Apr. 1; Serial No. 287,603; published Jan. 14, 1930. Class 44.

Altorfer Bros. Company, East Peoria, Ill. Laundry washing machines. 269,262; Apr. 1; Serial No. 292,192; published Jan. 14, 1930. Class 24.

American Insulating Co., Detroit, Mich. Pocket-forming elements for lining and insulating building walls. 269,206; Apr. 1; Serial No. 291,376; published Jan. 21, 1930. Class 12.

American Lanolin Corporation, Lawrence, Mass. Face cream. 269,320; Apr. 1; Serial No. 292,384; published Jan. 14, 1930. Class 6.

American Oil & Disinfectant Corporation, New York, N. Y. Preparation for exterminating insects. 269,321; Apr. 1; Serial No. 292,312; published Jan. 14, 1930. Class 6.

Apex Electrical Manufacturing Company, The, Cleveland, Ohio. Ironing-machine rolls, washtubs, wringer rolls, ironing-machine pads, etc. 269,228; Apr. 1; Serial No. 281,881; published Jan. 21, 1930. Class 24.

Appert, Alfred C., to Raymond Chevallier-Appert, Paris, France, successor. Product for preserving and improving wines and other beverages. 34,191; renewed Feb. 13, 1930.

Arch Preserver Shoe Shop, Inc., The, New York, N. Y. Stockings. 269,333; Apr. 1; Serial No. 292,780; published Jan. 14, 1930. Class 39.

Arnao, Charles, Company, Minneapolis, Minn. Electrical hair driers and hair-drying apparatus. 269,289; Apr. 1; Serial No. 291,862; published Jan. 14, 1930. Class 44.

Aspegren & Co., New York, N. Y., assignor, by mesne assignments, to Portsmouth Cotton Oil Refining Corporation, Portsmouth, Va., and New York, N. Y. Cottonseed oil. 77,414; renewed Apr. 5, 1930.

Auld, D. L., Company, The, Columbus, Ohio. Jewelry. 76,786; renewed Feb. 15, 1930.

Automatic Cooking Machine Company, Inc., New Bedford, Mass. Automatic cooking machines. 269,291; Apr. 1; Serial No. 291,078; published Dec. 24, 1929. Class 23.

B. F. C. Chemical Co. (See Bender, Walker M. K.)

Babson Park Citrus Growers Association, Babson Park, Fla. Fresh citrus fruits. 269,349; Apr. 1; Serial No. 290,052; published Jan. 21, 1930. Class 46.

Bachrach-Feld Co., The, doing business as Majestic Malt Co., Cincinnati, Ohio. Malt syrup. 269,345; Apr. 1; Serial No. 289,492; published Jan. 14, 1930. Class 46.

Banana Food Products Corporation, Plainfield, N. J. Banana powder. 269,338; Apr. 1; Serial No. 292,190; published Jan. 14, 1930. Class 46.

Bender, Walker M. K., doing business as B. F. C. Chemical Co., Pollocksville, N. C. Medicinal preparation. 269,324; Apr. 1; Serial No. 291,433; published Jan. 7, 1930. Class 6.

Bendiner & Schlesinger, Inc. (See Schlesinger, Maurice F., assignor.)

Beymer, Marshall, New York, N. Y. Therapeutic devices. 269,247; Apr. 1; Serial No. 292,488; published Jan. 7, 1930. Class 44.

Bowdlear, W. H., Company, The, Boston, Mass. Beeswax. 269,319; Apr. 1; Serial No. 292,390; published Jan. 7, 1930. Class 6.

Brin, Moses A., doing business as Cupid's Laboratories Studio, Chicago, Ill. Bath powder. 269,280; Apr. 1; Serial No. 288,020; published Nov. 12, 1929. Class 6.

British Colloids Ltd., London, England, assignor to Crookes Laboratories Incorporated, New York, N. Y. Antimonium, argentum, arsenicum, etc. 269,269; Apr. 1; Serial No. 276,404; published Oct. 8, 1929. Class 6.

Bullock Brothers Athletic Supply Company, Inc., Champaign, Ill. Athletic rubbing oil, gymnasium itch ointment, antiseptic dressing, etc. 269,378; Apr. 1. Class 6.

Burnham & Morrill Company, Portland, Me. Canned vegetables. 269,350; Apr. 1; Serial No. 289,179; published Jan. 21, 1930. Class 46.

Butler Aircraft Corporation, Kansas City, Mo. Aeroplanes. 269,261; Apr. 1; Serial No. 292,248; published Jan. 21, 1930. Class 19.

Byers Machine Company, Ravenna, Ohio. Cranes, ditchers, railroad shovels, and grading devices. 269,214; Apr. 1; Serial No. 247,355; published Jan. 21, 1930. Class 23.

Calvert, John W., doing business as Hollywood U-Reduce Company, Hollywood and Sacramento, Calif. Fat-reducing creams. 269,275; Apr. 1; Serial No. 272,748; published Feb. 5, 1929. Class 6.

Campbell Soup Company. (See Hodges, Leigh M., assignor.)

Carson Pirie Scott & Co., Chicago, Ill. Golf balls. 269,217; Apr. 1; Serial No. 208,637; published Jan. 14, 1930. Class 22.

Chandler & Rudd Company, The, doing business as The Chandler & Rudd Co., Cleveland, Ohio. Candy. 269,309; Apr. 1; Serial No. 293,264; published Jan. 21, 1930. Class 46.

Chase Brass & Copper Co. Incorporated, Waterbury, Conn. Filler caps of automobile radiators. 269,276; Apr. 1; Serial No. 272,389; published Jan. 15, 1929. Class 19.

Chevallier-Appert, Raymond. (See Appert, Alfred C.)

Chock-Herowitz Company, New York, N. Y. Pajamas. 269,367; Apr. 1; Serial No. 292,251; published Jan. 14, 1930. Class 39.

Cincinnati Victor Company, The, Cincinnati, Ohio. Ventilators, lamp standards, etc. 269,278; Apr. 1; Serial No. 288,222; published Jan. 21, 1930. Class 34.

Cleanwell Products Corp., St. Louis, Mo. Preparation for use as a bug and vermin exterminator, insect exterminator, etc. 269,227; Apr. 1; Serial No. 282,023; published Jan. 7, 1930. Class 6.

Clo-Jell Incorporated, New York, N. Y. Cod-liver oil incorporated in a jelly. 269,255; Apr. 1; Serial No. 292,521; published Jan. 14, 1930. Class 6.

Cole, Clifford M., doing business as Cole-Gano Pharmacal Company, Los Angeles, Calif. Bath preparations. 269,272; Apr. 1; Serial No. 275,560; published Jan. 7, 1930. Class 6.

Compañía Tabacalera Nacional, S. A., Habana, Cuba. Cigars. 269,240; Apr. 1; Serial No. 290,823; published Jan. 21, 1930. Class 17.

Conkey, Jessie C., doing business as Salbonal Co., Nortonville, Kans. Preparation for treatment of boils, etc. 269,282; Apr. 1; Serial No. 280,542; published May 14, 1929. Class 6.

Continental Nut Company, Seattle, Wash. Almonds, babassu nuts, butternuts, etc. 269,337; Apr. 1; Serial No. 267,243; published Jan. 14, 1930. Class 46.

Cracker Jack Co., The. (See Rueckheim Bros. & Eckstein, assignor.)

Cresta Blanca Company, doing business as Valencia Company, San Francisco, Calif. General medicinal tonic having a wine base. 269,374; Apr. 1. Class 6.

Crookes Laboratories Incorporated. (See British Colloids Ltd., assignor.)

Crosley Radio Corporation, The, Cincinnati, Ohio. Refrigerating apparatus and refrigerators. 269,274; Apr. 1; Serial No. 275,329; published Jan. 14, 1930. Class 31.

Cupid's Laboratories Studio. (See Brin, Moses A.)

Currier's Tablets Incorporated, Los Angeles, Calif. Medicated tablets. 269,231; Apr. 1; Serial No. 280,894; published Nov. 12, 1929. Class 6.

Cute-Craft Company, Fall River, Mass. Motor boats. 269,256; Apr. 1; Serial No. 292,440; published Jan. 14, 1930. Class 19.

Daggett & Ramsdell, New York, N. Y. Powder puffs and absorbent powder puffs. 269,243; Apr. 1; Serial No. 292,857; published Jan. 21, 1930. Class 29.

Daggett & Ramsdell, New York, N. Y. Powder puffs and absorbent powder puffs. 269,244; Apr. 1; Serial No. 292,852; published Jan. 21, 1930. Class 29.

Deery, P. J., & Company Limited, Liverpool, England. Cork grips for golf clubs and the like sporting articles. 269,241; Apr. 1; Serial No. 290,210; published Jan. 7, 1930. Class 22.

Diana Ipari es Kereskedelmi, Reszvenytarsasag, Budapest, Hungary. Mentholated alcohol, wine spirit, salt spirit or salt brandy recommended as a liniment, as a mouth wash, etc. 269,313; Apr. 1; Serial No. 260,721; published Jan. 14, 1930. Class 6.

Dodge & Olcott Company, New York, N. Y. Essential oils, flower essences, colors for perfumes, etc. 269,197; Apr. 1; Serial No. 288,786; published Jan. 14, 1930. Class 6.

Douglas Fir Plywood Institute, Tacoma, Wash. Douglas-fir plywood. 269,373; Apr. 1. Class 12.

Dreem Products Co. (See Lyons, Robert M.)

Eaton Laboratories, Inc., Kansas City, Mo. Dental plates. 269,377; Apr. 1. Class 44.

Edgett-Burnham Company, Newark, N. Y. Canned fruit and vegetables. 269,230; Apr. 1; Serial No. 281,205; published Jan. 21, 1930. Class 46.

Electrovent Corporation, Detroit, Mich. Electrically-operated ventilators and fans. 269,213; Apr. 1; Serial No. 289,921; published Jan. 14, 1930. Class 34.

Ellis Adding-Typewriter Company, The, Newark, N. J. Accounting machines, adding typewriters, etc. 269,372; Apr. 1. Class 26.

Cigars. National Grocer Company. 269,282; Apr. 1; Serial No. 292,281; published Jan. 21, 1930.

CLASS 19

Aeroplanes. Butler Aircraft Corporation. 269,261; Apr. 1; Serial No. 292,248; published Jan. 21, 1930.
Bicycles. Montgomery Ward & Co. Incorporated. 269,208; Apr. 1; Serial No. 291,132; published Jan. 21, 1930.
Coaches, buses, and trucks, Motor. C. H. Will Motors Corporation. 269,226; Apr. 1; Serial No. 282,082; published Jan. 14, 1930.
Filler caps of automobile radiators. Chase Brass & Copper Co. Incorporated. 269,276; Apr. 1; Serial No. 272,389; published Jan. 15, 1929.
Motor boats. Cute-Craft Company. 269,256; Apr. 1; Serial No. 292,440; published Jan. 14, 1930.
Pedal couplings for bicycles. Stevens Walden-Worcester, Inc. 269,194; Apr. 1; Serial No. 288,288; published Jan. 14, 1930.
Perambulators, baby carriages, and cars, etc. Tan Sad, Limited. 269,270; Apr. 1; Serial No. 275,860; published Jan. 14, 1930.
Trucks, Barrel. Southwest Pump Company. 269,209; Apr. 1; Serial No. 290,980; published Jan. 14, 1930.

CLASS 22

Bowling game apparatus, Automatic. R. L. Lloyd. 269,352; Apr. 1; Serial No. 288,305; published Jan. 14, 1930.
Cards, Playing. T. H. McCoy. 269,245; Apr. 1; Serial No. 292,742; published Jan. 14, 1930.
Cork grips for golf clubs and the like. P. J. Deety & Company Limited. 269,241; Apr. 1; Serial No. 290,210; published Jan. 7, 1930.
Golf balls. Carson Pirie Scott & Co. 269,217; Apr. 1; Serial No. 208,637; published Jan. 14, 1930.
Sleds, Coaster. Kalamazoo Sled Company. 269,233; Apr. 1; Serial No. 280,399; published Sept. 3, 1929.
Spinners. Enterprise Manufacturing Company. 269,219; Apr. 1; Serial No. 284,980; published Jan. 14, 1930.
Toy aeroplane construction sets. Sears, Roebuck and Co. 269,290; Apr. 1; Serial No. 291,842; published Jan. 7, 1930.
Toy guns. Grey Iron Casting Company. 269,242; Apr. 1; Serial No. 292,990; published Jan. 14, 1930.

CLASS 23

Cooking machines, Automatic. Automatic Cooking Machine Company. 269,291; Apr. 1; Serial No. 291,078; published Dec. 24, 1929.
Cranes, ditchers, railroad shovels, and grading devices. Byers Machine Company. 269,214; Apr. 1; Serial No. 247,355; published Jan. 21, 1930.
Hoist, Automobile. Globe Machinery & Supply Company. 269,292; Apr. 1; Serial No. 291,002; published Jan. 21, 1930.
Razors, and parts thereof, Combination and apparatus for honing and stropping. Rolls Razor (1927) Limited. 269,370; Apr. 1.

CLASS 24

Ironing-machine rolls, washtubs, wringer rolls, ironing-machine pads, etc. Apex Electrical Manufacturing Company. 269,228; Apr. 1; Serial No. 281,881; published Jan. 21, 1930.

Washboards. National Washboard Company. 269,248–50; Apr. 1; Serial Nos. 292,888–90; published Jan. 21, 1930.
Washing machines and parts thereof, Laundry. Voss Bros. Mfg. Co. 269,235; Apr. 1; Serial No. 279,580; published Jan. 14, 1930.
Washing machines, Laundry. Altorfer Bros. Company. 269,262; Apr. 1; Serial No. 292,192; published Jan. 14, 1930.

CLASS 26

Accounting machines, adding typewriters, etc. Ellis Adding-Typewriter Company. 269,372; Apr. 1.
Rulers, Desk. Westcott Rule Company. 269,376; Apr. 1.

CLASS 27

Clocks. Revere Clock Company. 269,308; Apr. 1; Serial No. 293,348; published Jan. 21, 1930.
Clocks, Electric. Hansen Manufacturing Company. 269,307; Apr. 1; Serial No. 293,427; published Jan. 21, 1930.

CLASS 28

Jewelry. D. L. Auld Company. 76,786; renewed Feb. 15, 1930.

CLASS 29

Brooms. National Grocer Company. 269,284; Apr. 1; Serial No. 292,277; published Jan. 21, 1930.
Powder puffs and absorbent powder puffs. Daggett & Ramsdell. 269,243; Apr. 1; Serial No. 292,857; published Jan. 21, 1930.
Powder puffs and absorbent powder puffs. Daggett & Ramsdell. 269,244; Apr. 1; Serial No. 292,852; published Jan. 21, 1930.

CLASS 31

Refrigerating apparatus and refrigerators. Crosley Radio Corporation. 269,274; Apr. 1; Serial No. 275,329; published Jan. 14, 1930.
Refrigerators and refrigeration apparatus. Perfection Stove Company. 269,355; Apr. 1; Serial No. 292,893; published Jan. 14, 1930.

CLASS 33

Bottles, jars, jugs, etc. Owens-Illinois Glass Company. 269,225; Apr. 1; Serial No. 283,344; published Jan. 7, 1930.
Glassware, Pressed. A. H. Heisey & Co. 75,897; renewed Nov. 23, 1929.

CLASS 34

Blowers for use with warm air furnaces and for ventilating purposes. Lakeside Company. 269,260; Apr. 1; Serial No. 292,361; published Jan. 14, 1930.
Furnaces, heating systems, and parts thereof. P. H. Ma Girl Foundry & Furnace Works. 269,259; Apr. 1; Serial No. 292,366; published Jan. 14, 1930.
Heating systems, Fuel. Williams OH-O-Matic Heating Corporation. 269,277; Apr. 1; Serial No. 272,374; published Jan. 21, 1930.
Heating units, air heaters, stokers, etc. B. F. Sturtevant Company. 269,199; Apr. 1; Serial No. 289,767; published Jan. 21, 1930.
Ventilators and fans, Electrically-operated. Electrovent Corporation. 269,218; Apr. 1; Serial No. 289,921; published Jan. 14, 1930.
Ventilators, lamp standards, etc. Cincinnati Victor Company. 269,278; Apr. 1; Serial No. 288,222; published Jan. 21, 1930.

CLASS 35

Hose, belting, and packing. Hewitt-Gutta Percha Rubber Corporation. 269,381; Apr. 1.

CLASS 38

Magazine. L. M. Hodges. 77,148; renewed Mar. 15, 1930.
Periodical. Magazine Publishers, Inc. 269,234; Apr. 1; Serial No. 279,900; published Apr. 9, 1929.

CLASS 39

Coats, Women's. Abraham & Straus, Inc. 269,356; Apr. 1; Serial No. 292,859; published Jan. 14, 1930.

Syrup, Malt. E. M. Lyons. 269,342; Apr. 1; Serial No. 291,010; published Jan. 14, 1930.
Vegetables, Fresh. Sheehy & Cumming. 269,287; Apr. 1; Serial No. 292,054; published Jan. 21, 1930.

CLASS 49

Whiskies, Scotch. John Walker & Sons, Limited. 78,286; renewed May 31, 1930.

CLASS 50

Fabrics, Cord and square woven. Fisk Rubber Company. 269,251–2; Apr. 1; Serial Nos. 292,624–5; published Jan. 21, 1930.
Name plates, waterers, feeders, poultry nests, etc. James Manufacturing Company. 269,203; Apr. 1; Serial No. 291,671; published Jan. 21, 1930.
Pads, Rug cushion. Warren-Allen Carpet Company. 269,205; Apr. 1; Serial No. 291,597; published Jan. 21, 1930.

ALPHABETICAL LIST OF LABELS

Beech-Nut Plain Noodles. For Noodles. Beech-Nut Packing Company. 37,294; Apr. 1.
Carlson's Swedish Rye Bread. For Rye Bread. A. W. Godfrey. 37,301; Apr. 1.
D & C—For Making Lemon Pie. For Ingredients for Making Lemon Pie. My-T-Fine Corporation. 37,305; Apr. 1.
Digestine. For Medicine. J. Jones. 37,304; Apr. 1.
Eastridge's Butterfly Perfume. For Perfume. J. R. Eastridge. 37,297; Apr. 1.
Expello Handy Bags for Chests, Trunks, Packages, Etc. For Moth and Worm Killer. Expello Corporation. 37,298; Apr. 1.
Expello Twelve Handy Bags. For Moth and Worm Killer. Expello Corporation. 37,299; Apr. 1.
Gabriel's Famous Healing Dusting Powder. For Healing Dusting Powder. J. Gabriel. 37,300; Apr. 1.
German Malt Syrup. For Malt Syrup. N. Oines. 37,306; Apr. 1.
Holtzman's Pretz-Sticks. For Pretzels. Pretz-Sticks Baking Company. 37,307; Apr. 1.
Ideal Brand Hearts of Gold Cantaloupes. For Cantaloupes. Huston, Culver & Co. Incorporated. 37,303; Apr. 1.
Lima Bean Wafers. For Lima-Bean Wafers. W. C. Baker. 37,293; Apr. 1.
Narcissus Bulbs. For Narcissus Bulbs. S. Horner, jr. 37,302; Apr. 1.
No. 51 Service Roll. For Roll Toilet Paper. Scott Paper Company. 37,309; pr. 1.
Rino. For Orange Salt. Rino Laboratories Co. 37,308; Apr. 1.
Super Wonder Glue Co. For Glue. Super Wonder Glue Co. 37,310; Apr. 1.
T-Ang for Children. For Cough Remedy. Chanbro Pharmacal Co. 37,295; Apr. 1.
Thorobread. For Dog Food. Thorobread Company. 37,311; Apr. 1.
Vienna Brand. For Ginger Ale. Double Eagle Bottling Company. 37,309; Apr. 1.

ALPHABETICAL LIST OF PRINTS

Keystone Chicks. For Chicks. D. W. Goodling. 12,465; Apr. 1.
Korkers. For Repair Device For Hosiery. Korker Company. 12,467; Apr. 1.
Oysters En Brochette . . . With Heins Tomato Ketchup. For Tomato Ketchup. H. J. Heins Company. 12,466; Apr. 1.
Wales Trimpak. For Cigarettes. Wales Novelties Corporation. 12,468; Apr. 1.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 1ST DAY OF APRIL, 1930

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). **Includes patents, reissues, and designs.**

A. G. Brown Boveri & Cie. (See Walty, Werner, assignor.)
Abeles, Ernest A., New York, N. Y. Solvent recovery apparatus for rubber-spreading machines. 1,752,875; Apr. 1.
Abramson, John H., assignor to Greenlee Bros. & Co., Rockford, Ill. Recessing tool. 1,753,103; Apr. 1.
Ackerman, Ernest W., and G. C. Nicholson, assignors to The Hydro-Check Corporation, Monroe, Mich. Hydraulic rebound device. 1,752,409; Apr. 1.
Acme Steel Company. (See MacChesney, C. M., and Norton, assignors.)
Adam, Frederick B., St. Louis, Mo. Outlet box. 1,752,322; Apr. 1.
Adams, Albert, McMechen, W. Va. Smoke consumer. 1,752,717; Apr. 1.
Adams-Barre Company, The. (See Adams, John Q., assignor.)
Adams Coal Machinery Company. (See Adams, Henry, assignor.)
Adams, Henry, assignor to Adams Coal Machinery Company, Plainfield, N. J. Barge coal-loading apparatus. 1,752,410; Apr. 1.
Adams, John Q., assignor to The Adams-Barre Company, Columbus, Ohio. Tire vulcanizer. 1,752,829; Apr. 1.
Aeolian Company, The. (See Head, Robert, assignor.)
Aeschbach, Friedrich, Aarau, Switzerland. Mixing and kneading machine. 1,752,628; Apr. 1.
Affel, Herman A., Ridgewood, N. J., assignor to American Telephone and Telegraph Company. Reduction of static interference in carrier systems. 1,752,360; Apr. 1.
Agfa Ansco Corporation. (See Risdon, John J., assignor.)
Aktiengesellschaft "Kolmag". (See Kolm, Ludwig, assignor.)
Alexander, Zeno, Kansas City, Mo. Transmission. 1,753,104; Apr. 1.
Alexanderson, Ernst F. W., Schenectady, N. Y., assignor to General Electric Company. Transmission of pictures. 1,752,876; Apr. 1.
Allerton, Robert W., South Orange, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., Pump. 1,752,546; Apr. 1.
Alterthum, Hans, Berlin, Germany, assignor to General Electric Company. Macrocrystal ingot and making it. 1,752,877; Apr. 1.
Altorfer, Alpheus W., Peoria, assignor to Altorfer Bros. Company, East Peoria, Ill. Washing machine. 1,752,547; Apr. 1.
Altorfer Bros. Company. (See Altorfer, Alpheus W., assignor.)
Altorfer Brothers Company. (See Simmons, Theodore, assignor.)
Ambler Asbestos Company. (See Mattison, Richard V., assignor.)
Ambye, Anthon, assignor to Davis & Furber Machine Company, Andover, Mass. Twister tube for spinning frames. 1,752,878; Apr. 1.
American Blower Corporation. (See Anderson, Edward L., assignor.)
American Lithographic Company. (See Banzett, William H., assignor.)
American Manganese Steel Company. (See Bruton, William C., assignor.)
American Manganese Steel Company. (See Estes, Clarence H., assignor.)
American Meter Company. (See Wilson, George D., assignor.)
American Powder Company. (See Borland, Charles R., assignor.)
American Radiator Company. (See Courtot, Louis, assignor.)
American Telephone and Telegraph Company. (See Affel, Herman A., assignor.)
American Telephone and Telegraph Company. (See Branson, David E., assignor.)
American Telephone and Telegraph Company. (See Clapp, Robert H., assignor.)
American Telephone and Telegraph Company. (See Kelley, Leo A., assignor.)
American Telephone and Telegraph Company. (See Kelley, L. A., Monk, and Thorp, assignors.)
American Telephone and Telegraph Company. (See Leibe, Frank A., assignor.)
American Textile Company. (See Ball, Ben A., assignor.)
American Type Founders Company. (See Haynes, Merritt W., assignor.)
Ammon, Charles D., Lincoln, Nebr. Hammer-mill feed grinder. 1,752,290; Apr. 1.
Ammon, Charles D., and E. W. Wilcox, Lincoln, Nebr.; said Wilcox assignor to said Ammon. Feed grinder. 1,752,971; Apr. 1.
Amonsen, George H., Minneapolis, Minn. Driving mechanism for machines. 1,752,411; Apr. 1.
Andersen, Carl A. J., Salt Lake City, Utah. Beet topper. 1,752,285; Apr. 1.
Anderson, Augustus L., Brooklyn, N. Y., assignor to Presto Primer and Reducing Valve Corporation. Reducing valve. 1,752,473; Apr. 1.
Anderson, Carter H., Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Treating metals. 1,752,474; Apr. 1.
Anderson, Edward L., Grosse Ile, assignor to American Blower Corporation, Detroit, Mich. Radiator. 1,752,879; Apr. 1.
Andreotti, Italo. (See Pardini, J. A., and Andreotti.)
Antizzo, Giuseppe, Brooklyn, N. Y., and G. Latorraca, Newark, N. J. Coin-controlled calling-card box. 1,752,718; Apr. 1.
Armstrong, Francis J., Brooklyn, N. Y., assignor to D. S. Craven, Salem, N. J. Electric-circuit-control lock-switch device for automobiles. 1,752,770; Apr. 1.
Armstrong, Lloyd Van H., Upper Montclair, assignor to Ingersoll-Rand Company, Jersey City, N. J. Steering gear. 1,753,039; Apr. 1.
Art Fixtures, Inc. (See Hoffmann, Otto, assignor.)
Ashworth, George B., Amsterdam, N. Y. Steam-pipe expansion joint. 1,752,475; Apr. 1.
Ast, Carl O., assignor to Pacific Knitting Mills, Inc., Los Angeles, Calif. Bathing suit. 1,752,771; Apr. 1.
Atlantic Refining Company, The. (See Peterkin, Albert G., jr., assignor.)
Atlas Leather Products Corporation, The. (See Marshuts, S. G., and Sockett, assignors.)
Atleson, Andy, et al. (See Smythe, Frank E. and A. Q., assignors.)
Atleson, May, et al. (See Smythe, Frank E. and A. Q., assignors.)
Aulwes, Henry C., Hartford, S. Dak. Brush holder. 1,752,361; Apr. 1.
Austin, Wray R., and J. N. Smith, assignors to F. G. Clark, Toronto, Ontario, Canada. Manufacture of anhydrous aluminum chloride. 1,752,936; Apr. 1.
Autokal Syndicate Limited, The. (See Rowley, C. D., and Jackson, assignors.)
Automatic Electric Inc. (See Nelson, Martin L., assignor.)
Backer, George, Shamokin Dam, Pa. Cylinder potato digger. 1,753,189; Apr. 1.
Baer, Lawrence E., assignor to Baer & Wilde Company, Attleboro, Mass. Bill holder. 1,753,186; Apr. 1.
Baer & Wilde Company. (See Baer, Lawrence E., assignor.)
Bain, Clarence J. (See Olsen, F., and Bain.)
Baird, Arthur J., Portland, Oreg., assignor to Baird Automatic Pre-Heater Co. Regulating apparatus for oil burners. 1,752,548; Apr. 1.
Baird Automatic Pre-Heater Co. (See Baird, Arthur J., assignor.)
Baker, G. W., Machine Company. (See Layton, Harry B., assignor.)
Baldwin, Clarence D., Bellingham, Wash. Railroad-rail straightener. 1,752,629; Apr. 1.
Balin, Samuel, assignor to United Auto Trunk Co., New York, N. Y. Wardrobe hatbox. 1,752,772; Apr. 1.
Ball, Ben A., assignor to American Textile Company, Inc., Pawtucket, R. I. Lace. Des. 80,820; Apr. 1.
Ball, Ben A., assignor to American Textile Company, Inc., Pawtucket, R. I. Lace. Des. 80,821; Apr. 1.
Ball, Ben A., assignor to American Textile Company, Inc., Pawtucket, R. I. Lace. Des. 80,822; Apr. 1.
Ball, Ben A., assignor to American Textile Company, Inc., Pawtucket, R. I. Lace. Des. 80,823; Apr. 1.
Ball, Ben A., assignor to American Textile Company, Inc., Pawtucket, R. I. Lace. Des. 80,824; Apr. 1.
Ball, Ben A., assignor to American Textile Company, Inc., Pawtucket, R. I. Lace. Des. 80,825; Apr. 1.
Ball, Ben A., assignor to American Textile Company, Inc., Pawtucket, R. I. Lace. Des. 80,826; Apr. 1.
Bankier, Robert, Philadelphia, Pa. Guide attachment for presser bars. 1,752,328; Apr 1.
Banzett, William H., Bergenfield, N. J., assignor to American Lithographic Company, Inc., New York, N. Y. Plate-registering means. 1,752,659; Apr. 1.
Barber Asphalt Company, The. (See Miller, John S., jr., assignor.)
Barbiers, Ferdinand S., assignor to The Hocking Glass Company, Lancaster, Ohio. Glass dispensing vessel. 1,752,291; Apr. 1.

Barnes Scale Company. (See Fellows, Noble L., assignor.)
Barnett, David A., assignor to Heany Laboratories Inc., New Haven, Conn. Automatic clutch mechanism. 1,752,937; Apr. 1.
Barrett Company, The. (See McCloskey, Gregory E., assignor.)
Barrett Company, The. (See Miller, Stuart P., assignor.)
Barrows, Allan S., Los Angeles, Calif., assignor to The Youngstown Steel Door Company, Cleveland, Ohio. Car door. 1,752,286; Apr. 1.
Barrows, Donald S., Rochester, N. Y. Railway truck. 1,753,105; Apr. 1.
Barstow, Welch, assignor to Recording Thermometer Company, Los Angeles, Calif. Recording thermometer. 1,752,362; Apr. 1.
Barth, Clarence W., Newburgh, N. Y. Surgical dressing. 1,753,106; Apr. 1.
Bassett, Preston R., Brooklyn, N. Y., assignor, by mesne assignments, to Sperry Gyroscope Company, Inc. Unattended beacon. 1,753,144; Apr. 1.
Bassick Company, The. (See Herold, Walter F., assignor.)
Bates, Adelmer M., and J. E. Cornell, assignors, by mesne assignments, to Bates Valve Bag Corporation, Chicago, Ill. Paper bag. 1,752,292; Apr. 1.
Bates, Bethel J., assignor of one-half to A. S. Gregg, Cleveland, Ohio. Balance for watch movements. 1,752,773; Apr. 1.
Bates Valve Bag Corporation. (See Bates, A. M., and Cornell, assignors.)
Bates Valve Bag Corporation. (See Cornell, John E., assignor.)
Baum, Leo, deceased, Brooklyn, N. Y.; A. R. Bond, executor. Locket. 1,752,719; Apr. 1.
Bazzoni, Lewis J., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Heel-covertrimming machine. 1,752,774; Apr. 1.
Beardsley, Elmer O., and W. F. Piper, assignors to The Beardsley & Piper Company, Chicago, Ill. Sand-feeding mechanism for molding machines. 1,752,549; Apr. 1.
Beardsley, Harry I., Chatham, and H. R. Clarke, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Cord fastener. 1,752,585; Apr. 1.
Beardsley & Piper Company, The. (See Beardsley, E. O., and Piper, assignors.)
Beaver, Charles J., Bowden, assignor to W. T. Glover and Company Limited, Manchester, England. Impregnating paper for insulation of electric cables and apparatus therefor. 1,752,972; Apr. 1.
Becker, Christian, Walker Township, Kent County, and F. Kleinheksel, Flint, Mich. Air-heating furnace. 1,752,938; Apr. 1.
Becker, Joseph, and J. Van Ackeren, Pittsburgh, Pa., assignors to The Koppers Company. Coking retort oven. 1,752,363; Apr. 1.
Bee, Herbert, Manchester, assignor to Woodbury Shoe Mfg. Co., Derry, N. H. Boot or shoe and shank stiffener therefor. 1,752,775; Apr. 1.
Beitler, John, Brentwood, Pa. Safety attachment for wringers. 1,753,040; Apr. 1.
Belcher, Gertrude, assignor to M. B. Johnson, Hollywood, Calif. Rug and making the same. 1,752,287; Apr. 1.
Bell & Howell Company, The. (See Howell, Albert S., assignor.)
Bell Telephone Laboratories, Incorporated. (See Buckley, Oliver E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Dehn, Joseph W., assignor.)
Bell Telephone Laboratories, Incorporated. (See Fowler, Clarence B., assignor.)
Bell Telephone Laboratories, Incorporated. (See Hartley, Ralph V. L., assignor.)
Bell Telephone Laboratories, Incorporated. (See Kinkead, Fullerton S., assignor.)
Bell Telephone Laboratories, Incorporated. (See Korn, Franklin A., assignor.)
Bendix Aviation Corporation. (See Semmes, Harry H., assignor.)
Bendix Brake Company. (See Dodge, Adiel Y., assignor.)
Bennett, Morris H., assignor to Scovill Manufacturing Company, Waterbury, Conn. Condenser. 1,753,001; Apr. 1.
Bergelson, Isadore, assignor of one-half to M. Rosen, Philadelphia, Pa. Sugar dispenser. 1,752,720; Apr. 1.
Beyer, Henry L., assignor to Gillinder & Sons, Inc., Philadelphia, Pa. Illuminating globe or similar article. Des. 80,827; Apr. 1.
Bierce, Harold E., Los Angeles, Calif. Preparing adsorbent materials. 1,752,721; Apr. 1.
Biette, Henry C., Detroit, assignor of twenty per cent to J. S. Langtin, Wyandotte, Mich. Steam cooker. 1,752,584; Apr. 1.
Birrer, John B., Alhambra, Calif. Sole stitcher. 1,752,722; Apr. 1.
Black, Clarence J., North Little Rock, Ark. Crosshead-guide anchor. 1,753,107; Apr. 1.
Black & Decker Manufacturing Company, The. (See Decker, Alonzo G., assignor.)
Blackmond, William C., Ranger, Tex. Chlorinating apparatus. 1,752,723; Apr. 1.
Blackstone Inventions, Inc. (See Blackstone, Selwyn R., assignor.)
Blackstone, Selwyn R., Milwaukee, Wis., assignor, by mesne assignments, to Blackstone Inventions, Inc. Bottle capper. 1,752,973; Apr. 1.
Blickman, Harry, New York, N. Y., assignor to S. Blickman, Inc., Weehawken, N. J. Exercising apparatus. 1,752,412; Apr. 1.
Blickman S., Inc. (See Blickman, Harry, assignor.)
Bliss, Edward P., jr., Philadelphia, Pa. Motor-driven blower. 1,752,330; Apr. 1.
Blum, Edward H. (See de Beaumont, J., and Blum.)
Blume, Louis F., Pittsfield, Mass., assignor to General Electric Company. Transformer. 1,752,880; Apr. 1.
Bochnak, Andrew, Bobtown, Pa. Automatic rifle. 1,752,324; Apr. 1.
Bockmühl, Max. (See Lautenschläger, C. L., Bockmühl, and Schwabe.)
Boedtcher, Franz A., Bergenfield, N. J., assignor to Otis Elevator Company, Jersey City, N. J. Safety device for elevator cage and shaft doors. 1,752,476; Apr. 1.
Boggs, Charles R., Waban, assignor to Simplex Wire and Cable Company, Boston, Mass. Cable. 1,752,974; Apr. 1.
Bolinder, Erik A., Stockholm, Sweden. Saw blade. 1,752,586; Apr. 1.
Bollinger, Paul, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Armature ventilation. 1,752,364; Apr. 1.
Bond, Alexander R., executor. (See Baum, Leo, assignor.)
Bondesen, Aage N., Copenhagen, Denmark. Carburetor. 1,753,108; Apr. 1.
Borghardt John H. (See Walther, G., Walkley, and Borghardt.)
Borland, Charles R., Concord, assignor, by mesne assignments, to American Powder Company. Boston, Mass. Manufacture of smokeless powder. 1,752,881; Apr. 1.
Bourdon, Pierre M., Paris, assignor to Michelin et Cie., Clermont-Ferrand, France. Grommet for pneumatic tires. 1,753,041; Apr. 1.
Bourie, Ignace, Reno, Nev. Internal-combustion-engine fuel. 1,752,724; Apr. 1.
Boutwell, Harry O., Los Angeles, Calif. Scrubbing machine. 1,752,882; Apr. 1.
Boye, James H., assignor to James H. Boye Manufacturing Company, Chicago, Ill. Shoe rack. 1,752,288; Apr. 1.
Boye, James H., Manufacturing Company. (See Boye, James H., assignor.)
Boye Needle Company, The. (See Davis, Edward D., assignor.)
Boyette, Noah A., Habira, Ga. Jack. 1,752,776; Apr. 1.
Boyle, Clete L. (See Klinger, J. D., and Boyle.)
Brach, Leon S., East Orange, N. J. Lightning arrester. 1,752,660; Apr. 1.
Braden, Harry L., Youngstown, Ohio. Mold wash. 1,752,725; Apr. 1.
Bragg, Caleb S., Palm Beach, Fla., and V. W. Kliesrath, Port Washington, assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y. Apparatus for operating suction-actuated devices in connection with the suction passages of internal-combustion engines. 1,753,165; Apr. 1.
Bragg, Caleb S., Palm Beach, Fla., and V. W. Kliesrath, Port Washington, assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y. Method of and apparatus for operating suction-actuated devices in connection with the suction passages of internal-combustion engines. 1,753,166; Apr. 1.
Bragg, Caleb S., Palm Beach, Fla., and V. W. Kliesrath, Port Washington, assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y. Method of and apparatus for operating suction-actuated devices in connection with the suction passages of internal-combustion engines. 1,753,167; Apr. 1.
Bragg, Caleb S., Palm Beach, Fla., and V. W. Kliesrath, Port Washington, assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y. Fueliser for air withdrawn from suction-actuated power actuators. 1,753,168; Apr. 1.
Bragg-Kliesrath Corporation. (See Bragg, C. S., and Kliesrath, assignors.)
Brahy, Victor A. M. E., St. Hilaire, Quebec, Canada. Airship construction. 1,752,831; Apr. 1.
Brandes Laboratories, Incorporated. (See Enderwood, Richard C., assignor.)
Brannaka, Robert B., Roaring Branch, Pa. Wire-twisting apparatus. 1,752,726; Apr. 1.
Branson, David E., River Edge, N. J., assignor to American Telephone and Telegraph Company. Reduction of static interference in carrier systems. 1,752,325; Apr. 1.
Branson, David E., River Edge, N. J., assignor to American Telephone and Telegraph Company. Reduction of static interference in carrier systems. 1,752,326; Apr. 1.
Braunstein-Loskant, Joseph, Basel, Switzerland. Apparatus for learning correct bow work for stringed instruments. 1,753,053; Apr. 1.
Breese, James L., jr., assignor to Oil Devices Corporation, Chicago, Ill. Hydrocarbon burner. 1,752,727; Apr. 1.
Brennan, James S., Attleboro, Mass. Combined spiritual mass card tray and stand therefor. Des. 80,828; Apr. 1.
Brenner, Charles M., Shreveport, La. Refrigeration coil. 1,753,042; Apr. 1.
Brewster, Percy D., Newark, N. J. Camera for color cinematography. 1,752,477; Apr. 1.
Briody, Bernard, assignor to Truscon Steel Company, Youngstown, Ohio. Dowel for concrete structures. 1,752,327; Apr. 1.

Britton, Edgar C., assignor to The Dow Chemical Company, Midland, Mich. Purifying phenyl-ethyl alcohol. 1,752,365; Apr. 1.
Brodersen, Karl, and W. Ext, Dessau in Anhalt, Germany, assignors, by mesne assignments, to Winthrop Chemical Company, Inc., New York, N. Y. Fungicide. 1,752,293; Apr. 1.
Bronander, Wilhelm B., Montclair, N. J. Roller bearing and mounting therefor. 1,752,777; Apr. 1.
Brown, A. G., Boveri & Cie. (See Kopellowitsch, J., and Stoecklin, assignors.)
Brown & Bigelow. (See Kristofek, Frank J., assignor.)
Brown, Frank G., Detroit, Mich. Pump. 1,752,366; Apr. 1.
Brown, Maurice M., Washington, D. C. Swimming catamaran. 1,752,630; Apr. 1.
Brown, William A., Philadelphia, and E. A. Corbin, jr., Swarthmore, Pa. Cooling, drying, and lighting fixture. 1,752,778; Apr. 1.
Bruback, Theodore M. (See Linaker, F. W., and Bruback.)
Brumder, Thekla U., executrix. (See Brumder, William C.)
Brumder, William C., deceased, Milwaukee, Wis.; T. U. Brumder, executrix. Mixing device. 1,752,832; Apr. 1.
Brumder, William C., deceased, Milwaukee, Wis.; T. U. Brumder, executrix. Mixing apparatus. 1,752,833; Apr. 1.
Brunn and Company. (See Brunn, Hermann A., assignor.)
Brunn, Hermann A., assignor to Brunn and Company, Inc., Buffalo, N. Y. Seat mounting for automobiles. 1,752,368; Apr. 1.
Bruton, William C., Albany, Calif., assignor to American Manganese Steel Company, Chicago, Ill. Choker hook. 1,752,367; Apr. 1.
Bryant, George F., and W. S. Warnock, Chicago, Ill. Printing-press bed. 1,752,779; Apr. 1.
Bryce, James W., Bloomfield, N. J., assignor to International Time Recording Company of New York, Endicott, N. Y. Secondary clock. 1,752,939; Apr. 1.
Buckeye Steel Castings Company, The. (See Bush, Samuel P., assignor.)
Buckeye Steel Castings Company, The. (See Johnson, G. T., and Stertzbach, assignors.)
Buckley, Oliver E., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signaling cable. 1,752,413; Apr. 1.
Bulten, William C., assignor of one-half to P. N. De Wit, Lansing, Ill., and one-half to F. N. De Wit. Table structure. 1,752,780; Apr. 1.
Bull, Arthur W., assignor to The Dorr Company, New York, N. Y. Defecation of sugar juice. 1,752,781; Apr. 1.
Burnett, Clarence H., Crothersville, Ind. Belt buckle. 1,752,414; Apr. 1.
Burton, Charles G., Salem, Ohio. Water-closet attachment. 1,752,782; Apr. 1.
Busenbark, William R., Akron, Ohio. Frame for license plates. 1,752,883; Apr. 1.
Bush, Samuel P., assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Car truck. 1,752,728; Apr. 1.
Butler, Howard, Four Oaks, England. Electric measuring instrument. 1,753,043; Apr. 1.
Butz, Walter D., Norristown, assignor of one-half to L. N. D. Williams, Elkins Park, Pa. Stocking. 1,752,587; Apr. 1.
Call, George R., Sioux City, Iowa. Vehicle traffic signal. 1,752,289; Apr. 1.
Cameron Can Machinery Co. (See Cameron, William, assignor.)
Cameron, William, assignor to Cameron Can Machinery Co., Chicago, Ill. Square-can cap-seaming mechanism. 1,752,328; Apr. 1.
Campbell, Charles A., Watertown, N. Y., assignor to The New York Air Brake Company. Feed-valve mounting. 1,752,631; Apr. 1.
Campbell, Chester C., West Orange, N. J., assignor to Otis Elevator Company, New York, N. Y. Elevator-cab construction. 1,752,661; Apr. 1.
Campbell, Samuel J., Green Bay, Wis., assignor to Hudson-Sharp Machine Company. Folding machine. 1,752,415; Apr. 1.
Cannon, Hiram B., Midway, Ky., assignor to The Carborundum Company, Niagara Falls, N. Y. Combustion chamber. 1,752,518; Apr. 1.
Canter, David, Mattapan, Mass. Ice-cream cone. 1,752,729; Apr. 1.
Caps, Arthur W., Rochester, N. Y., assignor to Photostat Corporation, Providence, R. I. Copyholder. 1,752,329; Apr. 1.
Carbide and Carbon Chemicals Corporation. (See Ray, A. B., and Felbeck, assignors.)
Carborundum Company, The. (See Cannon, Hiram B., assignor.)
Carburetor Control Company. (See Hess, Harry W., assignor.)
Cardinet, George H., Oakland, Calif. Display holder for bar candy or the like. 1,752,519; Apr. 1.
Carlson, Fritz O., Worcester, Mass. Tag-stringing machine. 1,752,730; Apr. 1.
Carlson, Victor E., San Diego, Calif. Sewing cabinet. 1,752,834; Apr. 1.
Carnahan, Ralph W. (See Love, William J., jr., assignor.)
Carpenter, B. G., & Co. Inc. (See Carpenter, Lansing T., assignor.)
Carpenter, Lansing T., assignor to B. G. Carpenter & Co. Inc., Wilkes-Barre, Pa. Crepe-steaming rack. 1,752,884; Apr. 1.
Carr-Lowrey Glass Co. (See Garwood, Charles B., assignor.)
Carroll, Frank, San Enselmo, Calif. Dispensing device. 1,752,885; Apr. 1.
Caruso, Louis, Irvington, N. J., assignor to The Lionel Corporation, New York, N. Y. Bumper. 1,752,731; Apr. 1.
Case Research Laboratory, Inc. (See Case, Theodore W., assignor.)
Case, Theodore W., assignor to Case Research Laboratory, Inc., Auburn, N. Y. Camera. 1,753,002; Apr. 1.
Chambers Brothers Company. (See King, Howard K., assignor.)
Chapman, Romaine C., Cheshire, assignor to Scovill Manufacturing Company, Waterbury, Conn. Display cabinet. 1,752,369; Apr. 1.
Chappell, Annie M., et al., executors. (See Chappell, Fred B.)
Chappell, Fred B., deceased, assignor of one-half to Glens Falls Machine Works, Glens Falls, N. Y., A. M. Chappell and W. T. Cowles, executors. Apparatus for handling paper pulp. 1,752,886; Apr. 1.
Cheesman, Silas A., Winnipeg, Manitoba, assignor to Northern Aerial Minerals Exploration Ltd., Toronto, Ontario, Canada. Ski pedestal for aeroplanes. 1,752,416; Apr. 1.
Chemische Fabrik auf Actien (vorm. E. Schering). (See Wreschner, M., and Loeb, assignors.)
Chilton, Roland, Keyport, N. J., assignor, by mesne assignments, to Eclipse Machine Company, Elmira Heights, N. Y. Engine-starting apparatus. 1,752,835; Apr. 1.
Christophers, Digby R. N., South Kensington, London, England. Convertible bed settee. 1,752,417; Apr. 1.
Chuprin, Charles V., Mount Carmel, Pa. Cuff fastener. 1,752,732; Apr. 1.
Chutter, George A., Schenectady, N. Y., assignor to General Electric Company. Induction furnace. 1,752,887; Apr. 1.
Cilley, Albert E., Melrose, Mass. Process and tool for surfacing blanket cylinders. 1,752,940; Apr. 1.
Clapp, Robert H., Ramsey, N. J., assignor to American Telephone and Telegraph Company. Suppression of interference in carrier telegraph systems. 1,752,330; Apr. 1.
Clark, Farley G. (See Austin, W. R., and Smith, assignors.)
Clark, John L., assignor of one-half to W. A. Yoho, Scottdale, Pa. Hammer. 1,752,588; Apr. 1.
Clark, John M., Detroit, Mich., and I. D. Ford, Roseland, Ontario, Canada, assignors to Universal Button Fastening & Button Company, Detroit, Mich. Button. 1,752,418; Apr. 1.
Clark, John M., Detroit, Mich., and I. D. Ford, Roseland, Ontario, Canada, assignors to Universal Button Fastening & Button Co., Detroit, Mich. Button. 1,752,419; Apr. 1.
Clark, John M., Detroit, Mich., and I. D. Ford, Roseland, Ontario, Canada, assignors to Universal Button Fastening & Button Company, Detroit, Mich. Button. 1,752,420; Apr. 1.
Clark, Omar E., Denver, Colo., assignor, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill. Haulage apparatus. 1,752,333; Apr. 1.
Clarke, Harry R. (See Beardsley, H. I., and Clarke.)
Cleary, Andrew W., Rochester, Pa., assignor, by mesne assignments, to The Wayne Pump Company, Baltimore, Md. Liquid-dispensing apparatus. 1,752,941; Apr. 1.
Clerkx van Keulen, Godefridus H., assignor to De Bataafsche Petroleum Maatschappij, The Hague, Netherlands. Trip casing spear. 1,753,074; Apr. 1.
Cleveland Welding Company, The. (See Krans, Harry W., assignor.)
Cloud, Walter A., Chiswick, London, England. Grinding, pulverizing, or disintegrating mill. 1,752,888; Apr. 1.
Cochin, Solomon. (See Schneyer, M. D., and Cochin.)
Colburn, Herbert C., San Leandro, Calif. Radiotube. 1,752,520; Apr. 1.
Colby, Frederic R., and A. L. Larsen, assignors to The Surface Combustion Company, Inc., Toledo, Ohio. Transferring objects to hook-type conveyers. 1,752,783; Apr. 1.
Cole, James B., Memphis, Tenn. Adjustable cot and headrest for burial caskets. 1,753,100; Apr. 1.
Collins, Harold B., Philadelphia, Pa. Envelope-filling machine. 1,752,784; Apr. 1.
Colson Company, The. (See Johnson, Wilfred G., assignor.)
Columbia Phonograph Company. (See Hinckley, Frank C., assignor.)
Columbus Machine Company, The. (See Sparks, Stanley W., assignor.)
Comstock-Castle Stove Company. (See Sandell, Joseph H., assignor.)
Concealed Door Check Co., The. (See Eastman, Floyd K., assignor.)
Concha, Thomas. (See Rogers, J. H., and Concha.)
Conran, William F., Brooklyn, N. Y. Valve. 1,752,836; Apr. 1.
Continental Can Company. (See Kronquest Alfred L., assignor.)

Continental-Diamond Fibre Company. (See McIntosh, James, assignor.)
Corbin, Elbert A., jr. (See Brown, W. A., and Corbin.)
Cornell, John E. (See Bates, A. M., and Cornell.)
Cornell, John E., assignor, by mesne assignments, to Bates Valve Bag Corporation, Chicago, Ill. Multiple-walled bag. 1,752,370; Apr. 1.
Corns, Thomas, Richmond, Victoria, Australia. Apparatus for manufacturing pies. 1,752,837; Apr. 1.
Cornwell, Edwin T. and F. W., London, England. Anti-dazzle spectacles. 1,752,889; Apr. 1.
Cornwell, Frederick W. (See Cornwell, Edwin T. and F. W.)
Correns, Erich. (See Hubert, E., Röst-Grande, and Correns.)
Courtot, Louis, Paris, France, assignor to American Radiator Company, New York, N. Y. Radiator. 1,752,785; Apr. 1.
Coviello, Anthony, Denver, Colo. Signal-light casing. Des. 80,829; Apr. 1.
Cowles, Irving, assignor to Union Bank of Chicago, trustee, Chicago, Ill. Force-feed lubricating device. 1,752,975; Apr. 1.
Cowles, Irving, Detroit, Mich., assignor to Union Bank of Chicago, trustee, Chicago, Ill. Flexible conduit assembly and making same. 1,752,976; Apr. 1.
Cowles, William T., et al., executors. (See Chappell, Fred B.)
Coyte, William A., assignor to J. Lyons and Company, Limited, London, England. Plastic-material measuring and filling machine. 1,752,890; Apr. 1.
Crane, Charles R., 2d., assignor to Crane Co., Chicago, Ill. Tubular shower head. 1,752,633; Apr. 1.
Crane Co. (See Crane, Charles R., 2d., assignor.)
Craven, D. Stewart. (See Armstrong, Francis J., assignor.)
Cree, George G., Schenectady, N. Y., assignor to General Electric Company. Protection of electric systems. 1,752,942; Apr. 1.
Cridland, Clifford F., Carter County, Mont. Caponizing instrument. 1,752,891; Apr. 1.
Crompton & Knowles Loom Works. (See Holmes, Elbridge R., assignor.)
Crompton & Knowles Loom Works. (See Lindegren, Carl J., assignor.)
Crompton & Knowles Loom Works. (See Robertson, William W., assignor.)
Crompton & Knowles Loom Works. (See Turner, Richard G., assignor.)
Cross, Walter M., Kansas City, Mo. Aeroplane-wing construction. 1,752,421; Apr. 1.
Crossman, Francis M., New York, N. Y. Binder for fuel agglomerates. 1,752,838; Apr. 1.
Cubrda, Frank. (See Tomec, J., and Cubrda.)
Culver, Gene G., St. Louis, Mo. Receptacle for use in manicuring. 1,753,044; Apr. 1.
Cumberland, John C., Schenectady, N. Y., assignor to General Electric Company. Motor control. 1,752,892; Apr. 1.
Cummins, Clessie L., assignor to Oil Engine Development Company, Columbus, Ind. Oil-burning engine. 1,752,786; Apr. 1.
Cutler, David A., Wollaston, Mass. Shoe. 1,752,787; Apr. 1.
Dabney, Conway, Crystal Springs, Miss. Direction signal. 1,753,110; Apr. 1.
Dahlström, Arvid O. (See Johansson, S. A. F., and Dahlström.)
Daniels, Anthony, Newark, N. J. Receptacle and making same. 1,752,371; Apr. 1.
David, Auguste G., and P. Gisclon, Villeurbanne, France. Machine for rupturing the ends projecting from wire heddles. 1,752,733; Apr. 1.
Davidson, George A. (See Halloran, R. A., Davis, and Davidson.)
Davis, Charles C. (See Nagle, Edward, assignor.)
Davis, Edward D., assignor to The Boye Needle Company, Chicago, Ill. Hairpin. 1,752,893; Apr. 1.
Davis & Furber Machine Company. (See Ambye, Anthon, assignor.)
Davis, William N. (See Halloran, R. A., Davis, and Davidson.)
Dawson, George H., Cambridge, Mass., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y. Card index. 1,752,294; Apr. 1.
Day, Alva G., South Edmeston, N. Y., assignor, by mesne assignments, to K-P-C Company. Dehydrating cheese. 1,752,521; Apr. 1.
Dayton Steel Foundry Company, The. (See Walther, G., Walkley, and Borghardt, assignors.)
De Batsafsche Petroleum Mattschappij. (See Clerkx van Keulen, Godefridus H., assignor.)
De Beaumont, Julien, Huntington Park, and E. H. Blum, Los Angeles, Calif. Apparatus for producing electric waves. 1,752,632; Apr. 1.
De Bothezat, George, New York, N. Y. Fan unit. 1,752,372; Apr. 1.
Decker, Alonzo G., Baltimore County, assignor to The Black & Decker Manufacturing Company, Towson, Md. Portable electric tapper. 1,752,422; Apr. 1.
Deere & Company. (See Livesay, Robert C., assignor.)
Degn, Paul, Kiel-Dietrichsdorf, assignor to the firm Howaldtswerke Aktiengesellschaft, Kiel-Neumuhlen-Dietrichsdorf, Germany. Floating dock for water aircraft. 1,752,894; Apr. 1.
Dehn, Joseph W., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 1,752,550; Apr. 1.
De Jong, Hendrik, Eindhoven, Netherlands, assignor to General Electric Company. Method and apparatus for mounting filaments. 1,752,895; Apr. 1.
De Luxe Metal Furniture Company. (See Levene, Albert H., assignor.)
Denbo, Wilson R., Jackson, Mich. Swimmer's buoy. 1,752,969; Apr. 1.
Dernbach, Charles S., Wausau, Wis. Device for depicting rural scenes. 1,753,111; Apr. 1.
Derossi, Carlo, Turin, Italy. Automatic apparatus for the rapid production of aerated water. 1,753,081; Apr. 1.
Detroit Dental Manufacturing Company. (See Kerr, Robert M., assignor.)
Detroit Harvester Company. (See Otwell, Ralph B., assignor.)
Deubener, Walter H., St. Paul, Minn. Cloth holder. 1,752,896; Apr. 1.
Deutsche Gold & Silber Scheideanstalt vormals Roessler. (See Kochendoerfer, Gerd, assignor.)
Deutsche Telephonwerke und Kabelindustrie Aktiengesellschaft. (See Höhne, Wilhelm, assignor.)
De Vilbiss Company, The. (See Mueller, Godfrey A., assignor.)
Dewey, Clarence L., assignor to Outing Manufacturing Company, Elkhart, Ind. Banjo. 1,752,788; Apr. 1.
De Wit, Frank N., et al. (See Buiten, William C., assignor.)
De Wit, Paul N., et al. (See Buiten, William C., assignor.)
Dickey, Elmer C., Kokomo, Ind. Brooder house. 1,753,082; Apr. 1.
Dickman, Margaret D., Duluth, Minn. Plaiter. 1,752,897; Apr. 1.
Dickman, Sam. (See Helwig, Wilhelm A. A. H., assignor.)
Dieterle, Frank, assignor to Ken Wel Sporting Goods Co., Inc., Utica, N. Y. Boxing glove. 1,752,977; Apr. 1.
Dietrichs, Charles, Little Ferry, assignor, by mesne assignments, to Walker Cement Products, Inc., Union City, N. J. Concrete-block machine. 1,752,373; Apr. 1.
Di Giacomo, Michael J., Wilmington, Del. Paper-hanging machine. 1,752,898; Apr. 1.
Ditchfield, Frank, assignor to The Youngstown Steel Door Company, Cleveland, Ohio. House-car door construction. 1,752,334; Apr. 1.
Dixon, George L. (See Fluharty, Allan M., assignor.)
Dobrick, August C., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill. Top plate for washbasins. Des. 80,830; Apr. 1.
Dodge, Adiel Y., South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill. Brake construction. 1,752,478; Apr. 1.
Dorr Company, The. (See Bull, Arthur W., assignor.)
Dorr Company, The. (See Downes, Frank A., assignor.)
Dorr Company, The. (See Fahrenwald, Arthur W., assignor.)
Dotson, Herbert F., San Antonio, Tex. Bottled-beverage-vending machine. 1,752,479; Apr. 1.
Dow Chemical Company, The. (See Britton, Edgar C., assignor.)
Downes, Frank A. (See Hoover, C. P., and Downes.)
Downes, Frank A., assignor to The Dorr Company, New York, N. Y. Agitation and settling apparatus. 1,752,789; Apr. 1.
Downes, Nate W. (See Downes, Ralph W., assignor.)
Downes, Ralph W., assignor to N. W. Downes, Kansas City, Mo. Handrail for fire escapes. 1,752,589; Apr. 1.
Drotning, Henry O., New York, N. Y. Toy. 1,752,978; Apr. 1.
Dufio, Thomas, Croghan, N. Y. Magneto contact plug. 1,752,590; Apr. 1.
Duke, Charles A., New York, N. Y. Collapsible seat or bench. 1,752,734; Apr. 1.
Du Pont, E. I., de Nemours & Company. (See Engelmann, Max, assignor.)
Dura Company, The. (See Nicholson, Stanley W., assignor.)
Durable Mat Company. (See Hollenbeck, Harold W., assignor.)
Durnin, Joseph V. (See Uhle, D. J., and Durnin.)
Durrer, Robert, Berlin-Wannsee, F. C. Siemens, Berlin-Dahlem, and A. Sprenger, Berlin-Charlottenburg, assignors to Friedrich Siemens Aktiengesellschaft, Berlin, Germany. Producing steel in an open-hearth furnace. 1,752,374; Apr. 1.
Duryea, O. C., Corporation. (See Duryea, Otho C., assignor.)
Duryea, Otho C., Waterbury, Conn., assignor to O. C. Duryea Corporation, Wilmington, Del. Car construction. 1,752,335; Apr. 1.
Dyer Frank L., Montclair, N. J. Electrical reproducing device. 1,752,943; Apr. 1.
Dykes, Coy M., Ariton, Ala. Peanut-picking machine. 1,752,375; Apr. 1.
Eastman, Floyd K., assignor to The Concealed Door Check Co., Kokomo, Ind. Doorcheck. 1,752,423; Apr. 1.
Eaton Axle & Spring Company, The. (See Howe, James M., assignor.)
Eckelman, Albert J., Portland, Oreg. Spoon-holding clip. 1,752,522; Apr. 1.
Eckstein, Reuben, New York, N. Y. Decorative lighting outfit. 1,752,662; Apr. 1.

Eclipse Machine Company. (See Chilton, Roland, assignor.)
Eclipse Machine Company. (See Marcus, Charles, assignor.)
Eclipse Textile Devices, Inc. (See Uttrich, Louis A., assignor.)
Edwards, Clarence G., Los Angeles, Calif. Counterthrust-pressure motor. 1,752,899; Apr. 1.
Ehrhart, William, Lancaster, Pa. Return apparatus. 1,752,979; Apr. 1.
Eickmeyer, Earl E., assignor to The National Recording Pump Company, Dayton, Ohio. Liquid-measuring pump. 1,752,523; Apr. 1.
Eisenmann, Carl W., Nebraska City, Nebr., assignor to The Safety Car Heating & Lighting Company. Switch construction. 1,752,900; Apr. 1.
Eitzen, August D., New York, N. Y. Controlling alternating currents. 1,752,944; Apr. 1.
Electric Vacuum Cleaner Company. (See Morgal, John F., assignor.)
Electrical Improvements Limited. (See Poynder, Herbert B., assignor.)
Ellinger, John G., Stout, Iowa. Accelerator safety locking device and brake alarm. 1,752,336; Apr. 1.
Ellis, Albert J., Bolton, N. C. Hame connecter. 1,753,045; Apr. 1.
Ellis, Arthur H., Rochester, Minn. Sign holder for automobile bodies. 1,752,591; Apr. 1.
Elliston & Cavell Limited. (See Person, Adolphe A., assignor.)
Enderwood, Richard C., assignor to Brandes Laboratories, Incorporated, Newark, N. J. Escutcheon for control dials. Des. 80,831; Apr. 1.
Engelmann, Max, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Seed disinfectant. 1,752,424; Apr. 1.
Engledow, George R., Raton, N. Mex. Airplane. 1,753,112; Apr. 1.
Englehorn, Elmer H., Douglaston, N. Y. Railroad-crossing signal. Des. 80,832; Apr. 1.
Ensign Carburetor Company. (See Ensign, Roy F. and O. H., assignors.)
Ensign, Orville H. (See Ensign, Roy F. and O. H.)
Ensign, Roy F. and O. H., Pasadena, assignors to Ensign Carburetor Company, Los Angeles, Calif. Carburetor. 1,752,551; Apr. 1.
Erie City Iron Works. (See Heckeroth, William C., assignor.)
Ersland, Amos K., Manhattan Beach, Calif. Wrench. 1,752,425; Apr. 1.
Estep, Adrian C., Seattle, Wash. Valve cage. 1,752,790; Apr. 1.
Estes, Clarence H., Chicago Heights, assignor to American Manganese Steel Company, Chicago, Ill. Pin plate for molding flasks. 1,752,552; Apr. 1.
Eureka Fire Hose Manufacturing Company. (See Grady, Frank R., assignor.)
Eustice, Alfred L., Chicago, Ill. Fuse. 1,753,046; Apr. 1.
Evans, Walter W., New Rochelle, assignor to R. T. Vanderbilt Company, Incorporated, New York, N. Y. Oil composition, etc. 1,752,945; Apr. 1.
Evans, Walter W., Longmeadow, Mass., assignor to R. T. Vanderbilt Company, Incorporated, New York, N. Y. Oil composition, etc. 1,752,946; Apr. 1.
Evensen, William, Chicago, Ill., assignor to Goss Printing Press Company. Folding mechanism. 1,752,426; Apr. 1.
Ext, Werner. (See Brodersen, K., and Ext.)
Fagan, John J., Bayonne, N. J. Heat-control apparatus. 1,752,663; Apr. 1.
Fagan, John L. (See Schwartz, W. M., Harrison, and Fagan.)
Fahrenwald, Arthur W., Moscow, Idaho, assignor to The Dorr Company, New York, N. Y. Hydraulic classifier. 1,752,791; Apr. 1.
Fairbanks, E. Hayward. (See Sparrow, William T., assignor.)
Faist, Jacob. (See Zwilling, A. J., and Faist.)
Fales, Elisha N., Dayton, Ohio. Device for improving the aerodynamic efficiency of an exhauster fan. 1,752,427; Apr. 1.
Falkenburg, Julius, Neuwied-on-the-Rhine, Germany. Rowing apparatus for gymnastic exercises. 1,752,901; Apr. 1.
Fantz, Fred C., Webster Groves, Mo. Return bend. 1,752,331; Apr. 1.
Fantz, Fred C., Webster Groves, Mo. Clean-out elbow for cracking stills, etc. 1,752,332; Apr. 1.
Faries Manufacturing Company. (See Miller, George L., assignor.)
Farman, Henri et Maurice. (See Waseige, Charles E., assignor.)
Farner, August, Kusnacht-Zurich, Switzerland. Device for disintegrating and conveying materials. 1,752,902; Apr. 1.
Farr, Alfred C., Upland, assignor of one-fourth to No-Greef Products, Incorporated, Muncie, Ind. Door-operating mechanism. 1,753,083; Apr. 1.
Farver, Jonathan, Shipshewanna, Ind. Hinge. 1,752,428; Apr. 1.
Fay, Joseph W., Villa Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Mechanism for working pulpous material. 1,752,480; Apr. 1.
Featheredge Rubber Company. (See Felix, Benjamin B., assignor.)
Fedders Manufacturing Company. (See Williams, Edward T., assignor.)
Felbeck, George T. (See Ray, A. B., and Felbeck.)
Feldman, J. M., Co. Inc. (See Holdeman, Harry R., assignor.)
Felix, Benjamin B., Chicago, Ill., assignor to Featheredge Rubber Company, Inc. Chair cushion. 1,752,295; Apr. 1.
Fellows, Noble L., assignor to Barnes Scale Company, Detroit, Mich. Scale. Des. 80,871; Apr. 1.
Felten & Guilleaume Carlswerk Actiengesellschaft. (See Zapf, Georg, assignor.)
Fildes, Frederick K., Altoona, Pa. Safety locking mechanism. 1,752,634; Apr. 1.
Firestone Tire and Rubber Company, The. (See Russell, Ronald F., assignor.)
Firestone Tire and Rubber Company, The. (See Stevens, William C., assignor.)
Firestone Tire and Rubber Company, The. (See Tenney, Frederick H., assignor.)
Fisk Rubber Company, The. (See Healy, Leon J. D., assignor.)
Fisk Rubber Company, The. (See Midgley, Thomas, assignor.)
Flagge, Philip W., High Point, N. C. Needle drier. 1,752,903; Apr. 1.
Floyd, George, Portsmouth, Ohio. Ringless self-expanding piston. 1,753,113; Apr. 1.
Fluharty, Allan M., assignor of fifteen per cent to G. L. Dixon, Miami, Fla. Sewing-machine threader. 1,753,114; Apr. 1.
Folberth, Frederick G. and W. M., Cleveland, Ohio. Radiator cap. 1,753,003; Apr. 1.
Folberth, William M. (See Folberth, Frederick G. and W. M.)
Folger, Henry C., Waltham, assignor, by mesne assignments, to Waltham System, Inc., Waverley, Mass. Refrigeration cabinet. 1,752,553; Apr. 1.
Fonda, Douglass C., West Orange, N. J., assignor to Nixon Vending and Change Making Machines, Inc., New York, N. Y. Vending cabinet. 1,752,635; Apr. 1.
Forcier, George J., Lakewood, Ohio. Apparatus for cleaning walls. 1,752,664; Apr. 1.
Ford, Henry, assignor to Ford Motor Company, Dearborn, Mich. Auxiliary transmission. 1,752,980; Apr. 1.
Ford, Ira D. (See Clark, J. M., and Ford.)
Ford Motor Company. (See Ford, Henry, assignor.)
Ford Motor Company. (See Wharam, John J., assignor.)
Forney, Scott G. (See Polle, G. A., and Forney.)
Fowler, Clarence B., Queens Village, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone set. 1,752,429; Apr. 1.
Franchetti, Nick. (See Orbin, George, assignor.)
Franklin Railway Supply Company. (See Roberts, M. H., and Peters, assignors.)
Franklin Simon & Company. (See Long, Dorothy, assignor.)
Freeling, Joseph E., et al. (See Thexton, J., jr., and Tomlinson, assignors.)
Freund, Edward, Long Beach, N. Y. Sound reproducer. 1,752,981; Apr. 1.
Friedländer, Daniel, Brussels, Belgium, assignor to Messrs. A. Meursing and E. J. Gratama, Amsterdam, Netherlands. Manufacture of sensitized velvet paper for photographical uses. 1,752,665; Apr. 1.
Friedley-Voshardt Co. (See Voshardt, Herman F., assignor.)
Friedman, Benjamin L., and S. Kovac, Roebling, N. J. Mop head and wringer. 1,752,337; Apr. 1.
Frohman, Emanuel. (See Stewart, Walter C., assignor.)
Fromm, Herbert, Hamburg, Wis. Shock absorber. 1,753,047; Apr. 1.
Frommann, Gustav H. (See Geer, Lawrence S., assignor.)
Fujii, Momotaro, Tokyo, Japan. Therapeutical instrument. 1,752,338; Apr. 1.
Fuller, Frank W., St. Paul, Minn. Reversible radiator hanger. 1,752,296; Apr. 1.
G. C. A. Manufacturing Company, The. (See Grinnell, Harold D., assignor.)
Gabriel Steel Company. (See Zabriskie, William F., assignor.)
Gallagher, George F., assignor to Krem-Ko Company, Chicago, Ill. Bottle or similar article. Des. 80,868; Apr. 1.
Gammeter, John R., Akron, Ohio, assignor to A. G. Spalding and Bros. Making balls. 1,752,735; Apr. 1.
Gardiner, Paul C., Oakland, Calif., assignor to General Electric Company. Amplifier. 1,752,839; Apr. 1.
Gardner-Denver Company, The. (See Clark, Omar E., assignor.)
Garfrell, Charles B., Kansas City, Mo. Wrench. 1,752,430; Apr. 1.
Garwood, Charles B., Linthicum Heights, assignor to Carr-Lowrey Glass Co., Baltimore, Md. Making flat bottles. 1,752,481; Apr. 1.
Gauger, Frank A., and R. W. Johnson, Milwaukee, Wis., assignors, by mesne assignments, to Time-O-Stat Controls Company. Water-heater appliance. 1,752,840; Apr. 1.
Gaw-O'Hara Envelope Company. (See Olgay, Albert, assignor.)
Gay, Frazer W., Newark, N. J. Protective system for transmission circuits. 1,752,666; Apr. 1.

Gear Grinding Company, Limited, The. (See Snarry, John W., assignor.)
Geer, Lawrence S., New York, assignor to G. H. Frommann, Concord, N. Y. Display device. 1,753,004; Apr. 1.
General Aniline Works, Inc. (See Kammerer, Hans, assignor.)
General Electric Company. (See Alexanderson, Ernst F. W., assignor.)
General Electric Company. (See Alterthum, Hans, assignor.)
General Electric Company. (See Blume, Louis F., assignor.)
General Electric Company. (See Chutter, George A., assignor.)
General Electric Company. (See Cree, George G., assignor.)
General Electric Company. (See Cumberland, John C., assignor.)
General Electric Company. (See de Jong, Hendrik, assignor.)
General Electric Company. (See Gardiner, Paul C., assignor.)
General Electric Company. (See Gittings, William N., assignor.)
General Electric Company. (See Handschin, Eugen, assignor.)
General Electric Company. (See Hösel, Paul, assignor.)
General Electric Company. (See Hoxie, Charles A., assignor.)
General Electric Company. (See Otis, Albert N., assignor.)
General Electric Company. (See Park, Robert H., assignor.)
General Electric Company. (See Rohkohl, Wilhelm, assignor.)
General Electric Company. (See Ruggles, William A., assignor.)
General Electric Company. (See Seede, John A., assignor.)
General Electric Company. (See Stevenson, Alexander R., jr., assignor.)
General Electric Company. (See Taylor, Laurens A., assignor.)
General Electric Company. (See Trombetta, Panfilo, assignor.)
General Electric Company. (See Wieseman, Robert W., assignor.)
General Electric Company. (See Zabel, William P., assignor.)
General Electric Company. (See Zelt, Elmer J., assignor.)
General Refractories Company. (See Trostel, Louis J., assignor.)
General Street Signal Corporation. (See Ruddick, John J., assignor.)
Genkin, Vladimir, Marseille, France. Protective system. 1,752,947; Apr. 1.
Gentry, Robert R. (See Williamson, T. W., and Gentry.)
George, Jerome R., assignor to Morgan Construction Company, Worcester, Mass. Looping trough for rolling mills. 1,752,841; Apr. 1.
Georgia Cushion and Wrapper Company. (See Woodall, John H., assignor.)
Gerbracht, Wilford B., Ames, Iowa. Take-off and landing device for aeroplanes. 1,752,554; Apr. 1.
Gilburg, Roy O., assignor to Marathon Electric Mfg. Co., Wausau, Wis. Coin-controlled switch-operating mechanism. 1,752,592; Apr. 1.
Gilchrist Company, The. (See Jameson, Thomas, assignor.)
Gill, John O., Barnesboro, Pa. Switch-throw stand. 1,752,736; Apr. 1.
Gillette, Maude M., New York, N. Y. Support for pictures, cards, etc. 1,752,297; Apr. 1.
Gillinder & Sons, Inc. (See Beyer, Henry L., assignor.)
Giordano, John, San Francisco, Calif. Tile-roof closure. 1,752,593; Apr. 1.
Gisclon, Pierre. (See David, A. G., and Gisclon.)
Gittings, William N., Upper Darby, Pa., assignor to General Electric Company. Control system. 1,752,842; Apr. 1.
Glens Falls Machine Works. (See Chappell, Fred B., assignor.)
Globe Lighting Fixture Mfg. Co. (See Rosenblatt, Isidor, assignor.)
Glover, W. T., and Company Limited. (See Beaver, Charles J., assignor.)
Glueck, John, West New York, N. Y., assignor of one-half to R. Hunkle, Grantwood, N. J. Brake. 1,752,377; Apr. 1.
Gobble, Lew W., Grand Junction, Colo. Airplane-wing section. 1,752,378; Apr. 1.
Going, George G., Middletown, Conn., assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. 1,752,482; Apr. 1.
Goldman, S. W., et al. (See Schultis, Charles F., assignor.)
Goodman, Lawrence M., Detroit, Mich. Emblem or similar article. Des. 80,869; Apr. 1.
Goodrich, William F., Detroit, Mich. Ramp structure. 1,753,115; Apr. 1.
Goodwin, John B., San Francisco, Calif. Internal-combustion engine. 1,752,379; Apr. 1.
Goss Printing Press Company. (See Evensen, William, assignor.)
Gould & Eberhardt. (See Zimmermann, William F., assignor.)
Grady, Frank R., Caldwell, assignor to Eureka Fire Hose Manufacturing Company, Jersey City, N. J. Uniting tubular members. 1,753,005; Apr. 1.
Graetzer, Otto, Zurich-Zollikon, Switzerland. Automatic cistern for liquids. 1,752,986; Apr. 1.
Graner, Hans. (See Ossanna, J., Graner, and Hofmann.)
Grant, Albert E., assignor to Grant Heat Machine Corporation, New York, N. Y. Oil feeding and burning apparatus. 1,753,145; Apr. 1.
Grant, Albert E., New York, N. Y., assignor to Grant Heat Machine Corporation, New York, N. Y. Oil-burning apparatus. 1,753,146; Apr. 1.
Grant Heat Machine Corporation. (See Grant, Albert E., assignor.)
Grant, Thomas, Gillespie, Ill. Drill. 1,752,524; Apr. 1.
Gratamm, E. J., et al. (See Friedländer, Daniel, assignor.)
Green, Walter H., Chicago, Ill., assignor, by mesne assignments, to The Permutit Company, New York, N. Y. Process and apparatus for softening water. 1,752,339; Apr. 1.
Greene, Le Roy, Chicago, Ill. Vending machine. 1,752,376; Apr. 1.
Greenlee Bros. & Co. (See Abramson, John H., assignor.)
Greffin, Philipp, assignor to Melone-Bovey Lumber Co., Minneapolis, Minn. Printing die. 1,752,298; Apr. 1.
Gregg, Albert S. (See Bates, Bethel J., assignor.)
Gress, Henry, South Ozone Park, Long Island, N. Y. Key and license holder. 1,752,380; Apr. 1.
Grinnell, Harold D., assignor to The G. C. A. Manufacturing Company, Pittsfield, Mass. Device for placing and removing lamp bulbs. 1,752,737; Apr. 1.
Grinnell, Harold D., assignor to The G. C. A. Manufacturing Company, Pittsfield, Mass. Fuse tongs. 1,753,181; Apr. 1.
Gross, Benjamin & Edward J., Co. (See Gross, Edward J., assignor.)
Gross, Edward J., New Rochelle, N. Y., assignor to Benjamin & Edward J. Gross Co., Inc., New York, N. Y. Finger ring or article of similar nature. Des. 80,833; Apr. 1.
Grout, Martin B., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Winding machine. 1,753,187; Apr. 1.
Gulf Production Company. (See Poole, G. A., and Forney, assignors.)
Gunnlaugsson, Skúli, Rio Vista, Calif. Tobacco pipe. 1,752,431; Apr. 1.
Haaf, Henry, Mount Vernon, N. Y. Wrist support. 1,753,006; Apr. 1.
Haerman, Maximillian C., Cleveland, Ohio, assignor to Theo. A. Kochs Company, Chicago, Ill. Corner sign. Des. 80,834; Apr. 1.
Hageman, Aaron M., Bloomfield, and A. F. Lindstrom, Nutley, N. J., assignors to Westinghouse Lamp Company. Composition for coating vitreous articles. 1,752,792; Apr. 1.
Hahnemann, Paul R., assignor to Niagara Machine and Tool Works, Buffalo, N. Y. Clutch. 1,752,843; Apr. 1.
Haines Hosiery Mills, Inc. (See Paget, Harold F., assignor.)
Hall, Bicknell, Quincy, and E. F. Hathaway, Wellesley, assignors to Shawmut Engineering Company, Dorchester, Mass. Winding mechanism particularly adapted for pattern-setting frames. 1,752,738; Apr. 1.
Hall, Frank W., Port Arthur, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y. Illuminating oil and making same. 1,752,299; Apr. 1.
Hall, Hartwell & Co. Inc. (See Hunter, Ralph, assignor.)
Halloran, Ralph A., Berkeley, W. N. Davis, Oakland, and G. A. Davidson, Berkeley, assignors to Standard Oil Company of California, San Francisco, Calif. Continuously hydrolyzing acid sludge. 1,752,555; Apr. 1.
Hammarlund, Lloyd A., Rockville Center, N. Y., assignor to The Hammarlund Manufacturing Company, Inc. Variable coupling device. 1,753,182; Apr. 1.
Hammarlund Manufacturing Company, The. (See Hammarlund, Lloyd A., assignor.)
Hammers, William J., assignor to Liverance & Van Antwerp, Grand Rapids, Mich. Welding-rod coating. 1,752,793; Apr. 1.
Handschin, Eugen, Baden, Switzerland, assignor to General Electric Company. System of induction-motor control. 1,752,904; Apr. 1.
Handy, Levin G., Mountain View, N. J. Toy trackage. 1,753,147; Apr. 1.
Hannegan, Thomas P., St. Paul, Minn. Crank-case heater. 1,752,594; Apr. 1.
Hansen, Charles C., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Drill-feeding device. 1,753,007; Apr. 1.
Hansen, Isak, New Rochelle, N. Y. Safety catch. 1,752,987; Apr. 1.
Hanson, Howard V., Walla Walla, Wash. Harness. 1,752,525; Apr. 1.
Hargreaves, Harold, Burnley, assignor to Jackson Boilers Limited, Leeds, England. Water boiler. 1,752,905; Apr. 1.
Harrison, Alma J. (See Schwartz, W. M., Harrison, and Fagan.)
Harrison, Arthur W., assignor of one-half to L. D. Kay, Los Angeles, Calif. Electric shock absorber. 1,752,844; Apr. 1.

Harrison, Burt S., Brooklyn, N. Y. Oven heating and circulating system. 1,752,483; Apr. 1.
Harrison, Walton, New York, N. Y. Magnetic loading for twin conductors. 1,752,556; Apr. 1.
Hart, Frederick A., New Britain, Conn., assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. 1,752,484; Apr. 1.
Harth, C. A. (See Nordgran, James C., assignor.)
Hartley, Ralph V. L., South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Secrecy system. 1,752,485; Apr. 1.
Hartley, Ralph V. L., South Orange, N. J., assignor to Bell Telephone Laboratories Incorporated, New York, N. Y. Magnetic device. 1,752,486; Apr. 1.
Hatfield, Frank A., assignor of fifty-one per cent to W. H. Logan and forty-nine per cent to E. R. Wolcott, Los Angeles, Calif. Apparatus for pumping liquids. 1,752,739; Apr. 1.
Hathaway, Edgar F. (See Hall, B., and Hathaway.)
Haussler, William J., Brooklyn, N. Y. Harmonica. 1,752,988; Apr. 1.
Haynes, Merritt W., Cranford, assignor to American Type Founders Company, Jersey City, N. J. Adjustable top for type cabinets. 1,753,048; Apr. 1.
Head, Robert, Yonkers, N. Y., assignor to The Aeolian Company. Perforating machine and the like. 1,753,148; Apr. 1.
Healy, Leon J. D., Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Cement and making same. 1,752,557; Apr. 1.
Heany Laboratories, Inc. (See Barnett, David A., assignor.)
Heckeroth, William C., assignor to Erie City Iron Works, Erie, Pa. Brick-wall construction. 1,752,558; Apr. 1.
Hegeman, Joseph F. (See Russell, A., and Hegeman.)
Heitman, Herbert, Woodhaven, assignor to The Fred'k Page Contracting Company, New York, N. Y. Incinerator. 1,753,008; Apr. 1.
Heller, William M. (See Stein, C., and Heller.)
Helwig, Wilhelm A. A. H., assignor of one-third to S. Dickman, Detroit, Mich. Ventilating port. 1,752,794; Apr. 1.
Henderson, Jack D., assignor to Moving Colour Signs Limited, London, England. Illuminative advertising apparatus. 1,753,049; Apr. 1.
Henken, Samuel L. (See Rothenberg, H., and Henken.)
Hennessy, Charles C., Indianapolis, Ind. Writing board. 1,752,989; Apr. 1.
Henry, Earl S., Medford, Okla. Steam scoring machine for ice. Re17,630; Apr. 1.
Henry, Harold T. (See Rumford, F., and Henry.)
Hepburn, William M., assignor to The Surface Combustion Company, Inc., Toledo, Ohio. Conveyer for use with furnaces. 1,752,432; Apr. 1.
Hermann Manufacturing Company, The. (See Larson, Oscar E., assignor.)
Herold, Walter F., Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn. Producing spring rings. 1,752,982; Apr. 1.
Herold, Walter F., Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn. Caster. 1,752,983; Apr. 1.
Herrmann, Robert, New York, N. Y. Fitted traveling bag. 1,752,948; Apr. 1.
Hersam, Conrad O. (See Logue, Charles H., assignor.)
Herzbrun, Isadore, et al. (See Schultis, Charles F., assignor.)
Hess, Harry W., assignor to Carburetor Control Company, Los Angeles, Calif. Mixing throttle valve. 1,753,009; Apr. 1.
Hess, Robert F. W., Detroit, Mich. Parcel receiver. 1,752,984; Apr. 1.
Hewetson, Henry H., Elizabeth, N. J., assignor to Standard Oil Development Company, New York, N. Y. Distillation of hydrocarbons. 1,753,149; Apr. 1.
Hibbert, Ernest, Goulburn, New South Wales, Australia. Tire for motor-vehicle wheels. 1,752,845; Apr. 1.
Hiering, William C., assignor to J. E. Mergott Company, Newark, N. J. Cigarette-package holder. Des. 80,835; Apr. 1.
Hill, Frederick H., assignor to The Monogram Shop, Los Angeles, Calif. Ring. Des. 80,836; Apr. 1.
Hillebrandt, Johan E., Brooklyn, N. Y. Stringed instrument. 1,752,906; Apr. 1.
Hinckley, Frank C., Stratford, assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn. Sound amplifier. 1,752,526; Apr. 1.
Hinds, Daniel C., Sioux Falls, S. Dak., and O. Q. Hinds, assignors to Ryan Manufacturing Corporation, Chicago, Ill. Ditch cutter for graders. 1,753,150; Apr. 1.
Hinds, Orville Q. (See Hinds, Daniel C. and O. G.)
Hines, James F., Lakewood, Ohio. Molding flask. 1,752,907; Apr. 1.
Hinnekens, Florent, assignor to Van Vlaanderen Machine Company, Paterson, N. J. Finishing machine. 1,752,949; Apr. 1.
Hirschner, Karl, assignor to the firm Schmidt & Melmer, Weidenau-on-the-Sieg, Germany. Refuse-handling apparatus. 1,752,950; Apr. 1.
Hoag, Charles I., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Sawing machine. 1,752,487; Apr. 1.
Hoche, Adam, assignor to Litmo Adhesive & Products Company, Lynn, Mass. Moldable composition. 1,753,010; Apr. 1.
Hocking Glass Company, The. (See Barbiers, Ferdinand S., assignor.)
Hoe, R., & Co. (See Lamatsch, Frederick, assignor.)
Hoffmann, Otto, Woodhaven, assignor to Art Fixtures, Inc., New York, N. Y. Strap for lighting fixtures or similar articles. Des. 80,837; Apr. 1.
Hoffmann, Otto, Woodhaven, assignor to Art Fixtures, Inc., New York, N. Y. Corner ornament for lighting fixtures or similar articles. Des. 80,838; Apr. 1.
Hofmann, Fritz. (See Ossanna, J., Graner, and Hofmann.)
Hohn, Max P. E., assignor to the firm "Universelle" Cigarettenmaschinenfabrik J. C. Muller & Co., Dresden, Germany. Means for counter rolling a cigarette paper. 1,752,340; Apr. 1.
Hohn, Max P. E., assignor to the firm "Universelle" Cigarettenmaschinenfabrik J. C. Muller & Co., Dresden, Germany. Sharpening-roller arrangement for the revolving sickle knives in cigarette-rod machines. 1,752,341; Apr. 1.
Höhne, Wilhelm, Berlin-Charlottenburg, assignor to Deutsche Telephonwerke und Kabelindustrie Aktiengesellschaft, Berlin, Germany. Tubular postal section. 1,753,169; Apr. 1.
Holdeman, Harry R., assignor to J. M. Feldman Co. Inc., Los Angeles, Calif. Panel for lighting fixtures or similar articles. Des. 80,839; Apr. 1.
Hollenbeck, Harold W., Kirkland, assignor to Durable Mat Company, Seattle, Wash. Fexible mat. 1,752,846; Apr. 1.
Hollindale, Wilfred H., assignor to Ternstedt Manufacturing Company, Detroit, Mich. Window-regulator handle or the like for an automotive vehicle. Des. 80,840; Apr. 1.
Hollingsworth, Ira M. (See Hollingsworth, Valorus S., assignor.)
Hollingsworth, Valorus S., assignor of one-half to I. M. Hollingsworth, Los Angeles, Calif. Windmill. 1,752,847; Apr. 1.
Holmes, Daisy N., executrix. (See Holmes, William T.)
Holmes, Elbridge R., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Let-off mechanism for looms. 1,752,488; Apr. 1.
Holmes, William T., deceased; D. N. Holmes, executrix, assignor to Monitor Controller Company, Baltimore, Md. Electric-motor starter. 1,753,116; Apr. 1.
Hoover, Charles P., Columbus, Ohio, and F. A. Downes, New York, N. Y. Agitation and settling process. 1,752,795; Apr. 1.
Hormes, William T., Baltimore, Md. Display rack. 1,752,595; Apr. 1.
Horton Manufacturing Company, The. (See Thorpe, S. T., and Peterson, assignors.)
Hortvet, Richard M., assignor to Mahr Manufacturing Company, Minneapolis, Minn. Rotary forging furnace. 1,752,433; Apr. 1.
Hösel, Paul, Charlottenburg, Germany, assignor to General Electric Company. Balanced valve. 1,752,908; Apr. 1.
Hosking, Robert, Berkley, Va. Signal device. 1,753,117; Apr. 1.
Howaldtswerke Aktiengesellschaft. (See Degn, Paul, assignor.)
Howard, Albert L., Hollis, Alaska. Flotation machine. 1,752,434; Apr. 1.
Howard, Albert P., Norwalk, Ohio. Measuring device. 1,752,527; Apr. 1.
Howard, James J., Stamford, Conn. Piston ring. 1,752,848; Apr. 1.
Howe, James M., assignor to The Eaton Axle & Spring Company, Cleveland, Ohio. Automobile bumper. 1,752,381; Apr. 1.
Howe Scale Company, The. (See Starr, Morton H., assignor.)
Howell, Albert S., assignor to The Bell & Howell Company, Chicago, Ill. Picture-projecting machine. 1,752,951; Apr. 1.
Howie, John L., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Variable resistance. 1,753,188; Apr. 1.
Hoxie, Charles A., Schenectady, N. Y., assignor to General Electric Company. Loud-speaker. 1,752,909; Apr. 1.
Hubbard, Francis A., Teaneck, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Method and apparatus for comparing and adjusting the electrical length of paths for the transmission of electrical energy. 1,752,528; Apr. 1.
Hubert, Emil, Alexander Röst-Grande, and E. Correns, Elberfeld, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Replacing the water in a water-moist cellulose by an organic liquid and the product thereof. 1,752,596; Apr. 1.
Hudson, George, Boongalle, Merbein South, Victoria, Australia. Tractor plow. 1,752,849; Apr. 1.
Hudson-Sharp Machine Company. (See Campbell, Samuel J., assignor.)
Huffman, James C., Battle Creek, Mich. Display rack. 1,752,935; Apr. 1.
Hughes, Robert H. S., Baltimore, Md. Stoker attachment. 1,753,050; Apr. 1.
Hunkle, Rene. (See Glueck, John, assignor.)

Hunter, Ralph, New York, assignor to Hall, Hartwell & Co. Inc., Troy, N. Y. Collar. 1,752,796; Apr. 1.
Hurd, Charles B., Santa Ana, Calif. Cupboard latch. 1,752,559; Apr. 1.
Hutchings, Joseph L., Olean, N. Y. Valve. 1,752,667; Apr. 1.
Hutchings, Le Roi E., Buffalo, assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y. Vertical record file. 1,752,300; Apr. 1.
Hutchinson, Edward, jr., Philadelphia, Pa., assignor, by mesne assignments, to Saftigard-Nudriaire, Inc., Wilmington, Del. Drying cabinet. 1,752,797; Apr. 1.
Hutton, Edward S., Miami, Fla. Backing stop for vehicles. 1,752,435; Apr. 1.
Hydro-Check Corporation, The. (See Ackerman, E. W., and Nicholson, assignors.)
Hyman, Henry. (See Rothenberg, H., and Henken, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Hubert, E., Röst-Grande, and Correns, assignors.)
Ice Cream Smack Corporation. (See Myers, W. R., and Opitz, assignors.)
Imperial Brass Manufacturing Company, The. (See Dobrick, August C., assignor.)
Ingersoll-Rand Company. (See Armstrong, Lloyd Van H., assignor.)
Ingersoll-Rand Company. (See Hansen, Charles C., assignor.)
Ingersoll-Rand Company. (See Thomas, Floyd H., assignor.)
Intercontinental Rubber Company. (See Spence, David, assignor.)
International Motor Company. (See Queeney, Frank E., assignor.)
International Time Recording Company of New York. (See Bryce, James W., assignor.)
Internationale Siegwartbalkengesellschaft in Luzern. (See Zehnder, Paul, assignor.)
Israel, Sidney, Houston, Tex. X-ray centering device. 1,753,151; Apr. 1.
Izumi, Torazo, Tokyo, Japan. Device for manufacturing a tape having braid-like wrinkles or plaits from solidifiable viscous solution. 1,752,636; Apr. 1.
Jackson Boilers Limited. (See Hargreaves, Harold, assignor.)
Jackson, Edwin, Indianapolis, Ind. Hub structure for pneumatic wheels. 1,752,740; Apr. 1.
Jackson, Maunsell B., Toronto, Ontario, Canada. Vegetative device. 1,752,597; Apr. 1.
Jackson, William. (See Rowley, C. D., and Jackson.)
Jacobsohn, Isadore M., Chicago, Ill., and S. Truscott, Birmingham, Ohio. Aircraft covering. 1,752,637; Apr. 1.
Jacobson, David L., assignor to The Koppers Company, Pittsburgh, Pa. Gas-purification process. 1,752,382; Apr. 1.
Jaeger, Maximilian, jr., St. Albans, N. Y. Wall construction and structural unit therefor. 1,752,342; Apr. 1.
Jagschitz, Konrad, Mainz, assignor to Maschinenfabrik Augsburg-Nuernberg A. G., Nuremberg, Germany. Gas reservoir. 1,752,383; Apr. 1.
Jameson, Thomas, assignor to The Gilchrist Company, Newark, N. J. Ice-cream disher. 1,752,560; Apr. 1.
Jamison, William F., Los Angeles, Calif. Hypodermic syringe. 1,752,384; Apr. 1.
Jay, Charles B. (See Stevens, W. E., and Jay.)
Jeandheur, George E., Great Neck, N. Y. Weather stripping. 1,752,990; Apr. 1.
Jelinek, Rudolph, Chicago, Ill. Display device. 1,752,952; Apr. 1.
Johansson, Sven A. F., and A. O. Dahlström, Stockholm, Sweden. Controlling pressure gauge. 1,753,118; Apr. 1.
Johnson, Alfred A., Sacramento, Calif. Automatic hydraulic transmission. 1,752,385; Apr. 1.
Johnson, Alfred E., assignor to The Weepah Manufacturing Corporation, Denver, Colo. Slug eliminator for vending machines. 1,752,798; Apr. 1.
Johnson, Edward, Oakland, Calif. Key duplicator. 1,752,668; Apr. 1.
Johnson, George T., and H. W. Stertsbach, assignors to The Buckeye Steel Castings Company, Columbus, Ohio. Bolster. 1,752,741; Apr. 1.
Johnson, Joseph B., Alfalfa, Okla. Four-wheeled-trailer hitch. 1,752,638; Apr. 1.
Johnson, Lloyd E. (See Sparks, W., and Johnson.)
Johnson, Maud B. (See Belcher, Gertrude, assignor.)
Johnson, Roy W. (See Gauger, F. A., and Johnson.)
Johnson, Wilfred G., assignor to The Colson Company, Elyria, Ohio. Caster. 1,752,742; Apr. 1.
Johnson, Wilfred G., assignor to The Colson Company, Elyria, Ohio. Caster. 1,753,183; Apr. 1.
Jolly, James, Deane, Bolton, England. Ring spinning and doubling frame. 1,753,119; Apr. 1.
Jones, Elmore D. (See Jones, Winfield S., assignor.)
Jones, Frank S., Seattle, Wash. Electrical circuit. 1,752,639; Apr. 1.
Jones, William L. M., Winnipeg, Manitoba, Canada. Shocker. 1,752,301; Apr. 1.
Jones, Winfield S., Brea, assignor of fifty per cent to E. D. Jones, Long Beach, Calif. Fishing tool. 1,752,669; Apr. 1.
Jongedyk, Ralph, Hinsdale, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Wrapping apparatus. 1,752,489; Apr. 1.
Jonson, John G., Seattle, Wash. Building window frame. 1,753,152; Apr. 1.
Jorgensen, Edmund N., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Electric welding. 1,752,598; Apr. 1.
Junkers, Hugo. (See Zindel, Ernst, assignor.)
Junkers, Hugo, Dessau, Germany. Riveting device. 1,752,799; Apr. 1.
Junkers, Hugo, Dessau, Germany. Assembly unit. 1,753,051; Apr. 1.
K-P-C Company. (See Day, Alva G., assignor.)
Kähne, Ernst, assignor to Theodor Kähne & Söhne, Rathenow, Germany. Manufacturing spectacle frames from tortoise shell and similar valuable material. 1,752,958; Apr. 1.
Kähne, Theodor, & Söhne. (See Kähne, Ernst, assignor.)
Kall, Myrtle L., Alexandria Bay, N. Y. Window fixture. 1,752,743; Apr. 1.
Kämmerer, Hans, Mannheim, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Dyestuffs containing chromium. 1,753,120; Apr. 1.
Kann, Louis J., Cleveland, Ohio. Worker's lamp. 1,752,343; Apr. 1.
Kappel, Adolph, Brooklyn, N. Y. Clothesline pulley. 1,753,084; Apr. 1.
Karcher, John C., Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Changing the properties of silicon steel. 1,752,490; Apr. 1.
Karfiol, Edward, Brooklyn, N. Y. Dolly. Des. 80,841; Apr. 1.
Karg, Rudolf, and J. Weiss, Lucerne, Switzerland. Producing insulating sheets. 1,752,561; Apr. 1.
Kari-Keen Manufacturing Company. (See Wilson, William W., assignor.)
Karlslyst, Oscar, Sacramento, Calif. Screen and window. 1,752,640; Apr. 1.
Karsten, Karl G., New York, N. Y. Radio program detector. 1,752,302; Apr. 1.
Kass, Samuel M., Philadelphia, Pa. Safety stand for use with gas stoves. 1,752,562; Apr. 1.
Kastenhuber & Lebrfeld. (See Woodward, John E., assignor.)
Kay, L. D. (See Harrison, Arthur W., assignor.)
Kehler, Adele W., San Francisco, Calif. Combination tray. Des. 80,842; Apr. 1.
Kelley, Edward W. (See Weaver, G. E., and Kelley.)
Kelley, Leo A., Elmhurst, N. Y., assignor to American Telephone and Telegraph Company. Interference neutralizer for alternating-current telegraph systems. 1,752,303; Apr. 1.
Kelley, Leo A., Elmhurst, N. Y., assignor to American Telephone and Telegraph Company. Reduction of atmospheric interference. 1,752,844; Apr. 1.
Kelley, Leo A., Elmhurst, N. Y., assignor to American Telephone and Telephone Company. Reduction of atmospheric disturbance. 1,752,845; Apr. 1.
Kellogg Switchboard and Supply Company. (See Grout, Martin B., assignor.)
Kellogg Switchboard and Supply Company. (See Howie, John L., assignor.)
Kelly, Leo A., Elmhurst, N. Monk, New York, N. Y., and V. P. Thorp, River Edge, N. J., assignors to American Telephone and Telegraph Company. Interference neutralizer for alternating-current telegraph systems. 1,752,846; Apr. 1.
Kemp, C. M., Mfg. Co., The. (See Kemp, William W., assignor.)
Kemp, William W., assignor to The C. M. Kemp Mfg. Co., Baltimore, Md. Muffle furnace and operating the same. 1,752,800; Apr. 1.
Ken Wel Sporting Goods Co. (See Dieterle, Frank, assignor.)
Kent, George P., Grove Park, London, England. Device for carrying maps. 1,752,910; Apr. 1.
Kerr, Robert M., assignor to Detroit Dental Manufacturing Company, Detroit, Mich. Mixing bowl. 1,753,121; Apr. 1.
Kielsmeier, Reuben, Baldwin Park, Calif. Water fountain. 1,753,122; Apr. 1.
Kimball, A., Company. (See Pope, Paul M., assignor.)
Kincaid, Jesse B. (See Prange, Maurice N., assignor.)
Kindervater, Julius, Brooklyn, N. Y. Locomotive connecting rod. 1,752,954; Apr. 1.
King, Howard K., Philadelphia, Pa., assignor to Chambers Brothers Company. Sheet-feeding machine. 1,752,744; Apr. 1.
Kingman, Russell B., Orange, assignor to Metal Textile Corporation, West Orange, N. J. Heat-absorbing medium. 1,752,670; Apr. 1.
Kingsport Press, Inc. (See Smith, Walter F., assignor.)
Kinkead, Fullerton S., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telegraph repeating system. 1,752,486; Apr. 1.
Kitching, Cyrus, Chicago, Ill. Tone-producing triangle. 1,752,529; Apr. 1.
Kivley, Ray C., Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Braiding machine. 1,752,487; Apr. 1.
Kjellgren, Bengt R. F., Cleveland, Ohio. Treating aluminous materials for the production of aluminum sulphate and alumina therefrom. 1,752,599; Apr. 1.
Kjellgren, Bengt R. F., Cleveland, Ohio. Treating aluminous materials. 1,752,641; Apr. 1.

Klaiber, Edward C., Memphis, Tenn., assignor to National Washboard Company, Chicago, Ill. Washboard. 1,752,745; Apr. 1.
Kleinheksel, Frank. (See Becker, C. and Kleinheksel.)
Kliesrath, Victor W. (See Bragg, C. S., and Kliesrath.)
Klinger, James D., and C. L. Boyle, Detroit, Mich. Composition for and process of cleaning metal. 1,752,746; Apr. 1.
Knight, Herbert M., Montclair, N. J. Structural element. 1,752,671; Apr. 1.
Kochendoerfer, Gerd, assignor to Deutsche Gold & Silber Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany. Introduction of iodine into pyridine derivatives. 1,753,170; Apr. 1.
Kochs, Theo. A., Company. (See Haerman, Maximillian C., assignor.)
Kohout, George A., Chicago, Ill. Power-feed stoker. 1,752,801; Apr. 1.
Kolm, Ludwig, Berlin, Germany, assignor to Aktiengesellschaft "Kolmag," Glaris, Switzerland. Apparatus for the winding of endless bands. 1,753,153; Apr. 1.
Kopellowitsch, Jakok, Baden, and J. Stoeckiin, Zurich, assignors to A. G. Brown Boveri & Cie., Baden, Switzerland. Apparatus for detecting grounds. 1,752,991; Apr. 1.
Koppers Company, The. (See Becker, J., and Van Ackeren, assignors.)
Koppers Company, The. (See Jacobson, David L., assignor.)
Korn, Franklin A., Elizabeth, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 1,752,438; Apr. 1.
Kottusch, Emil, Detroit, Mich. Piston. 1,752,672; Apr. 1.
Kovac, Stephen. (See Friedman, B. L., and Kovac.)
Kovats, John, Bridgeport, Conn. Folding table. 1,752,304; Apr. 1.
Kranz, Harry W., assignor, by mesne assignments, to The Cleveland Welding Company, Cleveland, Ohio. Disk wheel. 1,752,992; Apr. 1.
Krebs, Edouard, Oslo, Norway. Cell for electrolyzing solutions of alkali chlorides. 1,753,123; Apr. 1.
Krell, Otto, Berlin-Dahlem, Germany. Hangar for airships. 1,752,911; Apr. 1.
Krem-Ko Company. (See Gallagher, George F., assignor.)
Kristofek, Frank J., assignor to Brown & Bigelow, St. Paul, minn. Pencil tip. 1,752,563; Apr. 1.
Kronquest, Alfred L., Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Can-closing machine. 1,752,912; Apr. 1.
Krumm, William L., Chicago, Ill. Box. Des. 80,843; Apr. 1.
Kurowski, Alfred G. F., Brooklyn, assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 1,752,491; Apr. 1.
Kurtz, Thomas N. (See Loftus, F. H., and Kurtz.)
Kyrides, Lucas P., Buffalo, assignor to National Aniline & Chemical Co., Inc., New York, N. Y. Making quinaldine. 1,752,492; Apr. 1.
Ladd, George T., Pittsburgh, Pa., assignor to Ladd Water Tube Boiler Company, New York, N. Y. Waste-heat boiler. 1,752,673; Apr. 1.
Ladd Water Tube Boiler Company. (See Ladd, George T., assignor.)
Lahay, Dell J., Carney, Mich. Roundabout. 1,752,600; Apr. 1.
Lake, James, jr., Brooklyn, N. Y. Hat. 1,753,052; Apr. 1.
Lamatsch, Frederick, Grantwood, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y. Edition-printing slug holder and depressible margin bar. 1,752,565; Apr. 1.
Land, Charles H., assignor of one-half to W. H. Wilson, Detroit, Mich. Tractor trailer. 1,753,011; Apr. 1.
Lang, Theo, Munich, assignor to the firm Hans Trinkl Uhren- und Apparatefabrik G. m. b. H., Augsburg, Bavaria, Germany. Cartridge cut-out. 1,752,955; Apr. 1.
Langtin, John S. (See Blette, Henry C., assignor.)
Lappin, Michael T., New York, N. Y. Check protector. 1,752,674; Apr. 1.
Larner, Chester W., Philadelphia, Pa., assignor to I. P. Morris and De La Vergne, Inc. Sleeve valve. 1,752,489; Apr. 1.
Larsen, Arnold L. (See Colby, F. B., and Larsen.)
Larsen, Louis H., Union City, N. J., and C. W. Nixon, New York, N. Y. Handle-arresting mechanism for coin-controlled machines. 1,752,643; Apr. 1.
Larsen, Louis H., Union City, N. J., and S. C. McKeown, Mount Vernon, assignors to Nixon Vending and Change Making Machines, Inc., New York, N. Y. Transmission mechanism for vending or like machines. 1,752,642; Apr. 1.
Larson, Oscar E., assignor to The Hermann Manufacturing Company, Lancaster, Ohio. Kiln roller. 1,752,675; Apr. 1.
Latorraca, Giuseppe. (See Antizzo, G., and Latorraca.)
Lauro, Joseph, South Miami, assignor of one-half to R. Ragozzino, Miami, Fla. Automobile tire lock. 1,753,124; Apr. 1.
Lautenschläger, Carl L., Frankfort-on-the-Main, and M. Bockmühl and R. Schwabe, Hochst-on-the-Main, and Germany, assignors, by mesne assignments, to Winthrop Chemical Company, New York, N. Y. Solution of medicament and preparing same. 1,752,805; Apr. 1.
Lavarack, Frederick C., Montclair, N. J., and D. W. Richards, Roanoke, Va. Railway signaling. 1,752,493; Apr. 1.
Layng, Henry G., deceased, Chicago, Ill., by R. A. Layng, Brooklyn, N. Y., executrix. Coal-briquette machine. 1,752,644; Apr. 1.
Layng, Rosa A., executrix. (See Layng, Henry G.)
Layton, Harry B., assignor to G. W. Baker Machine Company, Wilmington, Del. 1,752,440. Apr. 1.
Lederer, Ernest A., East Orange, N. J., assignor to Westinghouse Lamp Company. Electron-discharge device and getter therefor. 1,752,747; Apr. 1.
Lederer, Ernest A., East Orange, N. J., assignor to Westinghouse Lamp Company. Prevention of electrical leakage. 1,752,748; Apr. 1.
Lederman, Max, New York, N. Y. Garter. 1,753,125; Apr. 1.
Lee, Frank N., Dupont, Ga. Convertible auto seat. 1,752,441; Apr. 1.
Lee, Hannah H., assignor of one-third to F. R. Markert, St. Paul, Minn. Window ventilator. 1,752,913; Apr. 1.
Lehman, Max. (See Nagle, W. G., and Lehman.)
Lehon Company, The. (See Moone, Albert E. F., assignor.)
Leibe, Frank A., Dunellen, N. J., assignor to American Telephone and Telegraph Company. Reduction of atmospheric disturbance. 1,752,847; Apr. 1.
Leibe, Hugo, Baltimore, Md. Cork-filled fabric and making same. 1,752,914; Apr. 1.
Leiman, Henry, Tampa, Fla. Wooden cigar box. 1,752,601; Apr. 1.
Letreux, Albert, Constantine, Algeria. Apparatus for automatically counting the volumes of granulous materials passing through the same. 1,752,602; Apr. 1.
Leven, Albert H., Newark, N. J., assignor to De Luxe Metal Furniture Company. Bracket for cabinets. 1,753,012; Apr. 1.
Levy, Stanley I., London, England. Electrolysis of ferrous chloride. 1,752,348; Apr. 1.
Lex, Rudolf, assignor of one-half to K. Zeyen, Cologne, Germany. Apparatus for spraying pulverulent material. 1,752,956; Apr. 1.
Ligon, Arthur L., Fort Stockton, Tex. Guide device. 1,753,126; Apr. 1.
Lilleberg, Tideman M., assignor to The Nye Tool & Machine Works, Chicago, Ill. Thread-cutting device 1,752,915; Apr. 1.
Linaker, Frederick W., and T. M. Bruback, Du Bois, Pa. Fittings and pipe system for soot cleaners. 1,752,442; Apr. 1.
Lindegren, Carl J., Providence, R. I., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Steel lay brace. 1,752,443; Apr. 1.
Lindmark, Elmer S., New York, N. Y. Conductor-holding clip. 1,753,013; Apr. 1.
Lindstrom, Albert F. (See Hageman, A. M., and Lindstrom.)
Linke, Oscar W. (See Stelert, A. F., and Linke.)
Lionel Corporation, The. (See Caruso, Louis, assignor.)
Lionne, Ernest, Swampscott, Mass. Paper and paper making. 1,752,802; Apr. 1.
Litmo Adhesive & Products Company. (See Hoche, Adam, assignor.)
Liverance & Van Antwerp. (See Hammers, William J., assignor.)
Livesay, Robert C., assignor to Deere & Company, Moline, Ill. Scraper for harvester main wheels. 1,752,993; Apr. 1.
Loeb, Laurence F. (See Wreschner, M., and Loeb.)
Loewy, Raymond G. F., Jackson Heights, N. Y. Combined automobile body and hood. Des. 80,844; Apr. 1.
Loftus, Fred H., Aliquippa, and T. N. Kurtz, Pittsburgh, Pa. Checkerwork for furnaces. 1,752,494; Apr. 1.
Logan, Waldo H., et al. (See Hatfield, Frank A., assignor.)
Logue, Charles H., Syracuse, N. Y., assignor of one-half to C. O. Hersam, Philadelphia, Pa. Gear-testing machine. 1,753,014; Apr. 1.
Lohrman, Thomas P., Detroit, Mich. Construction of closed vehicle bodies. 1,753,172; Apr. 1.
Loitsch, Cahrles, New York, N. Y. Grand-piano body construction. 1,752,676; Apr. 1.
Long, Dorothy, assignor to Franklin Simon & Company, Inc., New York, N. Y. Dress. Des. 80,845; Apr .1.
Long, Dorothy, assignor to Franklin Simon & Company, Inc., New York, N. Y. Dress. Des. 80,846; Apr. 1.
Long, Riley E., Clark, Va. Holder. 1,752,645; Apr. 1.
Loomis, Nathaniel E., Westfield, N. J., assignor to Standard Oil Development Company. Treating oils with finely-divided solid material. 1,753,171; Apr. 1.
Lorber, Charles, Bloomfield, N. J. Key case. 1,752,444; Apr. 1.
Love, William J., jr., Piqua, assignor of one-fifth to R. W. Carnahan, Dayton, Ohio. Recording time and period values. 1,752,564; Apr. 1.
Lovekin, Luther D., Wynnewood, Pa. Automatic gas-shut-off valve. 1,752,677; Apr. 1.
Ludwig, Willi, Hochst-on-the-Main, and O. Schaumann, Wiesbaden, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Solution of the active principle from animal organs and preparing the same. 1,752,916; Apr. 1.
Lueck, George A., Milwaukee, Wis. Heating and humidifying system for food carts. 1,752,749; Apr. 1.
Lukasczyk, Jakob, Rosenberg, Oberpfalz, Germany. Apparatus for strengthening the heads of railway rails. 1,752,646; Apr. 1.

Lukens, Alan R., Wyoming, assignor to The Richardson Company, Lockland, Ohio. Dielectric substance. 1,752,917; Apr. 1.

Lynn, John S., assignor to The Vesuvius Corporation, Los Angeles, Calif. Pressure lubricating apparatus. 1,752,530; Apr. 1.

Lyon Metal Products, Incorporated. (See Vance, Walter N., assignor.)

Lyons, J., and Company. (See Coyte, William A., assignor.)

Lytle, Arthur R., Flushing, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc. Nonferrous welding rod. Re17,631; Apr. 1.

MacChesney, Chester M., and R. H. Norton, assignors to Acme Steel Company, Chicago, Ill. Strap-stretching device. 1,752,495; Apr. 1.

Mackie, James, and Sons, Limited. (See Mackie, John P., assignor.)

Mackie, John P., assignor to James Mackie and Sons, Limited, Belfast, Ireland. Doffing mechanism for spinning, twisting, and like machines. 1,752,678; Apr. 1.

Macklin, Are L., Detroit, Mich. Electric toy. 1,753,127; Apr. 1.

Mahan, Joseph R., and J. B. Picard, assignors to The National Supply Company, Toledo, Ohio. Jack frame for well pumps. 1,752,647; Apr. 1.

Mahler, Johann, assignor to the firm: Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft, Augsburg, Germany. Fuel pump for multicylinder internal-combustion engines. 1,752,386; Apr. 1.

Mahr Manufacturing Company. (See Hortvet, Richard M., assignor.)

Maier, Charles E., Newark, N. J. Decorative wall structure. 1,752,679; Apr. 1.

Mallory, Marion, Toledo, Ohio. Current controller for engine ignition systems. 1,752,445; Apr. 1.

Malloy, Howard, Alma, Mich. Piston. 1,752,984; Apr. 1.

Malm, Frank S., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Composition of matter and its preparation. 1,752,531; Apr. 1.

Malsbary, Job F., Fresno, Calif. Electrical thermostat. 1,752,532; Apr. 1.

Mann, Edgar. (See Turner, J. W., Wood, and Mann.)

Marathon Electric Company. (See Gilburg, Roy O., assignor.)

Marcus, Charles, New York, assignor to Eclipse Machine Company, Elmira Heights, N. Y. Ignition system. 1,752,918; Apr. 1.

Markert, Frances R. (See Lee, Hannah H., assignor.)

Marquette Tool & Mfg. Company. (See Rode, Fredrich J., assignor.)

Marr, Arthur P. (See Marr, George M. and A. P.)

Marr, George M., New York, and A. P. Marr, Brooklyn, N. Y. Fire-detecting apparatus. 1,752,496; Apr. 1.

Marshutz, Siegfried G., and P. Sockett, assignors to The Atlas Leather Products Corporation, Los Angeles, Calif. Case and container. 1,753,054; Apr. 1.

Marson, Clifford J., assignor to The Standard Manufacturing Company, Cambridge City, Ind. Folding chair. 1,752,306; Apr. 1.

Marti, Fritz, La Chaux-de-Fonds, Switzerland. Electromagnetic impulse timepiece. 1,752,446; Apr. 1.

Martin, Karl, and P. Tietze, Rathenow, Germany. Optical means for producing color cinematographic pictures. 1,752,680; Apr. 1.

Martus, Martin L., Woodbury, Conn. Headless set screw. 1,753,154; Apr. 1.

Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft. (See Mahler, Johann, assignor.)

Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft. (See Pielstick, Gustav, assignor.)

Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft. (See Riehm, Wilhelm, assignor.)

Maschinenfabrik Augsburg-Nuernberg A. G. (See Jagschitz, Konrad, assignor.)

Mason, Wesley W., Baltimore, Md. Bottle closure. 1,752,603; Apr. 1.

Massingham, Henry R., La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for producing electrical cables. 1,752,497; Apr. 1.

Massingham, Henry R., La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Material-feeding apparatus. 1,752,604; Apr. 1.

Mathes, Robert C., Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone system. 1,752,498; Apr. 1.

Matheson, Roy, Hollis, Okla. Knee pad. 1,753,055; Apr. 1.

Matthews, Louis L., assignor to C. B. Maxson and J. W. Maxson, Westerly, R. I. Feeding and stacking machine. 1,752,648; Apr. 1.

Mattison, Richard V., Ambler, Pa., assignor to Ambler Asbestos Company. Plastic article. 1,752,307; Apr. 1.

Maus, George H., Amsterdam, N. Y. Rake. 1,752,447; Apr. 1.

Maxson, Charles B., et al. (See Matthews, Louis L., assignor.)

Maxson, Charles B., assignor of one-half to J. W. Maxson, Westerly, R. I. Feeding and stacking method and machine. 1,752,681; Apr. 1.

Maxson, Julian W., et al. (See Matthews, Louis L., assignor.)

Maxson, Julian W. (See Maxson, Charles B., assignor.)

Maxwell, Francis, Wallington, England. Cane mill. 1,752,533; Apr. 1.

Mayer, Henry K. (See McSpadden, Walker B., assignor.)

McCabe, Ira E., Chicago, Ill. Electrical connection. 1,752,957; Apr. 1.

McCartney, Will C., Cambridge, Ohio. Candy dish or similar article. Des. 80,847; Apr. 1.

McCartney, Will C., Cambridge, Ohio. Glass bowl or similar article. Des. 80,848; Apr. 1.

McClary, Archie W., Oakland, assignor to Welding Service Inc., San Francisco, Calif. Rail joint. 1,752,566; Apr. 1.

McCleave, Thomas J., San Diego, Calif. Advertising apparatus. 1,752,919; Apr. 1.

McClelland Casket Hardware Company. (See Utter, Bror A., assignor.)

McCloskey, Gregory E., South Orange, N. J., assignor to The Barrett Company, New York, N. Y. Electrical precipitator. 1,752,920; Apr. 1.

McConnell, Grant W., Dorset, Ohio. Roller attachment. 1,752,082; Apr. 1.

McCullough, Peter A., Pittsburgh, Pa. Cutting laminated glass. 1,752,567; Apr. 1.

McGrath, John T., Bloomington, Ill. Pneumatic hammer. 1,752,448; Apr. 1.

McGregor, Alexander G., London, England. Precipitating system. 1,753,015; Apr. 1.

McHugh, Edward F., Kingston, Pa. Interlocking sill or jamb covering. 1,752,605; Apr. 1.

McHugh, Edward F., Kingston, Pa. Adjustable sill or jamb covering. 1,752,606; Apr. 1.

McIntosh, James, Norristown, Pa., assignor, by mesne assignments, to Continental-Diamond Fibre Company, Newark, Del. Phenol-carbohydrate resin and making same. 1,753,030; Apr. 1.

McKee, Garnet W., Rockford, Ill. Control device. 1,752,534; Apr. 1.

McKee, Ralph H., New York, N. Y. Recovering alkali. 1,753,128; Apr. 1.

McKeown, Samuel C. (See Larsen, L. H., and McKeown.)

McKown, Harry L., Wheeling, W. Va. Heating stove. 1,752,387; Apr. 1.

McLaughlin, William I., assignor to Standard Oil Company of California, San Francisco, Calif. Core drill and bit. 1,752,388; Apr. 1.

McSpadden, Walker B., assignor of one-half to H. K. Mayer, Fort Collins, Colo. Awning or curtain. 1,752,610; Apr. 1.

McWilliams, Robert H., Memphis, Tenn. Railroad system for levee constructing. 1,752,958; Apr. 1.

Mead, Edward S., Philadelphia, Pa. Central heating system. 1,752,684; Apr. 1.

Meagher, Joseph H., Rochester, N. Y. Socket block for poles. 1,752,683; Apr. 1.

Meath, Campbell A., Neodesha, Kans. Toilet seat. 1,752,499; Apr. 1.

Mekelburg, Earl F., assignor to Union Electric Manufacturing Company, Milwaukee, Wis. Electric switch. 1,753,016; Apr. 1.

Melone-Bovey Lumber Co. (See Greffin, Philipp, assignor.)

Menningen, Adolph C., West Allis, Wis. Vehicle headlight. 1,752,349; Apr. 1.

Mergott, J. E., Company. (See Hiering, William C., assignor.)

Merrow, Charles H., Brockton, Mass. Shoe welt. 1,753,056; Apr. 1.

Metal Textile Corporation. (See Kingman, Russell B., assignor.)

Meursing, A., et al. (See Friedländer, Daniel, assignor.)

Meyer, Julius A., St. Louis, Mo. Drum. 1,752,668; Apr. 1.

Michelin et Cie. (See Bourdon, Pierre M., assignor.)

Midgley, Thomas, Hampden, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Vulcanizing press. 1,752,569; Apr. 1.

Miller, George L., assignor to Faries Manufacturing Company, Decatur, Ill. Glass shade. Des. 80,849; Apr. 1.

Miller, George L., assignor to Faries Manufacturing Company, Decatur, Ill. Glass shade. Des. 80,850; Apr. 1.

Miller, Harold A., Ottawa, Ontario, Canada. Drinking-cup dispenser. 1,752,607; Apr. 1.

Miller, John S., jr., Rahway, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa. Manufacture of bituminous emulsions. 1,752,449; Apr. 1.

Miller, Stuart P., Philadelphia, Pa., assignor to The Barrett Company. Process of and apparatus for polymerizing oils. 1,752,921; Apr. 1.

Millholland, James H., Philadelphia, Pa., assignor to Sandura Company, Inc., Paulsboro, N. J. Continuous-roll label. 1,752,535; Apr. 1.

Mills, Chester B., Brooklyn, N. Y., assignor, by mesne assignments, to Sperry Gyroscope Company, Inc. Ship's whistle. 1,753,155; Apr. 1.

Mills, Fred L., Oak Park, assignor to Mills Novelty Company, Chicago, Ill. Vending machine. 1,752,750; Apr. 1.

Mills Novelty Company. (See Mills, Fred L., assignor.)

Mitchell, Arthur L., Dallas, Tex. Stationary water heater. 1,752,536; Apr. 1.

Mitchell, Courtney N., Cleveland, Ohio. Piston. 1,752,685; Apr. 1.

Mitchell, James C., assignor to C. E. Russell, Joplin, Mo. Advertising apparatus. 1,752,570; Apr. 1.

Molden, William M., assignor of one-half to E. C. Reid, Lake Charles, La. Detachable connection and clamp. 1,753,129; Apr. 1.

Monier, Francis, Neuilly-sur-Seine, France. Carburetor for internal-combustion engines. 1,752,959; Apr. 1.

Monitor Controller Company. (See Holmes, William T., assignor.)

Monitor Controller Company. (See Whittingham, George H., assignor.)

Monk, Newton. (See Kelley, L. A., Monk, and Thorp.)

Monogram Shop, The. (See Hill, Frederick H., assignor.)

Moone, Albert E. F., Chicago, Ill., assignor to The Lehon Company. Machine for making roofing and the like. 1,752,751; Apr. 1.

Morgal, John F., assignor to Electric Vacuum Cleaner Company, Inc., Cleveland, Ohio. Floor polisher for vacuum cleaners. 1,752,803; Apr. 1.

Morgan Construction Company. (See George, Jerome R., assignor.)

Morris, I. P., and De La Vergne, Inc. (See Larner, Chester W., assignor.)

Morris, Marion C., Rosemary, N. C. Clamp. 1,753,057; Apr. 1.

Morrison, Bartholomew J., Baltimore, Md. Boiler. 1,752,389; Apr. 1.

Morrison, Charles S., Elkins Park, assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa. Toggle. 1,753,058; Apr. 1.

Moulton, Rollin H., Berwyn, Ill. Grease dispenser. 1,752,537; Apr. 1.

Moving Colour Signs Limited. (See Henderson, Jack D., assignor.)

Mueller, Godfrey A., Point Place, assignor to The De Vilbiss Company, Toledo, Ohio. Spray head. 1,752,922; Apr. 1.

Mueller, Godfrey A., Point Place, assignor to The De Vilbiss Company, Toledo, Ohio. Spray head. 1,752,923; Apr. 1.

Mueller, Godfrey A., Point Place, assignor to The De Vilbiss Company, Toledo, Ohio. Spraying device. 1,752,924; Apr. 1.

Muller, George W., Washington, D. C. Base plate for railroad-track structures. 1,752,451; Apr. 1.

Muller, George W., Washington, D. C., assignor to Muller Railway Track Systems, Incorporated, Wilmington, Del. Rail and tie-plate fastener. 1,752,450; Apr. 1.

Muller Railway Track Systems, Incorporated. (See Muller, George W., assignor.)

Münchenhagen, Willy, Berlin-Tempelhof, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Multioffice telephone system. 1,752,500; Apr. 1.

Murray, Humphrey D., assignor of one-half to Norton and Gregory Limited, London, England. Production of photographic images. 1,753,059; Apr. 1.

Mutual Chemical Company of America. (See Tarr, Omar F., assignor.)

Myers, Cornelius T., Avenel, N. J. Magazine lubricating means for vehicle parts. 1,752,960; Apr. 1.

Myers, Hubert A., Toledo, Ohio. Accelerator control. 1,752,501; Apr. 1.

Myers, L. A., Jr., Inc. (See Myers, William L., assignor.)

Myers, William L., assignor to L. A. Myers, Jr., Inc., Newark, N. J. Buckle. Des. 80,851; Apr. 1.

Myers, Wilson R., and B. O. Opitz, Portland, Oreg., assignors, by mesne assignments, to Ice Cream Smack Corporation. Cylinder-forming machine. 1,752,995; Apr. 1.

Myerson, Simon, Cambridge, Mass. Artificial tooth. 1,752,538; Apr. 1.

Myerstuen, Andrew, Seattle, Wash. Ship's pilot ladder. 1,753,060; Apr. 1.

Nachtigal, Daniel, Hibbing, Minn. Collar button. 1,753,130; Apr. 1.

Nagel, George E., Columbus, Ohio. Mold. 1,753,061; Apr. 1.

Nagle, Baker Company. (See Nagle, W. G., and Lehman, assignors.)

Nagle, Edward, New Philadelphia, assignor of one-half to C. C. Davis, Uhrichsville, Ohio. Locomotive brake shoe. 1,752,686; Apr. 1.

Nagle, Walter G., Belleville, and M. Lehman, Quincy, Ill., assignors to Baker Nagle Company, Belleville, Ill. Heater. Des. 80,852; Apr. 1.

Nason, John R., Auburn, Me. Economiser. 1,752,452; Apr. 1.

National Aniline & Chemical Co. (See Kyrides, Lucas P., assignor.)

National Fire Proofing Company. (See Shipley, Roy A., assignor.)

National Recording Pump Company, The. (See Eickmeyer, Earl E., assignor.)

National Supply Company, The. (See Mahan, J. R., and Picard, assignors.)

National Tool and Metals, Inc. (See Ost, Frederick A., assignor.)

National Washboard Company. (See Klaiber, Edward C., assignor.)

Naugatuck Chemical Company, The. (See Owen, Allen F., assignor.)

Naumann, Theodore F., Pawtucket, R. I., assignor to Seekouk Lace Company. Thread cutter. 1,752,611; Apr. 1.

Neitzel, Conrad T., Dallas, Tex., assignor, by mesne assignments, to H. Oliver, Little Rock, Ark. Bottle container. 1,752,502; Apr. 1.

Nelson, Albin J., Brooklyn, N. Y. Temperature regulator. 1,752,390; Apr. 1.

Nelson, Herman, Corporation, The. (See Otis, Gerald E., assignor.)

Nelson, Martin L., Park Ridge, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill. Multioffice telephone system. Re17,632; Apr. 1.

New Haven Clock Co., The. (See Porter, Wilson E., assignor.)

Newhouser, Mary V., Andarko, Okla. Clothes car. 1,752,687; Apr. 1.

New Idea Spreader Company, The. (See Oppenheim, Theodore H., assignor.)

New York Air Brake Company, The. (See Campbell, Charles A., assignor.)

Niagara Machine and Tool Works. (See Hahnemann, Paul R., assignor.)

Nichols, Edgar B., and U. G. Todd, assignors to The Pfaudler Co., Rochester, N. Y. Liquid-processing apparatus. 1,753,062; Apr. 1.

Nicholson, Griffith C. (See Ackerman, E. W., and Nicholson.)

Nicholson, Stanley W., assignor, by mesne assignments, to The Dura Company, Toledo, Ohio. Window regulator. 1,752,688; Apr. 1.

Nicolet, Walter, Leipzig, Germany. Loom. 1,752,804; Apr. 1.

Niedomanski, George G., Washington, D. C. Corn shaver. 1,753,086; Apr. 1.

Nitzsche, Fritz, Karlsruhe, Germany. Concrete foot for wooden poles. 1,753,063; Apr. 1.

Nixon, Clifton W. (See Larsen, L. H., and Nixon.)

Nixon, Clifton W., New York, N. Y. Coin-controlled mechanism. 1,753,087; Apr. 1.

Nixon, Clifton W., New York, N. Y. Vending apparatus. 1,753,088; Apr. 1.

Nixon, Clifton W., New York, N. Y. Controlling mechanism for dispensing machines. 1,753,091; Apr. 1.

Nixon, Clifton W., New York, N. Y. Handle-controlled slot closure. 1,753,092; Apr. 1.

Nixon, Clifton W., assignor to Nixon Vending and Change Making Machines, Inc. New York, N. Y. Control mechanism for coin-controlled machines. 1,753,089; Apr. 1.

Nixon, Clifton W., assignor to Nixon Vending and Change Making Machines, Inc., New York, N. Y. Vending and change-making machine. 1,753,090; Apr. 1.

Nixon Vending and Change Making Machines, Inc. (See Fonda, Douglass C., assignor.)

Nixon Vending and Change Making Machines, Inc. (See Larsen, L. H., and McKeown, assignors.)

Nixon Vending and Change Making Machines, Inc. (See Nixon, Clifton W., assignor.)

Noble, Olbert C., assignor to Tygart Valley Glass Company, Washington, Pa. Bottle. Des. 80,853; Apr. 1.

No-Greef Products, Incorporated. (See Farr, Alfred C., assignor.)

Noguchi, Shuhei, Stamford, Conn. Shipping tag. 1,752,539; Apr. 1.

Noirot, Leo F. and O. G., and G. C. Rupert, Peoria, Ill. Radioantenna. 1,752,925; Apr. 1.

Noirot, Otto G. (See Noirot, Leo F. and O. G., and Rupert.)

Nonnenman, William, St. John, New Brunswick, Canada. Electrical plug and socket. 1,753,064; Apr. 1.

Nordgran, James C., Salt Lake City, Utah, assignor, by mesne assignments, to C. A. Harth, The Dalles, Oreg. Automobile or highway signal. 1,752,805; Apr. 1.

Northern Aerial Minerals Exploration Ltd. (See Cheesman, Silas A., assignor.)

Norton and Gregory Limited. (See Murray, Humphrey D., assignor.)

Norton, Ralph H. (See MacChesney, C. M., and Norton.)

Nye Tool & Machine Works, The. (See Lilleberg, Tideman M., assignor.)

O'Brien, John O. (See Thornton, John E., assignor.)

Ogden, J. Edward, Company. (See Ogden, Ralph E., assignor.)

Ogden, Ralph E., Mountainville, assignor, by mesne assignments, to J. Edward Ogden Company, New York, N. Y. Expansion shield. 1,752,752; Apr. 1.

Ohio Electric and Controller Company, The. (See Wertz, Roy O., assignor.)

Ohlson, Olof, West Newton, Mass. Method and tool for cleaning spinnerets. 1,752,689; Apr. 1.

Oil Devices Corporation. (See Breese, James L., jr., assignor.)

Oil Engine Development Company. (See Cummins, Clessie L., assignor.)

Okonite Company, The. (See White, Francis J., assignor.)

Olgay, Albert, Glen Ellyn, assignor to Gaw-O'Hara Envelope Company, Chicago, Ill. Enveloping machine. 1,752,608; Apr. 1.

Oliver, Edd C., Adrian, Mich. Universal grinder. 1,752,961; Apr. 1.

Oliver, Hogan. (See Neitzel, Conrad T., assignor.)

Olsen, Fredrick, East Alton, Ill., and C. J. Bain, Dover, N. J. Loading explosives. 1,752,391; Apr. 1.

Olson, Nicholay J. N., Minneapolis, Minn. Automobile camp shelter. 1,752,571; Apr. 1.

Olson, Samuel, & Company. (See Olson, Samuel, assignor.)

Olson, Samuel, Oak Park, assignor to Samuel Olson & Company, Chicago, Ill. Automatic counting and grouping mechanism for conveyers. 1,752,540; Apr. 1.
O'Neil, James A., Hanna, Wyo. Coal-loading device. 1,752,453; Apr. 1.
Opitz, Bernhard O. (See Myers, W. R., and Opitz.)
Oppenheim, Theodore H., assignor to The New Idea Spreader Company, Coldwater, Ohio. Transplanter. 1,753,017; Apr. 1.
Orbin, George, assignor of one-half to N. Franchetti, Smock, Pa. Resilient wheel. 1,753,131; Apr. 1.
Orr, Elijah C., assignor to Orr Saw Tooth Grinder Co., Seattle, Wash. Inserted-tooth saw. 1,752,541; Apr. 1.
Orr Saw Tooth Grinder Co. (See Orr, Elijah C., assignor.)
Ossanna, J., and H. Graner, Munich, and F. Hofmann, Munich-Talkircher, assignors to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany. System of connections for compensating. 1,752,640; Apr. 1.
Ost, Frederick A., Inglewood, assignor, by mesne assignments, to National Tool and Metals, Inc., Torrance, Calif. Slot cutter. 1,752,690; Apr. 1.
Otis, Albert N., Schenectady, N. Y., assignor to General Electric Company. Door mechanism. 1,752,806; Apr. 1.
Otis Elevator Company. (See Boedtcher, Frans A., assignor.)
Otis Elevator Company. (See Campbell, Chester C., assignor.)
Otis, Gerald E., assignor to The Herman Nelson Corporation, Moline, Ill. Heating and ventilating apparatus. 1,753,156; Apr. 1.
Otis, Gerald E., assignor to The Herman Nelson Corporation, Detroit, Mich. Heating and ventilating apparatus. 1,753,157; Apr. 1.
Otwell, Ralph B., assignor to Detroit Harvester Company, Detroit, Mich. Winch attachment for tractors. 1,752,962; Apr. 1.
Outing Manufacturing Company. (See Dewey, Clarence L., assignor.)
Overbury, Frederick C., Hillsdale, N. J., assignor to The Patent and Licensing Corporation, Boston, Mass. Method of and machine for edge-coating roofing elements. 1,752,454; Apr. 1.
Owen, Allen F., Jackson Heights, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn. Treating vulcanized oils. 1,753,018; Apr. 1.
Owens Development Corporation. (See Owens, Freeman H., assignor.)
Owens, Freeman H., assignor to Owens Development Corporation, New York, N. Y. Optical printer. 1,752,753; Apr. 1.
Owens, John L. (See Owens, Robert J. and J. L.)
Owens, Robert J. and J. L., Minneapolis, Minn. Elevator leg. 1,752,612; Apr. 1.
Ozonide Corporation, The. (See Ramage, Alexander S., assignor.)
Pacific Knitting Mills, Inc. (See Ast, Carl O., assignor.)
Package Machinery Company. (See Smith, Elmer L., assignor.)
Packard Motor Car Company. (See Woolson, Lionel M., assignor.)
Page, Edward B., Norwich, England. Brush-making machine. 1,752,926; Apr. 1.
Page, Fred'k, Contracting Company, The. (See Heitman, Herbert, assignor.)
Page, Harry W., Wauwatosa, Wis. Spraying liquids. 1,753,019; Apr. 1.
Pagel, Ernest C., Chicago, Ill., assignor, by mesne assignments, to Signode Steel Strapping Company. Package. 1,752,996; Apr. 1.
Paget, Harold F., assignor to Haines Hosiery Mills, Inc., Philadelphia, Pa. Thread carrier. 1,752,754; Apr. 1.
Paper Service Company, The. (See Rowe, William W., assignor.)
Pardini, Julian A., San Francisco, and I. Andreotti, Nevada City, Calif. Demountable egg beater. 1,752,650; Apr. 1.
Park, Robert H., Scotia, N. Y., assignor to General Electric Company. Protection of electric systems. 1,752,807; Apr. 1.
Parker, Charles K., Richmond, assignor to Standard Oil Company of California, San Francisco, Calif. Apparatus for the lye treatment of petroleum oils. 1,752,850; Apr. 1.
Parker, Walter H. (See Townsend, W. S., and Parker.)
Parmley, Walter C., Upper Montclair, N. J. Pen. 1,752,392; Apr. 1.
Partlow, Howard W., Utica, N. Y. Release mechanism for fire extinguishers. 1,752,503; Apr. 1.
Patent and Licensing Corporation, The. (See Overbury, Frederick C., assignor.)
Payne, Thomas E., Toledo, Ohio. Crutch attachment. 1,753,065; Apr. 1.
Pease, John W., Rochester, N. Y. Fruit-paring machine. 1,752,997; Apr. 1.
Penrose, George G., Chicago, Ill. Packing carton. 1,752,504; Apr. 1.
Permutit Company, The. (See Green, Walter H., assignor.)
Person, Adolphe A., assignor of one-half to Elliston & Cavell Limited, Oxford, England. Wearing apparel. 1,752,927; Apr. 1.
Person, Harry J., & Son Incorporated. (See Person, Harry J., assignor.)
Person, Harry J., assignor to Harry J. Person & Son Incorporated, Lansing, Mich. Mausoleum construction. 1,752,572; Apr. 1.
Peterkin, Albert G., jr., Bryn Mawr, assignor to The Atlantic Refining Company, Philadelphia, Pa. Refining system. 1,752,455; Apr. 1.
Peters, Frank R. (See Roberts, M. H., and Peters.)
Peterson, Juel L., assignor to Rockford Drilling Machine Co., Rockford, Ill. Clutch. 1,753,085; Apr. 1.
Peterson, Nils P. (See Thorpe, S. T., and Peterson.)
Pettinelli, Parisino, Savona, Italy. Grid for chemical storage batteries. 1,752,963; Apr. 1.
Pettis, Clifton D., New York, N. Y. Apparatus for molding. 1,752,308; Apr. 1.
Pfaudler Co., The. (See Nichols, E. B., and Todd, assignors.)
Pfister, Karl H. T., Tacony, Pa., assignor to Rohm & Hass Company. Replacing halogen groups in organic compounds by amino groups. 1,752,998; Apr. 1.
Philips, William D., Brooklyn, N. Y. Air-lock and conveyer system. 1,753,158; Apr. 1.
Phillips, John H., Chicago, Ill. Anchoring device. 1,752,999; Apr. 1.
Photostat Corporation. (See Caps, Arthur W., assignor.)
Picard, John B. (See Mahan, J. R., and Picard.)
Pickett, Oliver B., Long Beach, Calif. Lawn edger. 1,752,505; Apr. 1.
Pieslstick, Gustav, assignor to Maschinenfabrik Augsburg-Nuernberg, Aktiengesellschaft, Augsburg, Germany. Reversible internal-combustion engine of the fuel-injection type. 1,753,020; Apr. 1.
Pillatt, Christopher A., Joliet, Ill. Gate valve. 1,752,456; Apr. 1.
Pilliod Company, The. (See Purdy, Jay D., assignor.)
Pintel, Herman, Arlington, N. J. Clothes rack. 1,752,691; Apr. 1.
Piper, Harry D., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for heat-treating metals. 1,752,573; Apr. 1.
Piper, Walter F. (See Beardsley, E. O., and Piper.)
Pitt, William, Brooklyn, N. Y. Automatic variable-transmission mechanism. 1,752,755; Apr. 1.
Poole, Gerald A., and S. G. Forney, Fort Worth, assignors to Gulf Production Company, Houston, Tex. Formation sampler. 1,753,066; Apr. 1.
Pope, Paul M., assignor to A. Kimball Company, New York, N. Y. Printing chase. 1,753,173; Apr. 1.
Portail, Fernand C. F., assignor to Société Anonyme le Carbone, Gennevilliers, France. Carburation device. 1,752,506; Apr. 1.
Porter, Wilson E., assignor to The New Haven Clock Co., New Haven, Conn. Clock. 1,752,651; Apr. 1.
Porter, Wilson E., assignor to The New Haven Clock Co., New Haven, Conn. Clock. 1,752,652; Apr. 1.
Poynder, Herbert B., Newcastle-upon-Tyne, assignor to Electrical Improvements Limited, Newcastle-upon-Tyne, England. Thermo-electrically-operated device for the protection of rotary dynamo-electric machines. 1,752,609; Apr. 1.
Prange, Maurice N., assignor to J. B. Kincaid, Detroit, Mich. Measuring device. 1,752,964; Apr. 1.
Prentice, George E., Berlin, Conn. Process of and blank for use in making sliders for separable fasteners. 1,752,928; Apr. 1.
Presto Primer and Reducing Valve Corporation. (See Anderson, Augustus L., assignor.)
Primos Lead Company. (See Smith, Walter C., assignor.)
Proctor & Schwartz, Incorporated. (See Morrison, Charles S., assignor.)
Proctor & Schwartz, Incorporated. (See Schwartz, W. M., Harrison, and Fagan, assignors.)
Proffen, Vladimir V., Seattle, Wash. Switch lock. 1,752,613; Apr. 1.
Purdy, Jay D., assignor to The Pilliod Company, Swanton, Ohio. Locomotive valve gear. 1,752,929; Apr. 1.
Quayle, Philip P., Chevy Chase, Md. Electric switch. 1,752,930; Apr. 1.
Queeney, Frank E., Teaneck, assignor to International Motor Company, New York, N. Y. Gas electric drive. 1,752,931; Apr. 1.
Quigan, Frank J., Jackson Heights, N. Y. Hand bag. Des. 80,870; Apr. 1.
Radio Corporation of America. (See Tennant, John W., assignor.)
Raffaelli Trading Co. (See Raffaelli, Viola, assignor.)
Raffaelli, Viola, New York, N. Y., assignor to Raffaelli Trading Co., Inc. Combined lamp base and body. Des. 80,854; Apr. 1.
Ragozzino, Raphael. (See Lauro, Joseph, assignor.)
Ramage, Alexander S., Detroit, Mich. Oxidized resin and making same. 1,752,693; Apr. 1.
Ramage, Alexander S., Detroit, Mich., assignor to The Ozonide Corporation. Production of gas and aromatic hydrocarbons from heavy hydrocarbon oils. 1,752,692; Apr. 1.
Rattray, Esther A. E. (See Stowell, Samuel N., assignor.)
Raule, Clifford T., Brookline, Pa. Drive for high-speed spindles. 1,752,542; Apr. 1.
Rawson, Ralph E., St. Louis, Mo. Toothbrush. 1,752,393; Apr. 1.
Ray, Arthur B., Bayside, and G. T. Felbeck, Mount Vernon, N. Y., assignors to Carbide and Carbon Chemicals Corporation. Recovery of adsorbable substances. 1,753,067; Apr. 1.

Reach, Milton B., Springfield, assignor to A. G. Spalding & Bros. Chicopee, Mass. Packaged inflated playing ball and making the same. 1,752,695; Apr. 1.
Reach, Milton B., assignor to Stopperless Water Bottle Company, Springfield, Mass. Closure for water bags. 1,752,808; Apr. 1.
Recchia, Leonard G., Seattle, Wash. Rebound absorber. 1,752,694; Apr. 1.
Recording Thermometer Company. (See Barstow, Welch, assignor.)
Reichart, James H., Muncie, Ind. Pop-corn machine. 1,752,457; Apr. 1.
Reid, Earl C. (See Molden, William M., assignor.)
Reller, Edwin L., and V. R. A. Stroh, St. Louis, Mo., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y. Accounting apparatus and system. 1,752,394; Apr. 1.
Remington Rand Inc. (See Dawson, George H., assignor.)
Remington Rand Inc. (See Hutchings, Le Roi E., assignor.)
Remington Rand Inc. (See Reller, E. L., and Stroh, assignors.)
Remington Typewriter Company. (See Going, George G., assignor.)
Remington Typewriter Company. (See Hart, Frederick A., assignor.)
Reserve Holding Company. (See Ruggles, Leonard L., assignor.)
Reserve Holding Company. (See Tharp, Victor S., assignor.)
Rheinische Metallwaaren- und Maschinenfabrik. (See Stange, Louis, assignor.)
Rice, Clarence L., Delta, Iowa. Egg carrier. 1,752,574; Apr. 1.
Richards, Daniel W. (See Lavarack, F. C., and Richards.)
Richardson Company, The. (See Lukens, Alan R., assignor.)
Richardson, Holden C., Washington, D. C. Landing gear. 1,752,395; Apr. 1.
Ridler, John E., Buffalo, N. Y. Cutting tool. 1,752,653; Apr. 1.
Ridlington, Joseph, Acton, London, England. Head lamp for road vehicles. 1,752,850; Apr. 1.
Riehm, Wilhelm, assignor to the firm Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft, Augsburg, Germany. Process and apparatus for starting internal-combustion engines. 1,753,021; Apr. 1.
Riley, Frank, et al. (See Thexton, J., jr., and Tomlinson, assignors.)
Ring, Arthur A., Montreal, Quebec, Canada. Device for holding printed matter. 1,752,614; Apr. 1.
Riordan, John M., Detroit, Mich. Auxiliary motor support. 1,752,809; Apr. 1.
Risdon, John J., assignor, by mesne assignments, to Agfa Ansco Corporation, Binghamton, N. Y. Photographic printer. 1,752,458; Apr. 1.
Robbins, William K., assignor, by mesne assignments, to Ira J. Wilson, Chicago, Ill. Scraper. 1,753,022; Apr. 1.
Roberts, Eugene, Hastings, N. Y., assignor to The Western States Machine Company, Salt Lake City, Utah. Centrifugal basket. 1,753,023; Apr. 1.
Roberts, Montague H., Englewood, N. J., and F. R. Peters, assignors to Franklin Railway Supply Company, New York, N. Y. Flexible connection for locomotive boosters. 1,752,696; Apr. 1.
Robertson, Alexander, Atlantic, Mass. Floor-finishing machine. 1,752,965; Apr. 1.
Robertson, Harry M., Cleveland, Ohio. Apparatus for annealing. 1,752,697; Apr. 1.
Robertson, William W., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Lay-driving mechanism for looms. 1,752,459; Apr. 1.
Rockford Drilling Machine Co. (See Peterson, Juel L., assignor.)
Rode, Fredrich J., assignor to Marquette Tool & Mfg. Company, Chicago, Ill. Variable pressure or relief valve. 1,753,024; Apr. 1.
Roesch, George R., assignor to Tolectro Corporation, Toledo, Ohio. Gas-producing apparatus. 1,752,851; Apr. 1.
Rogers, John H., and T. Concha, Los Angeles, Calif. Water heating and dispensing means. 1,752,698; Apr. 1.
Rohkohl, Wilhelm, Potsdam, Germany, assignor to General Electric Company. Safety system. 1,752,852; Apr. 1.
Rohm & Haas Company. (See Pfister, Karl H. T., assignor.)
Rohrdants, Henry, Philadelphia, Pa. Traffic indicator. 1,752,756; Apr. 1.
Romig, Frank G., Seattle, Wash. Blower. 1,752,810; Apr. 1.
Root, Harold C., Adams Center, N. Y. Windshield cleaner and heater. 1,752,615; Apr. 1.
Roosevelt, Claude L., Detroit, Mich. Curtain drier and stretcher. 1,753,025; Apr. 1.
Rosati, Dominick, Chicago, Ill. Cork extractor. 1,753,026; Apr. 1.
Roselle, Fredrick H., Turlock, Calif. Fuse-handling tool. 1,752,575; Apr. 1.
Rosen, Morris. (See Bergelson, Isadore, assignor.)
Rosenbaum, Rudolph R., Chicago, Ill. Lubricant product and producing process. 1,752,309; Apr. 1.
Rosenblatt, Isidor, assignor to Globe Lighting Fixture Mfg. Co., Brooklyn, N. Y. Lighting fixture. 1,752,654; Apr. 1.
Ross, Hugh J., Cliffwood, N. J. Airship. 1,753,068; Apr. 1.
Ross, Joseph C., Memphis, Tex. Combination shoe and hosiery stand. 1,752,699; Apr. 1.
Rosson, John W., Morgan City, La. Moss feeder and cleaner. 1,752,576; Apr. 1.
Röst-Grande, Alexander. (See Hubert, E., Röst-Grande, and Correns.)
Rothenberg, Harry, West Norwood, N. J., and S. L. Henken, Bronx, assignors to H. Hyman, Brooklyn, N. Y. Drycell-battery sealing composition. 1,752,351; Apr. 1.
Rowe, William W., assignor to The Paper Service Company, Cincinnati, Ohio. Crinkling and reenforcing paper. Re17,633; Apr. 1.
Rowley, Charles D., London, and W. Jackson, Brighton, assignors to The Autokal Syndicate Limited, London, W. 1., England. Calculating machine. 1,753,093; Apr. 1.
Royal Railway Improvements Corporation. (See Sauvage, William H., assignor.)
Ruben Patents Company. (See Ruben, Samuel, assignor.)
Ruben, Samuel, assignor to Ruben Patents Company, New York, N. Y. Method and apparatus of telephonic communication. 1,752,811; Apr. 1.
Ruddick, John J., West Newton, Mass., assignor to General Street Signal Corporation, Rochester, N. Y. Circuit controller. 1,752,812; Apr. 1.
Ruebel, Adam, Ithaca, N. Y. Edge trimmer. 1,753,132; Apr. 1.
Ruggles, Leonard L., Wheaton, Ill., assignor to Reserve Holding Company, Kansas City, Mo. Telephone system. 1,752,543; Apr. 1.
Ruggles, William A., Schenectady, N. Y., assignor to General Electric Company. Magnesium covered calcium wire. 1,752,813; Apr. 1.
Rumford, Fred, Jetmore, Kans., and H. T. Henry, New York, N. Y. Stabilizer for aeroplanes. 1,752,396; Apr. 1.
Rundell, Raymond R., Miami, Fla. Self opening and closing container cap. 1,752,700; Apr. 1.
Rupert, George C. (See Noirot, Leo F. and O. G., and Rupert.)
Rusden, Ethelbert A., Nayatt, assignor to The Textile-Finishing Machinery Company, Providence, R. I. Cloth guiding and stretching device. 1,752,966; Apr. 1.
Russell, Arthur, Baltimore, Md., and J. F. Hegeman, New York, N. Y. Producing cellulose acetate. 1,752,853; Apr. 1.
Russell, C. E. (See Mitchell, James C., assignor.)
Russell, Ronald F., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Strip-pulling device. 1,753,174; Apr. 1.
Ruthven, William, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Shaping tool. 1,752,507; Apr. 1.
Ryan, Bernard A., Syracuse, N. Y. Roller bearing. 1,752,616; Apr. 1.
Ryan Manufacturing Corporation. (See Hinds, Daniel C. and O. Q., assignor.)
Ryder, Frank P., Niagara Falls, N. Y. Feeding device for thrashing machines. 1,752,577; Apr. 1.
S. L. Products Company. (See Steiert, A. F., and Linke, assignors.)
Sacerdote, Guido M., Bayside, N. Y. Paper clip. 1,753,094; Apr. 1.
Safety Car Heating & Lighting Company, The. (See Eisemann, Carl W., assignor.)
Saftigard-Nudriaire, Inc. (See Hutchinson, Edward, jr., assignor.)
St. Joseph Iron Works. (See Schmidtke, Albert H., assignor.)
Sakuma, Eikichi, Tokyo Fu, Japan. Apparatus for making asphalt roofings. 1,753,027; Apr. 1.
Sandell, Joseph H., Chicago, Ill., assignor to Comstock-Castle Stove Company, Quincy, Ill. Heater door. Des. 80,855; Apr. 1.
Sandura Company. (See Millholland, James H., assignor.)
Sauvage, William H., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y. Hand brake. 1,753,133; Apr. 1.
Sayles, Ray. (See Stevens, W. E., assignor, and Jay.)
Schaumann, Otto. (See Ludwig, W., and Schaumann.)
Scheer, Charles, Silverton, Colo. Attachment for pipe stems. 1,753,095; Apr. 1.
Scherotto, John J., Union City, N. J., assignor to Snyder & Black, Incorporated, New York, N. Y. Package-display device. 1,752,655; Apr. 1.
Schlerghofer, Fred, Mount Vernon, N. Y. Window-closing device. 1,752,854; Apr. 1.
Schmid, Max, Nuremberg, Germany. Feed device for the carriage of typewriting machines. 1,753,134; Apr. 1.
Schmidt & Meimer. (See Hirschner, Karl, assignor.)
Schmidt, August F., St. Petersburg, Fla. Carton-discharging device. 1,752,352; Apr. 1.
Schmidtke, Albert H., assignor to St. Joseph Iron Works, St. Joseph, Mich. Method and apparatus for making baskets. 1,752,856; Apr. 1.
Schnell, William, assignor to Ternstedt Manufacturing Company, Detroit, Mich. Combination smoking and vanity case. Des. 80,856; Apr. 1.
Schneyer, Max D., Windsor, Ontario, Canada, and S. Cochin, Detroit, assignors of one-third to N. Shifrin, Fordson, Mich. Device for protection of goods displayed in show windows against theft. 1,752,578; Apr. 1.

Schönberger, Fritz, Sterkrade, Germany. Apparatus for measuring physical characteristics of flowing streams of fluid. 1,752,855; Apr. 1.
Schönhöfer, Fritz. (See Schulemann, W., Schönhöfer, and Wingler.)
Schroeder, Simon E., Minier, Ill. Washing-machine-agitator mechanism. 1,752,757; Apr. 1.
Schuberth, Paul, Augsburg, Germany. Door for vehicles for removing house refuse. 1,753,135; Apr. 1.
Schulemann, Werner, Vohwinkel, near Elberfeld, F. Schönhöfer and A. Wingler, Elberfeld, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Aminoalkylation of amines. 1,752,617; Apr. 1.
Schultis, Charles F., assignor of one-fourth to I. Herzbrun and one-fourth to S. W. Goldman, Cleveland, Ohio. Method of and machine for flanging pipes. 1,752,508; Apr. 1.
Schultz, Charles E., Chicago, Ill. Gas furnace. 1,752,460; Apr. 1.
Schumm, Max, Port Jefferson, N. Y. Method of and apparatus for employing tuning forks to generate audio-frequency current as a medium for sound. 1,753,069; Apr. 1.
Schwabe, Rudolf. (See Lautenschläger, C. L., Bockmühl, and Schwabe.)
Schwadron, Joel I., Vienna, Austria. Stocking. Des. 80,857; Apr. 1.
Schwarber, Henry, Weehawken, N. J. Embroidered lace edging. Des. 80,858; Apr. 1.
Schwarber, Henry, Weehawken, N. J. Embroidered lace edging. Des. 80,859; Apr. 1.
Schwarber, Henry, Weehawken, N. J. Embroidered lace edging. Des. 80,860; Apr. 1.
Schwarber, Henry, Weehawken, N. J. Embroidered lace edging. Des. 80,861; Apr. 1.
Schwarber, Henry, Weehawken, N. J. Embroidered lace edging. Des. 80,862; Apr. 1.
Schwarber, Henry, Weehawken, N. J. Embroidered lace edging. Des. 80,863; Apr. 1.
Schwarber, Henry, Weehawken, N. J. Embroidered lace edging. Des. 80,864; Apr. 1.
Schwartz, Walter M., A. J. Harrison, and J. L. Fagan, assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa. Panel-assembling apparatus. 1,753,070; Apr. 1.
Scott, William M., Tredyffrin Township, Chester County, Pa. Control system. 1,752,353; Apr. 1.
Scovill Manufacturing Company. (See Bennett, Morris H., assignor.)
Scovill Manufacturing Company. (See Chapman, Romaine C., assignor.)
Scrimger, Peter, Detroit, Mich. Mounting device for seed planters. 1,753,136; Apr. 1.
Scudder, Charles J., Scranton, Pa. Locomotive valve gear. 1,753,028; Apr. 1.
See, Cyrus V., Hardin, Mo. Fishing device. 1,752,397; Apr. 1.
Seede, John A., Schenectady, N. Y., assignor to General Electric Company. Japanning oven. 1,752,857; Apr. 1.
Seekonk Lace Company. (See Naumann, Theodore F., assignor.)
Seibt, Georg, Berlin-Schoneberg, Germany. Electrostatic loud-speaker. 1,753,137; Apr. 1.
Semmes, Harry H., Chevy Chase, Md., assignor to Bendix Aviation Corporation, New York, N. Y. Airfoil construction. 1,752,701; Apr. 1.
Shawmut Engineering Company. (See Hall, B., and Hathaway, assignors.)
Shea, Timothy E., Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Transmission network. 1,752,461; Apr. 1.
Shea, Timothy E., Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Wave filter. 1,752,579; Apr. 1.
Shifrin, Nathan. (See Schneyer, M. D., and Cochin, assignors.)
Shimmin, John T., Hurley, N. Mex. Apparatus for separating solids from liquids or liquors by filtration. 1,752,758; Apr. 1.
Shipley, Roy A., Canton, Ohio, assignor to National Fire Proofing Company, Pittsburgh, Pa. Apparatus for manufacturing hollow tile. 1,752,702; Apr. 1.
Shnable, Earl P., Chicago, Ill. Bucket excavator. 1,752,510; Apr. 1.
Shore, William E., New York, N. Y. Oil and air mixing device in the form of vacuum pumps. 1,752,398; Apr. 1.
Siefken, Gustavus A., Minneapolis, Minn. Brooch-fastening device. 1,752,858; Apr. 1.
Siemens, Friedrich, Aktiengesellschaft. (See Durrer, R., Siemens, and Sprenger, assignors.)
Siemens, Friedrich C. (See Durrer, R., Siemens, and Sprenger.)
Siemens & Halske Aktiengesellschaft. (See Münchenhagen, Willy, assignor.)
Siemens-Schuckertwerke Aktiengesellschaft. (See Ossanna, J., Graner, and Hofmann, assignors.)
Sieverling, Fred A., Great Bend, Kans. Safety apparatus for boats. 1,752,354; Apr. 1.
Signode Steel Strapping Company. (See Pagel, Ernest C., assignor.)
Simmons, Theodore, Mount Vernon, N. Y., assignor to Altorfer Brothers Company, East Peoria, Ill. Washing-machine agitator. 1,752,967; Apr. 1.
Simplex Wire and Cable Company. (See Boggs, Charles R., assignor.)
Simpson, Sanders C., Woodcliff, N. J. Aquarium stand or similar article. Des. 80,865; Apr. 1.
Simson, Herbert E., Los Angeles, Calif. Hand drill or screw driver. 1,752,708; Apr. 1.
Simunek, Jerry H., Gregory, S. Dak. Auxiliary air inlet for humidifiers. 1,752,859; Apr. 1.
Singer, Samuel, San Francisco, Calif. Price tag. 1,752,509; Apr. 1.
Sitton, Eugene N., La France, S. C. Padding with selvedge. 1,753,138; Apr. 1.
Skell, James E., Newark, N. J. Frame for holding photographic films and plates. 1,752,814; Apr. 1.
Sleeman, William C., Birmingham, Ala. Railway-brake equipment. 1,752,704; Apr. 1.
Sloane, W. & J., Manufacturing Company. (See Tomec, J., and Cubrda, assignors.)
Small, Arthur E., assignor to Union Metal Products Company, Chicago, Ill. Roof structure for railway cars. 1,752,355; Apr. 1.
Smith, Anthony R., Elyria, assignor to Steel and Tubes, Inc., Cleveland, Ohio. Lock. 1,752,968; Apr. 1.
Smith, Elmer L., Longmeadow, assignor to Package Machinery Company, Springfield, Mass. Applying labels to packages. 1,752,706; Apr. 1.
Smith, Hinsdale, Springfield, Mass., assignor to I. M. Upercu, New York, N. Y. Convertible body. 1,752,511; Apr. 1.
Smith, James N. (See Austin, W. R., and Smith.)
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Combined typewriting and card-perforating machine. Re17,634; Apr. 1.
Smith, John A., Cornwall, Ontario, Canada. Back-up brake for vehicles. 1,752,618; Apr. 1.
Smith, Joseph B., Havana, Ill. Machine for use in removing tires from wheels and rims. 1,752,759; Apr. 1.
Smith, Walter A., assignor to Stover Manufacturing & Engine Co., Freeport, Ill. Combined mop and brush holder. 1,752,512; Apr. 1.
Smith, Walter C., Moylan, assignor to Primos Lead Company, Philadelphia, Pa. Reclaiming battery-plate material. 1,752,356; Apr. 1.
Smith, Walter F., Kingsport, Tenn., assignor, by mesne assignments, to Kingsport Press, Inc. Nontarnishing metallic ink. 1,752,462; Apr. 1.
Smith, William T., Muncie, Ind. Bottle receptacle. 1,752,815; Apr. 1.
Smythe, Albert Q. (See Smythe, Frank E. and A. Q.)
Smythe, Frank E. and A. Q., San Diego, assignors of one-half to A. and M. Atleson, Los Angeles, Calif. Lever lock. 1,752,463; Apr. 1.
Snarry, John W., Handsworth, Birmingham, assignor to The Gear Grinding Company Limited, Birmingham, England. Metal cutting and grinding machine. 1,753,096; Apr. 1.
Snell, Harry S., La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Molding compound and its production. 1,752,580; Apr. 1.
Snyder & Black, Incorporated. (See Scherotto, John J., assignor.)
Sobecki, Anthony J., South Bend, Ind. Fish lure. 1,752,706; Apr. 1.
Société Anonyme le Carbone. (See Portail, Fernand C. F., assignor.)
Sockett, Phillip. (See Marshutz, S. G., and Sockett.)
Sologaistoa, Manuel H. P., San Pedro Sula, Honduras. Engine piston. 1,752,816; Apr. 1.
Spalding, A. G., and Bros. (See Gammeter, John R., assignor.)
Spalding, A. G., & Bros. (See Reach, Milton B., assignor.)
Spang, Ferdinand J., Butler, Pa. Fishing tool. 1,752,656; Apr. 1.
Sparks, Stanley W., Summit, N. J., assignor to The Columbus Machine Company, Columbus, Ohio. Gate valve. 1,752,657; Apr. 1.
Sparks, William, and L. E. Johnson, assignors to The Sparks-Withington Company, Jackson, Mich. Circuit closer. 1,753,029; Apr. 1.
Sparks-Withington Company, The. (See Sparks, W., and Johnson, assignors.)
Sparrow, William T., Hampton, Va., assignor of one-third to E. H. Fairbanks, Merchantville, N. J. Pin or bolt retainer for brake rigging. 1,752,544; Apr. 1.
Specter, Harry C., New York, N. Y. Waterproof-closure fastener. 1,752,464; Apr. 1.
Spector, Herman, Brooklyn, N. Y. Door viewer. Des. 80,866; Apr. 1.
Spelling, Thomas C., New York, N. Y. Water hoist. 1,753,163; Apr. 1.
Spelling, Thomas C., New York, N. Y. Water hoist. 1,753,164; Apr. 1.
Spence, David, Norwalk, Conn., assignor to Inter-continental Rubber Company, New York, N. Y. Treatment of guayule, etc. 1,753,184; Apr. 1.
Spence, David, Norwalk, Conn., assignor to Intercontinental Rubber Company, New York, N. Y. Extraction of rubber from guayule, etc. 1,753,185; Apr. 1.

Spencer, Corte J., Dundee, N. Y. Cow poke. 1,753,071; Apr. 1.
Spencer, Frank C., Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Feeding device for drilling-machine spindles. 1,752,465; Apr. 1.
Sperry Gyroscope Company. (See Bassett, Preston R., assignor.)
Sperry Gyroscope Company. (See Mills, Chester B., assignor.)
Spohr, Carl W., assignor to Williams, Camp and Bradbury, Chicago, Ill. Carburetor-controlling device. 1,752,817; Apr. 1.
Sprenger, Arthur. (See Durrer, R., Siemens, and Sprenger.)
Square D. Company. (See Van Valkenburg, Hermon L., assignor.)
Squier, Ralph A., Tieton, Wash. Box-lidding bench. 1,752,707; Apr. 1.
Stacks, Homer, Detroit, Mich. Detachable vehicle top. 1,753,031; Apr. 1.
Standard Manufacturing Company, The. (See Marson, Clifford J., assignor.)
Standard Oil Company. (See Sullivan, Frederick W., jr., assignor.)
Standard Oil Company of California. (See Halloran, R. A., Davis, and Davidson, assignors.)
Standard Oil Company of California. (See McLaughlin, William I., assignor.)
Standard Oil Company of California. (See Parker, Charles K., assignor.)
Standard Oil Development Company. (See Hewetson, Henry H., assignor.)
Standard Oil Development Company. (See Loomis, Nathaniel E., assignor.)
Stange, Louis, Sommerda, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany. Trigger apparatus for the single and continuous fire of automatic firearms. 1,753,072; Apr. 1.
Stanger, Herman C., Fort Ann, N. Y. Signal and communication mechanism for sunken submarines. 1,753,139; Apr. 1.
Starr, Morton H., assignor to The Howe Scale Company, Rutland, Vt. Railway-track scale. 1,753,097; Apr. 1.
Steel and Tubes, Inc. (See Smith, Anthony R., assignor.)
Steiert, Alois F., and O. W. Linke, assignors to S. L. Products Company, Philadelphia, Pa. Floor waxing and polishing device. 1,752,581; Apr. 1.
Stein, Charles, and W. M. Heller, Atlantic City, N. J. Doll. 1,753,032; Apr. 1.
Stein, Leo, Chicago, Ill. Brief case. 1,752,310; Apr. 1.
Steinbrückner, Adolf, Duisburg, Germany. Mill. 1,752,860; Apr. 1.
Stertzbach, Harry W. (See Johnson, G. T., and Stertzbach.)
Stevens, William C., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Tire-testing machine. 1,753,175; Apr. 1.
Stevens, William C., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Method and apparatus for drying articles. 1,753,176; Apr. 1.
Stevens, William C., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Bending machine. 1,753,177; Apr. 1.
Stevens, William E., and C. B. Jay, Raymond, Wash.; said Stevens assignor to R. Sayles. Roller screen. 1,752,466; Apr. 1.
Stevenson, Alexander R., jr., Schenectady, N. Y.; assignor to General Electric Company. Starting synchronous motor. 1,752,932; Apr. 1.
Stevenson, Geoffrey, Brookline, Mass. Copyholder. 1,752,399; Apr. 1.
Stewart, Walter C., assignor to E. Frohman, Gastonia, N. C. Differential motion for roving frames and the like. 1,752,708; Apr. 1.
Stickney, Burnham C., Hillside, N. J. Internal-combustion engine. 1,753,159; Apr. 1.
Stoecklin, Josef. (See Kopeliowitsch, J., and Stoecklin.)
Stoll, Berry V., assignor to Stoll Oil Refining Company, Louisville, Ky. Gasoline-filtering system and apparatus. 1,752,709; Apr. 1.
Stoll Oil Refining Company. (See Stoll, Berry V., assignor.)
Stone, Wallace E. C., Los Angeles, Calif. Dirigible headlight. 1,752,861; Apr. 1.
Stopperless Water Bottle Company. (See Reach, Milton B., assignor.)
Stover Manufacturing & Engine Co. (See Smith, Walter A., assignor.)
Stowell, Samuel N., Yuba City, assignor of one-fourth to E. A. E. Rattray, Marysville, Calif. Auto sled. 1,753,160; Apr. 1.
Strawn, Thomas C., Salem, Ohio. Garden implement. 1,752,467; Apr. 1.
Streszynski, George J., Kingston, N. Y. Hydraulic clutch. 1,752,862; Apr. 1.
Stroh, Victor B. A. (See Reller, E. L., and Stroh.)
Stull, John S., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Work-feeding device for drilling machines. 1,752,468; Apr. 1.
Sullivan, Frederick W., jr., assignor to Standard Oil Company, Whiting, Ind. Immersion wax. 1,752,933; Apr. 1.
Summerfeld, Albert, Saskatoon, Saskatchewan, Canada. Release-snap construction. 1,752,619; Apr. 1.
Sund, Alfred D., Santa Rosa, Calif. Bumper leg for brooms. 1,752,400; Apr. 1.
Sund, Alfred D., Santa Rosa, Calif. Bumper for brooms. 1,752,401; Apr. 1.
Surface Combustion Company, The. (See Colby, F. R., and Larsen, assignors.)
Surface Combustion Company, The. (See Hepburn, William M., assignor.)
Sutton Engineering Company. (See Wise, George A., assignor.)
Swanson, Reynold A., Montrose, S. Dak. Cover-retaining means. 1,752,710; Apr. 1.
Swartzbaugh Manufacturing Company, The. (See Ziola, Henry A., assignor.)
Swindin, Norman, Acton, London, England. Siphon. 1,752,620; Apr. 1.
Tarkington, George W., Silver Plume, Colo. Electric sign and its operation. 1,752,700; Apr. 1.
Tarkington, George W., Silver Plume, Colo. Extracting essentials from coffee and other substances. 1,752,761; Apr. 1.
Tarr, Omar F., Baltimore, Md., assignor to Mutual Chemical Company of America, New York, N. Y. Manufacture of chromates. 1,752,863; Apr. 1.
Tatarek, Joseph C., Jamestown, N. Dak. Flue bushing. 1,753,098; Apr. 1.
Tatham, Norman, Los Angeles, Calif. Scale. 1,752,711; Apr. 1.
Taveira, Antonio A. M., assignor to The Textile-Finishing Machinery Company, Providence, R. I. Automatic stretching and guiding apparatus. 1,753,033; Apr. 1.
Taylor, Charles, Buffalo, N. Y., assignor to Taylor Freezer Corporation, Beloit, Wis. Ice-cream freezer. 1,752,582; Apr. 1.
Taylor Freezer Corporation. (See Taylor, Charles, assignor.)
Taylor, Laurens A., Schenectady, N. Y., assignor to General Electric Company. Antenna system. 1,752,864; Apr. 1.
Taylor, Roy F., Richmond, Ind. Furniture base. 1,752,818; Apr. 1.
Tennant, John W., Middlesex, England, assignor to Radio Corporation of America. Connection block. 1,752,469; Apr. 1.
Tenney, Frederick H., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Safety clutch for tire conveyers. 1,753,178; Apr. 1.
Ternstedt Manufacturing Company. (See Hollindale, Wilfred H., assignor.)
Ternstedt Manufacturing Company. (See Schnell, William, assignor.)
Texas Company, The. (See Hall, Frank W., assignor.)
Textile-Finishing Machinery Company. (See Rusden, Ethelbert A., assignor.)
Textile-Finishing Machinery Company, The. (See Taveira, Antonio A. M., assignor.)
Tharp, Victor S., Elmhurst, Ill., assignor to Reserve Holding Company, Kansas City, Mo. Telephone system. 1,752,470; Apr. 1.
Thexton, Joseph, jr., and H. Tomlinson, assignors of one-fourth to J. E. Freeling and one-fourth to F. Reily, Fall River, Mass. Loom. 1,752,621; Apr. 1.
Thomas, Floyd H., Milan, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Steel retainer. 1,753,034; Apr. 1.
Thornton, John E., London, assignor to J. O. O'Brien, Manchester, England. Multicolor cinematograph and other film. 1,753,140; Apr. 1.
Thorp, Vaughn P. (See Kelley, L. A., Monk, and Thorp.)
Thorpe, Samuel T., and N. P. Peterson, assignors to The Horton Manufacturing Company, Bristol, Conn. Fishing rod. 1,752,865; Apr. 1.
Tiemann, Otto P., Bloomington, Ill. Seed-corn-testing laboratory. 1,752,518; Apr. 1.
Tietz, Ernest R., Detroit, Mich. Automobile wheel. 1,752,819; Apr. 1.
Tietze, Paul. (See Martin, K., and Tietze.)
Timblin, William S., River Forest, Ill. Umbrella. 1,752,820; Apr. 1.
Timblin, William S., River Forest, Ill. Umbrella. 1,752,821; Apr. 1.
Time-O-Stat Controls Company. (See Gauger, F. A., and Johnson, assignors.)
Todd, Ulysess G. (See Nichols, E. B., and Todd.)
Tolectro Corporation. (See Boesch, George R., assignor.)
Tomec, John, and F. Cubrda, Trenton, N. J., assignors to W. & J. Sloane Manufacturing Company. Inlaid linoleum and producing same. 1,752,402; Apr. 1.
Tomlinson, Henry. (See Thexton, J., jr., and Tomlinson.)
Townsend, William S., and W. H. Parker, Rochester, Pa., assignors, by mesne assignments, to The Wayne Pump Company, Baltimore, Md. Liquid-dispensing arrangement. 1,752,934; Apr. 1.
Trebes, Bruno M. A., Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Extrusion machine. 1,752,471; Apr. 1.
Trinkl, Hans, Uhren- und Apparatefabrik G. m. b. H. (See Lang, Theo, assignor.)
Tröften, Einar, Sulitjelma, Norway. Bucket and equipment for carrying same. 1,753,073; Apr. 1.
Trojan Powder Company. (See Wyler, Joseph A., assignor.)
Trombetta, Panfilo, Schenectady, N. Y., assignor to General Electric Company. Solenoid winding. 1,752,866; Apr. 1.

Trostel, Louis J., Baltimore, Md., assignor to General Refractories Company, Philadelphia, Pa. Refractory composition and making refractory articles therefrom. 1,752,867; Apr. 1.
Trotman, Walter K., Holyoke, Mass. Dandy roll. 1,752,311; Apr. 1.
Truscon Steel Company. (See Briody, Bernard, assignor.)
Truscott, Starr. (See Jacobsohn, I. M., and Truscott.)
Turner, John W., H. Wood, and E. Mann, Halifax, England. Shock-absorbing device for mechanically-propelled vehicles. 1,753,099; Apr. 1.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft-replenishing mechanism for looms. 1,752,403; Apr. 1.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Multicolor magazine. 1,752,404; Apr. 1.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft-replenishing mechanism for double-shuttle looms. 1,752,405; Apr. 1.
Turnquist, Magnus, Chicago, Ill. Hinge device. 1,752,312; Apr. 1.
Tuttle, Henry A., deceased, Upton, Mass.; J. L. Tuttle, executrix. Clutch mechanism. 1,752,313; Apr. 1.
Tuttle, Jennie L., executrix. (See Tuttle, Henry A.)
Tygart Valley Glass Company. (See Noble, Olbert C., assignor.)
Uhle, David J., and J. V. Durnin, Allentown, Pa. Pulverizing or grinding mill. 1,752,314; Apr. 1.
Uhle, David J., and J. V. Durnin, Allentown, Pa. Pulverizing or grinding mill. 1,752,622; Apr. 1.
Uhle, David J., and J. V. Durnin, Allentown, Pa. Pulverizing or grinding mill. 1,752,623; Apr. 1.
Uhrig, Richard V., Los Angeles, Calif. Slip for rotary tables and spiders for handling pipe. 1,752,822; Apr. 1.
Underwood Elliott Fisher Company. (See Kurowski, Alfred G. F., assignor.)
Underwood Elliott Fisher Company. (See Smith, Jesse A. B., assignor.)
Union Bank of Chicago, trustee. (See Cowles, Irving, assignor.)
Union Carbide & Carbon Research Laboratories, Inc. (See Lytle, Arthur R., assignor.)
Union Electric Manufacturing Company. (See Mekelburg, Earl F., assignor.)
Union Metal Products Company. (See Small, Arthur E., assignor.)
Union Switch & Signal Company. (See Witmer, Harold G., assignor.)
United Auto Trunk Co. (See Balin, Samuel, assignor.)
United Shoe Machinery Corporation. (See Bazzoni, Lewis J., assignor.)
Universal Button Fastening & Button Company. (See Clark, J. M., and Ford, assignors.)
"Universelle" Cigarettenmaschinen-Fabrik J. C. Muller & Co. (See Hohn, Max P. E., assignor.)
Upercu, Inglis M. (See Smith, Hinsdale, assignor.)
Urschel, Bertis H., assignor to Urschel Engineering Company, Bowling Green, Ohio. Axle for self-propelled vehicles. 1,753,037; Apr. 1.
Urschel Engineering Company. (See Urschel, Bertis H., assignor.)
Utter, Bror A., assignor to McClelland Casket Hardware Company, Richmond, Ind. Casket handle. 1,752,868; Apr. 1.
Uttrich, Louis A., Albany, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira, N. Y. Dyeing apparatus. 1,752,712; Apr. 1.
Van Ackeren, Joseph. (See Becker, J., and Van Ackeren.)
Van den Abeele, Joseph, Ghent, Belgium. Spinning machine. 1,752,869; Apr. 1.
Vance, Walter N., Nort Aurora, assignor to Lyon Metal Products, Incorporated, Aurora, Ill. Shelf rack. 1,752,315; Apr. 1.
Van Buren, John, Brooklyn, N. Y. Wrapping machine. 1,752,762; Apr. 1.
Vanderbilt, R. T., Company. (See Evans, Walter W., assignor.)
Van Dorn, Herbert E., Chicago, Ill., assignor to W. E. Van Dorn, Pasadena, Calif. Electric switch. 1,752,763; Apr. 1.
Van Dorn, Herbert E., Chicago, Ill., assignor to W. E. Van Dorn, Pasadena, Calif. Combined coupler head and buffer. 1,752,764; Apr. 1.
Van Dorn, William E. (See Van Dorn, Herbert E., assignor.)
Van Howe, Desire H., Royal Oak, Mich. Slide-way for window panes. 1,753,038; Apr. 1.
Van Sant, Robert H., Chicago, Ill. Applicator for toilet preparations. 1,752,765; Apr. 1.
Van Valkenburg, Hermon L., Wauwatosa, Wis., assignor, by mesne assignments, to Square D. Company, Detroit, Mich. Thermal overload relay. 1,752,514; Apr. 1.
Van Vlaanderen Machine Company. (See Hinnekens, Florent, assignor.)
Vesuvius Corporation, The. (See Lynn, John S., assignor.)
Vethe, Anders E., Oslo, Norway. Calculating apparatus. 1,752,766; Apr. 1.
Vincent, Charles W., Kingston, Pa. Aeroplane wing. 1,753,075; Apr. 1.
Visitacion, Aniceto R., assignor of one-fourth to G. W. Weigel and one-half to L. G. Weigel, New York, N. Y. Lighter. 1,752,658; Apr. 1.
Voshardt, Herman F., assignor to Friedley-Voshardt Co., Chicago, Ill. Nozzle for dishwashers. 1,752,816; Apr. 1.
Walker Cement Products, Inc. (See Dietrichs, Charles, assignor.)
Walker Dishwasher Corporation. (See Walker, Forrest A., assignor.)
Walker, Forrest A., assignor to Walker Dishwasher Corporation, Syracuse, N. Y. Spray nozzle. 1,752,823; Apr. 1.
Walker, Harold W., Edgewood Arsenal, Md. Wood preservation. 1,753,000; Apr. 1.
Walkley, Frank H. (See Walther, G., Walkley, and Borghardt.)
Walter, Erich, Atlantic City, N. J. Combination outlet box. 1,753,100; Apr. 1.
Waltham System, Inc. (See Folger, Henry C., assignor.)
Walther, George, F. H. Walkley, and J. H. Borghardt, assignors to The Dayton Steel Foundry Company, Dayton, Ohio. Wheel. 1,752,317; Apr. 1.
Walty, Werner, Ennetbaden, assignor to A. G. Brown Boveri & Cie., Baden, Switzerland. Electrical protective apparatus. 1,752,970; Apr. 1.
Wardrop, Ralph T. (See Yocum, E. L., and Wardrop.)
Warnock, Wallace S. (See Bryant, G. F., and Warnock.)
Warnock, Wallace S., Chicago, Ill. Printing-press bed. 1,752,767; Apr. 1.
Wasselge, Charles R., Rueil, assignor to Henri et Maurice Farman, Billancourt, France. Steering mechanism for motor vehicles. 1,752,624; Apr. 1.
Watson, George, Beaconsfield, British Columbia, Canada. Locking device. 1,752,824; Apr. 1.
Wayne Pump Company, The. (See Cleary, Andrew W., assignor.)
Wayne Pump Company, The. (See Townsend, W. S., and Parker, assignors.)
Weaver, Gallard E., and E. W. Kelley, assignors to Weaver Manufacturing Company, Springfield, Ill. Tire-casing spreader. 1,753,035; Apr. 1.
Weaver Manufacturing Company. (See Weaver, G. E., and Kelley, assignors.)
Weber, Jacob A. and L. A., Cleveland Heights, Ohio. Catafalque. Des. 80,867; Apr. 1.
Weber, Louis A. (See Weber, Jacob A. and L. A.)
Weepah Manufacturing Corporation, The. (See Johnson, Alfred E., assignor.)
Weigel, General W., et al. (See Visitacion, Aniceto R., assignor.)
Weigel, Louis G., et al. (See Visitacion, Aniceto R., assignor.)
Weiss, Josef. (See Karg, R., and Weiss.)
Welding Service Inc. (See McClary, Archie W., assignor.)
Wensley, Earl, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Sound or vibration transmitting apparatus. 1,752,515; Apr. 1.
Wertz, Roy O., assignor to The Ohio Electric and Controller Company, Cleveland, Ohio. Connecter. 1,753,179; Apr. 1.
Western Electric Company. (See Anderson, Carter H., assignor.)
Western Electric Company. (See Beardsley, H. I., and Clarke, assignors.)
Western Electric Company. (See Fay, Joseph W., assignor.)
Western Electric Company. (See Hartley, Ralph V. L., assignor.)
Western Electric Company. (See Hoag, Charles I., assignor.)
Western Electric Company. (See Hubbard, Francis A., assignor.)
Western Electric Company. (See Jongedyk, Ralph, assignor.)
Western Electric Company. (See Jorgensen, Edmund N., assignor.)
Western Electric Company. (See Karcher, John C., assignor.)
Western Electric Company. (See Kivley, Ray C., assignor.)
Western Electric Company. (See Malm, Frank S., assignor.)
Western Electric Company. (See Massingham, Henry R., assignor.)
Western Electric Company. (See Mathes, Robert C., assignor.)
Western Electric Company. (See Piper, Harry D., assignor.)
Western Electric Company. (See Ruthven, William, assignor.)
Western Electric Company. (See Shea, Timothy E., assignor.)
Western Electric Company. (See Snell, Harry S., assignor.)
Western Electric Company. (See Spencer, Frank C., assignor.)
Western Electric Company. (See Stull, John S., assignor.)
Western Electric Company. (See Trebes, Bruno M. A., assignor.)
Western Electric Company. (See Wensley, Earl, assignor.)
Western States Machine Company, The. (See Roberts, Eugene, assignor.)
Westinghouse Electric & Manufacturing Company. (See Bollinger, Paul, assignor.)
Westinghouse Lamp Company. (See Hageman, A. M., and Lindstrom, assignors.)

CARNEGIE LIBRARY OF ATLANTA

Westinghouse Lamp Company. (See Lederer, Ernest A., assignor.)
Wetch, Paul, Waukegan, Ill. Boat hull. 1,752,406; Apr. 1.
Wharam, John J., Detroit, assignor to Ford Motor Company, Highland Park, Mich. Brake. 1,752,516; Apr. 1.
Whatley, William J., Dallas, Tex. Internal-combustion engine. 1,752,713; Apr. 1.
White, Francis J., Brooklyn, N. Y., assignor to The Okonite Company, Passaic, N. J. Apparatus for reducing sheath currents. 1,752,318; Apr. 1.
White, Francis J., Brooklyn, N. Y., assignor to The Okonite Company, Passaic, N. J. Apparatus for reducing sheath currents. 1,752,319; Apr. 1.
White, Francis J., Brooklyn, N. Y., assignor to The Okonite Company, Passaic, N. J. Apparatus for reducing sheath currents. 1,752,320; Apr. 1.
Whitelegg, Robert H., Disley, England. Fuel bunker for the steam generators of locomotives, marine and stationary engines, and plant. 1,752,870; Apr. 1.
Whitmanis Manufacturing Company. (See Whitney, Karl H., assignor.)
Whitney, Karl H., assignor to Whitmanis Manufacturing Company, Kirksville, Mo. Supporting bar. 1,752,472; Apr. 1.
Whittingham, George H., assignor to Monitor Controller Company, Baltimore, Md. Switch-actuating mechanism. 1,753,078; Apr. 1.
Whittingham, George H., assignor to Monitor Controller Company, Baltimore, Md. Emergency electric-lighting system. 1,753,101; Apr. 1.
Whittingham, George H., assignor to Monitor Controller Company, Baltimore, Md. Switch-actuating mechanism. 1,753,180; Apr. 1.
Wiener, Hugo, Madisonville, Ky. Phonograph construction. 1,752,357; Apr. 1.
Wieseman, Robert W., Schenectady, N. Y., assignor to General Electric Company. Double speed, synchronous, dynamo-electric machine. 1,752,871; Apr. 1.
Wilcox, Albert C., Bridgeport, Ohio. Coal-loading machine. 1,752,714; Apr. 1.
Wilcox, Elmer W. (See Ammon, C. D., and Wilcox.)
Williams, Camp, and Bradbury. (See Spohr, Carl W., assignor.)
Williams, David T., Paterson, N. J. Drifting valve. 1,752,321; Apr. 1.
Williams, Edward T., Pelham Manor, assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y. Refrigerating apparatus. Re17,635; Apr. 1.
Williams, Harold E., Carthage, Mo. Awning. 1,753,102; Apr. 1.
Williams, Louis N. D. (See Buts, Walter D., assignor.)
Williamson, Timothy W., and R. R. Gentry, Hollywood, Tenn. Mail-sorting apparatus. 1,753,036; Apr. 1.
Wilson, George D., Berkeley, Calif., assignor to American Meter Company, Inc., New York, N. Y. Crank-shaft assembly. 1,752,625; Apr. 1.
Wilson, Ira J. (See Robbins, William K., assignor.)
Wilson, William H. (See Land, Charles H., assignor.)
Wilson, William W., Sioux City, Iowa, assignor to Kari-Keen Manufacturing Company, Inc. Trunk and luggage rack. 1,753,077; Apr. 1.
Wingler, August. (See Schulemann, W., Schönhöfer, and Wingler.)
Winthrop Chemical Company. (See Brodersen, K., and Ext, assignors.)
Winthrop Chemical Company. (See Lautenschläger, C. L., Beckmühl, and Schwabe, assignors.)
Winthrop Chemical Company Inc. (See Ludwig, W., and Schaumann, assignors.)
Winthrop Chemical Company. (See Schulemann, W., Schönhöfer, and Wingler, assignors.)
Winser, Oscar G., Troy, Kans. Paint and varnish remover. 1,752,858; Apr. 1.
Wise, George A., assignor to Sutton Engineering Company, Pittsburgh, Pa. Guide for straightening rolls. 1,752,825; Apr. 1.
Witmer, Harold G., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Insulation for electrical conductors. 1,752,872; Apr. 1.
Wittlig, Theodore H., Cleveland, Ohio. Brace for windsor chairs and the like. 1,752,545; Apr. 1.
Wobst, Paul F., Milwaukee, Wis. Peeler. 1,752,768; Apr. 1.
Wohlhuter, William G., Sherburn, Minn. Windshield heater. 1,752,715; Apr. 1.
Wolcott, Edson R., et al. (See Hatfield, Frank A., assignor.)
Wood, Harvey. (See Turner, J. W., Wood, and Mann.)
Woodall, John H., assignor to Georgia Cushion and Wrapper Company, Woodland, Ga. Pad for fruit containers. 1,752,716; Apr. 1.
Woodbury Shoe Mfg. Co. (See Bee, Herbert, assignor.)
Woodward, John E., Brooklyn, assignor to Messrs. Kastenhuber & Lehrfeld, New York, N. Y. Pen-point alloy. 1,753,161; Apr. 1.
Woodward, John E., assignor to Kastenhuber & Lehrfeld, New York, N. Y. Alloy. 1,753,162; Apr. 1.
Woolson, Lionel M., assignor to Packard Motor Car Company, Detroit, Mich. Hydrocarbon motor. 1,752,359; Apr. 1.
Worthington Pump and Machinery Corporation. (See Allerton, Robert W., assignor.)
Wreschner, Marie, and L. F. Loeb, assignors to the firm: Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Composition of matter and producing same. 1,752,826; Apr. 1.
Wright, Gordon A., Syracuse, N. Y. Building floor. 1,752,583; Apr. 1.
Wyatt, Floyd, Whittenberg, Tex. Gas burner. 1,753,141; Apr. 1.
Wyler, Joseph A., Allentown, Pa., assignor to Trojan Powder Company. Artificial fuel. 1,752,985; Apr. 1.
Yocum, Elmer L., Shamokin, and R. T. Wardrop, Bear Gap, Pa. Switch for directional signals. 1,753,078; Apr. 1.
Yoho, Walter A. (See Clark, John L., assignor.)
Young, William J., Cleveland, Ohio. Roofing construction. 1,752,827; Apr. 1.
Youngstown Steel Door Company, The. (See Barrows, Allan S., assignor.)
Youngstown Steel Door Company, The. (See Ditchfield, Frank, assignor.)
Zabel, William P., Cleveland Heights, Ohio, assignor to General Electric Company. Method and apparatus for mounting filaments. 1,752,828; Apr. 1.
Zabriskie, William F., assignor to Gabriel Steel Company, Detroit, Mich. Securing clip for metallic lath. 1,752,517; Apr. 1.
Zapert, Joseph, Brooklyn, N. Y. Combination key and dial lock. 1,752,407; Apr. 1.
Zapf, Georg, Riehlerwall, Cologne, assignor to Felten & Guilleaume Carlswerk Actiengesellschaft, Cologne-Mulheim, Germany. Submarine cable with pressure-protecting covering. 1,753,079; Apr. 1.
Zehnder, Paul, assignor to the firm Internationale Siegwartbalkengesellschaft in Lusern, Lucerne, Switzerland. Device for the production of tubes, poles, and the like from reenforced concrete centrifugally. 1,752,626; Apr. 1.
Zehnder, Paul, assignor to the firm Internationale Siegwartbalkengesellschaft in Lusern, Lucerne, Switzerland. Device for producing reenforced-concrete tubes by the action of centrifugal force. 1,752,627; Apr. 1.
Zein, Otto, Berlin, Germany. Tube expander. 1,752,408; Apr. 1.
Zelt, Elmer J., Fort Wayne, Ind., assignor to General Electric Company. Variable-voltage transformer. 1,752,873; Apr. 1.
Zeyen, Karl. (See Lex, Rudolf, assignor.)
Zimmermann, William F., Maplewood, assignor to Gould & Eberhardt, Newark, N. J. Guide rail for shaping-machine worktables. 1,753,142; Apr. 1.
Zimmermann, William F., Maplewood, assignor to Gould & Eberhardt, Newark, N. J. Shaping-machine work-table cross-rail guide. 1,753,143; Apr. 1.
Zindel, Ernst, assignor to H. Junkers, Dessau, Germany. Flying boat. 1,752,874; Apr. 1.
Ziola, Henry A., assignor to The Swartzbaugh Manufacturing Company, Toledo, Ohio. Cooker. 1,752,769; Apr. 1.
Zwilling, Arthur J., Valley Stream, and J. Faist, Glendale, N. Y. Optician's pliers. 1,753,080; Apr. 1.

Trostel, Louis J., Baltimore, Md., assignor to General Refractories Company, Philadelphia, Pa. Refractory composition and making refractory articles therefrom. 1,752,867; Apr. 1.
Trotman, Walter K., Holyoke, Mass. Dandy roll. 1,752,311; Apr. 1.
Truscon Steel Company. (See Briody, Bernard, assignor.)
Truscott, Starr. (See Jacobsohn, I. M., and Truscott.)
Turner, John W., H. Wood, and E. Mann, Halifax, England. Shock-absorbing device for mechanically-propelled vehicles. 1,753,099; Apr. 1.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft-replenishing mechanism for looms. 1,752,403; Apr. 1.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Multicolor magazine. 1,752,404; Apr. 1.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft-replenishing mechanism for double-shuttle looms. 1,752,405; Apr. 1.
Turnquist, Magnus, Chicago, Ill. Hinge device. 1,752,312; Apr. 1.
Tuttle, Henry A., deceased, Upton, Mass.; J. L. Tuttle, executrix. Clutch mechanism. 1,752,313; Apr. 1.
Tuttle, Jennie L., executrix. (See Tuttle, Henry A.)
Tygart Valley Glass Company. (See Noble, Olbert C., assignor.)
Uhle, David J., and J. V. Durnin, Allentown, Pa. Pulverizing or grinding mill. 1,752,314; Apr. 1.
Uhle, David J., and J. V. Durnin, Allentown, Pa. Pulverizing or grinding mill. 1,752,622; Apr. 1.
Uhle, David J., and J. V. Durnin, Allentown, Pa. Pulverizing or grinding mill. 1,752,623; Apr. 1.
Uhrig, Richard V., Los Angeles, Calif. Slip for rotary tables and spiders for handling pipe. 1,752,822; Apr. 1.
Underwood Elliott Fisher Company. (See Kurowski, Alfred G. F., assignor.)
Underwood Elliott Fisher Company. (See Smith, Jesse A. B., assignor.)
Union Bank of Chicago, trustee. (See Cowles, Irving, assignor.)
Union Carbide & Carbon Research Laboratories, Inc. (See Lytle, Arthur R., assignor.)
Union Electric Manufacturing Company. (See Mekelburg, Earl F., assignor.)
Union Metal Products Company. (See Small, Arthur E., assignor.)
Union Switch & Signal Company. (See Witmer, Harold G., assignor.)
United Auto Trunk Co. (See Balin, Samuel, assignor.)
United Shoe Machinery Corporation. (See Bazzoni, Lewis J., assignor.)
Universal Button Fastening & Button Company. (See Clark, J. M., and Ford, assignors.)
"Universelle" Cigarettenmaschinen-Fabrik J. C. Muller & Co. (See Hohn, Max P. E., assignor.)
Upercu, Inglis M. (See Smith, Hinsdale, assignor.)
Urschel, Bertis H., assignor to Urschel Engineering Company, Bowling Green, Ohio. Axle for self-propelled vehicles. 1,753,037; Apr. 1.
Urschel Engineering Company. (See Urschel, Bertis H., assignor.)
Utter, Bror A., assignor to McClelland Casket Hardware Company, Richmond, Ind. Casket handle. 1,752,868; Apr. 1.
Uttrich, Louis A., Albany, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira, N. Y. Dyeing apparatus. 1,752,712; Apr. 1.
Van Ackeren, Joseph. (See Becker, J., and Van Ackeren.)
Van den Abeele, Joseph, Ghent, Belgium. Spinning machine. 1,752,869; Apr. 1.
Vance, Walter N., Nort Aurora, assignor to Lyon Metal Products, Incorporated, Aurora, Ill. Shelf rack. 1,752,315; Apr. 1.
Van Buren, John, Brooklyn, N. Y. Wrapping machine. 1,752,762; Apr. 1.
Vanderbilt, R. T., Company. (See Evans, Walter W., assignor.)
Van Dorn, Herbert E., Chicago, Ill., assignor to W. E. Van Dorn, Pasadena, Calif. Electric switch. 1,752,763; Apr. 1.
Van Dorn, Herbert E., Chicago, Ill., assignor to W. E. Van Dorn, Pasadena, Calif. Combined coupler head and buffer. 1,752,764; Apr. 1.
Van Dorn, William E. (See Van Dorn, Herbert E., assignor.)
Van Howe, Desire H., Royal Oak, Mich. Slide-way for window panes. 1,753,038; Apr. 1.
Van Sant, Robert H., Chicago, Ill. Applicator for toilet preparations. 1,752,765; Apr. 1.
Van Valkenburg, Hermon L., Wauwatosa, Wis., assignor, by mesne assignments, to Square D. Company, Detroit, Mich. Thermal overload relay. 1,752,514; Apr. 1.
Van Vlaanderen Machine Company. (See Hinnekens, Florent, assignor.)
Vesuvius Corporation, The. (See Lynn, John S., assignor.)
Vethe, Anders E., Oslo, Norway. Calculating apparatus. 1,752,766; Apr. 1.
Vincent, Charles W., Kingston, Pa. Aeroplane wing. 1,753,075; Apr. 1.
Visitacion, Aniceto R., assignor of one-fourth to G. W. Weigel and one-half to L. G. Weigel, New York, N. Y. Lighter. 1,752,658; Apr. 1.
Voshardt, Herman F., assignor to Friedley-Voshardt Co., Chicago, Ill. Nozzle for dishwashers. 1,752,816; Apr. 1.
Walker Cement Products, Inc. (See Dietrichs, Charles, assignor.)
Walker Dishwasher Corporation. (See Walker, Forrest A., assignor.)
Walker, Forrest A., assignor to Walker Dishwasher Corporation, Syracuse, N. Y. Spray nozzle. 1,752,823; Apr. 1.
Walker, Harold W., Edgewood Arsenal, Md. Wood preservation. 1,753,000; Apr. 1.
Walkley, Frank H. (See Walther, G., Walkley, and Borghardt.)
Walter, Erich, Atlantic City, N. J. Combination outlet box. 1,753,100; Apr. 1.
Waltham System, Inc. (See Folger, Henry C., assignor.)
Walther, George, F. H. Walkley, and J. H. Borghardt, assignors to The Dayton Steel Foundry Company, Dayton, Ohio. Wheel. 1,752,317; Apr. 1.
Walty, Werner, Ennetbaden, assignor to A. G. Brown Boveri & Cie., Baden, Switzerland. Electrical protective apparatus. 1,752,970; Apr. 1.
Wardrop, Ralph T. (See Yocum, E. L., and Wardrop.)
Warnock, Wallace S. (See Bryant, G. F., and Warnock.)
Warnock, Wallace S., Chicago, Ill. Printing-press bed. 1,752,767; Apr. 1.
Waseige, Charles R., Ruell, assignor to Henri et Maurice Farman, Billancourt, France. Steering mechanism for motor vehicles. 1,752,624; Apr. 1.
Watson, George, Beaconsfield, British Columbia, Canada. Locking device. 1,752,824; Apr. 1.
Wayne Pump Company, The. (See Cleary, Andrew W., assignor.)
Wayne Pump Company, The. (See Townsend, W. S., and Parker, assignors.)
Weaver, Gallard E., and E. W. Kelley, assignors to Weaver Manufacturing Company, Springfield, Ill. Tire-casing spreader. 1,753,035; Apr. 1.
Weaver Manufacturing Company. (See Weaver, G. E., and Kelley, assignors.)
Weber, Jacob A. and L. A., Cleveland Heights, Ohio. Catafalque. Des. 80,867; Apr. 1.
Weber, Louis A. (See Weber, Jacob A. and L. A.)
Weepah Manufacturing Corporation, The. (See Johnson, Alfred E., assignor.)
Weigel, General W., et al. (See Visitacion, Aniceto R., assignor.)
Weigel, Louis G., et al. (See Visitacion, Aniceto R., assignor.)
Weiss, Josef. (See Karg, R., and Weiss.)
Welding Service Inc. (See McClary, Archie W., assignor.)
Wensley, Earl, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Sound or vibration transmitting apparatus. 1,752,515; Apr. 1.
Wertz, Roy O., assignor to The Ohio Electric and Controller Company, Cleveland, Ohio. Connecter. 1,753,179; Apr. 1.
Western Electric Company. (See Anderson, Carter H., assignor.)
Western Electric Company. (See Beardsley, H. I., and Clarke, assignors.)
Western Electric Company. (See Fay, Joseph W., assignor.)
Western Electric Company. (See Hartley, Ralph V. L., assignor.)
Western Electric Company. (See Hoag, Charles I., assignor.)
Western Electric Company. (See Hubbard, Francis A., assignor.)
Western Electric Company. (See Jongedyk, Ralph, assignor.)
Western Electric Company. (See Jorgensen, Edmund N., assignor.)
Western Electric Company. (See Karcher, John C., assignor.)
Western Electric Company. (See Kivley, Ray C., assignor.)
Western Electric Company. (See Malm, Frank S., assignor.)
Western Electric Company. (See Massingham, Henry R., assignor.)
Western Electric Company. (See Mathes, Robert C., assignor.)
Western Electric Company. (See Piper, Harry D., assignor.)
Western Electric Company. (See Ruthven, William, assignor.)
Western Electric Company. (See Shea, Timothy E., assignor.)
Western Electric Company. (See Snell, Harry S., assignor.)
Western Electric Company. (See Spencer, Frank C., assignor.)
Western Electric Company. (See Stull, John S., assignor.)
Western Electric Company. (See Trebes, Bruno M. A., assignor.)
Western Electric Company. (See Wensley, Earl, assignor.)
Western States Machine Company, The. (See Roberts, Eugene, assignor.)
Westinghouse Electric & Manufacturing Company. (See Bollinger, Paul, assignor.)
Westinghouse Lamp Company. (See Hageman, A. M., and Lindstrom, assignors.)

CARNEGIE LIBRARY OF ATLANTA

Westinghouse Lamp Company. (See Lederer, Ernest A., assignor.)
Wetch, Paul, Waukegan, Ill. Boat hull. 1,752,406; Apr. 1.
Wharam, John J., Detroit, assignor to Ford Motor Company, Highland Park, Mich. Brake. 1,752,516; Apr. 1.
Whatley, William J., Dallas, Tex. Internal-combustion engine. 1,752,713; Apr. 1.
White, Francis J., Brooklyn, N. Y., assignor to The Okonite Company, Passaic, N. J. Apparatus for reducing sheath currents. 1,752,318; Apr. 1.
White, Francis J., Brooklyn, N. Y., assignor to The Okonite Company, Passaic, N. J. Apparatus for reducing sheath currents. 1,752,319; Apr. 1.
White, Francis J., Brooklyn, N. Y., assignor to The Okonite Company, Passaic, N. J. Apparatus for reducing sheath currents. 1,752,320; Apr. 1.
Whitelegg, Robert H., Disley, England. Fuel bunker for the steam generators of locomotives, marine and stationary engines, and plant. 1,752,870; Apr. 1.
Whitmanis Manufacturing Company. (See Whitney, Karl H., assignor.)
Whitney, Karl H., assignor to Whitmanis Manufacturing Company, Kirksville, Mo. Supporting bar. 1,752,472; Apr. 1.
Whittingham, George H., assignor to Monitor Controller Company, Baltimore, Md. Switch-actuating mechanism. 1,753,076; Apr. 1.
Whittingham, George H., assignor to Monitor Controller Company, Baltimore, Md. Emergency electric-lighting system. 1,753,101; Apr. 1.
Whittingham, George H., assignor to Monitor Controller Company, Baltimore, Md. Switch-actuating mechanism. 1,753,180; Apr. 1.
Wiener, Hugo, Madisonville, Ky. Phonograph construction. 1,752,357; Apr. 1.
Wieseman, Robert W., Schenectady, N. Y., assignor to General Electric Company. Double speed, synchronous, dynamo-electric machine. 1,752,871; Apr. 1.
Wilcox, Albert C., Bridgeport, Ohio. Coal-loading machine. 1,752,714; Apr. 1.
Wilcox, Elmer W. (See Ammon, C. D., and Wilcox.)
Williams, Camp, and Bradbury. (See Spohr, Carl W., assignor.)
Williams, David T., Paterson, N. J. Drifting valve. 1,752,321; Apr. 1.
Williams, Edward T., Pelham Manor, assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y. Refrigerating apparatus. Re17,635; Apr. 1.
Williams, Harold E., Carthage, Mo. Awning. 1,753,102; Apr. 1.
Williams, Louis N. D. (See Butz, Walter D., assignor.)
Williamson, Timothy W., and R. R. Gentry, Hollywood, Tenn. Mail-sorting apparatus. 1,753,036; Apr. 1.
Wilson, George D., Berkeley, Calif., assignor to American Meter Company, Inc., New York, N. Y. Crank-shaft assembly. 1,752,625; Apr. 1.
Wilson, Ira J. (See Robbins, William K., assignor.)
Wilson, William H. (See Land, Charles H., assignor.)
Wilson, William W., Sioux City, Iowa, assignor to Kari-Keen Manufacturing Company, Inc. Trunk and luggage rack. 1,753,077; Apr. 1.
Wingler, August. (See Schulemann, W., Schönhöfer, and Wingler.)
Winthrop Chemical Company. (See Brodersen, K., and Ext, assignors.)
Winthrop Chemical Company. (See Lautenschläger, C. L., Bockmühl, and Schwabe, assignors.)
Winthrop Chemical Company Inc. (See Ludwig, W., and Schaumann, assignors.)
Winthrop Chemical Company. (See Schulemann, W., Schönhöfer, and Wingler, assignors.)
Winzer, Oscar G., Troy, Kans. Paint and varnish remover. 1,752,358; Apr. 1.
Wise, George A., assignor to Sutton Engineering Company, Pittsburgh, Pa. Guide for straightening rolls. 1,752,825; Apr. 1.
Witmer, Harold G., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Insulation for electrical conductors. 1,752,872; Apr. 1.
Wittlif, Theodore H., Cleveland, Ohio. Brace for windsor chairs and the like. 1,752,545; Apr. 1.
Wobst, Paul F., Milwaukee, Wis. Peeler. 1,752,768; Apr. 1.
Wohlhuter, William G., Sherburn, Minn. Windshield heater. 1,752,715; Apr. 1.
Wolcott, Edson R., et al. (See Hatfield, Frank A., assignor.)
Wood, Harvey. (See Turner, J. W., Wood, and Mann.)
Woodall, John H., assignor to Georgia Cushion and Wrapper Company, Woodland, Ga. Pad for fruit containers. 1,752,716; Apr. 1.
Woodbury Shoe Mfg. Co. (See Bee, Herbert, assignor.)
Woodward, John E., Brooklyn, assignor to Messrs. Kastenhuber & Lebrfeld, New York, N. Y. Pen-point alloy. 1,753,161; Apr. 1.
Woodward, John E., assignor to Kastenhuber & Lehrfeld, New York, N. Y. Alloy. 1,753,162; Apr. 1.
Woolson, Lionel M., assignor to Packard Motor Car Company, Detroit, Mich. Hydrocarbon motor. 1,752,359; Apr. 1.
Worthington Pump and Machinery Corporation. (See Allerton, Robert W., assignor.)
Wreschner, Marie, and L. F. Loeb, assignors to the firm: Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Composition of matter and producing same. 1,752,826; Apr. 1.
Wright, Gordon A., Syracuse, N. Y. Building floor. 1,752,583; Apr. 1.
Wyatt, Floyd, Whittenberg, Tex. Gas burner. 1,753,141; Apr. 1.
Wyler, Joseph A., Allentown, Pa., assignor to Trojan Powder Company. Artificial fuel. 1,752,985; Apr. 1.
Yocum, Elmer L., Shamokin, and E. T. Wardrop, Bear Gap, Pa. Switch for directional signals. 1,753,078; Apr. 1.
Yoho, Walter A. (See Clark, John L., assignor.)
Young, William J., Cleveland, Ohio. Roofing construction. 1,752,827; Apr. 1.
Youngstown Steel Door Company, The. (See Barrows, Allan S., assignor.)
Youngstown Steel Door Company, The. (See Ditchfield, Frank, assignor.)
Zabel, William P., Cleveland Heights, Ohio, assignor to General Electric Company. Method and apparatus for mounting filaments. 1,752,828; Apr. 1.
Zabriskie, William F., assignor to Gabriel Steel Company, Detroit, Mich. Securing clip for metallic lath. 1,752,517; Apr. 1.
Zapert, Joseph, Brooklyn, N. Y. Combination key and dial lock. 1,752,407; Apr. 1.
Zapf, Georg, Riehlerwall, Cologne, assignor to Felten & Guilleaume Carlswerk Actiengesellschaft, Cologne-Mulheim, Germany. Submarine cable with pressure-protecting covering. 1,753,079; Apr. 1.
Zehnder, Paul, assignor to the firm Internationale Siegwartbalkengesellschaft in Lusern, Lucerne, Switzerland. Device for the production of tubes, poles, and the like from reenforced concrete centrifugally. 1,752,626; Apr. 1.
Zehnder, Paul, assignor to the firm Internationale Siegwartbalkengesellschaft in Lusern, Lucerne, Switzerland. Device for producing reenforced-concrete tubes by the action of centrifugal force. 1,752,627; Apr. 1.
Zein, Otto, Berlin, Germany. Tube expander. 1,752,408; Apr. 1.
Zelt, Elmer J., Fort Wayne, Ind., assignor to General Electric Company. Variable-voltage transformer. 1,752,873; Apr. 1.
Zeyen, Karl. (See Lex, Rudolf, assignor.)
Zimmermann, William F., Maplewood, assignor to Gould & Eberhardt, Newark, N. J. Guide rail for shaping-machine worktables. 1,753,142; Apr. 1.
Zimmermann, William F., Maplewood, assignor to Gould & Eberhardt, Newark, N. J. Shaping-machine work-table cross-rail guide. 1,753,143; Apr. 1.
Zindel, Ernst, assignor to H. Junkers, Dessau, Germany. Flying boat. 1,752,874; Apr. 1.
Ziola, Henry A., assignor to The Swartzbaugh Manufacturing Company, Toledo, Ohio. Cooker. 1,752,709; Apr. 1.
Zwilling, Arthur J., Valley Stream, and J. Faist, Glendale, N. Y. Optician's pliers. 1,753,080; Apr. 1.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 1st DAY OF APRIL, 1930

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Absorber, Rebound. L. G. Recchia. 1,752,694; Apr. 1.
Accelerator control. H. A. Myers. 1,752,501; Apr. 1.
Accounting apparatus and system. E. L. Reller and V. R. A. Stroh. 1,752,394; Apr. 1.
Acid sludge, Continuously hydrolyzing. R. A. Halloran, W. N. Davis, and G. A. Davidson. 1,752,555; Apr. 1.
Adsorbable substances, Recovery of. A. B. Ray and G. T. Felbeck. 1,753,067; Apr. 1.
Adsorbent materials, Preparing. H. E. Bierce. 1,752,721; Apr. 1.
Advertising apparatus. J. C. Mitchell. 1,752,570; Apr. 1.
Advertising apparatus. T. J. McCleave. 1,752,919; Apr. 1.
Advertising apparatus, Illuminative. J. D. Henderson. 1,753,049; Apr. 1.
Aeroplane wing. C. W. Vincent. 1,753,075; Apr. 1.
Aeroplane-wing construction. W. M. Cross. 1,752,421; Apr. 1.
Agitation and settling apparatus. F. A. Downes. 1,752,789; Apr. 1.
Agitation and settling process. C. P. Hoover and F. A. Downes. 1,752,795; Apr. 1.
Aircraft covering. I. M. Jacobsohn and S. Truscott. 1,752,637; Apr. 1.
Aircraft, Floating dock for water. P. Degn. 1,752,804; Apr. 1.
Airfoil construction. H. H. Semmes. 1,752,701; Apr. 1.
Air-heating furnace. C. Becker and F. Kleinheksel. 1,752,938; Apr. 1.
Air lock and conveyer system. W. D. Phillips. 1,753,158; Apr. 1.
Airplane. G. R. Engledow. 1,753,112; Apr. 1.
Airplane-wing section. L. W. Gobble. 1,752,378; Apr. 1.
Airship. H. J. Ross. 1,753,068; Apr. 1.
Airship construction. V. A. M. E. Brahy. 1,752,831; Apr. 1.
Alarm: *See*—
  Locking and brake alarm.
Alcohol, Purifying phenylethyl. E. C. Britton. 1,752,365; Apr. 1.
Alkali chlorides, Cell for electrolyzing solutions of. E. Krebs. 1,753,123; Apr. 1.
Alkali, Recovering. R. H. McKee. 1,753,128; Apr. 1.
Alloy. J. E. Woodward. 1,753,162; Apr. 1.
Alloy, Pen-point. J. E. Woodward. 1,753,161; Apr. 1.
Aluminous materials for the production of aluminum sulphate and alumina therefrom, Treating. B. R. F. Kjellgren. 1,752,599; Apr. 1.
Aluminous materials, Treating. B. R. F. Kjellgren. 1,752,641; Apr. 1.
Aluminum chloride, Manufacture of anhydrous. W. R. Anstin and J. N. Smith. 1,752,936; Apr. 1.
Amines, Aminoalkylation of. W. Schulemann, F. Schönhöfer, and A. Wingler. 1,752,617; Apr. 1.
Amplifier. P. C. Gardiner. 1,752,839; Apr. 1.
Amplifier, Sound. F. C. Hinckley. 1,752,526; Apr. 1.
Anchor, Crosshead-guide. C. J. Black. 1,753,107; Apr. 1.
Anchoring device. J. H. Phillips. 1,752,999; Apr. 1.
Animal organs and preparing the same, Solution of the active principle from. W. Ludwig and O. Schaumann. 1,752,916; Apr. 1.
Annealing, Apparatus for. H. M. Robertson. 1,752,697; Apr. 1.
Antenna system. L. A. Taylor. 1,752,864; Apr. 1.
Apparel, Wearing. A. A. Person. 1,752,927; Apr. 1.
Applicator for toilet preparations. R. H. Van Sant. 1,752,765; Apr. 1.
Articles, Method and apparatus for drying. W. C. Stevens. 1,753,176; Apr. 1.
Assembly unit. H. Junkers. 1,753,051; Apr. 1.
Atmospheric disturbance, Reduction of. L. A. Kelley. 1,752,345; Apr. 1.
Atmospheric disturbance, Reduction of. F. A. Leibe. 1,752,347; Apr. 1.
Atmospheric interference, Reduction of. L. A. Kelley. 1,752,344; Apr. 1.
Automobile camp shelter. N. J. N. Olson. 1,752,571; Apr. 1.
Automobile or highway signal. J. C. Nordgran. 1,752,805; Apr. 1.
Automobile wheel. E. R. Tietz. 1,752,819; Apr. 1.
Auto seat, Convertible. F. N. Lee. 1,752,441; Apr. 1.
Awning. H. E. Williams. 1,753,102; Apr. 1.
Awning or curtain. W. B. McSpadden. 1,752,610; Apr. 1.
Axle for self-propelled vehicles. B. H. Urschel. 1,753,037; Apr. 1.
Bag: *See*—
  Fitted traveling bag. Paper bag.
  Multiple-walled bag.
Ball and making the same, Packaged inflated playing. M. B. Reach. 1,752,695; Apr. 1.
Balls, Making. J. R. Gammeter. 1,752,735; Apr. 1.
Banjo. C. L. Dewey. 1,752,788; Apr. 1.
Bar: *See*—
  Supporting bar.
Barge-coal-loading apparatus. H. Adams. 1,752,410; Apr. 1.
Base plate for railroad-track structures. G. W. Muller. 1,752,451; Apr. 1.
Basket, Centrifugal. R. Roberts. 1,753,023; Apr. 1.
Baskets, Method and apparatus for making. A. H. Schmidtke. 1,752,856; Apr. 1.
Battery-plate material, Reclaiming. W. C. Smith. 1,752,356; Apr. 1.
Battery sealing composition, Dry-cell-. H. Bothenberg and S. L. Henken. 1,752,351; Apr. 1.
Beacon, Unattended. P. R. Bassett. 1,753,144; Apr. 1.
Bearing and mounting therefor, Roller. W. B. Bronander. 1,752,777; Apr. 1.
Bearing, Roller. B. A. Ryan. 1,752,616; Apr. 1.
Bench: *See*—
  Box-bidding bench.
Bending machine. W. C. Stevens. 1,753,177; Apr. 1.
Binder for fuel agglomerates. F. M. Crossman. 1,752,838; Apr. 1.
Block: *See*—
  Connection block.
Blower. F. G. Romig. 1,752,810; Apr. 1.
Board: *See*—
  Writing board.
Boat, Flying. E. Zindel. 1,752,874; Apr. 1.

Fish lure. A. J. Sobecki. 1,752,706; Apr. 1.
Fishing device. C. V. See. 1,752,297; Apr. 1.
Fishing rod. S. T. Thorpe and N. P. Peterson. 1,752,865; Apr. 1.
Fitted traveling bag. R. Herrimann. 1,752,948; Apr. 1.
Fittings and pipe system for soot cleaners. F. W. Linaker and T. M. Bruback. 1,752,442; Apr. 1.
Flask: *See*—
Molding flask.
Flexible mat. H. W. Hollenbeck. 1,752,846; Apr. 1.
Floor, Building. G. A. Wright. 1,752,683; Apr. 1.
Floor-finishing machine. A. Robertson. 1,752,965; Apr. 1.
Flotation machine. A. L. Howard. 1,752,434; Apr. 1.
Flue bushing. J. C. Tatarek. 1,753,098; Apr. 1.
Folding chair. C. J. Marson. 1,752,306; Apr. 1.
Folding machine. S. J. Campbell. 1,752,415; Apr. 1.
Folding mechanism. W. Evensen. 1,752,426; Apr. 1.
Folding table. J. Kovats. 1,752,304; Apr. 1.
Forging furnace, Rotary. R. M. Hortvet. 1,752,433; Apr. 1.
Fountain: *See*—
Water fountain.
Frame: *See*—
Window frame.
Frame for holding photographic films and plates. J. E. Skell. 1,752,814; Apr. 1.
Frame for license plates. W. R. Busenbark. 1,752,883; Apr. 1.
Frames and the like, Differential motion for roving. W. C. Stewart. 1,752,708; Apr. 1.
Fuel, Artificial. J. A. Wyler. 1,752,935; Apr. 1.
Fuel bunker for the steam generators of locomotives, marine and stationary engines, and plant. R. H. Whitelegg. 1,752,870; Apr. 1.
Fuel, Internal-combustion-engine. I. Bourie. 1,752,724; Apr. 1.
Fuelliser for air withdrawn from suction-actuated power actuators. C. S. Bragg and V. W. Kliesrath. 1,753,168; Apr. 1.
Fungicide. K. Brodersen and W. Ext. 1,752,293; Apr. 1.

Furnace: *See*—
Air-heating furnace. Gas furnace.
Forging furnace. Induction furnace.
Furnace and operating the same, Muffle. W. W. Kemp. 1,752,800; Apr. 1.
Furnaces, Checkerwork for. F. H. Loftus and T. N. Kurts. 1,752,494; Apr. 1.
Furniture base. R. F. Taylor. 1,752,818; Apr. 1.
Fuse. A. L. Eustice. 1,753,046; Apr. 1.
Fuse tongs. H. D. Grinnell. 1,753,181; Apr. 1.
Garden implement. T. C. Strawn. 1,752,467; Apr. 1.
Garter. M. Lederman. 1,753,125; Apr. 1.
Gas burner. F. Wyatt. 1,753,141; Apr. 1.
Gas electric drive. F. E. Queeney. 1,752,931; Apr. 1.
Gas furnace. C. E. Schultz. 1,752,460; Apr. 1.
Gas-producing apparatus. G. R. Roesch. 1,752,851; Apr. 1.
Gas-purification process. D. L. Jacobson. 1,752,382; Apr. 1.
Gas reservoir. K. Jagschitz. 1,752,383; Apr. 1.
Gauge: *See*—
Pressure gauge.
Gear, Landing. H. C. Richardson. 1,752,895; Apr. 1.
Gear, Locomotive valve. J. D. Purdy. 1,752,929; Apr. 1.
Gear-testing machine. C. H. Logue. 1,753,014; Apr. 1.
Glass, Cutting laminated. P. A. McCullough. 1,752,567; Apr. 1.
Glove, Boxing. F. Diesterle. 1,752,972; Apr. 1.
Graders, Ditch cutter for. D. C. and O. Q. Hinds. 1,753,150; Apr. 1.
Grid for chemical storage batteries. P. Pettinelli. 1,752,968; Apr. 1.
Grinder, Feed. C. D. Ammon and E. W. Wilcox. 1,752,971; Apr. 1.
Grinder, Hammer-mill feed. C. D. Ammon. 1,752,290; Apr. 1.
Grinder, Universal. E. C. Oliver. 1,752,961; Apr. 1.
Grinding, pulverizing, or disintegrating mill. W. A. Cloud. 1,752,883; Apr. 1.
Grommet for pneumatic tires. P. M. Bourdon. 1,753,041; Apr. 1.
Guayule, etc., Treatment of. D. Spence. 1,753,184; Apr. 1.
Guide attachment for presser bars. R. Bankler. 1,752,323; Apr. 1.
Guide device. A. L. Ligon. 1,753,126; Apr. 1.
Guide for straightening rolls. G. A. Wise. 1,752,823; Apr. 1.
Guide rail for shaping-machine worktables. W. F. Zimmermann. 1,753,142; Apr. 1.
Hairpin. E. D. Davis. 1,752,893; Apr. 1.
Halogen groups in organic compounds by amino groups, Replacing. K. H. T. Pfister. 1,752,996; Apr. 1.
Hame connecter. A. J. Ellis. 1,753,045; Apr. 1.
Hammer. J. L. Clark. 1,752,588; Apr. 1.
Hammer, Pneumatic. J. T. McGrath. 1,752,448; Apr. 1.
Hand bag. F. J. Quigan. Des. 80,870; Apr. 1.
Hand brake. W. H. Sauvage. 1,753,133; Apr. 1.
Handle: *See*—
Casket handle.
Handle-arresting mechanism for coin-controlled machines. L. H. Larsen and C. W. Nixon. 1,752,643; Apr. 1.
Handrail for fire escapes. R. W. Downes. 1,752,589; Apr. 1.
Hangar for airships. O. Krell. 1,752,911; Apr. 1.
Hanger: *See*—
Radiator hanger.
Harmonica. W. J. Haussler. 1,752,988; Apr. 1.
Harness. H. V. Hanson. 1,752,525; Apr. 1.
Hat. J. Lake, jr. 1,753,052; Apr. 1.
Hatbox, Wardrobe. S. Balin. 1,752,772; Apr. 1.
Haulage apparatus. O. E. Clark. 1,752,338; Apr. 1.
Headlight, Dirigible. W. E. C. Stone. 1,752,861; Apr. 1.
Headlight, Vehicle. A. C. Menningen. 1,752,849; Apr. 1.
Heat-absorbing medium. R. B. Kingman. 1,752,670; Apr. 1.
Heat boiler, Waste-. G. T. Ladd. 1,752,678; Apr. 1.
Heat-control apparatus. J. J. Fagan. 1,752,668; Apr. 1.
Heat treating metals, Apparatus for. H. D. Piper. 1,752,573; Apr. 1.
Heater: *See*—
Crank-case heater. Windshield heater.
Water heater.
Heater. W. G. Nagle and M. Lehman. Des. 80,852; Apr. 1.
Heater appliance, Water-. F. A. Gauger and R. W. Johnson. 1,752,840; Apr. 1.
Heating and humidifying system for food carts. G. A. Lueck. 1,752,749; Apr. 1.
Heating and ventilating apparatus. G. E. Otis. 1,753,156–7; Apr. 1.
Heating system, Central. E. S. Mead. 1,752,684; Apr. 1.
Heel-cover-trimming machine. L. J. Bassoni. 1,752,774; Apr. 1.
Hinge. J. Farver. 1,752,428; Apr. 1.
Hinge device. M. Turnquist. 1,752,212; Apr. 1.
Hoist, Water. T. C. Spelling. 1,753,163–4; Apr. 1.

Piston, Engine. M. H. P. Sologalstoa. 1,752,816; Apr. 1.
Piston ring. J. J. Howard. 1,752,848; Apr. 1.
Piston, Ringless self-expanding. G. Floyd. 1,753,113; Apr. 1.
Plaiter. M. D. Dickman. 1,752,897; Apr. 1.
Planters, Mounting device for seed. P. Scrimger. 1,753,136; Apr. 1.
Plastic article. R. V. Mattison. 1,752,307; Apr. 1.
Plate-registering means. W. H. Bansett. 1,752,659; Apr. 1.
Pliers, Optician's. A. J. Zwilling. 1,753,080; Apr. 1.
Plow, Tractor. G. Hudson. 1,752,849; Apr. 1.
Poke, Cow. C. J. Spencer. 1,753,071; Apr. 1.
Polisher for vacuum cleaners, Floor. J. F. Morgal. 1,752,803; Apr. 1.
Pop-corn machine. J. H. Reichart. 1,752,457; Apr. 1.
Postal section, Tubular. W. Höhne. 1,753,169; Apr. 1.
Potato digger, Cylinder. G. Backer. 1,753,139; Apr. 1.
Powder, Manufacture of smokeless. C. R. Borland. 1,752,881; Apr. 1.
Precipitating system. A. G. McGregor. 1,753,015; Apr. 1.
Press: *See*—
Vulcanizing press.
Pressure gauge, Controlling. S. A. F. Johansson and A. O. Dahlström. 1,753,118; Apr. 1.
Pressure motor, Counter-thrust. C. G. Edwards. 1,752,899; Apr. 1.

Price tag. S. Singer. 1,752,509; Apr. 1.
Printing chase. P. M. Pope. 1,753,173; Apr. 1.
Printing die. P. Gremin. 1,752,298; Apr. 1.
Printing-press bed. G. F. Bryant and W. S. Warnock. 1,752,779; Apr. 1.
Printing-press bed. W. S. Warnock. 1,752,767; Apr. 1.
Protective system. V. Kenkin. 1,752,947; Apr. 1.
Protective system for transmission circuits. F. W. Gay. 1,752,066; Apr. 1.
Pulley, Clothesline. A. Kappel. 1,753,084; Apr. 1.
Pulpous material, Mechanism for working. J. W. Fay. 1,752,480; Apr. 1.
Pulverizing or grinding mill. D. J. Uhle and J. V. Durnin. 1,752,314; Apr. 1.
Pulverizing or grinding mill. D. J. Uhle and J. V. Durnin. 1,752,622–3; Apr. 1.
Pump. R. W. Allerton. 1,752,546; Apr. 1.
Pump. F. G. Brown. 1,752,366; Apr. 1.
Pump for multicylinder internal-combustion engines, Fuel. J. Mahler. 1,752,886; Apr. 1.
Pump, Liquid-measuring. E. E. Eickmeyer. 1,752,523; Apr. 1.
Pumps, Jack frame for well. J. R. Mehan and J. B. Picard. 1,752,647; Apr. 1.
Quinaldine, Making. L. P. Kyrides. 1,752,492; Apr. 1.
Rack: *See*—
Clothes rack.
Crepe-steaming rack.
Display rack.
Shelf rack.
Shoe rack.
Trunk and luggage rack.
Radiator. E. L. Anderson. 1,752,879; Apr. 1.
Radiator. L. Courtot. 1,752,785; Apr. 1.
Radiator cap. F. G. and W. M. Folberth. 1,753,003; Apr. 1.
Radiator hanger, Reversible. F. W. Fuller. 1,752,296; Apr. 1.
Radioantenna. L. F. and O. G. Noirot, and G. C. Rupert. 1,752,925; Apr. 1.
Radio program detector. K. G. Karsten. 1,752,302; Apr. 1.
Radiotube. H. C. Colburn. 1,752,520; Apr. 1.
Rail joint. A. W. McClary. 1,752,566; Apr. 1.
Rail straightener, Railroad-. C. D. Baldwin. 1,752,629; Apr. 1.
Rails, Apparatus for straightening the heads of railway. J. R. Lukaszyk. 1,752,646; Apr. 1.
Railroad system for levee constructing. R. H. McWilliams. 1,752,958; Apr. 1.
Rake. G. H. Maus. 1,752,447; Apr. 1.
Ramp structure. W. F. Goodrich. 1,753,115; Apr. 1.
Rebound device, Hydraulic. E. W. Ackerman and G. C. Nicholson. 1,752,409; Apr. 1.
Receptacle and making same. A. Daniels. 1,752,371; Apr. 1.
Receptacle, Bottle. W. T. Smith. 1,752,815; Apr. 1.
Receptacle for use in manicuring. G. G. Culver. 1,753,044; Apr. 1.
Recording time and period values. W. J. Love, jr. 1,752,564; Apr. 1.
Refining system. A. G. Peterkin, jr. 1,752,455; Apr. 1.
Refractory composition and making refractory articles therefrom. L. J. Trostel. 1,752,807; Apr. 1.
Refrigerating apparatus. E. T. Williams. Re17,635; Apr. 1.
Refrigeration coil. C. M. Brenner. 1,753,042; Apr. 1.
Refuse-handling apparatus. K. Hirschner. 1,752,950; Apr. 1.
Regulator: *See*—
Temperature regulator.
Window regulator.
Regulator handle or the like for an automotive vehicle, Window. W. H. Hollindale. Des. 80,840; Apr. 1.
Relay, Thermal overload. H. L. Van Valkenburg. 1,752,514; Apr. 1.
Resilient wheel. G. Orbin. 1,753,131; Apr. 1.
Resin and making same, Oxidized. A. S. Ramage. 1,752,693; Apr. 1.
Return apparatus. W. Ehrhart. 1,752,979; Apr. 1.
Return bend. F. C. Fants. 1,752,331; Apr. 1.
Rifle, Automatic. A. Bochnak. 1,752,324; Apr. 1.
Ring: *See*—
Piston ring.
Ring. F. H. Hill. Des. 80,836; Apr. 1.
Ring or article of similar nature, Finger. E. J. Gross. Des. 80,833; Apr. 1.
Ring spinning and doubling frame. J. Jolly. 1,753,119; Apr. 1.
Riveting device. H. Junkers. 1,752,799; Apr. 1.
Rod: *See*—
Connecting rod.
Fishing rod.
Welding rod.
Roller: *See*—
Kiln roller.
Roller attachment. G. W. McConnell. 1,752,682; Apr. 1.
Roller screen. W. E. Stevens and C. B. Jay. 1,752,466; Apr. 1.
Roof structure for railway cars. A. E. Small. 1,752,355; Apr. 1.
Roofing construction. W. J. Young. 1,752,827; Apr. 1.
Roofing elements, Method of and machine for edge-coating. F. C. Overbury. 1,752,464; Apr. 1.
Roofings, Apparatus for making asphalt. E. Sakuma. 1,753,027; Apr. 1.
Roundabout. D. J. Labay. 1,752,600; Apr. 1.
Rowing apparatus for gymnastic exercises. J. Falkenburg. 1,752,901; Apr. 1.
Rubber from guayule, etc., Extraction of. D. Spence. 1,753,185; Apr. 1.
Rubber-spreading machines, Solvent-recovery apparatus for. E. A. Abeles. 1,752,875; Apr. 1.
Rug and making the same. G. Belcher. 1,752,287; Apr. 1.
Safety device for elevator cage and shaft doors. F. A. Beedtcher. 1,752,476; Apr. 1.
Safety system. W. Rohkohl. 1,752,852; Apr. 1.
Sampler, Formation. G. A. Poole and S. G. Forney. 1,753,066; Apr. 1.
Saw blade. E. A. Bolinder. 1,752,586; Apr. 1.
Saw, Inserted-tooth. E. C. Orr. 1,752,541; Apr. 1.
Sawing machine. C. I. Hoag. 1,752,487; Apr. 1.
Scale. N. L. Fellows. 80,871; Apr. 1.
Scale. N. Tatham. 1,752,711; Apr. 1.
Scale, Railway-track. M. H. Starr. 1,753,097; Apr. 1.
Scenes, Device for depicting rural. C. S. Dernbach. 1,753,111; Apr. 1.
Scraper. W. K. Robbins. 1,753,022; Apr. 1.
Scraper for harvester main wheels. R. C. Livesay. 1,752,998; Apr. 1.
Screen: *See*—
Roller screen.
Screen and window. O. Karlslyst. 1,752,640; Apr. 1.
Screw, Headless set. M. L. Martus. 1,753,164; Apr. 1.
Scrubbing machine. H. O. Boutwell. 1,752,882; Apr. 1.
Seat: *See*—
Auto seat.
Toilet seat.
Seat mounting for automobiles. H. A. Brunn. 1,752,868; Apr. 1.

Secrecy system. R. V. L. Hartley. 1,752,485; Apr. 1.
Settee, Convertible bed. D. R. N. Christophers. 1,752,417; Apr. 1.
Sewing-machine threader. A. McC. Fluharty. 1,753,114; Apr. 1.
Shade, Glass. G. L. Miller. Des. 80,840–50; Apr. 1.
Shaping-machine-worktable cross-rail guide. W. T. Zimmermann. 1,753,143; Apr. 1.
Sheath currents, Apparatus for reducing. F. J. White. 1,752,318–20; Apr. 1.
Sheet-feeding machine. H. K. King. 1,752,744; Apr. 1.
Shelf rack. W. N. Vance. 1,752,315; Apr. 1.
Shield, Expansion. R. E. Ogden. 1,752,752; Apr. 1.
Shock absorber. H. Fromm. 1,753,047; Apr. 1.
Shock absorber, Electric. A. W. Harrison. 1,752,844; Apr. 1.
Shock-absorbing device for mechanically-propelled vehicles. J. W. Turner, H. Wood, and E. Mann. 1,753,099; Apr. 1.
Shocker. W. L. M. Jones. 1,752,801; Apr. 1.
Shoe. D. A. Cutler. 1,752,787; Apr. 1.
Shoe and hosiery stand, Combination. J. C. Ross. 1,752,699; Apr. 1.
Shoe rack. J. H. Boye. 1,752,288; Apr. 1.
Shoe welt. C. H. Merrow. 1,753,056; Apr. 1.
Shower head, Tubular. C. B. Crane, 2d. 1,752,633; Apr. 1.
Sign and its operation, Electric. G. W. Tarkington. 1,752,760; Apr. 1.
Sign, Corner. M. C. Haerman. Des. 80,834; Apr. 1.
Sign holder for automobile bodies. A. H. Ellis. 1,752,691; Apr. 1.
Signal: *See*—
Automobile or highway signal.
Direction signal.
Traffic signal.
Signal and communication mechanism for sunken submarines. H. C. Stanger. 1,753,139; Apr. 1.
Signal device. B. Hosking. 1,753,117; Apr. 1.
Signaling, Railway. F. C. Lavarack and D. W. Richards. 1,752,493; Apr. 1.
Sill or jamb covering, Adjustable. E. F. McHugh. 1,752,606; Apr. 1.
Sill or jamb covering, Interlocking. E. F. McHugh. 1,752,605; Apr. 1.
Siphon. N. Swindin. 1,752,620; Apr. 1.
Ski pedestal for aeroplanes. S. A. Cheesman. 1,752,416; Apr. 1.
Skins, Apparatus for seasoning. H. B. Layton. 1,752,440; Apr. 1.
Smoke consumer. A. Adams. 1,752,717; Apr. 1.
Smoking and vanity case, Combination. W. Schnell. Des. 80,856; Apr. 1.
Snap construction, Release. A. Summerfeld. 1,752,619; Apr. 1.
Sled, Auto. S. N. Stowell. 1,753,160; Apr. 1.
Slide-way for window panes. D. H. Van Hove. 1,753,038; Apr. 1.
Slip for rotary tables and spiders for handling pipe. R. V. Uhrig. 1,752,822; Apr. 1.
Slot cutter. F. A. Ost. 1,752,690; Apr. 1.
Slug holder and depressible margin bar, Edition-printing-. F. Lamatsch. 1,752,565; Apr. 1.
Socket block for poles. J. H. Meagher. 1,752,683; Apr. 1.
Solenoid winding. P. Trombetta. 1,752,866; Apr. 1.
Sole stitcher. J. B. Birrer. 1,752,722; Apr. 1.
Solids from liquids or liquors by filtration, Apparatus for separating. J. T. Shimmin. 1,752,758; Apr. 1.
Sound or vibration transmitting apparatus. E. Wensley. 1,752,515; Apr. 1.
Sound reproducer. E. Freund. 1,752,981; Apr. 1.
Spear, Trip casing. G. H. Clerkx van Keulen. 1,753,074; Apr. 1.
Spectacle frames from tortoise shell and similar valuable material, Manufacturing. E. Kühne. 1,752,953; Apr. 1.

Spectacles, Antidazzle. E. T. and F. W. Cornwell. 1,752,889; Apr. 1.
Spinnerets, Method and tool for cleaning. O. Ohlson. 1,752,689; Apr. 1.
Spinning frames, Twister tube for. A. Ambye. 1,752,878; Apr. 1.
Spinning machine. J. van den Abeele. 1,752,869; Apr. 1.
Spoon-holding clip. A. J. Eckelman. 1,752,522; Apr. 1.
Spray head. G. A. Mueller. 1,752,922–3; Apr. 1.
Spraying device. G. A. Mueller. 1,752,924; Apr. 1.
Spraying liquids. H. W. Page. 1,753,019; Apr. 1.
Spraying pulverulent material, Apparatus for. R. Lex. 1,752,956; Apr. 1.
Spring rings, Producing. W. F. Herold. 1,752,982; Apr. 1.
Stabilizer for aeroplanes. F. Rumford and H. T. Henry. 1,752,396; Apr. 1.
Stand: *See*—
Shoe and hosiery stand. Switch-throw stand.
Stand for use with gas stoves, Safety. S. M. Kass. 1,752,562; Apr. 1.
Stand or similar article, Aquarium. S. C. Simpson. Des. 80,865; Apr. 1.
Starter, Electric-motor. W. T. Holmes. 1,753,116; Apr. 1.
Static interference in carrier systems, Reduction of. H. A. Affel. 1,752,360; Apr. 1.
Static interference in carrier systems, Reduction of. D. E. Branson. 1,752,326–6; Apr. 1.
Steam scoring machine for ice. E. S. Henry. Re17,630; Apr. 1.
Steel, Changing the properties of silicon. J. C. Karcher. 1,752,490; Apr. 1.
Steel in an open-hearth furnace, Producing. R. Durrer, F. C. Siemens, and A. Sprenger. 1,752,374; Apr. 1.
Steel lay brace. C. J. Lindegren. 1,752,443; Apr. 1.
Steel retainer. F. H. Thoms. 1,753,034; Apr. 1.
Steering gear. L. Van H. Armstrong. 1,753,039; Apr. 1.
Steering mechanism for motor vehicles. C. R. Waseige. 1,752,624; Apr. 1.
Stills, etc., Clean-out elbow for cracking. F. C. Fantz. 1,752,332; Apr. 1.
Stocking. W. D. Buts. 1,752,587; Apr. 1.
Stocking. J. I. Schwadron. Des. 80,857; Apr. 1.
Stoker attachment. R. H. S. Hughes. 1,753,050; Apr. 1.
Stoker, Power-feed. G. A. Kohout. 1,752,801; Apr. 1.
Stop for vehicles, Backing. E. S. Hutton. 1,752,435; Apr. 1.
Stove, Heating. H. L. McKown. 1,752,387; Apr. 1.
Strap for lighting fixtures or similar articles. O. Hoffmann. Des. 80,837; Apr. 1.
Strap-stretching device. C. M. MacChesney and R. H. Norton. 1,752,495; Apr. 1.
Stretching and guiding apparatus, Automatic. A. A. M. Taveira. 1,753,033; Apr. 1.
Stringed instrument. J. E. Hillebrandt. 1,752,906; Apr. 1.
Stringed instruments, Apparatus for learning correct bow work for. J. Braunstein-Loskant. 1,753,053; Apr. 1.
Strip-pulling device. R. F. Russell. 1,753,174; Apr. 1.
Structural element. H. M. Knight. 1,752,671; Apr. 1.
Suction-actuated devices in connection with the suction passages of internal-combustion engines, Apparatus for operating. C. S. Bragg and V. W. Kliesrath. 1,753,165; Apr. 1.
Suction-actuated devices in connection with the suction passages of internal-combustion engines, Method of and apparatus for operating. C. S. Bragg and V. W. Kliesrath. 1,753,166–7; Apr. 1.
Sugar juice, Defaction of. A. W. Bull. 1,752,781; Apr. 1.
Suit, Bathing. C. O. Ast. 1,752,771; Apr. 1.
Support, Auxiliary motor. J. M. Biordan. 1,752,809; Apr. 1.
Support for pictures, cards, etc. M. M. Gillette. 1,752,297; Apr. 1.
Support, Wrist. H. Haaf. 1,753,006; Apr. 1.
Supporting bar. K. H. Whitney. 1,752,472; Apr. 1.
Surgical dressing. C. W. Barth. 1,753,106; Apr. 1.
Switch: *See*—

Transmission, Automatic hydraulic. A. A. Johnson. 1,752,385; Apr. 1.
Transmission, Auxiliary. H. Ford. 1,752,980; Apr. 1.
Transmission mechanism, Automatic variable. W. Pitt. 1,752,755; Apr. 1.
Transmission mechanism for vending or like machines. L. H. Larsen and S. C. McKeown. 1,752,642; Apr. 1.
Transmission network. T. E. Shea. 1,752,461; Apr. 1.
Transplanter. T. H. Oppenheim. 1,753,017; Apr. 1.
Tray and stand therefor, Combined spiritual mass card. J. S. Brennan. Des. 80,828; Apr. 1.
Tray, Combination. A. W. Kehler. Des. 80,842; Apr. 1.
Trimmer: *See*—
Edge trimmer.
Trough for rolling mills, Looping. J. R. George. 1,752,841; Apr. 1.
Truck, Car. S. P. Bush. 1,752,728; Apr. 1.
Truck, Railway. D. S. Barrows. 1,753,105; Apr. 1.
Trunk and luggage rack. W. W. Wilson. 1,753,077; Apr. 1.
Tube: *See*—
Radio tube.
Tube expander. O. Zein. 1,752,408; Apr. 1.
Tubes, poles, and the like from reenforced concrete centrifugally, Device for the production of. P. Zehnder. 1,752,626; Apr. 1.

Tubular members, Uniting. F. R. Grady. 1,753,005; Apr. 1.
Tuning forks to generate audio frequency current as a medium for sound, Method of and apparatus for employing. M. Schumm. 1,753,069; Apr. 1.
Typewriting and card-perforating machine, Combined. J. A. B. Smith. Re17,634; Apr. 1.
Typewriting machine. G. G. Going. 1,752,482; Apr. 1.
Typewriting machine. F. A. Hart. 1,752,484; Apr. 1.
Typewriting machine. A. G. F. Kurowski. 1,752,491; Apr. 1.
Typewriting machines, Feed device for the carriage of. M. Schmid. 1,753,134; Apr. 1.
Umbrella. W. S. Timblin. 1,752,820; Apr. 1.
Umbrella. W. S. Timblin. 1,752,821; Apr. 1.
Valve. W. F. Conran. 1,752,836; Apr. 1.
Valve. J. L. Hutchings. 1,752,667; Apr. 1.
Valve, Automatic gas shut-off. L. D. Lovekin. 1,752,677; Apr. 1.
Valve, Balanced. P. Hösel. 1,752,908; Apr. 1.
Valve cage. A. C. Estep. 1,752,790; Apr. 1.
Valve, Drifting. D. T. Williams. 1,752,321; Apr. 1.
Valve, Gate. C. A. Pillatt. 1,752,456; Apr. 1.
Valve, Gate. S. W. Sparks. 1,752,657; Apr. 1.
Valve gear, Locomotive. C. J. Scudder. 1,753,028; Apr. 1.
Valve, Mixing throttle. H. W. Hess. 1,753,009; Apr. 1.
Valve mounting, Feed-. C. A. Campbell. 1,752,631; Apr. 1.
Valve, Reducing. A. L. Anderson. 1,752,478; Apr. 1.
Valve, Sleeve. C. W. Larner. 1,752,439; Apr. 1.
Valve, Variable pressure or relief. F. J. Rode. 1,753,024; Apr. 1.
Variable resistance. J. L. Howie. 1,753,188; Apr. 1.
Vegetative device. M. B. Jackson. 1,752,597; Apr. 1.
Vending and change-making machine. C. W. Nixon. 1,753,090; Apr. 1.
Vending apparatus. C. W. Nixon. 1,753,088; Apr. 1.
Vending machine. L. Greene. 1,752,376; Apr. 1.
Vending machine. F. L. Mills. 1,752,750; Apr. 1.
Vending machine, Bottled-beverage-. H. F. Dotson. 1,752,479; Apr. 1.
Vending machines, Slug eliminator for. A. E. Johnson. 1,752,798; Apr. 1.
Ventilating port. W. A. A. H. Helwig. 1,752,794; Apr. 1.
Ventilation, Armature. P. Bollinger. 1,752,364; Apr. 1.
Ventilator: *See*—
Window ventilator.
Voltage transformer, Variable-. E. J. Zelt. 1,752,878; Apr. 1.
Volumes of granular materials passing through the same, Apparatus for automatically counting the. A. Letreux. 1,752,602; Apr. 1.
Vulcanizing press. T. Midgley. 1,752,569; Apr. 1.
Wall construction and structural unit therefor. M. Jaeger, jr. 1,752,342; Apr. 1.
Wall construction, Brick-. W. C. Heckeroth. 1,752,558; Apr. 1.
Wall structure, Decorative. C. E. Maier. 1,752,679; Apr. 1.
Walls, Apparatus for cleaning. G. J. Forcier. 1,752,664; Apr. 1.
Washbasins, Top plate for. A. C. Dobrick. Des. 80,830; Apr. 1.
Washboard. E. C. Klaiber. 1,752,745; Apr. 1.
Washing machine. A. W. Altorfer. 1,752,547; Apr. 1.
Washing-machine agitator. T. Simmons. 1,752,967; Apr. 1.
Washing-machine-agitator mechanism. S. E. Schroeder. 1,752,757; Apr. 1.
Watch movements, Balance for. B. J. Bates. 1,752,773; Apr. 1.
Water, Automatic apparatus for the rapid production of aerated. C. Derossi. 1,753,081; Apr. 1.
Water boiler. H. Hargreaves. 1,752,905; Apr. 1.
Water-closet attachment. C. G. Burton. 1,752,782; Apr. 1.
Water fountain. R. Kielsmeier. 1,753,122; Apr. 1.
Water heater, Stationary. A. L. Mitchell. 1,752,536; Apr. 1.
Water heating and dispensing means. J. H. Rogers and T. Concha. 1,752,698; Apr. 1.
Water, Process and apparatus for softening. W. H. Green. 1,752,389; Apr. 1.
Wave filter. T. E. Shea. 1,752,579; Apr. 1.
Wax, Immersion. F. W. Sullivan, jr. 1,752,933; Apr. 1.
Waxing and polishing device, Floor. A. F. Steiert and O. W. Linke. 1,752,581; Apr. 1.
Weather stripping. G. E. Jeandheur. 1,752,990; Apr. 1.
Weft-replenishing mechanism for looms. R. G. Turner. 1,752,403; Apr. 1.
Welding, Electric. E. N. Jorgensen. 1,752,598; Apr. 1.
Welding rod, Nonferrous. A. R. Lytle. Re17,631; Apr. 1.
Wheel: *See*—
Automobile wheel. Resilient wheel.
Disk wheel.
Wheel. G. Walther, F. H. Walkley, and J. H. Borghardt. 1,752,317; Apr. 1.
Whistle, Ship's. C. B. Mills. 1,753,155; Apr. 1.
Winding machine. M. B. Grout. 1,753,187; Apr. 1.
Winding mechanism particularly adapted for pattern-setting frames. B. Hall and E. F. Hathaway. 1,752,738; Apr. 1.
Winding of endless bands, Apparatus for the. L. Kolm. 1,753,153; Apr. 1.
Windmill. V. S. Hollingsworth. 1,752,847; Apr. 1.
Window-closing device. F. Schierghofer. 1,752,854; Apr. 1.
Window fixture. M. L. Kall. 1,752,743; Apr. 1.
Window frame, Building. J. G. Jonson. 1,753,152; Apr. 1.
Window regulator. S. W. Nicholson. 1,752,688; Apr. 1.
Window ventilator. H. H. Lee. 1,752,913; Apr. 1.
Windshield cleaner and heater. H. C. Roof. 1,752,615; Apr. 1.
Windshield heater. W. G. Wohlhuter. 1,752,715; Apr. 1.
Wire. Magnesium-covered calcium. W. A. Ruggles. 1,752,813; Apr. 1.
Wire-twisting apparatus. R. B. Brannaka. 1,752,726; Apr. 1.
Wood preservation. H. W. Walker. 1,753,000; Apr. 1.
Wrapping apparatus. R. Jongedyk. 1,752,489; Apr. 1.
Wrapping machine. J. Van Buren. 1,752,762; Apr. 1.
Wrench. A. K. Ersland. 1,752,425; Apr. 1.
Wrench. C. B. Gartrell. 1,752,430; Apr. 1.
Wringers, Safety attachment for. J. Beitler. 1,753,040; Apr. 1.
Writing board. C. C. Hennessy. 1,752,989; Apr. 1.
X-ray-centering device. S. Israel. 1,753,151; Apr. 1.

CLASSIFICATION OF PATENTS

ISSUED APRIL 1, 1930

NOTE—First number—class, second number—subclass, third number—patent number.

2— 18: 1,752,977
24: 1,753,055
67: 1,752,771
85: 1,752,927
175: 1,753,052
4— 7: 1,752,782
285: 1,753,409
5— 12: 1,752,417
8— 19: 1,752,712
9— 21: 1,752,630
1,752,960
10— 86: 1,752,982
124: 1,752,915
126: 1,752,422

Rubber. Federal Rubber Company. 269,541–2; Apr. 8; Serial Nos. 288,906–7; published Jan. 28, 1930.
Rubber and composition slabs. Essex Rubber Company Inc. 269,498; Apr. 8; Serial No. 291,084; published Jan. 28, 1930.
Rubber, uncured sheet rubber, Compounded unvulcanized. Federal Rubber Company. 269,499; Apr. 8; Serial No. 288,908; published Jan. 28, 1930.
Trees, Apple. Columbia & Okanogan Nursery Company. 269,473; Apr. 8; Serial No. 281,344; published Jan. 28, 1930.

CLASS 2

Cases, Cardboard flats or pads for use in egg. Egg Saver Package Company. 269,571; Apr. 8.

CLASS 4

Cleaner, Dry. Apex Motor Fuel Company. 269,502; Apr. 8; Serial No. 228,792; published July 5, 1927.
Soaps. R. M. Froehlich. 269,544; Apr. 8; Serial No. 292,930; published Jan. 28, 1930.
Solvent for cleaning. Western Chemical Co. 269,552; Apr. 8; Serial No. 292,513; published Jan. 28, 1930.
Washing fluid. I'm Alone Products Company. 269,459; Apr. 8; Serial No. 292,195; published Jan. 28, 1930.

CLASS 6

Astringent, antiseptic gargle, and deodorant, Mouth. I. Greenberg. 269,490; Apr. 8; Serial No. 292,664; published Jan. 21, 1930.
Chemical preparation. Chipman Chemical Engineering Company. 269,496; Apr. 8; Serial No. 292,065; published Jan. 21, 1930.
Compound for treatment of cold sores, ringworm, itch, etc. Henderson & Skipworth. 269,491; Apr. 8; Serial No. 292,567; published Jan. 21, 1930.
Cream, Face. Florian, Inc. 269,505; Apr. 8; Serial No. 276,937; published Jan. 21, 1930.
Dentifrices, talcum powders, quinine, etc. Sydney Ross Co. 269,455; Apr. 8; Serial No. 293,881; published Jan. 21, 1930.
Dentifrices, talcums, saccharin, etc. Sydney Ross Co. 269,454; Apr. 8; Serial No. 293,882; published Jan. 21, 1930.
Liniment. Lanman & Kemp, Inc. 269,493; Apr. 8; Serial No. 292,537; published Jan. 21, 1930.
Liniment. Shields Croup Liniment Co. 269,458; Apr. 8; Serial No. 292,251; published Jan. 28, 1930.
Medicinal preparation. R. A. Boice. 269,569; Apr. 8.
Medicinal preparation. Cynthia Brown's Indian Compound Co. 269,474; Apr. 8; Serial No. 280,880; published Jan. 21, 1930.
Medicinal preparation. G. G. Ulmer. 269,483–6; Apr. 8; Serial Nos. 292,837–40; published Jan. 21, 1930.
Medicine. T. F. O'Reilly. 269,548; Apr. 8; Serial No. 292,632; published Jan. 28, 1930.
Powder and rouge, Face. Lucien Lelong, Inc. 269,464; Apr. 8; Serial No. 291,676; published Jan. 21, 1930.
Salve or ointment of witch-hazel. Lanman & Kemp, Inc. 269,492; Apr. 8; Serial No. 292,540; published Jan. 21, 1930.
Shampoo preparation. William Cooper & Nephews, Incorporated. 269,546; Apr. 8; Serial No. 292,718; published Jan. 28, 1930.
Soda mint and pepsin, potassium chlorate, saccharine soluble, etc. E. Wildman. 269,504; Apr. 8; Serial No. 201,870; published Nov. 11, 1924.
Solvent and pipe cleaner, Drainpipe. P. M. Frank Disinfecting Co. 269,564; Apr. 8.
Witch-hazel, Double extract of. Lanman & Kemp, Inc. 269,520; Apr. 8; Serial No. 292,538; published Jan. 21, 1930.

CLASS 10

Fertilizers, Liquid. A. Nemeth. 269,551; Apr. 8; Serial No. 292,544; published Jan. 28, 1930.

CLASS 12

Asphalt emulsion. Flintkote Company. 269,495; Apr. 8; Serial No. 292,099; published Jan. 28, 1930.
Brick. E. V. Poston. 269,466; Apr. 8; Serial No. 283,696; published Jan. 28, 1930.
Brick. E. V. Poston. 269,519; Apr. 8; Serial No. 283,893; published Jan. 28, 1930.
Cement. Refractory. Inland Fire Brick Company. 269,497; Apr. 8; Serial No. 291,874; published Jan. 28, 1930.
Chemical mixture and color mixtures. G. E. Barnhart. 269,488; Apr. 8; Serial No. 292,783; published Jan. 28, 1930.
Waterproofing compound. Con-Tex Corporation. 269,515; Apr. 8; Serial No. 284,720; published Jan. 28, 1930.

CLASS 13

Enameled ware. Columbian Enameling & Stamping Co. 269,510; Apr. 8; Serial No. 274,037; published Jan. 7, 1930.
Grilles, Lock-crimp-mesh. Logan Co. 269,563; Apr. 8.

CLASS 14

Castings, Metal. Robbins & Myers, Inc. 269,545; Apr. 8; Serial No. 292,827; published Jan. 14, 1930.
Castings, Steel. Farrell-Cheek Steel Foundry Co. 269,463; Apr. 8; Serial No. 291,860; published Jan. 21, 1930.
Copper and brass ingots. South Bend Smelting & Refining Co. 269,550; Apr. 8; Serial No. 292,555; published Jan. 28, 1930.
Iron, steel, and alloy steel, rolled and drawn bars, rods, etc. National Steel Company. 269,555; Apr. 8; Serial No. 292,456; published Jan. 21, 1930.
Metal alloys. Haynes Stellite Company. 269,549; Apr. 8; Serial No. 292,602; published Jan. 28, 1930.
Metal alloys. Haynes Stellite Company. 269,557; Apr. 8; Serial No. 292,450; published Jan. 28, 1930.

CLASS 15

Gasoline and lubricating oil and grease. Firestone Tire & Rubber Company. 269,445; Apr. 8; Serial No. 291,721; published Jan. 28, 1930.
Oil, Lubricating and penetrating. Emerol Manufacturing Co. 269,513; Apr. 8; Serial No. 270,961; published Oct. 30, 1928.
Oils and greases, Lubricating. Pennsoil Company. 269,509; Apr. 8; Serial No. 275,238; published Feb. 26, 1929.

CLASS 16

Coating, cement paint, etc., Roof. National Tank Seal Company. 269,394; Apr. 8; Serial No. 289,286; published Jan. 28, 1930.
Dressing, Floor. Masury-Young Company. 269,556; Apr. 8; Serial No. 292,454; published Jan. 21, 1930.
Enamel, tire paints, touch-up enamel, etc. Pep Boys—Manny, Moe & Jack. 269,398; Apr. 8; Serial No. 286,715; published Jan. 28, 1930.
Lacquer undercoats and enamels, nitrate dope or clear lacquer, etc. Valentine & Company. 269,547; Apr. 8; Serial No. 292,691; published Jan. 28, 1930.
Paint. Charles Moser Company. 269,467; Apr. 8; Serial No. 283,579; published June 18, 1929.
Paints. L. F. Cassoff. 269,508; Apr. 8; Serial No. 275,555; published Jan. 28, 1930.
Paints and paint pigments. O. Wilson. 269,395; Apr. 8; Serial No. 288,736; published Jan. 28, 1930.
Paints and varnishes. Gamble Stores, Incorporated. 269,553; Apr. 8; Serial No. 292,494; published Jan. 28, 1930.
Polish and cleaner. Rex-Lin Corporation. 269,462; Apr. 8; Serial No. 291,891; published Jan. 14, 1930.
Varnish. Alfred Peats Company. 269,479; Apr. 8; Serial No. 279,877; published June 4, 1929.

CLASS 21

Electric batteries, electric flash lights, etc. Bright Star Battery Company. 269,446; Apr. 8; Serial No. 292,714; published Jan. 14, 1930.
Electric lanterns. Delta Electric Company. 269,435; Apr. 8; Serial No. 292,797; published Jan. 14, 1930.
Electrical advertising signs. Carew-Leidgen, Inc. 269,449; Apr. 8; Serial No. 291,049; published Jan. 14, 1930.
Ignition apparatus. Robert Bosch Magneto Company. 269,440; Apr. 8; Serial No. 292,574; published Jan. 14, 1930.
Ozone generating machines. H. Rosenfeld. 269,447; Apr. 8; Serial No. 291,639; published Jan. 14, 1930.
Radio receiving sets. Thomas A. Edison Incorporated. 269,444; Apr. 8; Serial No. 291,868; published Jan. 14, 1930.
Radio receiving sets. Gamble Stores, Incorporated. 269,441; Apr. 8; Serial No. 292,495; published Jan. 14, 1930.
Radio receiving sets and kits. Pilot Radio & Tube Corporation. 269,537; Apr. 8; Serial No. 293,067; published Jan. 14, 1930.
Radiospeakers. Operadio Manufacturing Company. 269,535; Apr. 8; Serial No. 293,150; published Jan. 14, 1930.
Resistances, Fixed and variable. Compo Mfg. Co. 269,536; Apr. 8; Serial No. 293,131; published Jan. 14, 1930.

CLASS 22

Boards used in games. Bishop Products Company. 269,523; Apr. 8; Serial No. 293,404; published Jan. 21, 1930.
Fishing rods. G. H. Mansfield & Co. Inc. 269,461; Apr. 8; Serial No. 291,991; published Jan. 21, 1930.

Game, Table. E. O. Roark. 269,525; Apr. 8; Serial No. 293,072; published Jan. 28, 1930.
Kindergarten paint sets, game beads, puzzle boards, etc. Ullman Manufacturing Company. 269,452; Apr. 8; Serial No. 293,015; published Jan. 28, 1930.
Toy aeroplanes, artificial bait, golf balls, etc. L. Bamberger & Co. 269,393; Apr. 8; Serial No. 290,297; published Nov. 26, 1929.
Toy blocks. Appleton Wood Products Co. 269,387; Apr. 8; Serial No. 291,604; published Jan. 21, 1930.
Toy irons and cooking ranges, Electric. Metropolitan Mfg. & Electric Co. 269,524; Apr. 8; Serial No. 293,227; published Jan. 21, 1930.

CLASS 23

Apparatus for removing wall paper. Miller Manufacturing Company. 269,433; Apr. 8; Serial No. 292,886; published Jan. 28, 1930.
Conveyors. C. R. Claghorn. 269,434; Apr. 8; Serial No. 292,865; published Jan. 28, 1930.
Pumps, pumping units. Decatur Pump Company. 269,438; Apr. 8; Serial No. 292,620; published Jan. 28, 1930.
Razors, safety-razor blades, knives, and scissors. Joseph Rodgers & Sons Limited. 269,532; Apr. 8; Serial No. 293,349; published Jan. 28, 1930.
Reamers, reamer pilots, reamer guides, etc. Evans Flexible Reamer Corporation. 269,443; Apr. 8; Serial No. 291,968; published Jan. 28, 1930.
Sewing machines. Associated Merchandising Corporation. 269,529; Apr. 8; Serial No. 293,463; published Jan. 28, 1930.
Sheeve blocks. Buckhout Boat Corporation. 269,506; Apr. 8; Serial No. 276,768; published Jan. 28, 1930.

CLASS 26

Binoculars. C-All-Scope Corporation. 269,439; Apr. 8; Serial No. 292,612; published Jan. 28, 1930.
Cameras, Photographic. Eastman Kodak Company. 269,526; Apr. 8; Serial No. 293,522; published Jan. 28, 1930.
Electric-lighting units. Hall & Connolly, Inc. 269,457; Apr. 8; Serial No. 287,394; published Jan. 28, 1930.
Picture photoplays, Motion-. Universal Pictures Corporation. 269,528; Apr. 8; Serial No. 293,495; published Jan. 28, 1930.
Scales. Vogel and Halke. 269,442; Apr. 8; Serial No. 292,378; published Jan. 21, 1930.
Spectacle frames. Riggs Optical Company. 269,530; Apr. 8; Serial No. 293,451; published Jan. 28, 1930.

CLASS 28

Finger rings and mountings therefor. Benjamin & Edward J. Gross Co. 269,469; Apr. 8; Serial No. 282,707; published Jan. 14, 1930.
Hollow ware of base metal, Table. Friedman Silver Co. 269,436; Apr. 8; Serial No. 292,724; published Jan. 14, 1930.

CLASS 32

Hatracks. H. R. Austin. 269,527; Apr. 8; Serial No. 293,511; published Jan. 28, 1930.
Mattresses, pillows, cushions, etc. Burton-Dixie Corporation. 269,501; Apr. 8; Serial No. 237,652; published Nov. 9, 1926.

CLASS 34

Furnaces, Heat-treating. Standard Fuel Engineering Company. 269,566; Apr. 8.
Glare shields. Killglare Corporation. 269,567; Apr. 8.
Stokers, Automatic. Frederick Iron & Steel Company. 269,565; Apr. 8.

CLASS 35

Inner tubes for tires. A. Meyerowitz. 269,534; Apr. 8; Serial No. 293,228; published Jan. 28, 1930.
Tire casings and tubes, Pneumatic. Corliss Anderson Tire Corporation. 269,533; Apr. 8; Serial No. 293,312; published Jan. 28, 1930.

CLASS 36

Orchestral instruments. Carl Fischer Inc. 269,448; Apr. 8; Serial No. 291,158; published Jan. 14, 1930.
Talking machines and parts thereof. Gebrüder Scharf. 269,456; Apr. 8; Serial No. 289,694; published Jan. 14, 1930.
Zylophones. Wm. Filene's Sons Company. 269,451; Apr. 8; Serial No. 289,737; published Jan. 28, 1930.

CLASS 37

Books, Loose-leaf blank. Sales Equipment Company. 269,514; Apr. 8; Serial No. 270,758; published Mar. 12, 1929.
Paper, Mulch. International Paper Company. 269,481; Apr. 8; Serial No. 292,994; published Jan. 21, 1930.
Paper, papeteries, etc., Writing and printing. Strathmore Paper Company. 269,391; Apr. 8; Serial No. 290,913; published Jan. 28, 1930.
Paper, Parchment wrapping. Paterson Parchment Paper Co. 269,397; Apr. 8; Serial No. 287,841; published Jan. 21, 1930.
Registers. Autographic Register Company. 269,390; Apr. 8; Serial No. 290,928; published Jan. 28, 1930.
Tallies, place and score cards, and tally holders. Buzza Company Inc. 269,388; Apr. 8; Serial No. 291,320; published Jan. 21, 1930.

CLASS 38

Advertisements, Comic. W. W. Crook. 269,570; Apr. 8.
Drawings, tracings, and prints thereof, Architectural. Indiana Limestone Company. 269,558; Apr. 8; Serial No. 292,360; published Jan. 28, 1930.
Magazine. Good Story Magazine Company. 269,389; Apr. 8; Serial No. 291,030; published Jan. 28, 1930.
Magazines or periodicals. American Optical Company. 269,554; Apr. 8; Serial No. 292,478; published Jan. 21, 1930.
Newspaper, Daily. Perth Amboy Evening News Co. 269,465; Apr. 8; Serial No. 293,066; published Jan. 21, 1930.
Periodical. National Federation of Business and Professional Women's Clubs, Inc. 269,460; Apr. 8; Serial No. 292,000; published Jan. 28, 1930.

Cream, Imitation whipped. S. M. Bates. 269,413; Apr. 8; Serial No. 290,538; published Jan. 21, 1930.
Creams and fondants, flour mixtures. J. W. Allen & Co. 269,405; Apr. 8; Serial No. 292,702; published Jan. 21, 1930.
Dressing, Mustard and mayonnaise. J. Dalphond. 269,511; Apr. 8; Serial No. 273,742; published Jan. 21, 1930.
Extract, Flavoring. R. Pichel. 269,429; Apr. 8; Serial No. 292,460; published Jan. 28, 1930.
Extract, Flavoring. R. Pichel. 269,430; Apr. 8; Serial No. 292,418; published Jan. 28, 1930.
Feed, Stock. Josey-Miller Company. 269,576; Apr. 8.
Fruits, citrus fruits, cantaloupes, etc., Fresh deciduous. Sgobel & Day, Inc. 269,431; Apr. 8; Serial No. 292,291; published Jan. 28, 1930.
Grapes. L. Rusconi. 269,572; Apr. 8.
Grapes and citrus fruits, Fresh. M. N. Jensen. 269,412; Apr. 8; Serial No. 290,467; published Jan. 21, 1930.
Herrings preserved in brine. Alexander Wood & Son. 269,423; Apr. 8; Serial No. 287,516; published Jan. 28, 1930.
Ice cream and ice-cream suckers. Good Humor Corporation of America. 269,425; Apr. 8; Serial No. 286,986; published Jan. 28, 1930.
Ice-cream cones. Maryland Baking Company. 269,476; Apr. 8; Serial No. 280,081; published Jan. 28, 1930.
Ice-cream cones. Maryland Baking Company. 269,477; Apr. 8; Serial No. 280,079; published Jan. 28, 1930.
Ice-cream cones. Maryland Baking Company. 269,478; Apr. 8; Serial No. 280,078; published Jan. 28, 1930.
Milk, Spray powder. Twin City Milk Producers Association. 269,540; Apr. 8; Serial No. 293,357; published Jan. 28, 1930.
Molasses. American Molasses Co. of North Carolina. 269,561; Apr. 8.
Noodles, macaroni, and spaghetti. Pfaffman Egg Noodle Company. 269,404; Apr. 8; Serial No. 292,748; published Jan. 21, 1930.
Nuts and confections. G. M. Meath. 269,424; Apr. 8; Serial No. 287,702; published Jan. 28, 1930.
Olive oil. Coen Companies Inc. 269,400; Apr. 8; Serial No. 292,866; published Jan. 21, 1930.
Potatoes. J. L. Robinson. 269,407; Apr. 8; Serial No. 292,289; published Jan. 28, 1930.
Sausage and scrapple. P. M. Adams. 269,408; Apr. 8; Serial No. 292,086; published Jan. 28, 1930.
Syrup and West India molasses, Compound of corn. Mangels-Herold Company. 269,402; Apr. 8; Serial No. 292,816; published Jan. 21, 1930.
Syrup, Malt. L. Siunecko, Jr. 269,406; Apr. 8; Serial No. 292,686; published Jan. 21, 1930.
Syrup, Malt. Bachrach-Feld Co. 269,419; Apr. 8; Serial No. 289,493; published Jan. 21, 1930.
Syrup, Malt. F. L. Brzoska. 269,507; Apr. 8; Serial No. 276,064; published Jan. 28, 1930.
Syrup, Table. E. A. Tyler. 269,428; Apr. 8; Serial No. 292,560; published Jan. 28, 1930.
Tomato catsup and canned corn, peas, beans, and tomatoes. Charles E. Meyer & Co. 269,516; Apr. 8; Serial No. 284,660; published Aug. 20, 1929.
Vegetables, Fresh. Boon Caswell & Tindel. 269,418; Apr. 8; Serial No. 289,569; published Jan. 28, 1930.

CLASS 50

Display boards, Portable advertising. E. Davidson Company. 269,568; Apr. 8.
Drapes, draperies, table covers, etc. Para Rubber Co. 269,470; Apr. 8; Serial No. 282,506; published Jan. 28, 1930.
Fabrics, Rubberized. E. I. du Pont de Nemours and Company. 269,494; Apr. 8; Serial No. 292,190; published Jan. 28, 1930.

ALPHABETICAL LIST OF LABELS

Air Mail. For Candy. Green Bros. Co. 37,320; Apr. 8.
Burton's Finer Lighter Weight. For Irish Poplin. Burton Brothers & Co. Inc. 37,315; Apr. 8.
Burton's Improved Standard Weight. For Irish Poplin. Burton Brothers & Co. Inc. 37,314; Apr. 8.
Do 644—Butter. For Butter. W. Doane. 37,317; Apr. 8.
Do 645—Butter. For Butter. W. Doane. 37,316; Apr. 8.
Do 649—Butter. For Butter. W. Doane. 37,318; Apr. 8.
Farm King. For Cut Green Beans. Anthony Wholesale Grocery Company. 37,312; Apr. 8.
Kampfs Herbal Tonic. For a Herbal Tonic. W. H. Kampfmueller. 37,321; Apr. 8.
Lemo-Rins. For Shampoo Treatment. Nassour Bros. 37,324; Apr. 8.
Medal of Honor. For Cigars. Medal of Honor Cigar Co. 37,323; Apr. 8.
Ointment No. 29 Nesrin. For Medicinal Preparation. Drug Products Co. Inc. 37,319; Apr. 8.
Orine for the Mouth. For Liquid Mouth Preparation. Dr. M. G. Bernheim. 37,313; Apr. 8.
Peroide Powdered Soap. For Powdered Soaps. Peck's Products Co. 37,325; Apr. 8.
Protein S. M. A. For Food Product. For Infants. Laboratory Products Company. 37,322; Apr. 8.
Radio. For Soap. E & G Soap Co. 37,326; Apr. 8.
Utah Sweetheart Celery. For Celery. Salt Lake County Celery Growers' Association. 37,327; Apr. 8.
Vosine. For a Mouth Wash and Gargle. Sampson & Burnham Company. 37,328; Apr. 8.

ALPHABETICAL LIST OF PRINTS

Fancy Veneers. For Veneers. Russell Fortune, Incorporated. 12,470; Apr. 8.
French Maid. Vacuum Packed Coffee. For Coffee. French Maid Cocolat Company. 12,472; Apr. 8.
Jade, Old as the Hills and Green as the Hills, was the Lucky Stone of the Ancients . . . For Jewelry and Silverware. Black, Starr & Frost-Gorham, Inc. 12,469; Apr. 8.
Omega. For Watches. J. R. Wood & Sons. 12,475; Apr. 8.
Royal Hawaiian Koa. For Veneers. Russell Fortune, Incorporated. 12,471; Apr. 8.
So Good in Themselves . . . So Attractive When Served This New Way. For Baked Beans. H. J. Heinz Company. 12,473; Apr. 8.
Style Twins. For Hats. Truly Warner Co. Inc. 12,474; Apr. 8.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 8TH DAY OF APRIL, 1930

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

A C Spark Plug Company. (See Champion, Albert, assignor.)
Abbe, Edward J., assignor to The Elwell Parker Electric Company, Cleveland, Ohio. Industrial truck. 1,753,731; Apr. 8.
Abbey-Scherer Company, The. (See Scherer, John R., assignor.)
Aber, John C., Butler, Pa. Audiphone. 1,753,817; Apr. 8.
Ackerman, George W., New York, N. Y. Grille. Des. 80,872; Apr. 8.
Ackerman, William K., Detroit, Mich. Liquid extractor. 1,753,732; Apr. 8.
Adams, Industries, Inc. (See Jacques, Raynaldo P., assignor.)
Adams, Walter S., Philadelphia, Pa., and E. Slingluff, sr., Cleveland Heights, Ohio, assignors to The J. G. Brill Company, Philadelphia, Pa. High-speed articulated car. 1,754,137; Apr. 8.
Aerograph Company Limited, The. (See Burdick, Charles L., assignor.)
Agee, George M., Owensboro, Ky. Control valve. 1,754,138; Apr. 8.
Agfa Ansco Corporation. (See Wendt, Bruno, assignor.)
Ahlm, Charles E. F., Cleveland, and G. M. Soule, South Euclid, assignors to Automotive Patent Holding Company, Cleveland, Ohio. Transmission gearing. 1,753,398; Apr. 8.
Aircraft Development Corporation. (See Betancourt, Gilbert, assignor.)
Aites, John F. (See Quinn, T., and Aites.)
Aktiebolaget Nordiska Armaturfabrikerna. (See Weibull, Ernst H. W., assignor.)
Aktiengesellschaft Brown Boveri & Cie. (See Baumann, A., and Meyer, assignors.)
Alden, George R. (See Skentelbery, C., and Alden.)
Alemite Corporation. (See Garbarino, Americo F., assignor.)
Alemite Corporation. (See Zerk, Oscar U., assignor.)
Alessi, Frank, assignor to V. Nava, Brooklyn, N. Y. Combined airplane and thermometer. Des. 80,878; Apr. 8.
Allen, John M., Toronto, Ontario, Canada, assignor to Scott & Williams, Incorporated, New York, N. Y. Hosiery. 1,754,185; Apr. 8.
Altice, George F., and W. L. Young, South Bend, Ind., assignors, by mesne assignments, to Bendix Service Corporation, Chicago, Ill. Adjusting tool. 1,753,545; Apr. 8.
Altmar Steel Products Company. (See Paltrowitz, Harry, assignor.)
Ambrette, Conrad, Brooklyn, N. Y. Folding machine for alimentary pastes. 1,753,733; Apr. 8.
American Air Filter Company. (See Goodloe, Alfred M., assignor.)
American Cable Company. (See Luckey, George P., assignor.)
American Can Company. (See Butler, William F., assignor.)
American Chain Company. (See Pitschner, Karl, assignor.)
American Cyanamid Company. (See Cooper, Kenneth F., assignor.)
American La France and Foamite Corporation. (See Witter, Willis D., assignor.)
American Laundry Machinery Company, The. (See Brockett, Bluford W., assignor.)
American Steel Foundries. (See Whitney, Loren L., assignor.)
American Telephone and Telegraph Company. (See Best, Fred H., assignor.)
American Telephone and Telegraph Company. (See Ohl, Russell S., assignor.)
American Telephone and Telegraph Company. (See Reed, T. C., and Odell, assignors.)
American Telephone and Telegraph Company. (See Thorp, Vaughn P., assignor.)
American Throttle Company. (See McKee, Neal T., assignor.)
American Type Founders Company. (See Buchanan, W. C., and Tourjee, assignors.)
Amrad Corporation, The. (See Woodhull, Samuel T., assignor.)
Anaconda Sales Company. (See Robinson, Thomas, assignor.)
Anchor Cap & Closure Corporation. (See Podel, Abraham, assignor.)
Anders, Otto, Berlin, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Telephone system. 1,753,279; Apr. 8.
Anderson-Barngrover Mfg. Co. (See Thompson, Albert R., assignor.)
Anderson, Charles W., Milan, Ohio. Steering range for automobiles. 1,753,194; Apr. 8.
Anderson, Fritz A., assignor to The Burdick Corporation, Milton, Wis. Support. 1,754,006; Apr. 8.
Anderson, Otto A., Chicago, Ill., assignor to Zangerle & Peterson Company. Davenport or like article. Des. 80,874; Apr. 8.
Andresen, Adolph C., assignor to Chicago Pneumatic Tool Company, New York, N. Y. Metal-working process and apparatus. 1,753,677; Apr. 8.
Andrew, Frederick W., Andalusia, and W. Hemingway, jr., Philadelphia, Pa., assignors to The Electrolock Manufacturing Company, Vicksburg, Miss. Ignition-switch lock. 1,753,734; Apr. 8.
Andrews, Frank M., et al. (See Funk, William G., assignor.)
Andrews, Frank W., Fort Wayne, Ind. Automatic electric heating apparatus. 1,753,190; Apr. 8.
Arjon Chemical Co. (See John, Robert, assignor.)
Armstrong Cork Company. (See Holt, Daniel S., assignor.)
Armstrong, Thomas L. B., Poughkeepsie, N. Y. Combination rule gauge. 1,753,191; Apr. 8.
Arnold, Ernest H., Cleveland, Ohio. Metal-wheel manufacture. 1,753,306; Apr. 8.
Arnold, Ernest H., Cleveland, Ohio. Metal spoke and its manufacture. 1,753,307; Apr. 8.
Arntzen, Cloyd H., Canton, Mo. End gate. 1,753,637; Apr. 8.
Art Fixtures, Inc. (See Hoffmann, Otto, assignor.)
Arthur, James L., Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio. Switch control. 1,753,918; Apr. 8.
Asbeck, Gustav, Dusseldorf-Rath, Germany. Rolling mill. 1,753,767; Apr. 8.
Asbridge, Harry H., Ashton-on-Mersey, assignor to The Churchill Machine Tool Company Limited, Broadheath, near Manchester, England. Grinding machinery. 1,754,139; Apr. 8.
Asbridge, Harry H., Ashton-on-Mersey, assignor to The Churchill Machine Tool Company Limited, Broadheath, near Manchester, England. Grinding or abrading machine. 1,754,140; Apr. 8.
Asten, Eduard v., Eupen, Belgium, and H. N. Hill, Philadelphia, Pa., assignors to Von Asten & Cie., Societe en Commandite, Eupen, Belgium. Fabric for technical purposes. 1,753,845; Apr. 8.
Athey, Isaac H., Chicago, Ill. Vehicle wheel. 1,753,785; Apr. 8.
Atkinson, Elijah B., Oakley, Kans. Lid or cover fastener for milk cans. 1,754,074; Apr. 8.
Atlanta Harness & Reed Manufacturing Company. (See Harris, A. W., Suchke, and King, assignors.)
Augstein, S., & Co. (See Egerer, August, assignor.)
Automatic Electric Inc. (See Wicks, John, assignor.)
Automatic Washer Company. (See Nelson, John, assignor.)
Automotive Patent Holding Company. (See Ahlm, C. E. F., and Soule, assignors.)
Avery, W. & T., Limited. (See Sykes, C. M., and Binns, assignors.)
Axtell, Fred W., Fort Worth, Tex. Making couplings for sucker rods and the like. 1,753,638; Apr. 8.
Babcock & Wilcox Company, The. (See Jacobus, David S., assignor.)
Bache, Ernest W., and J. Grice, assignors to George Salter and Company Limited, West Bromwich, England. Speed-controlling means for typewriter carriages. 1,753,195; Apr. 8.
Baczewski, Scepan. (See Piekos, Tadeusz, assignor.)
Badger, Arthur C., Newton, Mass. Impervious compressed-fluid container. 1,753,259; Apr. 8.
Badgley, Ollie V., Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio. Soldering machine. 1,753,639; Apr. 8.
Baeuerle & Morris, Inc. (See Dorfner, Anton L., assignor.)
Baillie, Jesse W., Newark, Ohio. Nonskid brake. 1,753,588; Apr. 8.
Baker-Raulang Company, The. (See Remde, Edward H., assignor.)
Baker, Russell W., Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio. Armature-conveying apparatus. 1,753,640; Apr. 8.
Baldwin, George D., New York, N. Y. Industrial railway track. 1,753,327; Apr. 8.
Baldwin, Nathaniel, East Mill Creek, Utah. Acoustic diaphragm and loud-speaker combination. 1,753,979; Apr. 8.
Ball, Edmund B. (See Hurst, J. E., and Ball.)
Banks, Robert T., Spokane, Wash., assignor to Sullivan Machinery Company. Feeding mechanism. 1,754,159; Apr. 8.

Banning, Ephraim. (See Edelman, Philip B., assignor.)
Bannister, Allan S., assignor to Revere Rubber Company, Providence, R. I. Shoe sole. Des. 80,875; Apr. 8.
Bannister, Allan S., assignor to Revere Rubber Company, Providence, R. I. Shoe sole. 80,876; Apr. 8.
Barber-Colman Company. (See Colman, Howard D., assignor.)
Barber-Greene Company. (See Barber, Harry H., assignor.)
Barber, Harry H., assignor to Barber-Greene Company, Aurora, Ill. Automatic measuring hopper. 1,753,546; Apr. 8.
Bardwell, Harold F., assignor to Electromatic Typewriters, Inc., Rochester, N. Y. Typewriting machine. 1,753,495; Apr. 8.
Bares, Rudolph. (See Wood, A. C., and Bares.)
Bargeboer, Adolf, The Hague, Netherlands. Regulating device. 1,753,678; Apr. 8.
Barnes, Lew, Chicago, Ill. Knockdown fight ring. 1,753,828; Apr. 8.
Barrett, Charles A., Buffalo, N. Y. Conveyer for heat-treating furnaces. 1,753,679; Apr. 8.
Barrymore Concrete Mixer Corporation. (See Daddisman, Reginald A., assignor.)
Barstow, Edwin O., and A. C. White, assignors to The Dow Chemical Company, Midland, Mich. Bag manufacture. 1,753,281; Apr. 8.
Barton, Edward O. (See Novinsky, R. A., and Barton.)
Barton, Francis M., assignor to G. Thompson, Chicago, Ill. Concrete floor construction. 1,753,496; Apr. 8.
Bascombe, Frank J. (See Reid, W. L., and Bascombe.)
Bassick Company, The. (See Herold, Walter F., assignor.)
Bastian-Morley Company. (See Lonergan, Simon J., assignor.)
Bates, Charles F. W., Cleveland Heights, Ohio. Radiotube. 1,753,260; Apr. 8.
Batie, Joseph E., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich. Apparatus for expanding cup-shaped members. 1,753,630; Apr. 8.
Bauman, Harry A., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Bathing cap. Des. 80,930; Apr. 8.
Baumann, Adolf, Baden, and A. Meyer, Kusnacht, near Zurich, assignors to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland. Compressor apparatus. 1,753,280; Apr. 8.
Baumann, Helene H., Highland Park, Calif. Nursing-bottle holder. 1,753,875; Apr. 8.
Baumgartner, Emil, Nanuet, N. Y. Utilizing the waste space in hothouses. 1,753,980; Apr. 8.
Bay State Fishing Company. (See Gallison, Ernest A., assignor.)
Bazzoni, Lewis J., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for applying foxing to shoes. 1,753,497; Apr. 8.
Beach, H. D., Company, The. (See Gibson, Francis W., assignor.)
Beardsley, Robert, Chicago, Ill. Lamp shade. 1,753,981; Apr. 8.
Bechik, Michael, Memphis, Tenn. Mattress. 1,753,359; Apr. 8.
Becker, Ernst, Berlin-Charlottenburg, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Internal-combustion engine. 1,753,196; Apr. 8.
Becker, Hans, Berlin-Charlottenburg, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Manufacturing drying varnishes. 1,754,186; Apr. 8.
Beckman, John W., Oakland, Calif. Breaking emulsions. 1,753,641; Apr. 8.
Beckman, John W., Oakland, Calif. Transforming organic acids into ketones. 1,753,642; Apr. 8.
Beckman, John W., Oakland, Calif. Processing cereal grains. 1,753,643; Apr. 8.
Beckwith, Harry H. (See Jennings, Melvin O., assignor.)
Beddard, William H., Small Heath, England. Coin-in-the-slot machine. 1,753,197; Apr. 8.
Bedford, Alda V., Schenectady, N. Y., assignor to General Electric Company. Belt or strip driving arrangement. 1,754,187; Apr. 8.
Bedo, Joseph, assignor to Permachrome Process Corporation, Cleveland, Ohio. Electroplating bath. 1,754,075; Apr. 8.
Beebe, Claude S., Salt Lake City, Utah. Toy fighting plane. 1,753,681; Apr. 8.
Beech-Nut Packing Company. (See Washburn, Walter B. C., assignor.)
Beghetti, Peter, San Francisco, Calif. Wire-twisting device. Re17,636; Apr. 8.
Bell, John E., Brooklyn, assignor to Power Specialty Company, New York, N. Y. Heating apparatus. 1,753,192; Apr. 8.
Bell, John E., deceased, Brooklyn, N. Y., L. R. Bell executrix. Waste-heat boiler. 1,753,589; Apr. 8.
Bell, Lola R., executrix. (See Bell, John E.)
Bell Telephone Laboratories, Incorporated. (See Black, Harold S., assignor.)
Bell Telephone Laboratories, Incorporated. (See Bragg, Herbert E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Clokey, Allison A., assignor.)
Bell Telephone Laboratories, Incorporated. (See Curley, Thomas V., assignor.)
Bell Telephone Laboratories, Incorporated. (See Gilbert, John J., assignor.)
Bell Telephone Laboratories, Incorporated. (See Given, Frederick J., assignor.)
Bell Telephone Laboratories, Incorporated. (See Hague, A. E., and Peterson, assignors.)
Bell Telephone Laboratories, Incorporated. (See Knoop, William A., assignor.)
Bell Telephone Laboratories, Incorporated. (See Newsom, James B., assignor.)
Bell Telephone Laboratories, Incorporated. (See Steinberg, John C., assignor.)
Bell Telephone Laboratories, Incorporated. (See Stokely, Ray L., assignor.)
Bell Telephone Laboratories, Incorporated. (See Whittle, Horace, assignor.)
Bellay, Julien, Brussels, Belgium. Gas and steam producer generator. 1,753,847; Apr. 8.
Benckiser, Joh. A., Chemische Fabrik. (See Draisbach, Fritz, assignor.)
Bendix Brake Company. (See Clapp, Stuart H., assignor.)
Bendix Brake Company. (See La Brie, Ludger E., assignor.)
Bendix Service Corporation. (See Altice, G. F., and Young, assignors.)
Benedict, Frederic K., assignor to Covel-Hanchett Co., Big Rapids, Mich. Workholder for bar-grinding machines. 1,753,590; Apr. 8.
Benintende, Louis, Woodbridge, N. J. Stepladder. 1,754,194; Apr. 8.
Benjamin, E. V., Co., The. (See Orndoff, Herbert W., assignor.)
Bennett, Incorporated. (See Brown, George A., assignor.)
Bennett, Morris H., assignor to Scovill Manufacturing Company, Waterbury, Conn. Condenser. 1,753,193; Apr. 8.
Benning, Cobb, et al. (See Blackwell, Sanford J., assignor.)
Bentz, Frank J., et al. (See Wheeler, H. A., Bentz, and Mason.)
Bentz, L. E., et al. (See Wheeler, H. A., Bentz, and Mason, assignors.)
Berger, George R., et al. (See Levings, Sherburne D., assignor.)
Berger, Samuel I., Newark, N. J. Traffic-simulating toy. 1,753,282; Apr. 8.
Bertsche, Ralph, jr., Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio. Engine starter. 1,753,591; Apr. 8.
Best, Fred H., Westfield, N. J., assignor to American Telephone and Telegraph Company. Meter. 1,753,230; Apr. 8.
Best, Fred H., Westfield, N. J., assignor to American Telephone and Telegraph Company. Meter for transmission testing. 1,753,231; Apr. 8.
Betancourt, Gilbert, assignor to Aircraft Development Corporation. Detroit, Mich. Airship terminal. 1,753,592; Apr. 8.
Bethlehem Steel Company. (See Kennedy, John J., assignor.)
Bettes, George W., Sparta, Mich. Road marker. 1,753,593; Apr. 8.
Bigbee, Carson L., Los Angeles, and J. Couch, San Mateo, Calif. Automobile headlight. 1,754,141; Apr. 8.
Bigelow, Clare G. (See Linn, C. W., Bigelow, and Raiche.)
Billig, Kurt. (See Mayer, F., Billig, Horst, and Schirmacher.)
Binns, Arthur. (See Sykes, C. M., and Binns.)
Binns, George W., assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio. Truing mechanism. 1,753,682; Apr. 8.
Bjorklund, Axel W. (See Krohn, E., and Liliquist, assignors.)
Black, Harold S., Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electric signaling system. 1,753,829; Apr. 8.
Blackburn, Charles A., Washougal, assignor to Keystone Manufacturing Co., Inc., Chehalis, Wash. Lawn mower. 1,754,076; Apr. 8.
Blackburn, Robert E., Los Angeles Calif. Wire-screen frame and making the same. 1,753,683; Apr. 8.
Black Rock Manufacturing Company. (See Nicholas, William, assignor.)
Blackwell, Sanford J., assignor of one-fourth to H. W. McLarty, one-fifth to C. Benning, and eleven-twentieths to Ransom and Company, Inc., Atlanta, Ga. Bottle. 1,753,736; Apr. 8.
Blair, James C., assignor to Libbey-Owens Glass Company, Toledo, Ohio. Method and apparatus for forming sheet glass. 1,753,768; Apr. 8.
Blair, William R., Washington, D. C. Ocean-going water craft. 1,753,399; Apr. 8.
Bloch, Leon, assignor to The Republic Brass Company, Cleveland, Ohio. Two-way valve. 1,753,684; Apr. 8.
Blount, William H. (See Sleeper, F. H., and Blount.)
Blume, George F., Philadelphia, Pa. Roller bearing. 1,754,077; Apr. 8.
Boda, Joseph E., Moline, Ill., assignor by mesne assignments, to Minneapolis-Moline Power Implement Company, Minneapolis, Minn. Disk harrow. 1,753,198; Apr. 8.

Bodenstein, Paul, Magdeburg, assignor to the firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Discharge means for tube or ball mills. 1,753,685; Apr. 8.
Bodge, Horace A., White Plains, N. Y. and J. C. Emley, Melrose Park, Pa. Bake oven. 1,753,914; Apr. 8.
Bogardus, Arthur G., New York, N. Y., assignor to Universal Oil Products Company, Chicago, Ill. Process and apparatus for treating petroleum oil. 1,753,769; Apr. 8.
Bohm, Stephen F., Cicero, Ill. Anchor and reel therefor. 1,753,737; Apr. 8.
Boldridge, Austin G., Houston, Tex. Aircraft. 1,754,007; Apr. 8.
Bond, Jayson K., assignor to Federal Asbestos & Cork Insulation Co., Milwaukee, Wis. Floral case. 1,753,594; Apr. 8.
Bonus, George Y., Chicago, Ill., assignor to Erie City Iron Works, Erie, Pa. Boiler. 1,753,687; Apr. 8.
Borgeson, Charles A., assignor of twenty-four and one-half per cent to G. W. Mitchell and twenty-four and one-half per cent to A. J. Lindersmith, San Francisco, Calif. Basement circulator. 1,753,686; Apr. 8.
Bornand, Emilien, and H. A. Schlaepfer, Geneva, Switzerland. Electric furnace. 1,754,142; Apr. 8.
Borsi, Frank, Washington, D. C., assignor to C. R. Summa, Waterbury, Conn. Oil can. 1,754,078; Apr. 8.
Boscardin, John M., Canaan, Conn. Tire mender. 1,753,688; Apr. 8.
Bossard Products Company. (See Bossard, Theodore, assignor.)
Bossard, Theodore, Salt Lake City, Utah, assignor to Bossard Products Company, Inc. Fueling system. 1,753,199; Apr. 8.
Bossart, Paul N., assignor to The Union Switch & Signal Company, Swissvale, Pa. Electrical relay. 1,753,689; Apr. 8.
Bossart, Paul N., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling apparatus. 1,753,982; Apr. 8.
Bottle Cap Patents Company. (See Swift, George W., jr., assignor.)
Bourn, Stephen W., Providence, R. I., assignor to United Shoe Machinery Corporation, Paterson, N. J. Foxing-cementing machine. 1,753,498; Apr. 8.
Bowen, William S., Westfield, N. J. Spray drying apparatus. 1,753,915; Apr. 8.
Bower, Sigmund, Brooklyn, N. Y. Machine for applying reenforcements to clothespins. 1,753,916; Apr. 8.
Bowman, James H., Bridgeport, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va. Corner miter for screeds. 1,753,595; Apr. 8.
Bowman, James H., Bridgeport, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va. Corner miter for base screeds. 1,753,596; Apr. 8.
Boyd, Paul F., Chicago, Ill. Retouching device. 1,753,876; Apr. 8.
Boyer, Charles A., Winona Lake, Ind. Casting reel. 1,753,738; Apr. 8.
Bradley, Linn, Montclair, N. J., and E. P. McKeefe, assignors to Bradley-McKeefe Corporation, New York, N. Y. Treatment of residual liquors. 1,754,207; Apr. 8.
Bradley, Linn, Montclair, N. J., and E. P. McKeefe, Plattsburgh, assignors to Bradley-McKeefe Corporation, New York, N. Y. Production of cooking liquor which contains sodium hydroxide. 1,754,208; Apr. 8.
Bradley-McKeefe Corporation. (See Bradley, L., and McKeefe, assignors.)
Brady, John D., assignor to Brady Process Company, El Dorado, Ark. Apparatus for breaking up petroleum emulsions. 1,754,079; Apr. 8.
Brady Process Company. (See Brady, John D., assignor.)
Bragg, Caleb S., Palm Beach, Fla., and V. W. Kliesrath, Port Washington, assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y. Power actuator for brake mechanism of automotive vehicles. 1,753,283; Apr. 8.
Bragg, Herbert E., East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Metering device. 1,753,330; Apr. 8.
Bragg-Kliesrath Corporation. (See Bragg, C. S., and Kliesrath, assignors.)
Branche, Nelson T. (See Stanbery, L. J., and Branche.)
Brand, Edwin J. (See Neuberger, Franklin H., assignor.)
Brand, William P., Muskegon, Mich. Switch. 1,753,846; Apr. 8.
Braun, Ferdinand, et al., executors. (See Mauser, Alfons.)
Braun, William A. (See Johnson-Vea, C. T., and Braun.)
Breitenstein, Albert F., assignor to The Geometric Tool Company, New Haven, Conn. Self-opening die head. 1,753,819; Apr. 8.
Breitenstein, Albert F., assignor to The Geometric Tool Co., New Haven, Conn. Self-opening die head. 1,753,848; Apr. 8.
Brenzinger, Julius, Fairfield, assignor to The Max Ams Chemical Engineering Corporation, Bridgeport, Conn. Pump. 1,753,232; Apr. 8.
Breslin, James J. (See Fischer, S., and Breslin.)
Brett, Henry E., Los Angeles, assignor to J. A. Yerkes, Long Beach, Calif. Valve. 1,753,818; Apr. 8.
Bridges, Ira D., Sanford, N. C., assignor to Draper Corporation, Hopedale, Mass. Loom crank-shaft box-cap bearing. 1,754,195; Apr. 8.
Briggs, Adelbert L., and H. Sauers, Escanaba, Mich. Crank-case heater for motor vehicles and the like. 1,754,080; Apr. 8.
Briggs and Stratton Corporation. (See Jacobi, Edward N., assignor.)
Brill, J. G., Company, The. (See Adams, W. S., and Slingluff, sr., assignors.)
Brill, J. G., Company, The. (See Latshaw, Elmer, assignor.)
Brimm, Daniel J., jr., West Hempstead, assignor to Ireland Aircraft, Inc. Retractable landing gear. 1,753,770; Apr. 8.
Bristol, Wm. H., Talking Picture Corporation. (See Griggs, Henry L., assignor.)
Brockett, Bluford W., Cleveland Heights, assignor The American Laundry Machinery Company, Norwood, Ohio. Garment-pressing machine. 1,753,877; Apr. 8.
Bromwell Wire Goods Company, The. (See Melish, Thomas G., assignor.)
Brown, Carl A., and A. C. Nielsen, East Cleveland, Ohio, assignor to General Electric Company. Machine for cutting glass cane or tubes. 1,754,143; Apr. 8.
Brown, George A., assignor to Bennett, Incorporated, Salem, Mass. Making waterproof paper. 1,753,690; Apr. 8.
Brown, John M., assignor to Crystal Oil Burner Corporation, Irvington, N. J. Liquid-fuel burner. 1,753,360; Apr. 8.
Brown, Vernie R. (See Waters, H. F., and Brown.)
Brown, William A., Philadelphia, Pa. Emergency heater. Re17,637; Apr. 8.
Browne, Vere B., Brackenridge, Pa. Making ductile iron chromium aluminum alloys. 1,754,008; Apr. 8.
Brownlie, James, Dennistoun, Glasgow, and A. Horsley, Thornliebank, Glasgow, Scotland. Collapsible box or case holding electric and other bulbs. 1,754,081; Apr. 8.
Brosek, Stanley, Detroit, Mich., Wall construction. 1,753,320; Apr. 8.
Bruhn, Friedrich W. G., Berlin-Wilmersdorf, Germany. Positive speed gauge. 1,753,547; Apr. 8.
Brundage, Forrest H. (See Umstead, James R., assignor.)
Brutscher, George H., Pittsburgh, Pa. Valve guide. 1,754,144; Apr. 8.
Bryson, Holmes, Groveland, Fla. Pressing installation for freight cars. 1,753,400; Apr. 8.
Bubblestone Company, The. (See Rice, John A., assignor.)
Buchanan, William C., Franklin, Mass., and W. O. Tourjee, Providence, R. I., assignors to American Type Founders Company, Jersey City, N. J. Printing press. 1,753,821; Apr. 8.
Buchet, Conrad R. assignor to National Air-Lub Products Incorporated, Los Angeles, Calif. Grease dispenser. 1,753,849; Apr. 8.
Bucking, Henry J., San Francisco, Calif. Safety apparatus for oil-storage tanks. 1,753,401; Apr. 8.
Buckwalter, Tracy V., assignor to The Timken Roller Bearing Company, Canton, Ohio. Removing bearings from axles. 1,753,771; Apr. 8.
Buckwalter, Tracy V., assignor to The Timken Roller Bearing Company, Canton, Ohio. Roller-bearing-axle construction. 1,753,772; Apr. 8.
Budd Wheel Company. (See Ragsdale, Earl J. W., assignor.)
Buer, Henry W., et al. (See Drahonovsky, John B., assignor.)
Buer, Hertha, et al. (See Drahonovsky, John B., assignor.)
Burden, Fred E., Moncton, New Brunswick, Canada. Biproximal tooth and interlocking key. 1,753,644; Apr. 8.
Burdick, Charles L., assignor to The Aerograph Company Limited, London, England. Spraying apparatus. 1,754,145; Apr. 8.
Burdick Corporation, The. (See Anderson, Fritz, A., assignor.)
Burger, Walter D., Forest Park, Ill. Automatic tack hammer. 1,753,499; Apr. 8.
Burleigh, James K., Hastings-upon-Hudson, N. Y. Can closure. 1,753,500; Apr. 8.
Burnham, Chester W., assignor to Oneida Community, Limited, Oneida, N. Y. Receptacle for silverawre. 1,753,878; Apr. 8.
Burns, Gertrude, New York, N. Y. Abdominal belt. 1,753,739; Apr. 8.
Burns, Harley E., Columbus, Ohio. Forming lock nuts. 1,753,597; Apr. 8.
Burns, William D., Amenia, N. Y. Roller bearing. 1,753,691; Apr. 8.
Burton, Frank C., assignor to Grisby-Grunow Company, Chicago, Ill. Radiocabinet. Des. 80,931; Apr. 8.
Butler, William F., Hillside, N. J., assignor to American Can Company, New York, N. Y. Salt-filling machine. 1,753,548; Apr. 8.
Butterworth, H. W., & Sons Company. (See France, Thomas W., assignor.)
Buttress, George A., assignor to F. and B. Holding Company, Los Angeles, Calif. Sheet lath. 1,753,598; Apr. 8.
Byrnes, Clarence P., trustee. (See James, Joseph H., assignor.)
C-S Engineering Company. (See Schellens, E. L., and Coffin, assignors.)
Cage, John M., Los Angeles, Calif., assignor, by mesne assignments, to Dehydrators Incorporated. Dehydration of oil and water emulsions. 1,754,009; Apr. 8.
Calvino, Giovanni, Milan, Italy. Coffee filter. 1,754,146; Apr. 8.

Cambron, Adrien, Tottenville, assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y. Accelerator for the vulcanization of rubber. 1,754,010; Apr. 8.

Camel Company. (See Heinen, F. C., and Darrow, assignors.)

Camfield, William H., Newark, assignor of one-half to W. Prior, East Orange, and one-half to W. Prior, jr., South Orange, N. J. Machine for cutting bias strips. 1,753,645; Apr. 8.

Canada Gypsum and Alabastine, Limited. (See Thomson, George M., assignor.)

Capper, Arthur M., assignor to Duquesne Steel Foundry Company, Pittsburgh, Pa. Annealing box. 1,753,261; Apr. 8.

Carey, Philip, Manufacturing Company, The. See Fischer, Albert C., assignor.)

Carlson, Andrew W., Spokane, Wash. Heel. 1,753,692; Apr. 8.

Carpenter, Russell H., Madison, Wis. Food strainer. 1,753,693; Apr. 8.

Carr, Fred S., Newton, assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass. Fastener. 1,754,209; Apr. 8.

Carr, Moses F., Lexington, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Fastener. 1,754,210; Apr. 8.

Carter, Clarence W., and C. P. Strite, Minneapolis, Minn. Frying bacon. 1,753,879; Apr. 8.

Case, Arthur F., assignor to The Wellman-Seaver Morgan Company, Cleveland, Ohio. Car-dumper clamp. 1,753,456; Apr. 8.

Cash, A. W., Company. (See Terry, Charles M., assignor.)

Cates, James W., Coffeyville, Kans. Cake-icing machine. 1,753,549; Apr. 8.

Cawthon, John S., Beech Bluff, Tenn. Fire alarm. 1,753,361; Apr. 8.

Central Brass and Fixture Company, The. (See McCloud, Edward H., assignor.)

Central Electric Tool Company. (See Weyandt, Carl S., assignor.)

Central National Bank of Cleveland, trustee. (See Prachar, John, assignor.)

Centrifix Corporation. (See Schuts, Joseph M., assignor.)

Centrifugal Castings Limited. (See Hurst, J. E., and Ball, assignors.)

Certain-teed Products Corporation. (See Speer, Alexander S., assignor.)

Chamberlain, Rufus N., et al. (See Levings, Sherburne D., assignor.)

Champion, Albert, assignor to A C Spark Plug Company, Flint, Mich. Chromium-plated worm shaft. 1,753,773; Apr. 8.

Chapin, Philip P., and W. J. Kupec, New York, N. Y. Automatic egg boiler. 1,753,740; Apr. 8.

Chase, Philip H., Bala, Pa. Mast arm. 1,754,082; Apr. 8.

Cheney, Moses E., Bayport, assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y. Electric measuring instrument. 1,753,402; Apr. 8.

Cheney, Moses E., La Crosse, Wis., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y. Electric indicating instrument. 1,753,917; Apr. 8.

Chevrette, Augustin J., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Shuttle-changing loom. 1,753,233; Apr. 8.

Chicago-Cleveland Car Roofing Company. (See Williams, Theron H., assignor.)

Chicago Pneumatic Tool Company. (See Andresen, Adolph C., assignor.)

Chicago Railway Equipment Company. (See Kadar, Louis, assignor.)

Chicago Railway Equipment Company. (See Told, Arnold H., assignor.)

Christensen, Emil, Portland, Oreg. Socket. 1,753,501; Apr. 8.

Christiansen, William F., Chicago, Ill., assignor to The Zangerle and Peterson Company. Davenport or like article. Des. 80,877; Apr. 8.

Chrysler Corporation. (See Lamborn, Fred J., assignor.)

Chrysler Corporation. (See Skelton, Owen R., assignor.)

Churchill Machine Tool Company Limited, The. (See Asbridge, Harry H., assignor.)

Cincinnati Grinders Incorporated. (See Binns, George W., assignor.)

Clapp, Stuart H., Washington, D. C., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill. Brake mechanism. 1,753,362; Apr. 8.

Clark, Stanley G., et al. (See Funk, William G., assignor.)

Clark, William G., Chicago, Ill. Dust collector. 1,753,502; Apr. 8.

Clarke, Lester J., New York, N. Y. Collapsible sled. 1,754,011; Apr. 8.

Clean-Be-Tween Tooth Brush Company. (See Myers, Robert R., assignor.)

Clemetsen Company, The. (See Vaaler, Jens, assignor.)

Cleveland Graphite Bronze Company, The. (See Klocke, William H., assignor.)

Cleveland Punch & Shear Works Company, The. (See Dobson, John E., assignor.)

Cleveland Punch & Shear Works Company, The. (See Pardee, Robert J., assignor.)

Clokey, Allison A., Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Constant-speed drive. 1,753,331; Apr. 8.

Clum Manufacturing Company. (See Winning, Robert K. assignor.)

Coe Manufacturing Company, The. (See Robinson, Thomas assignor.)

Coffin, Joel S., jr. (See Schellens, E. L., and Coffin.)

Coghlan, Thomas G., Elizabeth, N. J. Special tile for drip ledge. 1,753,332; Apr. 8.

Coghlan, Thomas G., Elizabeth, and E. A. Johnsen, Mountain Lakes, N. J. Furnace and operating the same. 1,753,363; Apr. 8.

Cohen, Louis, Washington, D. C., assignor, by mesne assignments, to Federal Telegraph Company. Radio receiving system. 1,753,306; Apr. 8.

Colavecchio, Benedict, Providence, R. I. Strap fastener. 1,753,918; Apr. 8.

Coldwell, Harry T., Newark, N. J., assignor to Philadelphia Lawn Mower Company Inc., Philadelphia, Pa. Lawn mower. 1,754,188; Apr. 8.

Colegrove, Charles E., Lakewood, assignor to White Sewing Machine Corporation, Cleveland, Ohio. Extension-cord retainer for sewing machines. 1,754,160; Apr. 8.

Colegrove, Charles E., Lakewood, assignor to White Sewing Machine Corporation, Cleveland, Ohio. Extension-cord retainer for sewing machines. 1,754,161; Apr. 8.

Colegrove, Charles E., Lakewood, assignor to White Sewing Machine Corporation, Cleveland, Ohio. Extension-cord retainer for sewing machines. 1,754,162; Apr. 8.

Collins, Eustace R., A. B. Eberhart, and W. A. Gillentine, Fort Worth, Tex. Insect exterminator. 1,754,083; Apr. 8.

Colman, Howard D., assignor to Barber-Colman Company, Rockford, Ill. Ball-warper traverse mechanism. 1,753,503; Apr. 8.

Coloder Company, The. (See Newdick, Norton A., assignor.)

Compagnie des Forges et Acieries de la Marine et d'Homecourt et al. (See de Courseulles, Robert, assignor.)

Cook, Egbert C., Puente, Calif. Turntable. 1,753,550; Apr. 8.

Cook, Willard G., Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company. Control system. 1,753,983; Apr. 8.

Cookson, Wilfred A., Freeport, Me. Mud-guard attachment. 1,754,147; Apr. 8.

Cooper, James H., Chicago, Ill. Cotton picker. 1,753,919; Apr. 8.

Cooper, Kenneth F., Great Neck, assignor to American Cyanamid Company, New York, N. Y. Fumigating compound and producing the same. 1,754,148; Apr. 8.

Cope, Seth A., San Francisco, Calif. Metal riser and nosing for concrete steps. 1,753,234; Apr. 8.

Copeland Products, Inc. (See Litle, Thomas J., jr., assignor.)

Copeland Products, Inc. (See Muffly, Glenn, assignor.)

Corbi, Joseph L., assignor of one-third to V. Galotta, Washington, D. C., and one-third to H. Pizzutiello, Bronx, N. Y. Shirt. 1,753,551; Apr. 8.

Corcoran, Daniel P., Gridley, Calif. Signal device. 1,753,364; Apr. 8.

Corff, Edward V. (See Endsley, L. E., and Corff.)

Cornelius, Richard L., Paso Robles, Calif. Dispensing device. 1,754,084; Apr. 8.

Cornell, Mead, San Francisco, Calif., assignor, by mesne assignments, to Lubrequipment Company. Meter. 1,753,552; Apr. 8.

Corning Glass Works. (See Taylor, William C., assignor.)

Cossey, John C. G. (See Mitchell, J., and Cossey.)

Costello, Henry O., Providence, R. I. Exercising apparatus. 1,753,309; Apr. 8.

Costello, Henry O., Providence, R. I. Exercising ball and support therefor. 1,753,310; Apr. 8.

Couch, John. (See Bigbee, C. L., and Couch.)

Covel-Hanchett Co. (See Benedict, Frederic K., assignor.)

Cowan, Archibald D., assignor to Patent Novelty Company, Fulton, Ill. Toy whistling clown. Des. 80,878; Apr. 8.

Cowles, Irving, Detroit, Mich., assignor to Union Bank of Chicago, trustee, Chicago, Ill. Self-heating device such as soldering irons. 1,753,741; Apr. 8.

Cox, Abram, Company. (See Mott, Abram C., jr., assignor.)

Cox, George C., and H. K. McIntyre, deceased; E. M. McIntyre, executrix, Raleigh, N. C., J. G. McIntyre, New York, N. Y., and M. McIntyre, Cranford, N. J., executors. Furnace for reducing metals. 1,753,822; Apr. 8.

Cox, Harold E. (See Trencham, H., Heath, Hamlyn, and Cox.)

Creamery Package Mfg. Company, The. (See Larsen, Olaf, assignor.)

Creamery Package Mfg. Company, The. (See Scovel, John C., jr., assignor.)

Crickmer, Charles S. (See Wilson, R. A., and Crickmer.)

Croft, Hiram D. (See Perkins, J. L., and Croft.)

Crompton & Knowles Loom Works. (See Chevrette, Augustin J., assignor.)

Cromwell, John C., Columbus, Ohio, assignor, by mesne assignments, to The Testite Company. Roof drain. 1,753,262; Apr. 8.

Cromwell, John C., Columbus, assignor to The Steel Sanitary Company, Alliance, Ohio. Welding apparatus and method of welding. 1,753,263; Apr. 8.

Cromwell, Oliver F. W., Ridgway, Pa. Leather-finishing compound. 1,753,694; Apr. 8.

Cropp, David B., New York, N. Y. Heel for shoes. 1,753,284; Apr. 8.

Cross, A. T., Pencil Co. (See Stowe, Roy C., assignor.)

Cross, Frederick J., and H. H. Schott, assignors to Robeson-Rochester Corporation, Rochester, N. Y. Waffle iron. Des. 80,879; Apr. 8.

Crum, Edward J. (See Loy, W. W., and Crum.)

Crystal Oil Burner Corporation. (See Brown, John M., assignor.)

Cummings, David P., Newton Center, Mass. Welt. 1,753,333; Apr. 8.

Cummings, Earle W., assignor to Watertite Casement Hardware Co., Santa Barbara, Calif. Swinging window and screen mounting. 1,753,504; Apr. 8.

Cummins, John H., Dallas, Tex. Ship. 1,754,149; Apr. 8.

Cunningham, Raymond C., assignor to Hincher Paper Box Co., Seattle, Wash. Box-wrapping device. 1,753,646; Apr. 8.

Curley, Thomas V., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 1,753,334; Apr. 8.

Curtis, Walter, assignor to The Sun Electrical Company Limited, London, England. Lamp, globe, shade, reflector or like supporting device. 1,753,880; Apr. 8.

Cushman, Joseph W., J. D. Everett, and C. J. Farrell, Vernon, assignors to J. F. Merrick and W. A. Teague, Wichita County, Tex., R. E. L. Saner, said Farrell, and said Everett. Oil separator. 1,753,403; Apr. 8.

Cutler-Hammer, Inc. (See Meuer, George J., assignor.)

Cutler-Hammer, Inc. (See Seeger, Edwin W., assignor.)

Daddisman, Reginald A., assignor to Barrymore Concrete Mixer Corporation, San Francisco, Calif. Portable concrete mixer. 1,753,311; Apr. 8.

Danco, Leon A., Fairfield, Conn., assignor to McKesson & Robbins, Incorporated, Bridgeport, Conn. Tag for containers. Des. 80,932; Apr. 8.

D'Ardenne, Walter H., Philadelphia, Pa., assignor to Heintz Manufacturing Company. Sealing door. 1,753,774; Apr. 8.

Darnell, Walter R., Long Beach, Calif. Furniture glide. 1,753,599; Apr. 8.

Darnell, Walter R., Long Beach, Calif. Furniture glide. 1,753,600; Apr. 8.

Darrow, William W. (See Heinen, F. C., and Darrow.)

Davenport, Herman A., Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Leveling machine. 1,753,404; Apr. 8.

Davey, George W. (See Waite, F. H., and Davey.)

Davidson & Company, Limited, of Sirocca Engineering Works. (See Whitmore, John, assignor.)

Davis, Alice M. (See Goby, Clifford S., assignor.)

Davis, Elmer A., Detroit, Mich. Screen and hanger therefor. 1,753,264; Apr. 8.

Davis, Elmer W., Newton, Mass., assignor, by mesne assignments, to Remington Rand Inc., Buffalo, N. Y. Index tab for record guides. 1,753,285; Apr. 8.

Daukus, John F., Detroit, Mich. Flywheel. 1,753,365; Apr. 8.

Dayton Scale Company. (See Wood, George R., assignor.)

Deach, Miles F., Oakland, Calif. Adjustable lamp support. 1,753,553; Apr. 8.

Debay, George C., Los Angeles, Calif. Apparatus for molding plastic blocks and the like. 1,753,405; Apr. 8

De Cew, Judson A., Mount Vernon, assignor to Process Engineers, Inc., New York, N. Y. Sizing paper pulp. 1,753,775; Apr. 8.

De Francisci, Joseph, Brooklyn, N. Y. Hydraulic press 1,753,742; Apr. 8.

Dehydrators Incorporated. (See Cage, John H., assignor.)

De Laval Steam Turbine Company. (See Peterson, Arvid, assignor.)

Delaware Chemical Engineering Co. (See du Pont, Francis I., assignor.)

Delco Products Corporation. (See Henning, Mortie, assignor.)

Delco Products Corporation. (See Teeter, Wilford H., assignor.)

Delco-Remy Corporation. (See Arthur, James L., assignor.)

Delco-Remy Corporation. (See Badgley, Ollie V., assignor.)

Delco-Remy Corporation. (See Baker, Russell W., assignor.)

Delco-Remy Corporation. (See Bertsche, Ralph, jr., assignor.)

Delco-Remy Corporation. (See Dewey, Fred G., assignor.)

Delco-Remy Corporation. (See Emmert, Rodger J., assignor.)

Delco-Remy Corporation. (See Fitzsimmons, John T., assignor.)

Delco-Remy Corporation. (See Hartsell, Herman L., assignor.)

Delco-Remy Corporation. (See Lawson, John W., assignor.)

Delco-Remy Corporation. (See Norviel, Harry E., assignor.)

Delco-Remy Corporation. (See Norviel, H. E., and Ecoff, assignors.)

Delco-Remy Corporation. (See Prescott, Frank H., assignor.)

Delco-Remy Corporation. (See Seabury, Ralph L., assignor.)

De Lisle, Harold L., Chicago, Ill. Binder for down-hanging sheets. 1,753,366; Apr. 8.

Delman, Inc. (See Morall, Charles, assignor.)

Deutsche Gold- & Silber- Scheideanstalt vormals Roessler. (See Kochendoerfer, Gerd, assignor.)

Deutsche Gold- und Silber-Scheideanstalt vormals Roessler. (See Stark, Hans, assignor.)

Deutsche Telephonwerke und Kabelindustrie Aktiengesellschaft. (See Höhne, Wilhelm, assignor.)

Dever, James, Sioux City, Iowa. Cattle-killing machine. 1,753,851; Apr. 8.

De Vilbiss, Alexander P. (See De Vilbiss, John A., assignor.)

De Vilbiss, John A., St. Louis, Mo., assignor to A. P. De Vilbiss, Burlington, Iowa. Filled concrete block and making the same. 1,753,776; Apr. 8.

Dewey, Fred G., Anderson, Ind., assignor by mesne assignments to Delco-Remy Corporation, Dayton, Ohio. Armature-winding apparatus. 1,753,554; Apr. 8.

Dickens, Howard B., Endicott, N. Y. Leg rest for the drivers of motor cars. 1,753,367; Apr. 8.

Dickinson, Arthur J., Limited. (See Groombridge, Walter H., assignor.)
